Festivals and Fasts (Jain).

STOCK (ST. GEORGE), M.A.
Lecturer in Greek in the University of Birmingham; author of *English Thought for English Thinkers.*
Fate (Greek and Roman).

STONE (DARWELL), M.A., D.D.
Principal Pusey Librarian, Oxford; author of *A History of the Doctrine of the Holy Eucharist.*
Episcopacy.

STRAHAN (JAMES), M.A.
Edinburgh; author of *Hebrew Ideals.*
Encratites, Euchites, Family (Biblical and Christian).

SUFFRIN (AARON EMMANUEL), M.A. (Oxon.).
Vicar of Waterlooville, Hants.
Dualism (Jewish), Fate (Jewish).

SUTHERLAND (J. F.), M.D., F.R.S.E., F.S.S.
Late Deputy Commissioner in Lunacy for Scotland.
Drunkenness.

TACHIBANA (SHUNDO).
Professor in the Soto-Sect College, Tokyo.
Ethics and Morality (Japanese).

TAYLOR (ALFRED EDWARD), M.A. (Oxon.), D.Litt. (St. Andrews).
Professor of Moral Philosophy in the United College of SS. Salvator and Leonard, St. Andrews; late Fellow of Merton College, Oxford; Fellow of the British Academy; author of *The Problem of Conduct* (1901), *Elements of Metaphysics* (1903), *Varia Socratica* (1911).
Dreams and Sleep (Introductory).

TEMPLE (Lt.-Col. Sir RICHARD C., Bart.), C.I.E.
Hon. Fellow of Trinity Hall, Cambridge; late of the Indian Army; Deputy Commissioner, Burma, 1888–94; Chief Commissioner, Andaman and Nicobar Islands, 1894–1903; editor of the *Indian Antiquary* since 1884.
Fetishism (Indian).

THURSTON (HERBERT), B.A., S.J.
Joint-Editor of the Westminster Library for Priests and Students; author of *Life of St. Hugh of Lincoln*, *The Holy Year of Jubilee*, *The Stations of the Cross.*
Extreme Unction.

TURNER (STANLEY HORSFALL), M.A., D.Litt.
Fellow of the Royal Economic Society; Deputy Chief Inspector for Scotland to the National Health Insurance Commission; formerly Lecturer in Political Economy in the University of Aberdeen.
Economics, Fabian Society.

VOLLERS (KARL), Dr.Phil.
Ehemals Professor der Semitischen Sprachen an der Universität, und Direktor des Grossherzogl. Munzkabinets, Jena.
Festivals and Fasts (Muslim).

WADDELL (Lt.-Colonel L. AUSTINE), C.B., C.I.E., LL.D., F.L.S., F.R.A.I., M.R.A.S., I.M.S.
Late Professor of Tibetan in University College, London; author of *The Buddhism of Tibet*, *Tribes of the Brahmaputra Valley*, *Lhasa and its Mysteries*.
Festivals and Fasts (Tibetan).

WALSHE (W. GILBERT), M.A.
London Secretary of Christian Literature Society for China; late 'James Long' Lecturer; author of *Confucius and Confucianism*; editor of *China*.
Fate (Chinese).

WARFIELD (BENJAMIN BRECKINRIDGE), D.D., LL.D., Litt.D.
Charles Hodge Professor of Didactic and Polemic Theology in the Theological Seminary of the Presbyterian Church in the U.S.A. at Princeton, New Jersey.
Edwards and the New England Theology.

WATT (HUGH), M.A., B.D.
Minister of the United Free Church at Bearsden, Dumbartonshire; Examiner in Church History to the United Free Church.
Eucharist (Reformation and post-Reformation period).

WHITLEY (WILLIAM THOMAS), M.A., LL.D., F.R.Hist.S., F.T.S.
Secretary of the Baptist Historical Society; formerly Principal of the Baptist College of Victoria, and Secretary of the Victorian Baptist Foreign Mission.
Enthusiasts (Religious).

WISSOWA (GEORG), Dr. jur. et phil.
Ordentlicher Professor an der Universität zu Halle; Geheimer Regierungsrat.
Expiation and Atonement (Roman).

WOODS (FRANCIS HENRY), M.A., B.D.
Rector of Bainton, Yorkshire; late Fellow and Theological Lecturer of St. John's College, Oxford.
Festivals and Fasts (Hebrew).

CROSS-REFERENCES

In addition to the cross-references throughout the volume, the following list of minor references may be useful:

TOPIC.	PROBABLE TITLE OF ARTICLE.
Dutch East Indies	Indonesia.
Dutch Reformed Church	Reformed Church.
Dyaks	Indonesia.
Dyophysitism	Monophysitism.
Dyothelitism	Monothelitism.
Eagle	Animals.
Earth-mother	Earth, Earth-gods.
East	Orientation.
Easter	Calendar (Christian), Festivals and Fasts (Christian).
Ecclesiasticism	Clericalism and Anti-Clericalism.
Eclecticism	Philosophy (Greek).
Eel	Animals.
Effigy	Magic.
Egg	Cosmogony and Cosmology.
Elephant	Animals.
Elves	Demons and Spirits, Fairy.
Emperor-worship	Cæsarism, Deification.
Ephod	Dress.
Epilepsy	Disease and Medicine.
Erigena	Scholasticism.
Eternal Life	Life and Death, Ethics (Christian).
Ethiopian Church	Abyssinia.
Evangelical Association	Sects (Modern Christian).
Evangelical Counsels	Counsels and Precepts.
Evangelical Union	Presbyterianism.
Execration	Cursing and Blessing.
False Witness	Oaths.
Familiar Spirit	Demons and Spirits.
Fanaticism	Enthusiasts (Religious).
Fellowships	Brotherhoods, Communistic Societies, Monasticism.

LISTS OF ABBREVIATIONS

I. General

A.H. = Anno Hijrae (A.D. 622).
Ak. = Akkadian.
Alex. = Alexandrian.
Amer. = American.
Apoc. = Apocalypse, Apocalyptic.
Apocr. = Apocrypha.
Aq. = Aquila.
Arab. = Arabic.
Aram. = Aramaic.
Arm. = Armenian.
Ary. = Aryan.
As. = Asiatic.
Assyr. = Assyrian.
AT = Altes Testament.
AV = Authorized Version.
AVm = Authorized Version margin.
A.Y. = Anno Yazdagird (A.D. 639).
Bab. = Babylonian.
c. = *circa*, about.
Can. = Canaanite.
cf. = compare.
ct. = contrast.
D = Deuteronomist.
E = Elohist.
edd. = editions or editors.
Egyp. = Egyptian.
Eng. = English.
Eth. = Ethiopic.
EV = English Version.
f. = and following verse or page: as Ac $10^{34f.}$
ff. = and following verses or pages: as Mt $11^{28ff.}$
Fr. = French.
Germ. = German.
Gr. = Greek.
H = Law of Holiness.
Heb. = Hebrew.
Hel. = Hellenistic.
Hex. = Hexateuch.
Himy. = Himyaritic.
Ir. = Irish.
Iran. = Iranian.
Isr. = Israelite.
J = Jahwist.
J″ = Jehovah.
Jerus. = Jerusalem.
Jos. = Josephus.
LXX = Septuagint.
Min. = Minæan.
MSS = Manuscripts.
MT = Massoretic Text.
n. = note.
NT = New Testament.
Onk. = Onkelos.
OT = Old Testament.
P = Priestly Narrative.
Pal. = Palestine, Palestinian.
Pent. = Pentateuch.
Pers. = Persian.
Phil. = Philistine.
Phœn. = Phœnician.
Pr. Bk. = Prayer Book.
R = Redactor.
Rom. = Roman.
RV = Revised Version.
RVm = Revised Version margin.
Sab. = Sabæan.
Sam. = Samaritan.
Sem. = Semitic.
Sept. = Septuagint.
Sin. = Sinaitic.
Skr. = Sanskrit.
Symm. = Symmachus.
Syr. = Syriac.
t. (following a number) = times.
Talm. = Talmud.
Targ. = Targum.
Theod. = Theodotion.
TR = Textus Receptus.
tr. = translated or translation.
VSS = Versions.
Vulg. = Vulgate.
WH = Westcott and Hort's text.

II. Books of the Bible

Old Testament.

Gn = Genesis.
Ex = Exodus.
Lv = Leviticus.
Nu = Numbers.
Dt = Deuteronomy.
Jos = Joshua.
Jg = Judges.
Ru = Ruth.
1 S, 2 S = 1 and 2 Samuel.
1 K, 2 K = 1 and 2 Kings.
1 Ch, 2 Ch = 1 and 2 Chronicles.
Ezr = Ezra.
Neh = Nehemiah.
Est = Esther.
Job.
Ps = Psalms.
Pr = Proverbs.
Ec = Ecclesiastes.
Ca = Canticles.
Is = Isaiah.
Jer = Jeremiah.
La = Lamentations.
Ezk = Ezekiel.
Dn = Daniel.
Hos = Hosea.
Jl = Joel.
Am = Amos.
Ob = Obadiah.
Jon = Jonah.
Mic = Micah.
Nah = Nahum.
Hab = Habakkuk.
Zeph = Zephaniah.
Hag = Haggai.
Zec = Zechariah.
Mal = Malachi.

Apocrypha.

1 Es, 2 Es = 1 and 2 Esdras.
To = Tobit.
Jth = Judith.
Ad. Est = Additions to Esther.
Wis = Wisdom.
Sir = Sirach or Ecclesiasticus.
Bar = Baruch.
Three = Song of the Three Children.
Sus = Susanna.
Bel = Bel and the Dragon.
Pr. Man = Prayer of Manasses.
1 Mac, 2 Mac = 1 and 2 Maccabees.

New Testament.

Mt = Matthew.
Mk = Mark.
Lk = Luke.
Jn = John.
Ac = Acts.
Ro = Romans.
1 Co, 2 Co = 1 and 2 Corinthians.
Gal = Galatians.
Eph = Ephesians.
Ph = Philippians.
Col = Colossians.
1 Th, 2 Th = 1 and 2 Thessalonians.
1 Ti, 2 Ti = 1 and 2 Timothy.
Tit = Titus.
Philem = Philemon.
He = Hebrews.
Ja = James.
1 P, 2 P = 1 and 2 Peter.
1 Jn, 2 Jn, 3 Jn = 1, 2, and 3 John.
Jude.
Rev = Revelation.

III. For the Literature

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

Baethgen = *Beiträge zur sem. Religionsgesch.*, 1888.
Baldwin = *Dict. of Philosophy and Psychology*, 3 vols. 1901-1905.
Barth = *Nominalbildung in den sem. Sprachen*, 2 vols. 1889, 1891 ([2]1894).
Benzinger = *Heb. Archäologie*, 1894.
Brockelmann = *Gesch. d. arab. Litteratur*, 2 vols. 1897-1902.
Bruns-Sachau = *Syr.-Röm. Rechtsbuch aus dem fünften Jahrhundert*, 1880.
Budge = *Gods of the Egyptians*, 2 vols. 1903.
Daremberg-Saglio = *Dict. des ant. grec. et rom.*, 1886-90.
De la Saussaye = *Lehrbuch der Religionsgesch.*[3], 1905.
Deussen = *Die Philos. d. Upanishads*, 1899 [Eng. tr., 1906].
Doughty = *Arabia Deserta*, 2 vols. 1888.
Grimm = *Deutsche Mythologie*[4], 3 vols. 1875-1878, Eng. tr. *Teutonic Mythology*, 4 vols. 1882-1888.
Hamburger = *Realencyclopädie für Bibel u. Talmud*, i. 1870 ([2]1892), ii. 1883, suppl. 1886, 1891 f., 1897.
Holder = *Altceltischer Sprachschatz*, 1891 ff.
Holtzmann-Zöpffel = *Lexicon f. Theol. u. Kirchenwesen*[2], 1895.
Howitt = *Native Tribes of S. E. Australia*, 1904.
Jubainville = *Cours de Litt. celtique*, i.-xii., 1883 ff.
Lagrange = *Études sur les religions sémitiques*[2], 1904.
Lane = *An Arabic-English Dictionary*, 1863 ff.
Lang = *Myth, Ritual and Religion*[2], 2 vols. 1899.
Lepsius = *Denkmäler aus Ægypten u. Æthiopien*, 1849-1860.
Lichtenberger = *Encyc. des sciences religieuses*, 1876.
Lidzbarski = *Handbuch der nordsem. Epigraphik*, 1898.
McCurdy = *History, Prophecy, and the Monuments*, 2 vols. 1894-1896.
Muir = *Sanskrit Texts*, 1858-1872.
Muss-Arnolt = *A Concise Dict. of the Assyrian Language*, 1894 ff.
Nowack = *Lehrbuch d. heb. Archäologie*, 2 vols. 1894.
Pauly-Wissowa = *Realencyc. der classischen Altertumswissenschaft*, 1893-1895.
Perrot-Chipiez = *Hist. de l'Art dans l'Antiquité*, 1881 ff.
Preller = *Römische Mythologie*, 1858.
Réville = *Religion des peuples non-civilisés*, 1883.
Riehm = *Handwörterbuch d. bibl. Altertums*[2], 1893-1894.
Robinson = *Biblical Researches in Palestine*[2], 1856.
Roscher = *Lex. d. gr. u. röm. Mythologie*, 1884.
Schaff-Herzog = *The New Schaff-Herzog Encyclopedia of Relig. Knowledge*, 1908 ff.
Schenkel = *Bibel-Lexicon*, 5 vols. 1869-1875.
Schürer = *GJV*[3], 3 vols. 1898-1901 [*HJP*, 5 vols. 1890 ff.].
Schwally = *Leben nach dem Tode*, 1892.
Siegfried-Stade = *Heb. Wörterbuch zum AT*, 1893.
Smend = *Lehrbuch der alttest. Religionsgesch.*[2], 1899.
Smith (G. A.) = *Historical Geography of the Holy Land*[4], 1896.
Smith (W. R.) = *Religion of the Semites*[2], 1894.
Spencer (H.) = *Principles of Sociology*[3], 1885-1896.
Spencer-Gillen[a] = *Native Tribes of Central Australia*, 1899.
Spencer-Gillen[b] = *Northern Tribes of Central Australia*, 1904.
Swete = *The OT in Greek*, 3 vols. 1893 ff.
Tylor (E. B.) = *Primitive Culture*[3], 1891 [[4]1903].
Ueberweg = *Hist. of Philosophy*, Eng. tr., 2 vols. 1872-1874.
Weber = *Jüdische Theologie auf Grund des Talmud u. verwandten Schriften*[2], 1897.
Wiedemann = *Die Religion der alten Ægypter*, 1890 [Eng. tr., revised, *Religion of the Anc. Egyptians*, 1897].
Wilkinson = *Manners and Customs of the Ancient Egyptians*, 3 vols. 1878.
Zunz = *Die gottesdienstlichen Vorträge der Juden*[2], 1892.

2. Periodicals, Dictionaries, Encyclopædias, and other standard works frequently cited.

AA = Archiv für Anthropologie.
AAOJ = American Antiquarian and Oriental Journal.

ENCYCLOPÆDIA

OF

RELIGION AND ETHICS

D

DRAVIDIANS (North India).—**1. Meaning of term.**—The term 'Dravidian' (Skr. *Drāviḍa*, the adjectival form of *Draviḍa*) seems to have been primarily an eqnivalent for 'Tamil,' but was extended by Caldwell (*Dravidian Grammar*[2], 4 ff.) to denote the family of languages formerly designated Tamulian or Tamulic, practically inclnding all the languages of Sonthern India,—Tamil, Telugu, Malayālam, Canarese, and Tulu,—which form a group well defined and closely related one to another. Manu (*Institutes*, x. 43, 44) speaks of the Draviḍas as a tribe of Kṣatriyas, or warriors, who had become out-castes; and, as they are the only southern tribe mentioned in his lists, Caldwell supposed that in ancient times the name was loosely applied to the whole of the South Indian peoples. Whether or not this belief was well founded, his invention of the word 'Dravidian' as a generic term for the South Indian group of languages is convenient, and has been generally accepted. By a natural, if not perfectly justifiable, extension the term, primarily philological, has been widely used in an ethnological sense, and we have become accustomed to speak of the Dravidian peoples when we really mean the races speaking the Dravidian languages. Even in this slightly extended sense the term 'Dravidian' is fairly exact and little open to misunderstanding. Risley, however, in his report on the last Censns of India (i. 500), has used the term in a much wider sense. He includes in it races 'extending from Ceylon to the valley of the Ganges, and pervading the whole of Madras, Hyderābād, the Central Provinces, most of Central India, and Chotā Nāgpur'; and he regards this as 'probably the original type of the population of India, now modified to a varying extent by the admixture of Aryan, Scythian, and Mongoloid elements.' Nearly all the other existing races of India, except the Indo-Aryans, such as the Rājputs, Jāts, and Khatrīs of the Panjāb, are classed by him as Scytho-Dravidians, Aryo-Dravidians, or Mongolo-Dravidians. In other words, every element in the present population which cannot be classed as Aryan, Scythian, or Mongoloid, is designated 'Dravidian.' This terminology is, as Risley himself is aware, open to much criticism. Like 'Aryan,' 'Dravidian,' originally a purely philological term, is wanting in precision when used in an ethnological sense. But the name, however unsatisfactory it may be, has now passed into popular use, and the writer of the present article is unable to suggest a better alternative. Here it is taken to denote that form of Animism which constitntes the belief of a body of forest tribes occupying the line of hills which forms the backbone of the Peninsula, extending from the Indian Ocean into the lower course of the Ganges. Analogous forms of belief are found among the agricultural, artisan, and menial popnlation of the great northern Plains, and along the lower slopes of the Himālaya. Beliefs and practices of this type form the basis of popular Hinduism as we now observe it. In fact, no clear line of distinction can be drawn between these forms of Animism and much of what is known as orthodox Hinduism. Both have been in contact for an enormous period of time, and each has reacted on the other, Hinduism admitting many of the Animistic beliefs and rites of the darker races, while these in their turn have largely accepted the outward observances of the Hindu faith, worshipping the Hindu gods, who are often only modifications of their own deities, and adopting the rules of caste and the social restrictions concerning food and personal purity which caste enforces.

2. Primitive Dravidian religion.—An attempt has been made by Caldwell in Southern India to investigate on the basis of philology the primitive Dravidian beliefs.

'They were,' he says (*op. cit.* 118), 'without hereditary "priests" and "idols," and appear to have had no idea of "heaven" or "hell," of the "soul" or "sin"; but they acknowledged the existence of God, whom they styled Kō, or king—a realistic title little known to orthodox Hinduism. They erected to his honour a "temple," which they called Kō-il, "God's house"; but I cannot find any trace of the "worship" which they offered to him.'

In another passage (*ib.* 580 ff.) he compares the demonolatry of the Dravidians with the shamanism of High Asia, noting as features of resemblance the absence of a regular priesthood; the acknowledgment of God's existence, combined with neglect of His worship; the non-existence of belief in metempsychosis; the objects of worship being not gods or heroes, but demons, which are supposed to be cruel, revengefnl, and capricious, and are worshipped with blood sacrifices and wild dances.

'The officiating magician or priest excites himself to frenzy, and then pretends or supposes himself to be possessed by the demon to which worship is being offered; and whilst in this state he communicates to those who consult him the information he has received. The demonolatry practised in India by the more primitive Dravidian tribes is not only similar to this, but the same. Every word used in the foregoing description of Shamanite worship would apply equally to the Dravidian demonolatry; and in depicting the ceremonies of the one race we depict those of the other also.'

It must, however, be remarked that the belief in metempsychosis, unless Caldwell uses the term in its technical sense, is found among the Northern Dravidians.

3. **Shamanism.**—Thus, according to Caldwell, the basis of the beliefs of the South Indian Dravidian tribes is shamanism, and many instances of similar customs can be quoted among those of the North; *e.g.* the Kūrs or Muāsīs of Chotā Nāgpur communicate with the evil spirit which they worship through their priest, the *baigā*. He assembles the people, music and dancing commence, and an invocation of the spirit is chanted—

'until one or more of the performers manifest possession by wild rolling of the eyes and involuntary spasmodic action of the muscles. The affection appears contagious, and old women and others who have not been dancing become influenced by it in a manner that is horrible to contemplate. . . . This certainly is the most thorough form of demon worship with which we have met, and one that must appear to its votaries to testify to its own reality each time it was resorted to' (Dalton, 232 f.).

Similar practices employed for the exorcism of diseases are widely spread among the people of the northern Plains. But even among the tribes which occupy the central range of hills this form of shamanistic orgies seems never to have taken the same hold among the people as has been the case in Southern India, where what is known as Devil Dancing may be observed much more frequently than in the north. This has been described among the Shānārs of Tinnevelly by Caldwell (*op. cit.* 585 f.) and by Burnell ('The Devil Worship of the Tulavas,' *IA*, 1894); and in Northern India, at least, shamanism has played a quite unimportant part in the development of the popular beliefs.

4. **Animism.**—The religion of the Northern Dravidians is mainly a form of Animism, defined by Tylor, who invented the term, as 'the belief in Spiritual Beings' (*Prim. Cult.*[3], 1891, i. 424); or as Jevons (*Introd. to Hist. of Rel.*, 1896, p. 22) defines it: 'All the many movements and changes which are perpetually taking place in the world of things, were explained by primitive man on the theory that every object which had activity enough to affect him in any way was animated by a life and will like his own.' The term has been used by some authors 'to cover the various manifestations of what is commonly but cumbrously styled the "anthropomorphic" tendency of savage thought' (Marett, *Thresh. of Rel.*, 1909, p. 6); and the same author (*ib.* 11) urges that what he calls 'Supernaturalism' is 'not only logically, but also, in some sense, chronologically prior to Animism.' Following the same line of argument, Risley (*Census Report*, 1901, i. 352), while accepting the title 'Animism' for the vague, amorphous conception which he is discussing, endeavours to ascertain the ideas which underlie it:

'What the Animist worships and seeks by all means to influence and conciliate is the shifting and shadowy company of unknown powers or influences making for evil rather than for good, which resides in the primeval forest, in the crumbling hills, in the rushing river, in the spreading tree, which gives its spring to the tiger, its venom to the snake, which generates jungle fever, and walks abroad in the terrible guise of cholera, smallpox, or murrain. Closer than this he does not seek to define the object to which he offers his victim, or whose symbol he daubs with vermilion at the appointed season. Some sort of power is there, and that is enough for him. Whether it is associated with a spirit or an ancestral ghost, whether it proceeds from the mysterious thing itself, whether it is one power or many, he does not stop to inquire.'

And he goes on to suggest that—

'the hypothesis that the earliest beginnings of savage religion are to be sought in the recognition of elemental forces to which, in the first instance, no personal qualities are ascribed, may, perhaps, afford an explanation of a problem which has exercised several inquirers of late—the origin of the *fainéant* unworshipped Supreme beings who figure in savage mythology almost all over the world. . . . When the era of anthropomorphism sets in and personal gods come into fashion, the active and passive powers of the earlier system are clothed in appropriate attributes. The former become departmental spirits or gods, with shrines and temples of their own and incessant offerings from apprehensive votaries. The latter receive sparing and infrequent worship, but are recognized, *en revanche*, as beings of a higher type, fathers and well-wishers of mankind, patrons of primitive ethics, makers of things, who have done their work and earned their repose. The Santāl Marang Buru represents the one; the Bongas or godlings of disease are examples of the other.'

5. **Animism in Northern India.**—The characteristics of Animism in Northern India have often been described, and do not materially differ from what we observe in other parts of the world. Thus Gait writes of Assam (*Census Report*, 1891, i. 93):

'There is a vague but very general belief in some one omnipotent being, who is well-disposed towards men, and whom therefore there is no necessity of propitiating. Then come a number of evil spirits, who are ill-disposed towards human beings, and to whose malevolent interference are ascribed all the woes which afflict mankind. To them, therefore, sacrifices must be offered. These malevolent spirits are sylvan deities, spirits of the trees, the rocks, and the streams, and sometimes also of the tribal ancestors. There is no regular priesthood, but some persons are supposed to be better endowed with the power of divination than others. When a calamity occurs, one or more of these diviners, shamans, or soothsayers is called on to ascertain the particular demon who is offended, and who requires to be pacified by a sacrifice. This is done either by devil dancing, when the diviner works himself into a paroxysm of drunkenness and excitement, and then holds converse with the unseen spirits around him, or by the examination of omens—eggs, grains of rice, or the entrails of a fowl. There is a profound belief in omens of all sorts; no journey is undertaken unless it is ascertained that the fates are propitious, while persons who have started on a journey will turn back should adverse omens be met with on the way. One peculiarity in connexion with their sacrifices may be mentioned. On all necessary occasions, goats, fowls, and other animals are offered to the gods; but it is always assumed that the latter will be content with the blood and entrails; the flesh is divided among the sacrificer and his friends, the presiding soothsayer usually getting the lion's share.'

From another point of view, dealing with the case of persons gifted with the hereditary powers of healing, Rose (i. 161) shows that—

'as primitive religions have no conception of the distinction between the soul and the life, they reason, logically enough from their standpoint, that, precisely as physical life is transmitted, so too is the soul transmitted from one generation to another, and with the life transmigrate, as it were, all the attributes and powers of the progenitor. On this theory it is quite easy to explain the transmitted hereditary power of curing disease or causing evil by means which we may call supernatural.

Animism, as we observe it in Northern India, develops on various lines, according to the diverse objects which are supposed to be occupied and dominated by spirit agency. It will be convenient to begin with the worship of the celestial bodies, though, as a matter of fact, this type of worship is probably later than the cult of tree-spirits or of the village gods. It is in an advanced stage of religious belief, says Robertson Smith (*Rel. Sem.*[2], 1894, p. 114), that celestial gods predominate.

6. **Sun-worship.**—Sun-worship prevails widely among the forest tribes of the Central Hills. When they are in trouble, the Kharwārs appeal to the sun; any open space on which he shines serves as an altar. When a sacrifice is needed, the Kisāns offer a white cock to him, according to the laws of mimetic magic. The Bhuiyās and Orāons worship him as Borām or Dharm Devatā. The Korwās reverence him as Bhagwān, 'the wonderful, the divine one'—a term borrowed from the Hindus; his service is done in an open space, where an ant-hill is used as the altar. The Khariās adore him under the name of Bero.

'Every head of a family should during his lifetime make not less than five sacrifices to this deity—the first of fowls, the second of a pig, the third of a white goat, the fourth of a ram,

and the fifth of a buffalo. He is then considered sufficiently propitiated for that generation, and regarded as an ungrateful god if he does not behave handsomely to his votary.'

Worship of a similar kind is done by the Kols and Orāons (*qq.v.*) (Dalton, 130, 132, 133, 141, 157, 159, 186, 223). The Davars, a forest tribe in the Thāna district on the west coast, worship the Sun at the Divālī, or feast of lights, by throwing red lead towards him, and offering fowls, which are not killed, but allowed to fly into the forest (*BG* xiii. pt. i. 157). The Bhīls of the Sātpura Hills have a form of joint worship of the Sun and Moon under the name of Sondal Deo (Luard, i. 72). Among the village population of the Plains this non-Aryan worship of the Sun has been combined with the Aryan cult of Sūrya or Sūraj Nārāyan.

7. **Moon-worship.**—Moon-worship, though probably earlier in origin than that of the Sun, is much less important. The Binjhiās of Chotā Nāgpur worship Nind-bonga as the Moon, in conjunction with Sing-bonga, or the Sun; and in many other cases the worship of both luminaries is combined, as with the Chandor of the Mundās, known also as Chando Omol or Chanalā, who is worshipped by women, and considered to be the wife of Sing-bonga, the Sun-god, and mother of the stars (Risley, *Tribes and Castes*, i. 136, ii. 103 f.; Dalton, 186). The most curious form is the Chauk Chanda rite in Bihār. On that day the people fast and employ a Brāhman to worship the Moon with an offering of flowers and sweetmeats. It is believed that, if any one looks upon the Moon that day, calamity will befall him. Should any one be unlucky enough to do this, he can repel the dangerous influences by getting himself abused by other people; abuse, like mock fights, being regarded as a means of protection against demons (Frazer, *GB*[2] iii. 93 f.). He therefore, in order to excite their abuse, flings stones on the roofs of his neighbours' houses (*NINQ* v. 23 f.).

8. **Planet-worship.**—The worship of the other planets is of much less importance. Their motions are observed chiefly by astrologers, who calculate the horoscopes of children, and examine the figures with a view to determining whether a marriage will or will not be auspicious. Eclipses are supposed to be the work of spirit agency embodied in the demon Rāhu, who can be scared by noise, while the suffering Sun or Moon can be restored to vitality by sacrifice and fasting during the period of the eclipse (see DOSĀDHS).

9. **The spirits of water.**—According to the theory of Animism, the flow of water in river, stream, or well is considered to be due to spirit action, and floods and whirlpools are the work of a malignant spirit. In the Panjāb, when a village is menaced by floods, the headman makes an offering of a coco-nut (which is probably a form of commutation of an original human sacrifice) and a rupee to the flood-demon. He holds the offering in his hand, and stands in the water until the flood rises high enough to wash it away. Then it is believed that the waters will abate. Some offer an animal victim, a buffalo, horse, or ram, which, after blood has been drawn from its ear as a sign that the offering has been made, is flung into the water (*NINQ* i. 5). At a whirlpool on the Tapti river the Gonds sacrifice a goat before daring to cross the stream (*Berar Gazetteer*, 1870, p. 35). This propitiation of the water-spirit develops in two directions—first, into the worship of rivers held specially sacred, like the Ganges and Narbadā, on whose banks, when the sinner bathes, he enters into communion with the spirit of the stream. As his body is cleansed, so his soul is relieved from pollution. His idea of purification is not spiritual in our sense of the word—that is foreign to primitive habits of thought—but spiritual in the sense of getting rid of evil spirits and their dangerous influence. In the second place, the vague spiritual entity which animates the water is personified into one or other of a host of water-godlings, like Kwāja Khizr or Pīr Bhadr, who are worshipped by fishermen and boatmen whose business is on the great waters. Wells, in the same way, are sacred. Some have underground connexion with a holy river; others are appropriated to the cult of some special god; others are oracular. Hot springs, in particular, indicate the presence of the fire-spirit; of a demon which, if not propitiated, brings disease; of a Rākṣasa or demon slain by a goddess whose blood keeps the water warm (Waddell, *Among the Himalayas*, 203; *BG* xiv. 373).

In the same way the fall of rain is due to spirit agency which, if not conciliated, causes drought. The curious nudity rite, by which women endeavour to repel the evil influence by dragging a plough through the soil—a good instance of mimetic magic—is familiar (Crooke, *PR* i. 69; Frazer, *GB*[2] i. 98).

10. **Wind-spirits.**—On the same principle the spirit which causes wind is personified in the Panjāb as Sendū Bīr, the whistling god, whose voice announces the approaching storm. He has now been adopted into Hinduism as an incarnation of Siva, and is regarded as a malignant deity, causing madness, and burning houses, stealing crops, and otherwise immoral (Rose, i. 130). When a whirlwind comes, the Ghasiyā women in Mirzapur hold the house thatch, and stick an iron or wooden spoon into it as a charm against the demon; if a man were to touch it, the storm would sweep the roof away (*NINQ* i. 68). In the Panjāb, Pherū is the deified saint who rides on the little whirlwinds which blow in the hot weather, and an appeal to him protects the worshipper from harm (Crooke, *PR* i. 81).

11. **The hail-demon.**—Hail also is the work of a spirit, which, under the rules of sympathetic magic, can be scared by cutting the hailstones with a knife; or the business of repelling it is entrusted to a special magician, like the *śilārī* of eastern Bengal, who, when a storm approaches, rushes almost naked from his hut, with a rattan wand in his right hand, invoking Parameśvara, the Supreme God. He ascends a mound, and, spreading abroad his hands and indicating by a motion of his wand the direction in which he desires the hail to pass away, he recites a series of doggerel incantations (Wise, 368 f.). The Garpagarī of the Central Provinces and the Wolī or Oliyā of Kumaun exercise similar functions (*NINQ* iii. 106; *Central Provinces Gazetteer*, 1870, p. 48).

12. **Tree-spirits.**—The tree with its waving leaves and branches, apparently dying in the autumn and waking to new life in the spring, providing various medicines and intoxicants, is naturally regarded as inhabited by a spirit. Such spirits, impersonations of the vague terrors of the jungle, the causers of death, accident, and disease to those who intrude within their domains, are generally regarded as malignant. But, when the tribe adopts a settled life, it is provided by the tree-spirit with food and shelter. Tribes like the Mundās take care to preserve a patch of the primitive jungle in which the spirits disestablished by the woodman's axe may repose. Here most of the tribal religious worship is conducted (see ORĀONS). The cult at a later period develops into reverence for one or other of the special varieties of trees, some of which, like those of the fig genus, are regarded as the abode of the collective gods; others are appropriated to the service of individual gods, as the Bel (*Ægle marmelos*) to Siva, or the Tulasī (*Ocymum sanctum*) to Viṣṇu. Under the shade of the village tree, where the business of the

community is conducted, are placed the rude stones which collectively embody the Grāma-devatā, or local gods and godlings (see § 27).

These tree-spirits, in their most primitive conception, form a host of beings without special names, and to whom no special functions are assigned. But in process of time they tend to become concentrated into one or more distinct personalities, like the Silvanus of the Romans. Such is Barām, the forest deity of the Juāngs of Keunjhar, who stands at the head of their system, and is regarded with great veneration (Risley, *Tribes and Castes*, i. 353). We find also, in Bengal, Thānpati, one of the elder gods of the Savarās, 'lord of the sacred grove' (*thān*) (*ib.* ii. 244). In the same category is Sarnā Būṛhī, the 'old lady of the grove' (*sarnā*) of the Orāons, who corresponds to Deswālī, the 'lady of the cleared land' of the Mundās (Bradley-Birt, *Chota Nagpore*, 39). In the United Provinces her place is taken by Bansaptī Mā (Skr. *vanaspati*, 'ruler of the wood'), who is known by the Musahars, a half-civilized jungle tribe, as Bansatī or Bansurī.

'By her command the trees bear fruit, the bulbs grow in the earth, the bees make honey, the tussar worm fattens on the *āsan* leaf, and lizards, wolves, and jackals (useful as food to man) multiply their kind. She is the goddess of child-birth. To her the childless wife makes prayers for the grant of offspring. In her name and by her aid the medicine-man or sorcerer expels devils from the bodies of the possessed. In her name and to her honour the village man kindles a new fire for lighting a brick-kiln. Woe to the man who takes a false oath in the name of Bansatī!' (Nesfield, *Calcutta Rev.* lxxxvi. 264).

So with the Thārūs of the sub-Himālayan Tarāī. They fear the demons lurking in the forest trees, especially the weird cotton tree (*Bombax heptaphylla*).

'Only the terrible cry of fire will bring these poor fear-stricken creatures to open their doors and remove the heavy barriers from their huts at night; and even in the daytime, amid the hum of human life, the songs of the birds, and the lowing of cattle, no Thāru, man, woman, or child, will ever venture along a forest line without casting a leaf, a branch, or a piece of old rag upon the Bansati formed at the entrance of the deep woods, to save themselves from the many diseases and accidents the goblins and malicious spirits of the forests can bring upon and cause them. The Bansatī, or "good spirit" of the woods, is a square space cut in the ground, six feet by six, and covered with pine branches' (Knowles, 214).

Another form of this cult, already alluded to in the case of the Thārūs, is that of attaching rags to trees. Trees thus decorated are to be found all over Northern India, and are known as Chithariyā or Chithraiyā Bhavānī, 'Our Lady of Tatters,' or in the Panjāb as Lingrī Pīr, or the 'Rag Saint' (Crooke, *PR* i. 161). The question of the motive of these rag-offerings has been fully discussed by Hartland (*LP*, ii. 175 ff.). Discarding the two most usual explanations—either that they are offerings to the god or presiding spirit, or that they contain the disease of which one desires to be rid, and transfer it to any one who touches or handles them—he regards the rite as another application

The evidence from Northern India corroborates this explanation, which throws much light on the Animistic practices which are discussed in the present article.

One peculiar custom connected with trees is that of marrying the bride and bridegroom to them—of which numerous examples have been collected in Northern India (Crooke, *PR* ii. 115 ff.). The object of this custom is obscure. In some cases the intention may possibly be to communicate to the newly-wedded pair the vigorous reproductive power of the tree. In most cases, however, the intention seems to be to transfer to the tree the malignant spirit influence which menaces them, and, in particular, endangers the fertility of the union (Frazer, *GB*[2] i. 195 f.).

13. **Worship of Mother Earth.**—From the worship of the vague spiritual beings with whom the Dravidian peoples the forests amidst which he dwells, and in which he collects the game, roots, and fruits which constitute his only food supply, we pass on to the worship of the Earth-Mother, which marks the adoption of a settled life and his earliest experiments in agriculture. Among many savage races the Earth-deity is spiritualized as female (Tylor, i. 326); and it has been suggested with some degree of probability that the predominance of Mother-worship in India and elsewhere represents a survival from the matriarchate, the prevalence of which has been attested in India by a considerable amount of evidence (J. E. Harrison, *Proleg. to Gr. Religion*, 1903, pp. 261, 499; Risley-Gait, *Census Report*, i. 448). As in the case of the Greek *Thesmophoria*, the gist of which was a mimicking of Nature's processes, in a word, the ritual of sympathetic or mimetic magic—the women fasting seated on the ground because the earth was desolate, then rising and revelling to stir the Megara to imitate the impulse of spring—the North Indian cult of Mother Earth is largely in the hands of women. Again, though we find in the Rigveda the personification of Dyaus and Pṛithivī as respectively gods of heaven and earth, from whom the other deities and even the whole universe were supposed to spring, this cult is quite different from that of the Earth-Mother as we find it among the Dravidians (Monier-Williams, *Brāhmanism and Hinduism*[4], 1891, p. 182; Oppert, 402).

14. **Restoration of the fertility of the Earth-Mother.**—The theory of the Dravidians, like that of many primitive races, *e.g.* the Romans (Granger, *Worship of Romans*, 1895, p. 208), is that the Earth after bearing each successive harvest becomes exhausted, and that if she is to continue to discharge her functions she must be periodically refreshed and roused to new activity. In one of the dances of the Kol women of Chotā Nāgpur, they all kneel and pat the ground with their hands in time to the music, as if coaxing the earth to be fertile; and this also doubtless is the intention of the Orāon dance when the performers 'all face inwards and simultaneously jumping up come down on the ground with a resounding stamp that marks the finale of the movement' (Dalton, 198, 255). The same rite was performed at the worship of Demeter Cidaria in Arcadia, and it is found in many other parts of the world (Frazer, *Pausan.*, 1900, iv. 239). Secondly, as among the Celts (Nutt, *Voy. of Bran*, ii. [1897] 150), it was believed that the Earth-spirit needed to be periodically refreshed with human blood. This was one of the ideas underlying the rite of *meriah* sacrifice among the Kandhs (*q.v.*). Thirdly, the fertility of the soil was supposed to depend upon the periodical marriage of Mother Earth with her male consort. The cult of this divine pair meets us throughout the whole range of Dravidian myth, belief, and ritual. Thus in Bengal we find Būṛhā-Būṛhī,

'the old man and the old lady,' whom the Rautiās regard as the ancestors of mankind; they are in Eastern Bengal invoked in times of sickness and trouble; they generally haunt a sacred tree, but in their worship, if a perfect tree be not procurable, a branch of it will answer the purpose (Wise, 132 f.; Risley, *op. cit.* i. 270, 381, ii. 203). The Majhwārs of Mirzapur worship the pair Dih and Deohārin, the impersonated protectors of the village site (*dīh*), and they also recognize as crop-guardians the pair Ningo Bāghiyā, the phallic tiger, to whom, when the grain is ripe, the first five handfuls, after being taken home and crushed, are offered; and Hariyārī Mātā, 'the mother of greenery,' to whom a burnt sacrifice is made in the field at sowing and harvest time (Crooke, *Tribes and Castes*, iii. 435, 447). The Pāvrās, a forest tribe in Khāndesh, sacrifice, before harvest, goats and fowls, and make an offering of corn to a pair called Baṛā Kumbā and Rānī Kājhal, who occupy adjoining sacred trees; the pair are invoked at the marriage rites in a song which describes the wedding of these deities of the forest (*BG* xii. 97 f.). The divine pair worshipped by the Kharwārs of the Central Hills are Chandol and Chandā, apparently moon-deities (the moon having a powerful influence over the fertility of the crops), who correspond to the Muṇḍā Desaulī and his wife, Jhārerā or Maturū (Dalton, 130, 188; Frazer, *GB*[2] ii. 154 ff.). The Kharwārs of Palamāu reverence in the same way a pair known as Darhār and Ḍākin, a boar and country spirits being offered to the male, and a sow and spirits to the female; in Mirzapur, their goddess Devī is associated with the cult of the phallic Gansām (*NINQ* i. 40). In the United Provinces and Bihār we meet a pair of village sprites, Chordeva and his spouse Chordevī, or Jāk and Jaknī, who are known as the thieving deities, because husband and wife live in separate villages, and, when the crops in one village are more productive than those of another, the people think that the Jāk robs the fields of the barren tract to support his wife. This reminds us of the law of the XII Tables, which 'forbade people to spirit away the crops from a neighbour's field by means of spells and incantations' (Crooke, *TC* iii. 447; Frazer, *Pausanias*, v. 57).

In a higher stage of culture among the people of Bengal, Sītalā, a form of the Mother-goddess, who presides over smallpox, has as her husband Ghaṇṭakaraṇa, who is now being adopted into the cult of Śiva; and even the Sun-god is provided with a partner (Gait, *Bengal Census Report*, i. 193). The patron pair in Rājputāna are Ekliṅga, whose name betrays his phallic origin, now known as Īśvara, the lord Śiva, and Gaurī, the yellow lady, who is identified with Annapūrṇā, 'she that is filled with *or* possessed with food.' At the opening of the year a deputation is sent outside the city to provide earth for Gaurī, thus typifying her as the Earth-goddess. With this image is united one of Īśvara, 'and they are placed together; a small trench is then excavated, in which barley is sown; the ground is irrigated and artificial heat supplied till the grain germinates, when the females join hands and dance round it, invoking the blessings of Gaurī on their husbands. The young corn is then taken up, distributed, and presented by the females to the men, who wear it in their turbans' (Tod, i. 603). This is one of the Gardens of Adonis so fully illustrated by Frazer (*Adonis, Attis, Osiris*[2], 1907, p. 194 ff.). In Southern India even Viṣṇu is associated with the Earth-goddess Bhūmi-devī, as her consort (Oppert, 363); and in a still later development Śiva is represented in his androgynous form as Ardhanārīśa, with a hermaphrodite body, uniting in himself the principles of male and female generation.

15. **Marriage of the Earth-goddess.**—The rites of symbolic marriage of the Earth-Mother to her partner are periodically performed by many of the Dravidian tribes. Among the Kharwārs of Chotā Nāgpur she is represented by Mūchak Rānī, whose marriage is performed every third year with great pomp and ceremony. The people assemble with drums and horns, and sing wild songs in honour of the bride and bridegroom. The officiant enters a cave, and returns bringing with him the Rānī, who is represented by a small oblong-shaped stone daubed with red lead. This is dressed in wedding garments and carried in a litter to a sacred tree, under which it is placed. The procession then starts for another hill, where the bridegroom, supposed to belong to the Agariyā, or iron-smelter caste, resides. The stone of the goddess is here flung into a chasm; but it is believed that the two hills are connected by an underground passage, by which the bride returns, always in the form of the same stone, every third year to her father's house (*NINQ* iii. 23 f.). Among the Musahars of the United Provinces, Bansaptī, the Forest Mother, is married to Gansām or Bansgopāl, who is represented by a mud pillar in phallic form (Crooke, *TC* iv. 34 f.). In Bihār, Hara or Śiva is combined with his female form in Hargaurī, who is worshipped at marriages (Buchanan, i. 420). In Khāndesh, Rānubāī is a favourite family-goddess. Her marriage and investiture with the sacred thread are performed in a seven days' ceremony, in which the goddess is represented by an image made of wheat flour (*BG* xii. 51). The marriage of Dhartī, or Mother Earth, as performed by the Orāons, is described in the article ORĀONS. In the Panjāb, Darya Sāhib, the god of the river Indus, is married in great state to the goddess, who is embodied in a pot of hemp; and Devī, in the form of Ganggor, represented by an image of clay or cow-dung, is loaded with ornaments, and, after her marriage is performed, is flung into a well (Rose, i. 118, 128). When the tutelary deity of Marwār fell into the hands of the prince of Amber, he married him to his own female deity, and then returned him to his original owner (Tod, ii. 123). As among many savage races, like the Maoris, the legend is told of the severing of the wedded pair, Heaven and Earth, so the Gonds believe that 'formerly the sky lay close down upon the earth. One day an old woman happened to be sweeping, and when she stood up she knocked her head against the sky. Enraged, she put up her broom and pushed the sky away, when it rose up above the earth, and has ever since remained there' (Russell, i. 94; Lang, *Custom and Myth*[2], 1893, p. 45 ff.). It is perhaps possible that we have an echo of the same marriage rite in the tale of the wedding of Ghāzī Miyān, the Muhammadan hero, who has been adopted from Musalmān hagiology into the worship of the Dravidians of the Plains, and whose career ends in untimely death (*NINQ* iv. 70; Crooke, *PR* ii. 324). This is also perhaps the origin of the myth of Dūlhā Deo, 'the bridegroom god,' wedded and slain in the midst of the marriage rites. He reminds us of Attis, god of vegetation, married and periodically put to death in order to promote the fertility of the soil (*NINQ* iii. 39, 93; Crooke, *PR* i. 119 ff.). With this, in the legend of Dūlhā Deo, is combined the world-wide myth of the disappearance of bride or bridegroom in consequence of the infringement of some mystic rule of tabu (Lang, *op. cit.* 64 ff.).

16. **Ritual of the worship of Mother Earth.**—Among the forest tribes of the Central Hills, Mother Earth is supposed to live with the other village gods in a pile of stones collected round the sacred tree of the hamlet. Worship is done through the *baigā* (*q.v.*), or aboriginal priest, at the chief agri-

cultural seasons—ploughing, sowing, and harvesting—with an offering of flowers and the sacrifice of a goat, the flesh of which is eaten by the men, boys, and unmarried girls, no grown-up girl or married woman sharing in the rite. This is the formal village-worship; but, as we have seen (§§ 9, 14), grown-up women have private services of their own, which are distinct from the tribal celebrations. Other tribes worship her when they begin wood-cutting or collecting thatching-grass, or gleaning the petals of the mahua (*Bassia latifolia*). With some tribes the offering consists of molasses, butter, cakes, a fowl, and some spirits. According to the principles of mimetic magic, the goat should be grey-coloured, and the fowl speckled (*NINQ* i. 77).

17. **Her benign and malevolent aspect.**—In fact, the character of the offering marks the twofold conception of the goddess. In her benevolent form she is Mother of all things, giver of corn, producer of fertility in man and beast. Accordingly she is presented with offerings of flowers, milk, or the fruits of the earth. In her malevolent and chthonic aspect, which would naturally be recognized by tribes which dispose of their dead by inhumation, she is appeased by blood sacrifices of animals, or even, as in the case of the Kandhs, with human victims. Macpherson, writing of this tribe (*Calcutta Rev.* v. 54), states that in her malevolent form, as the supreme power,

'when a tribe engages in war with enemies of another race, her awful name is invoked, and vows of sacrifice are recorded in the event of success. Her nature is purely malevolent; but she does not seem to interfere with the independent action of other deities in their respective spheres, and she is nowhere peculiarly present.'

On the other hand, in her benign character she

'presides over the operations of nature. . . . Upon her depend the fecundity of the soil and the growth of all rural produce, the preservation of the patriarchal houses, the health and increase of the people, and, in an especial manner, the safety of the flocks and their attendants. She is worshipped by human sacrifices. She has no fixed corporeal shape, form, image, symbol, or temple. But she, together with the other superior gods, may temporarily assume any earthly form at pleasure; as, for instance, that of the tiger as convenient for purposes of wrath.'

In her benign form, among the Kharwārs of Mirzapur she is honoured by sprinkling pulse and rice on the ground, with the prayer: 'Mother Earth! Keep us in prosperity, and protect the ploughman and oxen!' (*NINQ* i. 141); while the orthodox Hindu, at the time of sowing and harvest, prays: 'I salute the Earth, the realizer of all desires, she who is blessed with all kinds of riches and creatures; she who is contented, faithful, and virtuous, the giver of all that one asks for the realization of desires' (*ib.* v. 76). In the eastern Panjāb she takes the form of Shāod Mātā, 'Mother of fertility,' and she is represented by a plough coulter placed between two round balls of cow-dung, probably with a phallic significance. Over these are laid leaves of holy trees, and the peasant, as he measures the corn on the threshing-floor, prays: 'O Mother Shāod! Give us increase, and make our bankers and rulers contented!' (*ib.* i. 173). Her malevolent nature appears in the Kandh prayer: 'We are not satisfied with our wealth; but what we do possess we owe to you, and for the future we hope for the fulfilment of our desires. We intend to go on such a day to such a village, to bring human flesh for you. We trust to attain our desires through this service. Forget not the oblation!' (Macpherson, *Memorials*, 1865, p. 117). Probably the idea of communicating the fertility of the Mother is the object of the curious Maṭmangarā rite at the marriages of the lower castes, when the 'lucky earth' is dug from the village tank, and brought to form the marriage altar and the fireplace at which the wedding feast is cooked (Crooke, *PR* i. 27).

18. **The Mother identified with the snake.**—In her chthonic aspect the Mother-goddess and her partner are naturally identified with the snake, an animal which lives in holes and moves in the darkness. This was the case at the Greek *Thesmophoria*, where the pigs' flesh thrown into the chasms of the earth seems to have been regarded as in some sort the due of the earth-powers as represented by the guardian snakes; the Erinys, the offended ghost, was considered to be a snake, and this was also the guise of the death hero (J. E. Harrison, *op. cit.* 123, 232, 326 ff.). The Kūrs of Chotā Nāgpur claim descent from Nāga Bhūiya and Nāga Bhūiāin, the male and female earth-serpents (Dalton, 231). The Mother-goddess of South India, Ellammā, has images of snakes in her temple; and Durgammā, another form of the deity, has her temple built over a snake-hole beside a sacred Margosa tree, which, with the snake, if there be one there, is held sacred, and both are symbols of the goddess (Oppert, 469, 497). The Ḍāngis of the United Provinces worship the Earth-god, Bhūmiyā, as an old snake; and in Bundelkhand snakes are worshipped under the name of Bhiarānī, a form of Devī, a title which is said to mean 'dweller in the earth' (Luard, i. 75). From the same point of view, the snake is the guardian of underground treasure (Crooke, *PR* ii. 134 ff.).

19. **The cult of the Earth-Mother developing into a general Mother-cult.**—It seems probable that from this primitive conception of the Earth-Mother as either kindly or malevolent has developed the worship of the Mother-goddesses, which forms such an important element in the beliefs of the people of Northern India. As in Greece, the close connexion of the Mother-goddess with the earth is illustrated in sacred art. As in the Greek vases she appears rising out of a mound, so Ellammā's image is a figure hewn in stone, fashioned so that only the head is visible, while the body is concealed in the earth; and the same conception appears in Buddhist bas-reliefs, where we find the Earth-goddess, Mahāpathavī or Pṛithivī, rising out of the ground and supporting the horse of the Master (J. E. Harrison, *op. cit.* 277 ff.; Oppert, 468; Grünwedel, *Buddhist Art in India*, 1901, p. 100 f.).

This conception of the Mother-goddess seems to be the most important element in the Dravidian cultus which has been imported into Hinduism. Like the Earth-Mother, the other Mothers appear in a double manifestation, at once benignant and malevolent. This is shown in the epithets of Devī, who is the most common type of the class—Kanyā, 'the maiden'; Kanyākumārī, 'the youthful virgin'; Sarvamaṅgalā, 'always auspicious'; Śākambharī, 'nourisher of herbs'; and, on the other side, Chāmuṇḍā, 'the demon-slayer'; Kālī, 'the black one'; Rajasī, 'the fierce'; Raktadantī, 'bloody-toothed.' It is this contrariety of aspect which renders the cult of the Mother-goddesses so perplexing. In one contrasted and yet identical form they both cause and remove disease. Thus in eastern Bengal the Mother is usually worshipped under the form of Siddhīśvarī, 'perfected queen,' or Vṛddhīśvarī, 'old queen'; but when epidemic diseases break out she is appealed to with an euphemistic epithet as Rākhyā or Bhadrā Kālī, 'Kālī the protector, the auspicious' (Wise, 135). In this benignant form she is one of the favourite objects of worship in Bihār as Kṣemakarṇī, 'she who confers blessings' (Buchanan, ii. 49). In the Central Provinces the village-goddess Devī represents the Earth-goddess; she can cause or avert smallpox and cholera, and is incarnate in the body of any one suffering from the former disease; so much so that those who enter the room where the

patient lies take off their shoes as a mark of respect to her (Russell, i. 79).

20. Varied manifestations of the Mothers.—Hence the manifestations of the Mothers are infinitely varied. Bahucharājī, who has a shrine at Anjār in Kachchh, is the 'looking-glass goddess,' before whom the votary worships his own image on a sheet of silvered glass; but, to illustrate the elasticity of the cult, in Baroda she is said to have been originally a Chāran woman, who when attacked by robbers committed suicide, and was elevated to the rank of a manifestation of the divinity (*BG* v. 212). Another group of six Mothers in Kāthiāwār are also said to be the daughters of a Chāran who was dismissed from court as unlucky because he was childless. He practised austerities at a shrine of Kālī, and his six daughters, who were born in response to a prayer addressed to the goddess, became Mothers (*ib.* viii. 642 f.). The cult, in fact, is vague in the extreme. The worship of Ekvīrā, the Mother of the Kārli Caves, is mixed up with the original Buddhism, of which this place was a centre, part of the cultus being the circumambulation of a *dagoba*, or Buddhist relic shrine; and the temple of the Turturiā Mother is served by women, who are supposed to be modern representatives of the original Buddhist nuns (*ib.* xi. 383; Cunningham, *Archæological Reports*, xiii. 147). It is in Western India that the Mother-cult most widely prevails. Each Rājput clan in Kāthiāwār has a patron Mother; all Rājputs visit the Mātā with their brides immediately after marriage, and the mint at Navanagar is presided over by the Mother Āśāpurī, 'hope-fulfiller'; but peculation goes on under her very eyes.

21. Ritual of Mother-worship.—The worship at the famous shrine of Becharājī in Baroda may be taken as an example of the ritual of the Mother-cult, which here is almost purely Animistic. Every morning the head officiant, after ablution, enters the adytum and pours a mixture of milk, curds, clarified butter, sugar, and honey—known collectively as *pañchāmṛita*, 'the five divine foods'—over the image, and drops water over it through a perforated metal pot, while a Brāhman chants hymns from the Veda. Coloured powder and flowers are placed upon the image, incense and camphor are burnt, and silver lamps are kept lighted day and night. After the worship, the 'children's food' (*bālabhojya*), consisting of wheat-flour, sugar, and clarified butter, is offered with a coco-nut (a survival of human sacrifice), and the morning service ends with the waving of lamps (*ārti*), burning of camphor, ringing of bells, and beating of gongs. Another meal of sugar and milk is offered to the goddess about 10 a.m., a little being sprinkled over the image, and the rest consumed by the priests. In the evening a passage of the sacred book telling of the exploits of the Devī is read, the figure is washed and worshipped, and more cooked food is presented (*BG* vii. 611 f.).

More usually the Devī or Kālī receives a blood offering, some of which is sprinkled upon the altar (see DEVĪ PĀTAN).

Of all the orthodox Hindu cults that of Devī is most akin to Animism, and hence many of the forest tribes of the Central Hills accept as representatives of her many village-goddesses, such as Khermātā, primarily an Earth-goddess; the Desahāī Devī, or goddess of the four quarters of the hamlet; the Chithraiyā Devī, or goddess of rags (§ 12), besides various local incarnations like the Vindhyabāsinī Devī, the goddess of the Vindhyan range (Russell, i. 83). In the Panjāb we find unmarried girls recognized as representatives of Devī, to whom, as to the goddess, offerings are made twice a year. Here, also, girls make images of Śiva and his spouse Pārvatī, Devī in her mountain form, and afterwards throw them into the water. The popular explanation is that this rite commemorates the suicide of a woman married to a boy husband.

'But a different explanation has been suggested. The deities Śiva and Pārvatī are conceived as spirits of vegetation, because their images are placed in branches over a heap of flowers and grass; but this theory leaves many points unexplained, and until we have full details of the rites observed at all the festivals of Devī we cannot hope to discover the ideas underlying these local rites' (Rose, i. 126).

22. The Disease-Mothers.—Mention has been already made (§ 19) of Kālī as the causer and remover of disease. The control of disease is in the hands of a host of these Mothers, to each of whom the power over a certain malady is assigned; Śītalā, for instance, controlling smallpox, Mārī Mātā cholera, and so on (see BENGAL, § 13; Crooke, *PR* i. 123 ff.). These functions are not, however, clearly fixed, and are often attributed to the Mothers of orthodox Hinduism. Thus the Gangotā cultivators in Bihār worship Jagadambā, 'Mother of the world,' twice or three times a month, with offerings of husked rice and incense; while under the title of Bhagavatī, 'the worshipful one,' Devī is propitiated at weddings and in times of sickness, by offerings of kids, butter, basil leaves, and vermilion (Risley, *Tribes and Castes*, i. 269).

Shamanism is an important agency in the cure of disease. The *kaphrī*, as Buchanan (ii. 131) calls the exorcist in Bihār, makes an offering to the deity of disease, and becomes violently agitated before he announces the treatment which he recommends. When a person is bitten by a snake he is carried to the shrine of Biṣaharī, 'she who removes venom,' and the practitioner foretells the event by staring into a vessel of water, the troubling of the water indicating the arrival of the deity to take part in the cure. In the eastern Panjāb, the exorcist, who is here called *bhagat*, 'worshipper,' builds a shrine to his familiar, before whom he dances. When he is to be consulted, which should be at night, the inquirer provides tobacco and music. The former is waved over the person of the invalid and given to the *bhagat* to smoke. While the music plays and a butter lamp is lighted, the *bhagat* sometimes lashes himself with a whip, under which treatment he is seized with the afflatus, and, in a paroxysm of dancing and head-wagging, states the name of the malignant influence, the manner in which it may be propitiated, and the time when the disease may be expected to abate. Or he waves corn over the sick man and counts out the grains into heaps, one grain for each spirit which is likely to be at the bottom of the trouble, and that one on whose heap the last grain falls is the one to be attended to (*NINQ* i. 127 f.). In Jalandhar a scape-animal is used; a goat or young buffalo is selected, blood is drawn from its ear, and its face is smeared with vermilion. Then it is taken round and outside the village, bearing the malady with it. It finally becomes the perquisite of the exorcist (*ib.* ii. 191). An important part of the treatment is the muttering of spells and the waving of peacock feathers to scare the spirit (*ib.* iii. 74).

23. Mountain-worship.—'Like the Baal of the Semites, the local Jupiter was commonly worshipped on high places. Wooded heights, round which the rain-clouds gather, were indeed the natural sanctuaries for a god of the sky, the rain, and the oak' (Frazer, *Lect. Kingship*, 1905, p. 208; cf. Farnell, *CGS* i. 4, 51; Fowler, *Roman Festivals*, 1899, pp. 222, 261). The same ideas, combined with the awe and mystery which surround them, doubtless commended the worship of mountains to the Dravidian tribes. Those of the Central Hills imagine each peak to be the haunt of an evil spirit, which they are careful to propitiate before they make an ascent; and it is a common belief

that mountains were formed by rival divine or evil powers warring with each other and using the rocks as missiles (*NINQ* i. 47). The cult of mountains has been regarded as purely Dravidian; but this is very doubtful, and at any rate the reverence paid by the Aryans to the mighty Himālayan peaks must have dated from the time when they first came under observation. Many of them became seats of the Hindu gods, and one title of Siva is Giriśa, while that of his consort is Pārvatī, both meaning 'mountain-dweller.'

In Bengal the Mundās, Santāls, Mahilīs, and other tribes of Chotā Nāgpur revere a mountain-god called Marang Buru or Baṛ Pahāṛ, 'great mountain,' to whom their tribal priest makes sacrifice of buffaloes and other animals. These sacrifices are made at the chief visible habitation of the deity, a bluff near Lodhma (Gait, i. 191). In the Hoshangābād district of the Central Provinces, Sūryabhān, or 'Sun-rays,' is a common name for isolated, round-peaked hills, on which the Sun-god is believed to dwell; and among the Kurkūs, Dūngar Deo, 'the mountain-god,' resides on the nearest hill outside the village, where yearly at the Dasahra festival he is worshipped with an offering of two coco-nuts, five dates, and a ball of vermilion paste. They regard him as their tribal god (Elliott, *Settlement Report*, 1867, pp. 121, 254).

24. Animal-worship.—The Northern Dravidians share with other primitive races the belief that animal intelligence is identical with that of man; that animals can, as in the folk-tale world, talk and act precisely as men do; that men and animals may for a time resume the forms which had once been theirs, or, for that matter, take any other. Hence shape-shifting, as it has been called, is widely accepted, and it may even take place by means of death and a new birth, the powers and qualities or even the actual form of a deceased ancestor being reproduced in his descendants. Hence various animals are worshipped within the Dravidian area, of which a few instances will be given here to illustrate the local cults as a supplement to the facts collected in art. ANIMALS.

(*a*) *The horse.*—Some of the Rājput tribes of Gujarāt worship Ghoṛā Deva, 'the horse-god,' in the form of a horse of stone, at their main festivals; and on the sixth day after a birth the Ojhā Kumhār potters of Kachchh form a horse of clay and make the child worship it (Campbell, *Notes*, 292). One of the chief gods of the Goṇḍs is Kodapen, the horse-god, a stone which is worshipped on the outskirts of the village at the commencement of the rainy season. Only men join in the worship, women being excluded. The *bhūmak* priest besmears the stone with red lead, presents a horse made of pottery, then a heifer, on the head of which he pours spirits and prays: 'Thou art the guardian of the village; we have come and offered to thee according to our ability. If in anything we have failed to please thee, forgive us. Protect our oxen and cows; keep us in safety; let there be no fear in the jungle.' After this the victim is slain and boiled, some of the meat is laid with flour before the god, and the worshippers eat the remainder of the food (Hislop, App. i. p. iii). The Goṇḍs and other Central Indian tribes place earthenware horses on the tombs of ancestors and on the village shrines, which serve as steeds for the sainted dead and for the local gods.

(*b*) *The tiger.*—The tiger is naturally worshipped by the forest tribes. Baghīśvar, 'the tiger lord,' is a favourite deity along the Vindhyan and Kaimūr ranges. The Santāls and Kisāns worship him as Banrājā, 'forest king,' will not kill him, and believe that he spares them in return for their devotion. Even those who do not actually worship him swear by his name or on his skin, as is the case among the Hos and Juāngs (Dalton, 132, 133, 158, 214). The tribes further west, like the Kurkūs, worship Bāgh or Vāgh Deo, and a female Wāghāī Devī, served by a *bhūmak* priest, who pretends to know spells by which he can protect himself and his parishioners from the beast (*Berar Gazetteer*, 191 f.; Elliott, *op. cit.* 255 f.). The belief in tiger-men, or men who are really metamorphosed tigers, is common, the man-eater being often a person of evil life changed into that form (Gait, *Assam Census*, i. 250 f.; Crooke, *PR* ii. 216 ff.).

(*c*) *The cow.*—Cow-worship, which appears to arise among pastoral tribes which have attained some degree of culture, is naturally not found highly developed among the Dravidians, and the life of the animal is not protected by the effective tabu enforced by orthodox Hindus. The Goṇḍs, for instance, kill a cow at the funeral rites and hang the tail of the victim on the gravestone as a sign that the obsequies have been duly performed; and the Kurkūs sprinkle the blood of a cow on the grave, believing that if this rite be omitted the ghost refuses to rest and returns to earth to plague the survivors (Dalton, 283; *IA* i. 348 f.). See art. Cow (Hindu).

It is only among the semi-Hinduized forest tribes that the cult of the cow has made much progress. In Nepāl, where under the present dynasty the rules of Hinduism are rigidly enforced, it is deemed the highest sacrilege to approach the image of the sacred animal, except in a position of adoration, 'insomuch that a malicious person, wishing to suspend the agricultural operations of his neighbour, would be sure to effect his purpose by placing a stone or wooden figure of a cow in the midst of a field' (Kirkpatrick, 100). Further west the cult of the cow is closely connected with that of Kṛṣṇa, and in Central India we have the curious rite of the silent tendance of cattle, in which the performers, drawn from the highest classes of the community, bathe, anoint themselves, put on garlands of flowers, and walk in procession through the grazing grounds, holding bunches of peacock feathers (*NINQ* i. 154 f.).

Special godlings are also worshipped to secure the safety of cattle. Nagar Deo in Garhwāl on the lower Himālaya is supposed to have the cattle in his charge, and he is represented by a trident fixed on a platform to which the first milk given by the animals is dedicated. In Kumāun his place is taken by Chaumū or Baudhān, who recovers stray beasts, receives offerings of milk, and, when a missing animal is found, is honoured by the sacrifice of a goat (*NINQ* i. 56). Among the Kharwārs of the Central Hills, Goraiyā or Gauraiyā, properly a god of boundaries, presides over the herds (Crooke, *Tribes and Castes*, iii. 251).

(*d*) *The dog.*—In common with the Kunbīs of Khāndesh, the Bhīls of that district show extreme reverence to the dog and horse; and the dog is respected by all Marāṭhas, who figure the animal as the companion of their god Bhairoba; and by many Hindus in Western India, who worship the dog of their god Kāla Bhairava (Campbell, *Notes*, 276). At the shrine of Malhārī in Dharwār the Vaggaiyya ministrants dress in blue woollen coats, tie bells and skins round their waists, and meet the pilgrims barking and howling like dogs. They endeavour, in fact, to assimilate their appearance to that of the god whom they serve (Robertson Smith, *Rel. Semites*[2], 437). Each Vaggaiyya has a bowl into which the pilgrims put food; the Vaggaiyyas lay these down, fight with each other like dogs, and then lying on the ground put their mouths, as animals do, into the bowls and eat the contents (*BG* xxii. 212). The cults of Bhairoba or Bhairava, and of Khaṇḍē Rāo, Khaṇḍoba, or

Khandojī (now promoted to be an incarnation of Siva), which are widely spread in Western India, have dog-worship as their basis. The Bauris of Bengal will on no account touch a dog, and the water of a tank in which a dog has been drowned cannot be used until an entire rainy season has purified it. Under the influence of the Hindus they have now invented a legend that, as they themselves kill cows and other animals, they deem it right to regard as sacred some beast which is as holy to them as the cow is to Brāhmans; this, as Risley remarks (*Tribes and Castes*, i. 79 f.), being 'a neat reconciliation of the twinges of conscience and cravings of appetite.' But it seems clear that this is an afterthought, and that, the dog being really the sacred animal of the tribe, its 'uncleanness' resulted from its sanctity, as in the case of the pig among the Semites and other races (Frazer, *Pausanias*, iv. 137 f.). 'In general it may be said that all so-called unclean animals were originally sacred; the reason for not eating them was that they were divine' (*GB*[2] ii. 315).

(*e*) *Birds.*—Many birds are regarded as sacred by the Northern Dravidians; and the sanctity of others, like the crow, the pigeon, and the wagtail, is suggested by the respect paid to omens taken from them. The skin of a species of Buceros or hornbill, known as the 'bird of wealth' (*dhanchiṛyā*), is hung up in houses by wizards in the Central Provinces, and the thigh bones are attached to the wrists of children as a charm against evil spirits (Hislop, 6). The peacock seems among the Kandhs to impersonate the Earth-Mother, because they placed an effigy of the bird on the top of the *meriah*, or human sacrifice-post (Maltby-Leman, *Manual of Ganjam*, 1882, p. 84).

(*f*) *Fish.*—Fish are regarded in many places as sacred. Some are believed to contain the souls of the dead; all varieties are emblems of fertility, and are therefore used in the marriage rites. At most of the sacred places in Northern India along the sacred rivers, such as Hardwār, Mathurā, and Benares, the fish in that portion of the stream adjoining the bathing places are carefully preserved, and any attempt to catch them is fiercely resented by the Brāhmans. The tabu here enforced is partly due to the sanctity of the holy place which makes things connected with it sacred (Jevons, *Introd.* 63); they are also popularly regarded as impersonations of the divine energy of the stream, and as connected with the dead whose ashes are consigned to its waters. They have now been adopted into the cults of the Hindu gods, and pious people write the name of Rāma on thousands of pieces of bark or paper, which they enclose in little packets and throw to the fish. Once Sītā, wife of Rāma, was bathing in a Deccan stream, when one of the fish bit her leg. If one be now caught and its palate examined, in it will be found a ball of butter (*BG* xviii. pt. i. 93). The crocodile is worshipped as an object of terror. In Baroda the crocodile god, Magar Deo, is worshipped once a year to protect men and animals from the attacks of these monsters, and also as a preventive against illness. The deity is represented by a piece of wood in the form of the animal, supported on two posts (Dalal, i. 157).

25. **Totemism.**—The respect paid to some of these animals may rest upon a totemistic basis; but it is difficult to say where, in Northern India, the line can be drawn between animal-worship and totemism. In any case the connexion of totemism with the current beliefs of the Dravidians is obscure; and totemism, as we find it at present, generally appears as a mode of defining the exogamous groups, many of which trace their descent from some animal, plant, or other thing which the members of the group regard as sacred and will not eat or injure. The totemistic exogamous groups have been discussed by Risley (*Tribes and Castes*, i., Introd. xlii ff.) and Dalton (254). The latter states that among the Orāons 'the family or tribal names are usually those of animals and plants, and when this is the case the flesh of some part of the animal or fruit of the tree is tabued to the tribe called after it.' This respect for the totem seems now hardly to exist among the totemistic tribes of the Central Provinces, the sacred plants and animals having generally been adopted into the cult of some Hindu deity (Russell, i. 189 f.). The feeling of reverence is still strong in Central India, where the totem tree is never cut or injured; men make obeisance to it, and women veil their faces when they pass it (Luard, i. 198 f.).

26. **Local village-godlings.**—Writing more particularly of the Semites, Robertson Smith (*Rel. Semites*[2], 92) remarks that 'the activity, power, and dominion of the gods were conceived as bounded by certain local limits, and, in the second place, they were conceived as having their residences and homes at certain fixed sanctuaries.' In order of time the worship of the village-deities is probably later than that of celestial gods, as they can hardly exist under the conditions of a nomadic life, and their worship probably marks an early stage of tribal settlement. The worship of these gods, as appears from the character of the priesthood (§ 49), has no connexion with Brāhmanical Hinduism. They vary in name, character, and functions all over the country. But all have one distinguishing mark—their influence is confined to a particular area, and it is only when some shrine has, by cures and wonders performed within its precincts, acquired a more than local reputation that it attracts the worship of persons residing beyond its special domain. When this stage is reached, it leads to the establishment of a local cult, which, as it develops and becomes important, is generally annexed by some priest drawn from the orthodox ranks of Brāhmanism, and the local god is gradually promoted to a seat in the regular Hindu pantheon.

27. **The village shrine.**—The general name for these gods is Grāma- or Grāmya-devatā, 'the godlings of the village,' or in the modern vernacular Gāṅv-devatā or Gāṅv-devī, the last title marking connexion with the Mother-cult. Sometimes, again, they are known as Dih, 'the village,' and the shrine is called Deohār, 'holy place'—a term which is also applied to the whole body of village-gods. In its simplest form the village shrine is a collection of water-worn stones placed under the sacred tree of the settlement. In the Plains, where all stones are scarce, pieces of old carving from a ruined Buddhist or Hindu religious building are often used for this purpose, and occasionally the desecrated image of the Buddha may be seen doing service as the representative of the village Devī or her consort. Sometimes ancient stone axes, looked on with awe by people who now use none but metal implements, have been found in such places. In the more prosperous villages a small square building of brick masonry, with a bulbous head and perhaps an iron spike as a finial, serves as a shrine. Its position is marked by a red flag hung from the adjoining sacred tree; or a bamboo pole is erected close by to serve as a perch for the deity when he deigns to visit the shrine to receive the offerings and attend to the prayers of his votaries. In the hill villages occupied by the purer Dravidian tribes, such as the Kols or Orāons, the shrine is usually a rude mud hut roofed with bamboos and straw, which is often allowed to fall into disrepair until the godling reminds his votaries of his displeasure by bringing sickness or some other calamity upon them. Inside is a small mud plat-

form, on which a jar of water is usually placed and offerings are made.

No clear distinction is made between the various kinds of spirits which occupy such a shrine. First, there are the purely elementary deities, like the Earth-Mother and her consort; secondly, those spirits which are regarded as generally benignant, like the Satī, the spirit of a woman who died on the pyre of her husband, or those which are actively malignant. Thus on the borders of the hill country where Dravidian and Aryan intermix, may be seen what is called a *brahm*, a shrine in honour of some deified Brāhman, where the worshipper makes a libation of milk or curds, lights a lamp, and offers the fire-service (*homa*); and in an adjoining Dravidian village a *baghaut*, a rude shrine or cairn erected on the spot where a man was killed by a tiger, at which a Kol makes an occasional sacrifice (*NINQ* ii. 19). In the eastern Panjāb the fusion of cults is equally obvious. Wilson (*op. cit.* ii. 147) describes at Kāngra a shrine erected by the Chamārs, or menial Hindu leather-dressers, inside which they light a lamp twice a month, and

'when they were ill or in trouble they would come to this shrine and bow down before it, and promise that if their troubles were removed, or their wish gratified, they would present some offering, such as bread, or a coco-nut, or a flag. If the saint fulfilled his part of the bargain, the worshipper fulfilled his vow; if not, the vow was void. Thus I was told that a small flag waving over the shrine had been presented by a Chamār, who had been ill, and who had vowed to offer a flag on his recovery. Often a shrine may be seen outside the village to the village god, or to the smallpox goddess, or some other deity, where at set times the women make offerings of water or grain; and a small lamp may be often seen burning on a Thursday evening at the tomb of a Muhammadan saint. These practices are said to be forbidden in the Korān; but the women especially place some faith in them, and a Rāin is said to have divorced his wife because she persisted in lighting lamps at a Fakīr's tomb, in hope of being blessed with a son.'

This concrete instance admirably illustrates the beliefs of the low-class Musalmān population, who are in the main converts from Dravidian tribes, and whose faith in the tenets of the Prophet is only a thin veneer over their primitive Animistic creed. In the same part of the country we often find the worship of Bhūmiyā, the earth-god, combined with that of one of the great Muhammadan saints; and in one village it appeared that the Hindu Jāts distributed their worship between the saint Shaikh Aḥmad Chishtī of Ajmēr (*q.v.*), Brāhmans, and the Pipal, or sacred fig-tree.

In many places, again, in the hill country where caves are found, they are utilized as local shrines. They are places of mystery, the fitting abode of the gods, and it is believed that they form an entrance to the nether world. Such cave shrines are numerous in the lower Himālaya, and many of them have been appropriated by the orthodox Hindu gods (*NINQ* iii. 147). They are the prototypes of the great cave-temples of the Buddhists and Hindus, like Ajanta or Elephanta (*qq.v.*).

28. General characteristics of the Grāma-devatā worship.—It is obviously impossible to attempt any precise definition of vague, amorphous beliefs such as these. The creed of the lower classes of the population is, on the one hand, purely Animistic, a cult of the powers of Nature. On the other hand, to it has been added a belief in the necessity of propitiating sundry goblins and evil spirits, many of the latter being the angry ghosts of persons who have perished by a tragical or untimely death. This has, again, absorbed from Hinduism the worship of Brāhmans, and from Muhammadanism the cult of the saints or martyrs of Islām. Further, we occasionally find more than one element united in a single cult. It is, therefore, unnecessary to attempt to compile a list of these village-godlings. A few examples may be given to indicate the general character of this form of worship.

29. Worship of Gansām Deo.—Gansām Deo is an important god of the Gonds, Kols, and kindred races. An attempt is now being made to give him a place in Hinduism as a form of Kṛṣṇa; but his Dravidian origin is apparent. In Mirzapur he is protector of the crops, and the *baigā* priest propitiates him, when the rice is ripening, with the sacrifice of a fowl, goat, or sucking-pig, and an oblation of liquor. He generally resides in a tree, and near his shrine is usually placed a rude stone representing Devī. We have here another instance of the cult of the male and female element performed to stimulate the growth of the crops (Crooke, *Tribes and Castes*, iii. 312). But Gansām has another side, being by some supposed to be a chieftain of the Gonds who was killed by a tiger. His legend tells that after his death he visited his wife, and she conceived by him.

'Descendants of this ghostly embrace are, it is said, living to this day at Amoda, in the Central Provinces. He, about the same time, appeared to many of his old friends, and persuaded them that he could save them from the maws of tigers and other calamities, if his worship were duly inaugurated and regularly performed; and, in consequence of this, two festivals in the year were established in his honour; but he may be worshipped at any time, and in all sickness and misfortune his votaries confidently appeal to him' (Dalton, 232).

30. Worship of Bhairoṅ.—Bhairoṅ, another favourite Dravidian god, is often confounded with Bhūmiyā, who is one form of the consort of the Mother-goddess. He has been partially adopted into Hinduism as Kāla Bhairava, who is often depicted with eighteen arms, ornamented with a garland of skulls, with ear-rings and armlets formed of snakes, a serpent coiled round his head, in his hands a sword and a bowl of blood. He is thus a fitting partner to the blood-stained Mother, Kālī. But it seems clear that in the primitive conception he is one of the divine pair to whose union the fertility of the soil, cattle, and people is due. Even in his Hinduized form as Kāla Bhairava he retains the characters of Animism. As worshipped by the Kunbī cultivators in the Deccan, he is represented as a man standing; in one hand a trident, in the other a drum shaped like an hour-glass, while he is encircled by a serpent, a mark of his chthonic origin. He lives in an unhewn stone smeared with oil and vermilion, and he remains kindly so long as he is supplied with offerings of butter.

'He cures snake-bites, and tells whether an undertaking will do well or will fail. In the chest of the rough figure of Bhairav are two small holes. The person who wishes to consult the oracle places a betel-nut in each of the holes, and explains to Bhairav that if the right betel-nut falls first it will mean that the undertaking will prosper, and that if the left betel-nut falls first it will mean that the undertaking will fail. He asks the god, according as the event is to be, to let the lucky or the unlucky nut fall first. He tells the god that if he will drop the lucky nut, and if his undertaking prospers, he will give the god a cock or a goat. Twice a year, before they begin to sow and before they begin to reap, the villagers come in procession and worship Bhairav' (*BG* xviii. pt. i. 289).

Bhairoṅ or Bhūmiyā is also known as Khetrpāl, or 'field-guardian.' In the Panjāb, when the crop is nearly ripe, Brāhmans are consulted to fix an auspicious time for reaping; and, before the work is begun, five or seven loaves of bread, a pitcher of water, and a small quantity of the crop are set aside in the name of Khetrpāl (Rose, i. 126). Bhūmiyā, again, at times changes sex, and is identified with the Earth-Mother, and provided with a consort in Chandwand or Kherā, the personification of the village site (*NINQ* v. 160). Like his consort, Bhūmiyā has a malignant aspect. He is said to visit with sickness those who show him disrespect, as, for instance, by cleaning their teeth near his shrine.

'Those Bhūmiyās who thus bear the reputation of being revengeful and vicious in temper are respected, and offerings to them are often made; while those who have the character of easy, good-tempered fellows are neglected' (*NINQ* iii. 107).

31. **Worship of Hanumān, the monkey-god.**—In the same grade is the monkey-god, Hanumān, Hanumat, 'he with the jaws,' also known as Maruti or Mahābīr, 'the great hero,' who has become fully adopted into Hinduism as the helper of the god Rāma in his war against the demon Rāvaṇa, which forms the subject of the epic of the *Rāmāyaṇa*. He is, however, plainly a survival from the old theriolatry. He is represented by a rude image, combining human and monkey characteristics, the animal's tail being specially prominent, and the whole smeared with vermilion. He is an especial favourite with the Marāṭhas; but most villages in Northern India have a shrine dedicated to Hanumān, and the establishment of his image is one of the first formal acts performed at the settlement of a new hamlet. In every fort, built or re-built by Sivajī, the Marāṭha hero, he placed inside the main gate a small shrine with an image of Hanumān (*BG* x. 335). Even now this god has hardly gained full franchise in the Hindu pantheon, and in the greater shrines he acts as warden (*dwārapāla*) to the higher gods. His virile attributes make him a fitting partner of the Mother-goddess, and he is essentially a Dravidian god, bearing in his representation among the Dravidian Suiris of Mirzapur little of the monkey character except his long tail; and he is identified with Borām, or the sun-god, by the wild Bhuiyās of Keunjhar (Buchanan, i. 467; Dalton, 147). Some years ago, when an epidemic broke out among the forest Kāthkaris of Nāsik, they believed that it was a judgment upon them because they used to kill and eat the sacred Hanumān monkeys. They fled the country for a time in order to escape his vengeance (*BG* xvi. 65).

32. **Spirit-worship.**—Besides local gods of this class, most of whom are associated with the fertility of the land, cattle, and people, the Dravidian is beset by a host of spirits of another kind.

First come the vague terrific forms, the impersonations of awe and terror, spirits of the waste or of the darkness, like the *jinn* of Semitic folk-lore—the Rākṣasa, the Bīr or Vīra, the Dāno, the Daitya. These are now all known by Aryan names, but their representatives were also doubtless found among the Dravidians. Some account of these, and other like vague potentialities, will be found under BENGAL, § 8, ḌOMS, § 2, and DEMONS AND SPIRITS (Indian).

Secondly, there is the host of Bhūts or Bhūtas, the restless spirits of those who have perished by an untimely death, or have failed to reach their longed-for rest, because they have not been honoured with due obsequial rites. They are generally malignant, and if not regularly propitiated bring disease or other suffering on those who neglect their service. Such are Rājā Lākhan, worshipped by the Kols with his sister Belā, and Rājā Chandol, the tutelary god of the Korwās. Most of these seem to be historical personages, Rājā Lākhan apparently having been a leader of the Hindus against the Muhammadan conquerors. They have now been deified and receive constant worship (Crooke, *PR* i. 198 ff.). In the same class are Hardaur Lālā, the cholera godling, and Haridās Bābā, the patron deity of the Ahīrs (*q.v.*). This process of deification of persons, famous or notorious in life, still goes on actively.

'So far as I have been able to trace back the origin of the best-known minor provincial deities, they are usually men of past generations who have earned special promotion and brevet rank among disembodied ghosts by some peculiar acts or accident of their lives or deaths, especially among the rude and rough classes' (Lyall, *Asiatic Studies*[2], 1907, i. 24 ff.).

Thus Hānjū (Dīvān, or Minister, of the Charkari State in Central India) died in A.D. 1768. Though he was not specially famous during his life, a platform was erected at the site of his cremation, and a visit to it is now supposed to cure fever. Hīrā Lāl was killed by robbers some eighty years ago; his decapitated trunk ran three miles to the cremation ground; a cairn was raised on the spot, which is now used as a place of prayer, where boons are granted (Luard, i. 75 f.). Shrines like these are found in all parts of the country.

It is quite impossible to prepare a full catalogue of these Dravidian village-gods. Their names and attributes vary from village to village, and those of any district are unknown even at a short distance from their place of worship. An account of some of the most remarkable deities of this class will be found in Crooke, *PR* i. 83 ff. Some lists of them are given in Elliot, *Supplementary Glossary*, *s.v.* 'Deewar'; Gait, *Census Report Bengal*, 1901, i. 192 ff.; Dalal, i. 156; Campbell, 312 ff.; Ibbetson, 113 ff.; *NINQ* iii. 38 ff., 55, 128, 200, iv. 110, 148, 181.

33. **Boundary-worship.**—The local character of the worship of the village-gods is shown by the respect paid to boundaries, and in the cult of the deities presiding over them. The Roman worship of Terminus, with the sanctity attached by the Latins to boundary-stones, is one of the most familiar examples of this class of beliefs (Smith, *Dict. Antiq.*[3] i. 90 f.). Among the Goṇḍs the village boundaries are placed in charge of the ancestral ghosts (Sleeman, i. 269 f.). In its most primitive form the cult is found among the Dravidians of the Vindhyan and Kaimūr ranges, who employ their *baigā* priest to perambulate the village annually, and to mark it out with a line of the common liquor, distilled from rice or other grains, in order to prevent the inroad of foreign spirits, who are regarded as necessarily hostile. The boundary, again, is often defined by making a goat walk along the disputed line, and watching it till it gives a shiver, which is regarded as an indication of the wishes of the spirit, whose adjudication is at once accepted (*NINQ* i. 202). The boundary-spirit naturally develops into a deity in whose charge the line is placed. Thus, according to Macpherson, the Kandhs recognized Sundi Pennu as the boundary-god: 'particular points upon the boundaries of districts, fixed by ancient usage, and generally upon highways, are his altars, and these demand each an annual victim, who is either an unsuspecting traveller struck down by the priests, or a sacrifice provided by purchase' (*Memorials*, 90; *Calcutta Rev.* v. 55). Among other tribes, like the Rautiās of Bengal, Goraiyā is regarded as a sort of rural Terminus; the Telī oilmen offer a sucking-pig in the rainy season before the lump of dried mud which symbolizes the presence of the god, the victim after sacrifice being either buried in the ground or given to a Dosādh (*q.v.*), who seems to act as priest of the more primitive deities, and claims the offerings as his legitimate perquisite (Risley, *Tribes and Castes*, ii. 309). Another deity of the same type, Sewanriyā, is the tribal god of the Bhuiyārs and Ghasiyās of the United Provinces, who sacrifice a goat and offer some spirits and a thick cake, the head of the animal and the cake being the perquisite of the *mahto*, or headman, who performs the rite (Crooke, *Tribes and Castes*, ii. 93, 418). Among the Santāls his place is taken by the *sima-bonga*, the collective boundary-gods, who are propitiated twice a year with sacrifices of fowls offered on the boundary of the village where these deities are supposed to dwell (Risley, *Tribes and Castes*, ii. 234). Under the title of *simanta-pūjā*, 'boundary-worship,' this has become part of the Hindu marriage-rites, the youth when he comes to fetch his bride being obliged to free himself from the foreign and hostile spirits which have accompanied him, by a rite of worship performed at the boundary of the village of his bride.

34. **Implement-worship.**—The worship paid to the implements used by the husbandman and the

tools of the artisan falls into a different class, which has sometimes been included under the head of Fetishism—a term which possesses no scientific value. In various forms it appears among the rural classes of Northern India. The Bhandārī barbers of Orissa, on the fourth day of the feast to Durgā, lay their razors, scissors, and mirror before the image of Viśvakarma, their patron deity, with offerings of sweetmeats and flowers (Risley, *Tribes and Castes*, i. 93). The Kaibarttā fishermen of Bengal Proper celebrate the feast of Jālpālanī in the early spring, on the last day of which they lay their net, smeared with red lead, on the river bank (*ib.* i. 380). The Kumhār potters arrange their trade implements and specimens of their manufactures on the kiln, ornament them with leaves of the Bel tree (*Ægle marmelos*), and present oblations; while the Pāsī palm-tappers set up their sickles and present offerings of flower and grain (*ib.* i. 525, ii. 167). Perhaps the most remarkable of these so-called fetishes is the *gurdā*, or sacred chain of the *baigā* priest, which is kept in the hut dedicated to the god. With this the *baigā* lashes himself into a state of ecstatic frenzy, and hysterical girls are thrashed with it to drive the devil out of them. This chain, under the name of Sāklā Pen, 'the chain god,' is worshipped by the priests of the Gonds, carried in procession, and solemnly deposited in the shrine (Hislop, App. p. 8; Crooke, *Tribes and Castes*, iii. 441). Among purely agricultural implements, honour is especially paid to the plough, the corn-sieve, basket, and broom used in cleaning and measuring grain, and the rice-pounder, to which a phallic significance naturally attaches (Crooke, *PR* ii. 187 ff.).

35. Stone-worship.—Stones throughout Northern India are recognized as the abode of spirits and deities. One form of this worship, that of the *liṅgam*, or phallus, now appropriated to the cult of Śiva, was formerly believed to have been adopted from the Dravidian tribes of the south by the Aryans (Oppert, 372 f.). This view is now generally rejected (Hopkins, *Rel. of India*, 1896, p. 471). It is said to be alluded to by the writers of the Veda in the *śiśna-deva*, 'tail-gods,' but the cult was not openly acknowledged until the rise of Śiva-worship in the Epic period (*ib.* 150, 462). The growth of this form of worship has been attributed to Greek influence, while Fergusson suggests that the *liṅgam* is in origin a miniature Buddhist *dagoba*, or relic-shrine (*Hist. of East. and Ind. Architecture*, 1899, p. 167). The worship of Śiva in this form probably spread throughout India at least as early as the 5th or 6th cent. A.D. (Wilson, *Essays*, 1862–77, i. 224). Śiva, again, is associated with the bull Nandi, and in this form may be compared with the Greek Dionysus in his bull form, as god of fertility, with which his phallic emblem is perhaps associated (J. E. Harrison, *Prolegomena*, 432 ff.). Oppert (378 f.) asserts that the Dravidians were originally adherents of the Śakti-, or Mother-worship, and that 'there exists hardly any evidence to show that these same people worshipped the *liṅga*, or the organ of generation; and even at the present day we cannot point out any aboriginal tribe, which has retained intact its national customs, as revering the Phallus.' This assertion is probably an over-statement of the facts. As we have seen, most of the Dravidian tribes combine with the worship of the Mother-goddess that of her male consort, and the mimic celebration of the union of the divine pair suggests erotic rites. Hislop has collected a long Gond epic which tells of the creation and adventures of their hero, Lingo. But, as Dalton (282) remarks, this has obviously been compiled under Hindu influence, and cannot be regarded as embodying the real traditional lore of the Gonds. At the same time, it suggests that *liṅgam*-worship was familiar to this tribe, and with them, in the form of the tiger, it was combined with animal-worship in the personification of their deity, Lingo or Ningo Bāghiya (Forsyth, 188). With this may be compared the worship by the Sudhas of Bengal of their goddess Khambeśwarī, who is represented by a peg (Risley, *Tribes and Castes*, ii. 268).

36. Other stone-worship among the Dravidians.—Stone-worship appears in other forms among the Northern Dravidians. Thus we find the worship of cairns. The Bhīls of Rājputana erect on the hill-tops, to the memory of the spirits of deceased relatives, cairns of stone, on which they place rude images of the horse, burn small oil lamps, and sometimes hang pieces of cloth. Goats or male buffaloes are offered here, and the pottery horse-figures are made with holes through which the spirits of the dead are supposed to enter, and then travel up to heaven, when the horse is presented to the deity (Bannerman, i. 53). Conical piles of stone are worshipped in Nepāl as residences of the local gods, and are known as Deorālī, a title also applied to one of the Himālayan peaks (Kirkpatrick, 60). In Mirzapur, in the United Provinces, Anktahā Bīr is the hero impersonated by a pile of rude stones, to which every traveller adds one as he passes by. The hero is now on the way to promotion, as the offerings at his shrine are taken by a family of Brāhman priests (*NINQ* i. 40).

Secondly, we find special worship of particular stones. In all the villages of Central India are stones known by the names of Motī Mātā, 'pearl Mother,' or Lālbāī-Phūlbāī, 'the red flower Mother,' which are worshipped when cholera appears. The Bhīl *barwā*, or medicine-man, officiates; he cuts off the head of a goat, and offers it with some lemons, copper coins, eggs, flowers, etc., in a piece of a broken earthen pot, while a toy cart, apparently used as a vehicle for the goddess, is placed beside the stones. When the head of the goat has been offered, the *barwā* takes up the potsherd and places it on his head. A watchman takes a living goat, an attendant carrying a pot full of country spirits, which drops slowly out of a small hole in the bottom of the jar. Behind this the car of the goddess is dragged by a third officiant. The procession is directed towards the famous shrine of Onkārnātha, until they reach a village, the home of another goddess, Sāt Mātrā, 'Mother of truth.' Here the jar and carriage are left, and by this means the spirit of cholera is supposed to be enticed away beyond the limits of the town, by the aid of her chariot, and attracted by the goat and spirits presented to her (Luard, i. 78). This primitive method of disease-transference illustrates the Animistic character of the cultus. In some cases the stone, which is the home of the deity, is replaced by pillars of wood, blackened by constant offerings of oil and butter. Such are the representatives of Bīrnāth, 'hero lord,' worshipped by the Ahīr cowherds as a protector of their cattle—a worship apparently identical with the cultus of the group of deities known as Bangaramāī, Bangarā Bāī, or, in her Hinduized form, as Devī, who are worshipped in various parts of the Central Provinces (Hislop, 15 f.; Crooke, *Tribes and Castes*, i. 63 f.). This pillar-worship takes various forms. Sometimes we find a stone pillar (*lāṭ*) appropriated to the hero Bhīmsen, who is probably in origin a Dravidian deity, but is now associated with the burly hero of the *Mahābhārata* epic. The Gonds worship him in the form of a shapeless stone covered with vermilion, or of two pieces of wood standing three or four feet above the ground, like those of Bangaramāī. Among the Naikudē, one of the Gond septs, he is represented by a huge

stone rising out of the ground and covered with vermilion.

'In front of this, Naikudē Goṇḍs mingle with Rāj Goṇḍs and Kolāms in acts of adoration. The order of the religious service seems to be as follows. At 5 p.m., having cooked a little rice, the worshippers place it before the god, and add a little sugar. They then besmear the stone with vermilion, and burn resin as incense in its honour; after which all the parties offer their victims, consisting of sheep, hogs, fowls, with the usual libations of arrack. The god is now supposed to inspire the Pūjārī [priest], who rolls about his head, leaps frantically round and round, and finally falls down in a trance, when he declares whether Bhīmsen has accepted the service or not. At night all join in drinking, dancing, and beating tom-toms [drums]' (Hislop, 24 f.).

Passing to the Plains, we find the deity represented by stone pillars, some of those erected by the Buddhist Emperor Aśoka and bearing copies of his edicts being appropriated by the menial Dravidian tribes for this form of worship. In Baroda the forest tribes worship several deities who have their abode in stones. Kavādio Dev, their principal deity, lives in the hollow of a ravine, which, it is believed, will open to receive worshippers of holy life and will reject those who are wicked. Gohāmāyā Mādī, the Mother-goddess, is merely a huge boulder which has fallen from the summit of a hill. Before it are placed clay images of men and animals, probably substitutes for the original sacrifice (Dalal, i. 156).

Finally come the pillar stones erected as a home for the spirits of ancestors. Some account of these has been given in connexion with ANCESTOR-WORSHIP (vol. i. p. 431). Such are the *pāliyā*, or guardian stones, of Western India, the heroes inhabiting which are believed to scour the fields and gardens at night, and are consequently much dreaded (*BG* xi. 307 f., xvi. 647). The custom of erecting such stones has probably been borrowed from the Dravidians, because they are erected by the Bhīls, and are common among the Muṇḍās and Khāsīs (*Rajputana Gazetteer*, i. 122; Dalton, 55, 203).

37. **The development of the pantheon.**—The earliest conception of the Dravidian deities whom we have been discussing represents them as gods of all work, to whom no definite functions are assigned. The formation of a pantheon, in which the duties of each god are clearly limited, is a much later development (Robertson Smith, *Rel. Semites*[2], 39). The current accounts of some of these Dravidian pantheons must be received with some caution, as in the case of Macpherson's account of the Kandh deities. But it seems certain that among some of the wilder tribes this stage of development has been reached, though we may suspect that in some cases it may be traced to Hindu influence. Thus the Malē or Maler Pahāṛias, according to Shaw (Dalton, 268 ff.), are said to have eight gods: Raxie, abiding in a black stone, invoked when a man-eating tiger or an epidemic attacks the village; Chal or Chalnad, with a similar representation and functions; Pow or Pau Gosāin, god of highways; Dwārā Gosāin, protective deity of the village; Kul Gosāin, deity of the sowing season; Autga, god of hunting; Gumū Gosāin, sometimes associated with Kul Gosāin; and Chamdā Gosāin, most important of all, who needs such a great propitiatory offering that only chiefs and men of wealth can provide it. Later inquirers supply a different list, containing Dharmer or Bedo Gosāin, the Sun-god, who rules the world; Bārā Duārī, 'he that has a temple with twelve doors,' the tutelary village-god; Gumū Gosāin, at whose shrine ancestor-worship is performed, and who is represented by the pillars that support the rafters of the shed-like temple; Chalnad, who presides over groups of ten villages; Pau Gosāin (the Pow of Shaw), god of highways; and Chamdā Gosāin, most exacting of all (Bradley-Birt, *Story of an Indian Upland*, 297 ff.). Even here the development of the pantheon is only embryonic, and the duties of the several deities are but imperfectly distributed. The Santāl pantheon is equally vague, having, as some authorities believe, in the background a *fainéant* Supreme Being, known as Ṭhākur, who is occasionally identified with the Sun; deities of Nature, like Marang Buru, the mountain-god, and Jair or Jāhir Erā, goddess of the sacred grove; besides a separate group of family-gods, arranged in two divisions—the Orak-bonga, or regular family-deity, and the Abgē-bonga, or secret god (Risley, *Tribes and Castes*, ii. 232). The other more Hinduized tribes have in the same way developed deities with special functions, like Dārapāt Deo with his wife Angārmatī, the war-gods of the Kharwārs of the Kaimūr range, and Zorbād Deotā, a god of hunting (*NINQ* iv. 36, 77).

38. **Theogonies.**—Some of the North Dravidian tribes have framed elaborate theogonies with legendary accounts of the creation of man and of the dispersal of the tribes. Thus the Muṇḍās tell how the self-existent primeval deities, Otē Borām and Sing-bonga, created a boy and girl, taught them the art of love, and placed them in a cave to people the world (Dalton, 185). The Kandh legend of the struggle between Būṛhā Pennu, the Supreme Being, god of light, and his consort, Tarī, the Earth-goddess, which ends in the creation of man and all other living things, is more elaborate, and has probably been embellished by the vivid imagination of the natives who supplied Macpherson with his information (*Memorials*, 84 ff.). The Goṇḍ legend of the birth and adventures of Lingo has already been noticed (§ 35). Among the more advanced and Hinduized tribes, legends of this kind seem to have almost entirely disappeared, overlaid by the traditions connected with the Hindu gods, who have gradually displaced or absorbed the tribal deities.

39. **Sacrifice.**—The theory underlying the practice of sacrifice is, according to the well-known but not universally accepted theory of Robertson Smith, the desire to attain communion with the god by joining with him in the consumption of the flesh of the victim or the fruits of the earth offered at his shrine. In the modern view of the Dravidians, however, it is purely a business transaction, *do ut des*, an arrangement that, if the god fulfils the desires of the worshipper, he will receive a sacrifice in return. Totemism, as we have seen (§ 25), has almost completely ceased to influence the popular beliefs, and it is thus impossible to trace the steps by which, if it was ever the general rule among this people, the slaughter of the totem animal developed into the methods of sacrifice which are in use at present. Here, too, as is the case with all their beliefs and rites, there is no literary evidence of any kind to assist us. There is, however, some scanty evidence to prove that the modern custom may have a totemistic basis. Thus the Parahiyās of the Kaimūr range hold the goat in great respect—a feeling which among the Bengal branch of the tribe applies to sheep and deer. There is a current tradition that, as a means of purification, they in former times used the dung of these animals to smear the floors of their huts; this substance has now been replaced by cow-dung (Dalton, 131). If this be a case of a survival of totemism, not of the ordinary worship of animals, it is noteworthy that in Mirzapur they propitiate the mountain-goddess, whom they now call Devī, with the sacrifice of a goat. Before the animal is slain, it is fed on a few grains of rice, and water is poured upon its head. This they call, not 'sacrifice, but 'goat-worship'; and sometimes, when the Devī is worshipped to avert an epidemic of cholera, the goat is not sacrificed,

but released as a scape-animal (Crooke, *Tribes and Castes*, iv. 130). More significant than this is the rule that after sacrifice the flesh of the animal must be consumed by the worshipper and his clansmen, then and there, in the immediate presence of the deity—a rule which is characteristic of totem sacrifices (Jevons, *Introd.* 145 f.). In fact, as was the case in ancient Israel, all slaughter is equivalent to sacrifice (Robertson Smith, *Rel. Semites*², 241). This, it may be noted, is also the Hindu rule, and many of those who indulge in meat use only that of sacrificed animals, following the rule of Manu (*Institutes*, v. 31) that meat must be eaten only on occasion of sacrifice. The Dravidians are specially careful not to share the sacred meat with strangers, or even with members of their own tribe outside the inner circle of relationship.

40. Methods of sacrifice.—The methods of sacrifice differ among the various tribes. In the more primitive form the ritual is cruel: the Goālās of Bengal turn a pig loose amidst a herd of buffaloes, which are encouraged to gore it to death (Risley, *Tribes and Castes*, i. 290). We occasionally find among the northern tribes the habit of tearing the victim in pieces, as in the Goṇḍ sacrifice to Bāgheśvar, the tiger-god (Dalton, 280). This points to an original habit of eating the flesh of the victim raw, which survived in some of the Greek mysteries and the practices of the Bacchæ, and appears among the southern branches of the tribe, where a lamb is torn to pieces by a man with his teeth (*Bulletin Madras Museum*, iii. 265). At a Devī shrine in Gorakhpur the pigs to be offered are brought to the temple with their hind legs tied; and, the throats of the animals being half cut with a blunt knife, they are allowed to bleed to death before the altar (*NINQ* v. 202). The Tiyars of Bengal, like many of the other menial castes, when they offer a goat to Kālī at the Divālī, or feast of lights, do not decapitate the victim, but stab it in the throat with a sharp piece of wood (Wise, 393). The ordinary method, however, is by decapitation.

In Northern Bengal the usual shrine of Kālī consists of a heap of earth, generally placed under a tree, with a stake to which the head of the victim is fastened, so that the neck may be stretched out for decapitation (Buchanan, ii. 749). The Gorkha custom of sacrificing buffaloes, by one, or at most two blows, is a humane rite; but that of the Newārs, or aborigines of the country, who allow the animal to bleed slowly to death, is very cruel and very disgusting (Oldfield, *Sketches*, ii. 346 ff.). Such was also the custom of the Bhūmij of Chotā Nāgpur at the Binda-parab feast. Two male buffaloes were driven into an enclosure, and on a raised stage adjoining and overlooking it the Rājā and his suite used to take their places. After some ceremonies, the Rājā and his family priest discharged arrows at the victims.

'Others follow their example, and the tormented and enraged beasts fall to and gore each other, while arrow after arrow is discharged. When the animals are past doing very much mischief, the people rush in and hack at them with battle-axes till they are dead. The Santāls and wild Kharriās, it is said, took great delight in this festival; but I have not heard a murmur at its discontinuance, and this shows that it had no great hold on the minds of the people' (Dalton, 176).

It is the general rule that the victim should die from the effects of a single stroke. At the worship of Mārī Mātā, the cholera goddess, at Kāngra, one of the hill districts of the Panjāb, the animal, a ram, he-goat, or cock, must be decapitated with a sharp sword at a single blow. If more than one stroke be needed, it is believed that the goddess has not been duly propitiated and that the ceremony has failed (*PNQ* i. 1). Much importance, therefore, is laid on the act of striking the first blow (Jevons, *Introd.* 291). In Kumāun, in the lower Himālaya, bull buffaloes are offered to Kālī in the event of drought.

'Each buffalo is successively led to the door of the temple for decapitation; the first stroke is inflicted by the principal zemindar [land-owner], and, if not immediately fatal, is followed up by repeated blows from the surrounding crowd, until the animal is despatched, or rather hacked in pieces' (Traill, *Statistical Sketch of Kumaun*, 1828, p. 68).

When a fowl is being sacrificed by the Santāls to the mountain-god, Marang Burū, the sharp national axe is held securely on the ground with the blade pointing upwards, and the priest, taking the bird in both hands, presses its neck heavily upon the upturned edge, severing the head from the body; the blood is then scattered over the stones which form the altar of the god (Bradley-Birt, *Story of an Indian Upland*, 258, with a photograph of a kid sacrifice). In Baroda the ritual of the Animistic worship consists in burning, as incense, some clarified butter before the god, and then sprinkling spirits on small heaps of rice. After this the worshipper kills a cock by cutting its throat, plucks out the feathers, and places bundles of them before the god; he then cooks the fowl, and lays some of the cooked meat on the altar, paints the idol with vermilion, and hangs flags over it. While these rites are going on, the tribal musical instruments are played. When the ceremony is over, the worshippers consume the remainder of the food (Dalal, i. 156).

41. The times of sacrifice.—No special time is appointed for the Dravidian sacrifices. At the more important festivals of the Mother-goddess the victims are slaughtered throughout the day and night. In some Greek shrines it was the custom to slay the victim at night and consume the flesh before the dawn (Pausanias, II. xxvii. 1, X. xxxviii. 4). This was also the rule among the Arabs (Robertson Smith, *Rel. Semites*², 282). For the Hindu *śūlagava* sacrifice, in which the victim, as the name implies, seems to have been pierced with a spike or lance, the time was fixed after midnight; but some authorities preferred the dawn (Rajendralala Mitra, *Indo-Aryans*, i. 364; Jevons, *Introd.* 146). This rule still prevails among the Prabhūs of western India, who at marriages sacrifice a goat to the family-goddess. In some families the rite is done at midnight on the day before the marriage. The goat is brought into the room and made to stand before the image. One of the married women of the family comes forward, washes the victim's feet, sprinkles red powder on its head, and, after waving a lighted lamp round its face, retires. The eldest man in the household lays a bamboo winnowing-fan with a handful or two of rice in it before the goat, and, taking a sword, stands on one side. While the animal is eating the rice, he cuts off the head with one stroke, holds up the head, lets a few drops of blood trickle over the image of the goddess, and then places the head on a metal plate under the seat of the deity (*BG* xviii. pt. i. 195). At the shrine of Bechrājī in Baroda the victims are slain at dead of night, 'in order not to offend the feelings of Brāhmans and others' (*ib.* vii. 614).

42. The self-surrender of the victim.—The feeding of the victim before sacrifice is probably a means of propitiating it, and suggesting that it is a willing victim. When the Rautiās of Bengal sacrifice an animal to Baṛ Pahāṛ, the mountain-god, the victim is given rice to chew, and is decked with flowers before being slain (Risley, *Tribes and Castes*, ii. 203). At the worship of the Mother-goddess, Bechrājī, when a buffalo is brought for sacrifice, red powder and flowers are sprinkled over the animal, and it is worshipped. A white cloth is thrown over the back of the beast, and a garland of flowers, removed from the image of the goddess, is hung round its neck. A

lamp filled from one of those burning in the shrine is brought lighted from the inner room and placed on the stone altar in front of the temple. The buffalo is then let loose, and if it goes and smells the lamp it is considered to be acceptable to the Devī, and is slain at once, if possible by a single stroke of a sword. A blood-stained flower is presented to the deity, and the bystanders apply some of the blood to their foreheads. The blood is believed to bring health and prosperity, and even Brāhmans preserve cloths dipped in the blood, as charms against disease. If the buffalo refuses to smell the lamp placed on the stone altar, it is taken away, after one of its ears has been cut and a drop of the blood offered to the goddess on a flower (*BG* vii. 614).

A more common method is to test the victim by pouring water on it, which was a custom in Greece (J. E. Harrison, *Prolegomena*, 502). When the Ṭhags did sacrifice to Devī, their patron goddess, they used to place on a white sheet the consecrated pickaxe and knives used in their murders, with the spirits provided for the feast. Two goats were selected, black and perfect in all their parts. They were bathed and made to face the west; and, if they shook themselves lustily to throw off the moisture from their bodies, they were considered acceptable to the goddess. If only one shook itself, both were accepted. If neither did so, it was a sign that Devī had rejected both, and the party ate the rice and drank the spirits. But this was regarded in the light of a simple meal, and the sacrifice was postponed to another occasion. When the sacrificial feast took place, the skins, bones, and offal of the victims were thrown into a pit, and they were regarded as so sacred that none but a Ṭhag was allowed to see them (Thornton, *Illustrations of the History and Practices of the Thugs*, 1837, p. 68 f.). The rule that the victim must shake its head in token of acceptance is also found in the Panjāb (Rose, i. 118).

43. **Variety, sex, and colour of the victim.**—The rules as to the variety, sex, and colour of the victim are not very clearly defined. The animals most commonly sacrificed are buffaloes, goats, pigs, and fowls. The Bhīls of Khāndesh show their complete divorce from Hinduism by sacrificing a bullock to their gods Hātipawā and Vāghāchā Kunvar, 'the tiger lord,' while their other deities receive a he-goat or a fowl—a cock for the god, a hen for the goddess (*BG* xii. 93). The Kanjar gypsies of the United Provinces offer a pig to Nathiyā; a lizard to Mānā Gurū; a goat to Devī; a pig to Jakhiyā; a fowl to Madār (Crooke, *Tribes and Castes*, iii. 147). The Mundās offer a male buffalo to Deswālī, their village-god, and fowls to his consort, Jāhir Būṛhī (Risley, *Tribes and Castes*, ii. 103). But this distinction of victims seems to be exceptional.

The colour of the victim offered to the chthonic and malignant powers (like the Greek σφάγιον [J. E. Harrison, *Prolegomena*, 68]) ought to be black. When the forest tribes of the Kaimūr range offer sacrifice to Churel, a malignant female deity, it should consist of a black she-goat and a black fowl; Bansaptī, the forest-goddess, is less actively malignant, and is honoured with a grey or spotted goat (*NINQ* i. 57). Among the Marāṭhas, fowls with ruffled feathers are peculiarly acceptable offerings in cases of disease, and if a cock be sacrificed it should be able to crow (*BG* xi. 34). Following the same laws of symbolic magic, the Kisāns and Bhuiyās of Bengal offer a white cock to Borām, the Sun-god (Dalton, 132, 141).

44. **The head of the victim.**—The head of the victim is universally regarded as sacrosanct, as was the case with the Semites (Robertson Smith, *Rel. Semites*², 379). Among the Dravidian tribes it is sometimes, when severed, laid upon the altar of the deity in whose honour the sacrifice is being made, but more usually it is the portion of the priest (Dalton, 142; Crooke, *Tribes and Castes*, i. 8). The Bhāṭs of the United Provinces, who pretend to be orthodox Hindus, practise the curious rite of sacrificing a pig to the village-god, Birtiyā, this being done by a low caste Chamār *ojhā*, or medicine-man, who cuts off the head, buries it deep in the ground, and appropriates the remainder of the flesh (Crooke, *TC* ii. 26).

45. **Commutation of animal sacrifice.**—The animal sacrifice is occasionally commuted in deference to the humanitarian ideas of the Vaiṣṇava and Jain sectaries. In one form of the rite, slaughter of the animal is replaced by merely cutting the ear, letting a few drops of blood fall on the ground or upon the altar, and then allowing the animal to escape (Rose, i. 120). The same custom probably in part explains the rite of letting loose a bull (*vṛiṣotsarga*), when devotees release an animal in sacred cities like Benares or Gaya, or when a young animal is branded with the trident of Śiva, and released in the course of the *Śrāddha*, or mind-rite (see ANCESTOR-WORSHIP, vol. i. p. 452ᵇ). The more primitive form of the rite was to slay the animal, with the object of providing food for the spirit of the deceased. This rule is still in force among the more secluded tribes, like the Gonds, who kill a cow after the burial, sprinkle its blood upon the grave, and hang up the tail of the victim on the gravestone, as evidence that the funeral rites have been duly performed. In default of this, it is supposed that the spirit is unable to rest, and returns to haunt the survivors (*IA* i. 348 ff.).

46. **The scape-animal.**—The animal sacrifice, again, is commuted into the scape-animal, with the addition of the belief, common among the Dravidians, that it is 'the vehicle which carries away the collected demons or ills of a whole community' (Frazer, *GB*² iii. 101). This rite is most commonly performed as a means of removing epidemic disease; *e.g.*, in the United Provinces during an epidemic of cholera, a buffalo bull is marked with vermilion and driven beyond the village boundary, thus taking away the disease with him. When the idea is still further worked out by Brāhmans, it develops by painting the beast all over with lampblack and smearing its forehead with vermilion, to represent the 'vehicle' on which Yama, the god of death, rides. To make the charm more effective, the scape-animal is loaded with pieces of iron, as a potent protective against evil spirits (*NINQ* i. 102, v. 116).

47. **Human sacrifice.**—Human sacrifice was, as is well known, common among the Dravidians, and the best illustration of it is derived from the Kandh (*q.v.*) rite of *meriah* sacrifice. Probably most of the rites of the same kind performed by the allied tribes were done with the same intention (Crooke, *PR* ii. 167 ff.). As was the case in Greece, we find survivals which probably indicate a commutation of the rite (Lang, *Myth, Ritual, and Religion* [ed. 1899], i. 261 ff.). Thus, at Nāsik in the Deccan, when cholera appears, a woman of the Māng, a menial tribe, is solemnly led out of the city as a scape-victim. She remains outside the city limits till the next day, when she bathes and returns. The ceremonial, which closely resembles that of bringing a victim to a shrine, doubtless implies an earlier rite of human sacrifice (*BG* xvi. 521). Another rite resembles that of the self-immolation of pilgrims, who used in former times to fling themselves, in the name of Śiva, over the cliff known as Bhairava Jhāmp, near the famous shrine of Kedārnāth in the lower Himālaya; this rite seems to have prevailed farther west in the hills of the Panjāb (Atkinson, ii. 773; Rose, i. 133). It has now been commuted into paying

for the services of a *bādī*, or rope-dancer, who slides on a wooden saddle upon a cable hung from a precipitous cliff, as a means of propitiating Śiva in some Kumāun villages (*NINQ* i. 55, 74 f., 128, iii. 205). In the form of the Bihundā rite the same custom prevails in the Panjāb on the river Sutlej (Rose, i. 133). In Baroda, at the worship of Vāgh Deo, the tiger-god, a man is covered with a blanket, bows to the image, and walks round it seven times. During this performance the worshippers slap him on the back. He then tries to escape to the forest, pursued by the children, who fling balls of clay at him, and finally bring him back, the rite ending with feasting and drinking (Dalal, i. 156).

48. **Periodical sacrifices.**—The main tribal sacrifices of the Dravidians are not, as a rule, performed annually, and the victims sometimes vary from year to year. The Mundās sacrifice every second year a fowl, every third year a ram, every fourth year a buffalo, to their mountain-god, Marang Burū; and the main object is to induce him to send favourable rain (Dalton, 199). The Tipperās have a legend that their king, Śrī Dharma, enjoined that human sacrifices in honour of Śiva should be offered only triennially (*ib.* 111). This rule of triennial sacrifices is followed by the Kharwārs, Cheros, and Nāgbansīs, while the Kaurs offer a fowl yearly to the tribal Satī, and a black goat every third year (Buchanan, i. 493; Dalton, 129, 135, 138). There are other instances of feasts celebrated at intervals of more than a year, such as the Theban *Daphnephoria* and the Bœotian *Dædala* (Frazer, *Pausanias*, v. 41 f., *GB*[2] i. 225 f., iii. 328 n.). Those which recur at intervals of eight years seem to be based on an attempt to harmonize lunar and solar time, just as the twelve years' feasts in South India may roughly represent Jupiter's period of revolution round the sun (Frazer, *Kingship*, 294 f.). But it is difficult to suppose that considerations such as these could have influenced people in the state of culture possessed by the Northern Dravidian tribes. It is possible that, in some cases, considerations of economy and the cost of providing the necessary victims may have suggested the rule that the sacrifices should take place at intervals longer than that of a year.

49. **The priesthood.**—It is said of the Kurkūs of the Central Provinces that 'they have no priesthood, by class or profession, and their ceremonies are performed by the elders of the family' (*Central Pr. Gaz.*, Nagpur, 1870, p. 49). It is true that among many of the North Dravidian tribes the domestic worship, including that of deceased ancestors, is performed by the senior member of the household, or by the house father. But practically all these tribes have reached the stage of possessing priests. The term 'priest,' however, does not usually define with accuracy the functions of this officiant, the duties of medicine-man, sorcerer, exorcist, or witch-finder being generally combined in a single individual or class. Thus, at the Mundā rites in honour of Desaulī, the village patron god, 'the sacrifice and offerings are made by the village priest, if there be one; or, if not, by any elder of the village who possesses the necessary legendary lore' (Dalton, 196). Among the Malēs of Bengal the village headman acts as priest in the worship of Dharmer Gosāin (Risley, *Tribes and Castes*, ii. 57).

The priest, again, among the Kandhs is often identified with the shaman.

'The priesthood may be assumed by any one who chooses to assert a call to the ministry of any god, such call needing to be authenticated only by the claimant's remaining for a period varying from one night to ten or fourteen days in a languid, dreamy, confused state, the consequence of the absence of his third soul in the divine presence. And the ministry which may be thus assumed may, with few exceptions, be laid down at pleasure' (Macpherson, 103).

Their *jannīs*, or priests, he goes on to say, are divided into two classes—

'one which has given up the world, and devotes itself exclusively to religious offices; and one which may still engage in every occupation excepting war. The former class are disposed to hold that they alone are qualified to perform the rites of the greater deities; but the two classes pass insensibly into one another, and many of both are seen to perform every ceremonial,—with two exceptions, namely, the rite of human sacrifice, at which a great and fully instructed priest alone can officiate; and the worship of the god of war, which his own priesthood alone can conduct. And this god, it is to be observed, requires that his priest shall serve him only, while all the other deities accept divided service from their ministers' (*ib.* 104).

The 'great *jannī*,' or ascetic who has given up the world,

'can possess no property of any kind, nor money, nor, according to his rules, even look upon a woman; and he must generally appear and act as unlike other men as possible. He must live in a filthy hut, a wonder of abomination. He must not wash but with spittle; nor leave his door, save when sent for; except, perhaps, when he wanders to draw liquor from some neglected palm-tree, at the foot of which he may be found, if required, lying half drunk. He scarcely ever wears a decent cloth or blanket. He commonly carries in his hand a broken axe or bow, and has an excited, sottish, sleepy look; but his ready wit never fails him in his office. He eats such choice morsels as a piece of the grilled skin and the feet of the sacrificial buffaloes, and the heads of the sacrificed fowls: and, when a deer is cut up, he gets for his share perhaps half the skin of the head with an ear on, and some of the hairy skimmings of the pot.'

The layman priest, on the other hand, has a wife and family, and may accumulate wealth. He eats apart from other laymen, but may drink with them (*ib.* 104 f.). These statements must be accepted with some amount of caution, as Macpherson, relying on information received from his native subordinates, was inclined to attribute a more elaborate system of beliefs and ritual to the Kandhs than the tribe probably ever possessed.

Among the other tribes of the same family this ascetic class of priest does not seem to exist, though, of course, the diviner or witch-finder often adopts the shamanistic tricks which are the common property of his kind. Macpherson also records the singular fact that some Hindus were employed by the Kandhs to assist in the service of the minor deities.

'This alone would indicate that there has been a great change in their religion; but it is probable that the low Hindus alluded to are but the Ojhās or sorcerers whom the witchcraft superstition has called into existence' (Dalton, 296).

50. **Priestly titles.**—Along the Kaimūr range and in Chotā Nāgpur the tribal priest is known as the *baigā* (*q.v.*). Among the more Hinduized tribes he is known by the titles of *pāhan* (Skr. *pradhāna*, 'leader') or *pūjārī*, 'one who does the service of the gods,' both titles being borrowed from the Hindus of the Plains. No village is without a *baigā*, and such is the superstition of the people, that they would rather leave a village than live without him. Usually he is a member of one of the non-Aryan tribes, and is generally selected from those who live in the more remote tracts, and who, not being contaminated by Hindu beliefs and culture, are supposed to have the most accurate knowledge of the evil spirits, and the modes of placating and repelling them. In the more civilized villages in Palamāu, Forbes found that even Brāhmans and Rājputs were being occasionally appointed to this office—a sign of the progressive process of bringing the tribes under the Hindu yoke. The *baigā* is looked up to with awe by all the residents, is responsible for the appearance of disease in man or beast, and is bound to offer up the sacrifices necessary to repel it.

'He is supposed to be better informed on all that concerns the village than any one else, and to be able to point out each man's tenure. Among the jungle tribes he is invariably the arbitrator in all disputes as regards land or rent, and is the oracle in all discussions affecting the ancient customs and rites of the village, with all of which he is supposed to be intimately acquainted. He is bound at the commencement of each harvest to offer up sacrifices and perform certain ceremonies to propitiate the spirits. For this purpose he levies contributions of money, grain, cloth, fowls, and goats from all villagers. Until these sacrifices have been performed, no one would think of yoking a plough; and the Baiga often takes advantage of the delay to increase his demands' (*NINQ* iv. 5).

The official among the Gonds bears the same name.

'The nuptial, funeral, and similar ceremonies are performed under the lead of aged relations. But generally in every village there is a man who is supposed to have the power of charming tigers and preventing by spells (*mantra*) such calamities as drought, cholera, etc. He is called a Baiga' (*JASB*, 1890, p. 282).

The *pāhan* of the Cheros and Kharwārs, and the *lāyā* or *nāyā* (apparently a corruption of Skr. *nāyaka*, 'leader') of the Korās, exercise similar functions (Dalton, 129; Risley, *Tribes and Castes*, i. 509).

51. **Appointment of priests.**—In Chotā Nāgpur, according to Forbes (*NINQ* iv. 5), the office of priest is hereditary;

'but in the event of its becoming necessary to appoint a new Baiga, a meeting of the entire community is held, and the successor is appointed by vote; the individual selected is then called on to accept the post, and, in the event of his doing so, a day is fixed for the ceremony of installation. On the appointed day the whole village community meets in solemn conclave: the village headman presides, and the proceedings commence by his calling upon the candidate to state publicly whether he is willing to accept the office, and the duties he will have to perform are explained to him. He is then conducted round the boundaries of the village, the different landmarks of which are explained to him. The whole party then returns to the place of meeting, when the president, taking up the Baiga's instruments of office, which are known as "the knife and dagger," solemnly hands them to the new incumbent, and the installation is complete. These are the sacrificial instruments, and are heirlooms of the village; they are presented in the formal manner above described to each successive Baiga, and are used solely in sacrifice.' In the villages more under Hindu influence these hereditary implements of the Baiga seem to have fallen into disuse.

In other cases a special ceremony is performed to ascertain the will of the local deity regarding the appointment of his priest. In Kunāwar, on the lower slopes of the Himālaya, at one of the greater Hindu festivals, the villagers bathe, and, putting some water in the drinking-cups at the shrine of the local god, invoke him. 'He who is chosen is miraculously rapt or inspired by the god, and, taking up the cup, he is able to distribute grain from it, although it contained nothing but water. The Deotā [godling] may also declare his pleasure in this matter by imbuing one of his votaries with the power of thrusting, unharmed or unmarked, an iron rod through some portion of his flesh. It is the custom in one village to ask the Deotā from time to time after the death of his priest whether he wishes a successor appointed. The image is raised upon the shoulders of the people, and, if the god presses heavily to the left, he wishes the election postponed; if to the right, he wishes it to take place without delay' (*PNQ* i. 12).

Similar ceremonies are performed by the other Dravidian tribes. Among the Mundās the *pāhan* is always selected from among the descendants of the earliest settlers in the village, who alone understand how to propitiate the local gods. He is always selected from one family, but the actual *pāhan* is changed at intervals of from three to five years, by the rite of the sacred winnowing-fan—*mystica vannus Iacchi*. This is taken from house to house by the village boys, and the man at whose house it halts is elected; the same method of selection prevails among the Orāons (Risley, *Tribes and Castes*, ii. 106 f.; Dalton, 247).

52. **Priestly tabus.**—Among the Malērs the *demāno* is appointed by Divine election. After his call he must spend a certain time in the wilderness, in intimate communication, as his flock believes, with the deity, Bedo Gosāin. From the time that any one devotes himself to the priestly profession, his hair is allowed to grow like that of a Nazirite, because his powers of divination entirely disappear if he cuts it. The cutting of the hair of a holy man is, as Frazer shows (*GB*² i. 368), dangerous for two reasons; first, there is the danger of disturbing the spirit of the head, which may be injured in the process, and may revenge itself upon the person who molests him; secondly, the difficulty of disposing of the shorn locks, which may be accidentally injured, and thus, on the principles of sympathetic magic, may endanger the original owner, or may be used by some evil-minded person to work black magic against him. After admission to full orders the Malēr priest must establish his ability to foretell events, and

'he must prove by the performance of some stupendous work beyond the strength of one man, that he is supernaturally aided by the Supreme Being. The priest may be a married man, but after entering holy orders he must refrain from associating with or touching any woman except his wife. Having undergone all the tests, his nomination is finally confirmed by the Mānjhī [headman] of the village, who ties a red silk thread to which cowries are attached round his neck, and binds a turban on his head. He is then allowed to appear at the periodical sacrifice of buffaloes celebrated by the Mānjhī in the month of January, and must drink some of the blood of the victim (Dalton, 270).

Another interesting tabu of the Dravidian priests is that enforced at Zindā Kaliānā in the Panjāb, where they are required always to sleep on the ground or on a square bed of grass made on the ground between four posts. This reminds us of the Helloi or Selloi, priests of the Pelasgian Zeus of Dodona, who sleep upon the ground and have their feet unwashed, and of the Prussian priests who sleep in tents near the sacred oak (Hom. *Il.* xvi. 234 f.; Sophocles, *Trach.* 1167; Rose, i. 118 f.; *JAI* xxx. 36).

53. **Remuneration of priests.**—The methods of remunerating the Dravidian priest vary. Usually he supports himself on the head of the victims and portions of the other offerings which are his perquisite. Among the Mundās he has a glebe of rent-free land, and among the other tribes he receives gifts of grain and other produce at harvest time, and food at the chief tribal feasts.

54. **The sister's son as priest.**—The fact that inheritance among many of the people in North India is traced through the female has been held to indicate the prevalence of polyandry in ancient times. 'It was probably wide-spread amongst many tribes in other parts of India who at the present day retain no tradition of the practice' (Risley-Gait, *Census Report*, 1901, i. 448). This is specially shown in the case of those tribes among whom the sister's son does sacrifice to appease the spirit of the deceased. Thus among the Hārīs of Bengal a pig is sacrificed on the tenth day after a death to appease the spirit of the departed, the flesh being eaten by the relatives, while the nephew (sister's son) of the dead man officiates as priest; and the same is the case among the Ḍoms (*q.v.*), Musahars, Pāsīs, and Tāntīs of the same province (Risley, *Tribes and Castes*, i. 316, ii. 167, 300). Among the Arakhs of the United Provinces, if the services of a Brāhman cannot be secured, the sister's son of the deceased can officiate; the Bhuiyārs hold him in great honour, and make periodical presents to him as the Hindus do to a Brāhman; among the Ḍoms, as in Bengal, he is the funeral priest; among the Kols the marriage rites are performed by the same relative (Crooke, *Tribes and Castes*, i. 83, ii. 95, 325 f., iii. 309; Dalton, 63). This primitive form of priesthood is almost certainly a survival of the matriarchate. A record of the struggle between the matriarchate and the patriarchate has been traced in the Kandh legend, which tells how Tarī, the Earth-goddess, contends with her consort, Būṛhā Pennū. The latter is finally victorious, and as a sign of Tarī's discomfiture imposes, as in the Semitic story, the cares of childbirth upon her sex (Macpherson, 84 ff.).

55. **The aboriginal priest adopted into Hinduism.**—The process of adoption of these aboriginal priests into Hinduism has been clearly traced in the Central Provinces by Russell (i. 176 f.). Here the class of village priests or astrologers, the *joshī*, *jogī*, *jangam*, and his fellows, occupy for the lower castes the position which Brāhmans hold in the higher strata.

'They are the ministrants of the more primitive form of religion—that of the village gods. In many cases their ritual has probably been derived from a Dravidian source, and they

themselves may be the promoted descendants of the tribal priests, medicine-men, or witch-finders. It is true that they are now for the most part employed in the service of the Hindu gods, but this is probably a kind of religious evolution, of a nature akin to the social elevation into Hinduism of the casteless tribes; and, moreover, different authorities have held that many features of the cult of Śiva and Kālī, which represent a great retrogression from the purer nature gods of the Vedas, have been derived from Dravidian sources.'

56. **The priestly castes.**—Further, we find among some of the Dravidian tribes that certain castes, possibly in imitation of the Brāhman levites of Hinduism, have become specialized for religious purposes, and furnish priests to the lower orders. Thus the Mauliks of Manbhūm and Western Bengal act as priests of the meaner tribes.

'Their offices as priests of the various spiritual powers who haunt the forests, rocks, and fields and bring disease upon man and beast are in great request. A Bhumij or a Kurmi who wishes to propitiate these dimly-conceived but potent influences will send for a Maulik to offer the necessary sacrifices in preference to a Lāyā or priest of his own caste—a fact which speaks strongly for the antiquity of the settlement of the former in the country' (Risley, *Tribes and Castes*, ii. 83).

The *baigā* (*q.v.*) caste in the same way provide priests for the Gonds; and in the United Provinces the Paṭārī branch of the Majhwārs, who perhaps take their name from the *pāṭ*, or sacred plateau, which gives a deity to the Kūrs, Kurkūs, or Muāsīs, act as priests of the whole tribe, and take, like the Hindu *mahābrāhman*, the clothes and other goods of the dead man, by wearing or using which they are supposed to pass them on to the next world for his comfort. Hence they are held in such contempt that their parishioners will neither eat with them nor drink water from their hands (Crooke, *Tribes and Castes*, iv. 153 ff.).

57. **The menial priesthood in the Plains.**—Among the menial tribes and castes of the Plains the worship of the village-gods is performed by priests drawn from the very lowest ranks, Bhangī, Dosādh, Mālī, or barber; while the semi-Hinduized tribes of the Kaimūr range generally employ a Chero or Bhuiyār. Nor are their services confined to members of the tribes which generally employ them. Women even of high caste use their services in worshipping those local gods, whom the innate conservatism of their sex inclines them to propitiate side by side with the higher Hindu divinities. In time of stress, when famine, disease, or other trouble besets the village, all classes of the community employ them to perform the blood sacrifices and rude ceremonies of propitiation which they themselves do not understand or are unwilling to perform.

58. **Promotion of Dravidian gods into Hinduism.**—Writing of Greek religion, Campbell (*Religion in Gr. Lit.*, 1898, p. 46) remarks that the reaction of primeval local ceremonies upon the Aryan religious deposit is one of the many causes of the infinite variety in the popular cults of deities reverenced throughout Greece under the same name.

'People at an early stage of culture,' he says, 'are too entirely steeped in the awe and reverence which has descended to them from their forefathers to adopt heartily or entirely a system of worship coming from abroad. The imitative faculty may be active in grafting foreign features on native religion, but the inherent force of that religion will always prevail over such adjuncts, which to begin with are but imperfectly understood.' They remain, as he remarks elsewhere (p. 119), 'as an undergrowth when the tall trees of the forest were felled.'

The survival of these deities among a race of higher knowledge than that which originally worshipped them is further encouraged by the fact that they are to a large extent the impersonations of the awe and mystery of the forest, or the malign manifestations of the primitive Mother-goddess. A new race occupying an unknown land is naturally inclined to insist on the conciliation of those local powers, which, if neglected, are likely to visit them with their displeasure. The Aryan form of Animism was not in its nature different from that of the Dravidians, and hence the acceptance of the local cults presented no difficulty. The spirit of Hinduism has always been catholic, and it has always been ready to give shelter to foreign beliefs, provided it was permitted to assimilate them in its own fashion.

'The homely jungle hero,' says Lyall (*Asiatic Studies*[2], i. 50), 'comes eventually to get brevet rank among regular divinities, whenever his tribe is promoted into Hinduism. The upper class of Brāhmans are prone to deny the existence of this process, and to profess that the proselytizing which goes on should be understood as involuntary on their part, and merely superficial; they would be willing to keep their Olympus classic and above the heads of their low-born intruders. But the local Brāhman has to live, and is not troubled by any such fine scruples, so he initiates the rude Goṇḍ and Mīnā (non-Aryans of the jungle) as fast as they come to him for spiritual advice, sets them up with a few decent caste prejudices, and gives to their rough unfinished superstitions some Brāhmanic shape and varnish. This is vexatious to the refined Vedāntist of the towns, but the same thing goes on everywhere; for a lofty and refined orthodoxy will not attract ignorant outsiders, nor will it keep the mass of a people within a common outline of belief. So the high and mighty deities of Brāhmanism would never draw upward the peasant and the woodlander if he were not invited to bring with him his fetish, his local hero or sage, his werewolf and his vampires, all to be dressed up and interpreted into orthodox emanations. In one part of Rājputāna the Mīnās (an aboriginal tribe) used to worship the pig. When they took a turn towards Islām, they changed their pig into a saint called Father Adam, and worshipped him as such; when the Brāhmans got a turn at them, the pig became identified as the famous Boar Avatār of Vishnu, whose name is Varāha.'

This account admirably explains the process by which these local gods are adopted into Hinduism. A few examples may be given of Dravidian gods promoted in this way. The cases of Bhairoṅ, Gansām, and Hanumān have been already referred to (§ 29 ff.). Tod (i. 292 n.) describes how the primitive goddess of the Bhīls, who under Hindu guidance was re-named Lakṣmī, goddess of prosperity, gained the title of Sītalā Mātā, the smallpox goddess, whom the women of the tribe invoke in times of danger. Macpherson tells how, when the Hindus occupied the Kandh country, they took over the local goddess, Kandhinī, and, joining in the aboriginal worship at her shrine, 'her worship becomes practically confused with that of Durgā, but it is still discharged with regularity and pomp by this joint ministry' (*Calcutta Rev.* v. 58).

The adoption by the Hindus of these aboriginal gods is often masked by a legend which tells that an image was accidentally found, and the agency by which it is said to have been recovered is often that of a member of one of the non-Aryan tribes. This tale is told of the famous image of Jagannāth, which is said to have been recovered by one of the aboriginal tribe of Savarās. Ball (580) describes how a Kandh found an image said to resemble that of a cat, which is now recognized as that of Narasiṅha, the 'man-lion' incarnation of Viṣṇu. Often the image or *liṅgam* is said to have been discovered as the result of a dream. One of the most famous *liṅgams* in the Central Provinces was recovered in this way, and the same tale is told of an image of Kṛṣṇa in western India, of the great *liṅgam* at Mewār, and quite recently of an image thrown up on the seashore near Bombay (*BG* v. 81; Tod, i. 242; *NINQ* i. 175). The same inference may perhaps be drawn from the fact that the images most valued by modern Hindus are those known as *svayambhu*,

'that is, existing spontaneously and of their own nature pervaded by the essence of deity. They are merely rough stones or rocks supposed to have descended direct from heaven, or to have appeared miraculously on the soil. They are the most sacred of all objects of adoration, and, when discovered, temples are built over them. The most usual idols of this kind are stones supposed to represent the Liṅga of Śiva; and when shrines are built round them, a Yoni (to represent the female organ) is usually added' (Monier-Williams, *Brahmanism and Hinduism*[4], 69).

These Dravidian local gods seem to have supplied much of the coarser elements of modern Hinduism—the lavish blood sacrifices of animals, the occasional immolation of human beings, the use of

spirituous liquor in the service of the gods—all of which appear in the Śākta cult, the most degraded form of the current belief. The same was the case in Greece, where 'it must be remembered that the cruder and wilder sacrifices and legends . . . were strictly *local*; that they were attached to these ancient temples, old altars, barbarous *xoana*, or wooden idols, and rough fetish stones in which Pausanias found the most ancient relics of Hellenic theology' (Lang, *Myth, Ritual, and Religion*, i. 252 f.).

59. **Dravidian feasts and festivals.**—The Dravidian feasts may be roughly divided into two classes: (1) those celebrated at the chief agricultural seasons—ploughing, sowing, harvesting—the object of which is to promote the fertility of the soil and the growth of the crops; (2) those intended as a means of purgation, the periodical expulsion of the malign spiritual powers which menace the community. The line, however, between these two classes of festivals cannot be clearly drawn, and the ceremonies of one occasionally merge in those of the other.

When the hot weather has passed, with the first fall of rain the Santāl performs at seed-time the *Erok Sim* feast, when he craves the blessing of the Mother-goddess who presides over the crops, by making a sacrifice of chickens in her sacred grove. This is followed by the *Hariar Sim*, 'the feast of greenery,' when a sacrifice is again made to secure the favour of the gods (Bradley-Birt, *Indian Upland*, 278 f.). At the transplanting of the rice the Rain-god is again invoked; and at the critical period later on, when the success of the crop depends upon abundant rain, the *Chhaṭ-parab*, or 'umbrella feast,' is held. It is a form of rude mimetic magic.

'A long lithe *sāl* tree shorn of its branches supports the smallest of umbrellas roughly made of gaudy tinsel, and together, amidst the excited shouts of the celebrants, they are raised aloft until, standing perpendicularly, the *sāl* trunk is fixed firmly in the ground. As it slowly settles into place, the people, gathering up handfuls of dust and earth, pelt the umbrella with loud cries and much laughter, dancing round it the while as round a maypole, while the men turn somersaults and perform wonders of athletics and acrobatic skill. Copious drinking of rice beer brings the feast to a close' (*ib.* 280 f.).

Finally, when the rice is in ear and the season of harvest approaches, the *Janthar* feast, or offering of first-fruits, is performed. Tiny sheaves of the half-ripe corn are placed in the sacred grove upon the sacrificial stone, and prayers are made to the gods that they will permit the crop to be safely reaped and garnered. The sacrifice of a pig, the flesh of which is cooked and eaten in the grove, is an essential part of this feast (*ib.* 281). The corn, as Frazer suggests, is eaten sacramentally 'as the body of the corn-spirit' (*GB*[2] ii. 318 ff.). This round of Santāl feasts may be taken as specimens of those performed by the Northern Dravidian tribes, further accounts being reserved for the articles on Mundās, Orāons, and others.

An example of the second class of festivals—the purgation feasts—is to be found in the *Māgh-parab* or *Desaulībonga* of the Mundās. A sacrifice is made to the village-protecting deity, Desaulī.

'At this period an evil spirit is supposed to infest the locality; and, to get rid of it, the men, women, and children go in procession round and through every part of the village, with sticks in their hands as if beating for game, singing a wild chant and vociferating violently till they feel assured that the bad spirit must have fled; and they make noise enough to frighten a legion' (Dalton, 280 f., 196 f.).

We find the same custom amongst the menial castes of the Plains, among whom, after the *Divālī*, or feast of lights, the house-mother takes a sieve and a broom, and beats them in every corner of the house, exclaiming, 'God abide and Poverty depart!' These feasts have been exhaustively discussed by Frazer (*GB*[2] iii. 39 ff.).

The lights used at the *Divālī* feast are probably intended as a means of expelling evil spirits. Among the Pāvrās, an aboriginal tribe of Khāndesh, at this feast four or five stones are brought from a neighbouring river-bed and placed outside the houses but within the village lands. They are painted red, liquor is sprinkled on the ground and freely drunk, and goats and fowls are sacrificed. Dancing begins at nightfall, and two men, holding lighted torches, go from house to house followed by the villagers. Every housewife comes out with a lighted lamp in her hands, waves it before them, marks their foreheads with the lamp oil, and gives beer. In this way every house in the village is purified (*BG* xii. 100). Further south it resolves itself into a means of purifying the cattle. After feasting, a figure of Balindra, god of cattle, is made and hung up in the cowshed, with rice and coco-nuts tied round its neck. The cattle are decorated with splashes of colour and garlands. The fiercest bull and the swiftest heifer in the herd are covered with flowers, and driven through the village, followed by a crowd of shouting youths. The lad who can snatch a garland from the bull or heifer as it rushes along is loudly applauded, and is considered a fit match for the best girl in the neighbourhood (*ib.* xv. pt. i. 207).

60. **The Holī.**—The most interesting of these Dravidian festivals in North India is that of the *Holī*, known further south as the *Shimgā*. The chief part of the rite is the burning of the *Holī* fire, the primary intention of which is apparently by a sort of sympathetic magic to ensure a due supply of sunshine for the crops (Frazer, *GB*[2] iii. 313 ff.). But there are other incidents which suggest that the rite in its present form is complex, and that more than one train of thought has led to its observance. Returning to that primitive tribe, the Pāvrās of Khāndesh, we find that a pit is dug, and a wooden stake thrust into it, and lighted at night. Every one brings a piece of bread, some rice, and a cock, portions of which are thrown into the fire and the rest consumed on the spot. Drinking and dancing go on till dawn (*BG* xii. 100). In Kumāun each clan erects a tree covered with rags which are begged by the young men from the people of the tribe. Near the tree a fire is kindled and the tree is burned. While it is being burned there is a contest between the clans, each trying to carry off a shred of cloth from the tree of another clan. When the tree is consumed the people leap over the ashes, believing that in this way they get rid of itch and other diseases. The analogy with the custom of hanging rags on trees is here obvious (§ 12). In Gwalior, again, two phallic figures are constructed. One, made of wood, is preserved from year to year; the other, of bricks, after the fire is lighted is broken to pieces with blows of shoes and bludgeons. The wooden figure is placed beside the wedding couch as a fertility charm (*NINQ* iii. 92 f.). A similar rite is the *Khatarhuvā* of Kumāun, when a fire of dry grass and weeds is burned round a pole. Obscene songs are sung, and the purport of one is that the cattle are now safe from demons (*ib.* iii. 135). Among the Dravidian Biyārs, again, a stake of the sacred cotton tree is driven into the ground, and a time is fixed for the Burning of the Old Year. The fire is lit by the village *baigā*, and the people after parching ears of barley at it eat them. They sprinkle the ashes about, and with them mark their foreheads (Crooke, *Tribes and Castes*, ii. 137). An important part of these rites is the leaping over the fire and the driving of the cattle through it, which Frazer (*GB*[2] iii. 312) thinks 'may be intended, on the one hand, to secure for man and beast a share of the vital energy of the sun, and, on the other hand, to purge them of all evil influences; for to the primitive mind fire is the most powerful of all purificatory agents.' Further than this, we find that, in the

ceremony as performed in the Mathura district of the United Provinces, the important portion of the rite is that the village priest, apparently as a representative of the community, should walk through the fire not in a perfunctory way, but in a manner which seems to imply that he was expected actually to expose himself to the flames. A similar rite practised by the king of Tyre seems to represent the commutation of an actual fire sacrifice (Frazer, *Adonis, Attis, Osiris*, 38; Crooke, *PR* ii. 317). The *Holi*, then, appears to be a complex rite, the chief intention being to promote fertility and dispel evil influences.

61. The Saturnalia.—It will have been noticed that in connexion with festivals of this kind there is a period of licence, which may be compared to that of the Roman Saturnalia. The *Māgh-parab*, or spring feast of the Mundās, is held in January,

'when the granaries are full of grain, and the people, to use their own expression, full of devilry. They have a strange notion that at this period men and women are so overcharged with vicious propensities that it is absolutely necessary for the safety of the person to let off steam by allowing for a time full vent to the passions. The festival, therefore, becomes a saturnale, during which servants forget their duty to their masters, children their reverence for parents, men their respect for women, and women all notions of modesty, delicacy, and gentleness; they become raging bacchantes' (Dalton, 196).

In the same way the rites of the *Holī* festival are accompanied by indecency of word and gesture; the singing of ribald songs, and the flinging of filth or coloured water on passers-by. Such orgies are commonly associated with the rites of the spring festival or the garnering of the crops (Frazer, *GB*[2] iii. 118 f., 138). It seems more probable that these acts of indecency are intended as a piece of sympathetic magic to induce fertility, than, as Crawley (*Mystic Rose*, 1902, p. 278 ff.) suggests, a means of purification and breaking with the past by a complete inversion of the normal, decent course of ordinary life.

62. Hunting-festivals.—The last group of the Dravidian festivals which can be considered here is that of the general hunt. In Chotā Nāgpur the Hos, as well as most of the other non-Aryan tribes of the district, have a great national hunting-festival in May. Immense crowds assemble, beat the forests, and kill enormous quantities of game (Bradley-Birt, *Chota Nagpore*, 107 ff.). Among the Rājputs this is represented by the annual spring rite of the *Ahairia*, when the boar, the enemy of the Mother-goddess, Gaurī, is slain (Tod, i. 598 f.). Frazer connects this slaying of the boar with the killing of the corn-spirit (*GB*[2] ii. 284). This general hunting-festival, again, seems to develop into the Mundā rite, when all the girls of the village arm themselves and make a descent upon a neighbouring village, whence they carry off all the live stock, in the shape of fowls, kids, pigs, and lambs, which they can secure, the village thus raided retaliating by a similar raid upon another; and in the Plains, in Bihār, at the *Jūr Sītal* feast in honour of Sītalā, the smallpox goddess, the people in the forenoon cover themselves with mud, which they shower on every one they meet, and in the afternoon go out with clubs and hunt hares, jackals, and any other animal they can find in the village (*NINQ* iii. 98; Grierson, *Bihār Peasant Life*, 401). The import of these rites is obscure. They may be connected with the totemistic slaughter of sacred animals, as in the case of Hunting the Wren; or they may be purificatory or cathartic (*FL* xi. 250 ff., xvii. 270 ff.).

63. The current religious beliefs of the peasant.—It remains to consider the general views of the so-called Dravidian peasant of the Plains on the subjects of religion and morality. This question was specially considered at the last Census, and much useful information has been collected.

Beginning with the Panjāb, Wilson, a careful observer (*Sirsa Settlement Rep.*, 1883, p. 133), holds that the ordinary Hindu peasant of the Panjāb

'has practically no belief in the transmigration of souls, but has a vague idea that there is a future life, in which those who are good in this world will be happy in a heaven, while those who are bad will be wretched in a hell. His devotional offerings to demons, saints, and godlings are meant rather to avert temporal evils or to secure temporal blessings than to improve his prospects in the world to come. He has an idea that sin will bring evil on himself and his fellows in this life as well as after death. His instincts as to good and evil are much the same as the ordinary European moral distinctions, only they do not take so wide a range; instead of extending to the whole human race, or to the whole nation or sect, they extend only to his own tribe, or village, or family. He thinks it wrong to tell a lie unless perhaps to benefit a relative or friend; he thinks it wicked to injure a man unless he has been injured by him, or to cheat another unless he thinks that that other would cheat him if he got a chance; or to take a bribe without giving the promised consideration for it.' He has a vague idea that it is good for him to meditate on the deity; and, to show that he has not forgotten him, he mutters the name of Rāma, or of some other Hindu god, when he rises in the morning, and, 'if he is piously inclined, at all times also, in season and out of season. Notwithstanding all the numerous saints and deities whom he endeavours to propitiate, he has a vague belief that above all there is one Supreme God whom he calls Nārāyan [Nārāyaṇa] or Parmeshar [Parameśvara], who knows all things and by whom all things were made, and who will reward the good and punish the bad both in this life and in the life to come.'

Fagan, writing of the neighbouring district of Hissar, remarks (*NINQ*, iii. 129) that the peasant is in no sense an orthodox Hindu. He feeds and venerates, though he does not respect, the Brāhman; and he acknowledges the existence and power of the three great Hindu gods, Śiva, Viṣṇu, Kṛṣṇa. Of the more strictly orthodox, but inferior gods, perhaps Sūraj Nārāyan, the Sun-god, is the one most commonly worshipped. His worship consists in bathing at the tank adjoining one of the Hindu temples, obeisance, and pouring water over the *liṅgam* of Śiva. He worships Sūraj Nārāyan on Sundays; and the more pious fast on that day in his honour, eating only one meal, and abstaining from the use of salt. But these gods are too great for every-day use. 'He lives, as it were, in an atmosphere charged with the spirits of departed saints, heroes, demons, and others who are in a position to, and as a matter of fact do, exercise a benevolent or malevolent influence in the affairs of mankind, and it is from them that he selects those who are to be the recipients of his every-day devotion. It is not so much perhaps the case that he worships them with fixed ceremonies as he does Śiva or Sūraj Nārāyan; but they are always consciously almost present to him as the beings who have the most immediate connexion with his destinies.' In this class Bhūmiyā or Khetrpāl, the Earth-god, and Sītalā, the goddess of smallpox, are most commonly worshipped. Fire he adores by dropping butter into it; he worships the Pīpal, or sacred fig-tree, at dawn, after bathing, by pouring water at its root and making obeisance.

Burn (i. 73 ff.) corroborates the existence in the United Provinces of belief in a Supreme God, called Bhagvān, Parameśvara, Īśvara, or Nārāyaṇa.

'It must not be forgotten, however, that, to the Hindu, religion includes matters which to other people are merely social concerns; and, while he has no idea of congregational worship, such as is usual for instance in Christianity or Islām, ritual enters into his daily life probably to a greater extent than into that of a Christian or Musalmān.'

A cultivator in Bundelkhand thus described his religion to Luard (i. 64): 'All I know about religion is that every day I call Rām morning and night. All my time is taken up in work. I do not do things which would outcaste me, associate with the low, or eat forbidden things. This is all my religion.' In other words, religion amounts to observance of the laws of caste.

W. CROOKE.

DRAVIDIANS (South India).—**1. Introductory.** —The Southern Dravidians, numbering about 57 millions of people, occupy the portion of India that is bordered on the north by a line which, starting about 100 miles south of Goa, runs along the Western Ghāts to Kolhapur and Hyderābād, then passes south of Berār to the Bay of Bengal on the east. The term 'Dravidian,' irrespective of boundary, is generally used in the sense applied to it by Kumārila Bhaṭṭa in the 8th cent. (about A.D. 725 [Hoernle, *Hist. of India*, 1905, p. 76]) to include those southern peoples who then spoke languages he termed 'Āndhra Drāvida,' or 'Telugu Tamil,' among which are now included, as chief languages, Telugu, Tamil, Kanarese, Malayālam, and Tulu. Many attempts have been made to connect this group with other outside families of languages, such as Scythian, Ural-Altaic, and Australian; but, so far as any conclusive evidence is concerned, 'the attempt is now generally regarded as a failure' (*Linguistic Survey of India*, vol. iv. p. 282). The same conclusion seems to have been arrived at with regard to efforts made to connect the Southern Dravidians with other known races of the world, or even with those of North India. Recent head-measurements in South India have led Thurston (*Castes and Tribes of Southern India*, vol. i. p. xli) to the conclusion that

'whatever may have been the influence which has brought about the existing sub-brachycephalic or mesaticephalic type in the northern areas, this influence has not extended southward into the Tamil and Malayālam countries, where Dravidian man remains dolicho- or sub-dolichocephalic.'

It follows that there is no reliable evidence whether the Southern Dravidians are autochthones, or whether in some primitive time they reached their present habitats from some outside country. In South India they were preserved, almost down to historic times, from the outside social and ethnical influences of Aryan, Scythian, or Mongoloid invaders, which in the north submerged the proto-Dravidian races, who spoke some proto-Dravidian language. The barrier of the Vindhya range of mountains warded off for long the pressure of these more vigorous races and of their more advanced civilization. The Southern Dravidians have, therefore, preserved their own indigenous language, diversified in course of time into distinct groups of separate languages. In these languages —Telugu, Kanarese, Malayālam, and especially Tamil—a literature was developed in a peculiar classical form, so archaic and different from the spoken language of to-day that even an educated Southern Indian would now be unable to read or understand this early literature, unless he made it a special study. It enshrines somewhat of the early history of the social organizations and religious conceptions of the pre-Aryan period.

To the east and west of the Vindhyas lay the low coastlands, through which, in due course, Aryan and other newcomers penetrated, settled in the richer river-valleys, and thence advanced through the more accessible passes to the central table-land. These incursions were comparatively late in the lifetime of Dravidian peoples. It is not until the 4th cent. B.C. that mention is made in Aryan literature of the Southern Dravidians. The grammarian Pāṇini in the 5th cent. B.C. merely notes the existence of the Āndhras, who ruled in the Telugu country in the north-east of Dravidian lands, and who, from the account of Megasthenes, held an extensive sway south of the Maurya empire as early as 300 B.C. Kātyāyana, the commentator of Pāṇini, in the 4th cent. B.C., also mentions the ancient Dravidian Pāṇḍya and Chola kingdoms, which had their capitals at Mūdūr and Uraiyūr (*ūr* being Dravidian for 'village' or 'town'). The Edicts of Aśoka in the 3rd cent. B.C. show that the south was then well known, as were the kingdoms mentioned above, and that of the Cheras on the east. Aśoka records in these Edicts that he had conquered the Kaliṅgas as far south as the Kistna River, and killed 100,000 of the inhabitants—which he regretted because 'in such a country dwell Brāhmans and ascetics, men of different sects' (V. A. Smith, *Aśoka*, Oxf. 1901, p. 16). The publication of these Edicts as far south as Mysore 'presupposes a widely diffused knowledge of the art of writing' (V. A. Smith, *Early Hist. of India*[2], do. 1908, p. 154). Inter-communication had so increased by the time of Mahendra, a relative of Aśoka, that he is said to have implanted Buddhism as far south as Ceylon (see CEYLON BUDDHISM).

In the history of religious life—so far as it is of permanent interest—of the Southern Dravidians, it is almost impossible to discriminate exactly between what was the result of the influence of Aryan conceptions and what was of purely indigenous origin. Thought in India loves to work through analogies, and an analogy may be found in the Aryan influence in the south on race and on religion, so far as it affected the higher classes and their literature.

The aboriginal Dravidian was of short stature, of dark skin, with a short broad nose. The Aryan —at least the early Aryan ethnically uninfluenced by the aboriginal races, of whom the pure Brāhman is the best type in India to-day—was of fair complexion and had typical Aryan features. In South India of to-day

'between a Brāhman of high culture, with fair complexion and long narrow nose, on the one hand, and a less highly civilized Brāhman, on the other, there is a vast difference, which can only be reasonably explained on the assumption of racial admixture; and it is no insult to the higher members of the Brāhman community to trace, in their more lowly brethren, the result of crossing with a dark-skinned and broad-nosed race of short stature' (Thurston, *op. cit.* vol. i. p. liv).

This racial mixture of Dravidian and Aryan can be traced all over the south, more marked as one goes northward, where the Aryan influence was more predominant. The same mixture of Aryan and Dravidian can be traced in the literature of the religious life of the people, so far as it is a record of their best thought. There is throughout it an underlying Dravidian substratum, interwoven and covered over with, sometimes almost

concealed by, accretions from Aryan culture. Just as Dravidian languages, from their contact with Aryan languages, were enlarged with a new vocabulary and their literature enriched by new modes of expression, so, in a similar manner, Dravidian primitive religious conceptions were refined from dark superstitions and Animism, until they finally reached a living faith[1] in the saving grace of a Supreme Deity. The primitive Dravidian substratum has been described as a form of shamanism (see preced. art. §§ 2, 3). This phase of thought still exists in South India among the wilder tribes and simpler rural folk, who have their own peculiar ecstatic frenzied dances, amid which the votaries, drugged and foaming at the mouth, are held to be in communion with some demon or goddess, and to become soothsayers of the deity thirsting for unholy rites and blood sacrifice. Out of some such phase of thought emerges the pre-historic primitive Dravidian religion, known as some form of Śaivism, or worship of Śiva. The attributes and rites of this deity were gradually brought into conformity, by a process of compromise, with those of some Aryan deity or deities. This was due to the necessity under which an invading race lie of compromising with the people amid whom they make their new homes. There are evidences which tend to show that the Aryans adopted somewhat of the pronunciation of Dravidian languages (*Linguistic Survey*, vol. iv. p. 279). Dravidian languages, on the other hand, north and south, enlarged the vocabulary of the Aryan languages and influenced their inflexions. In a similar manner Dravidian religious conceptions reacted on Aryan modes of thought.

The attributes of the Dravidian deity Siva were found to be most in conformity with those of the Vedic god Rudra, the wielder of the thunderbolt and father of the Storm-gods. The conception thus grew of a half-Dravidian half-Aryan deity—Rudra-Śiva, the Destroyer of the Universe—who became the Supreme Deity, Śiva, of the great mass of the Dravidian people. The term *śiva* is even used in the Vedas as = 'auspicious'—an epithet of the god Rudra. The word *śiva* is, however, the Dravidian word for 'red,' and the word *rudra* in the Rig Veda 'often seems to mean red.' Therefore, at a very early period, 'it seems probable that the conception of the god Rudra had a tinge of Dravidian ideas' (*Linguistic Survey*, iv. 279).

This 'tinge of Dravidian' runs through all Dravidian literature of post-Aryan periods in which the religious ideals of the people were expressed, giving it a distinctive and often perplexing individuality of its own. Aryan influences had, no doubt, a predominating effect alike on the literature, the religious conceptions, and the philosophic modes of reasoning of the Dravidian. Nevertheless, Dravidian genius, roused by contact with an advanced civilization, developed a distinctive religious literature worthy not only to stand side by side with the best of the literature of India, but also to take a place in history as a contribution to the records of the efforts and aspirations of mankind towards the truth.

Evidence for the influence of early Christian beliefs (see *ERE* ii. 548 ff.) on later Dravidian religious conceptions belongs more to the region of feeling than to that of absolute proof. This feeling seems to have impressed itself most strongly on European scholars, who may be said, by their intimate acquaintance with Indian languages and literature, to be almost saturated with the spirit and thought of India (see Grierson, 'Modern Hinduism and its Debt to the Nestorians,' in *JRAS*, April 1907; Pope, Introd. to *Tiru Vāchakam*[2]). The theory of this influence is not further touched on for want of definite evidence or proof: it must suffice to say that, throughout Tamil literature, from the 8th or 9th century, there are to be found ideas and sometimes totally unexpected forms of expression suggestive of some Christian influences on the poetry of the period.

2. **Early history of Dravidian religion.**—Tradition ascribes the earliest Aryan influences on Dravidian religious literature to the Jains, whose writings were usually in Sanskrit, and were translated into the vernaculars for the use of the common people. The *Kural*, a collection of couplets, in the Vembā metre, on ethical subjects, is especially claimed by the Jains as their contribution to the earliest efforts to provide the Dravidian cultivators of the soil with moral teachings. This claim seems improbable; the work is more usually ascribed to a weaver named Tiru Valluvar, who lived at St. Thomé, near Madras. It is said to have been accepted by the 3rd *Saṅgha*, or Tamil Academy, at Madura, through miraculous intervention of the god Śiva to establish the revealed character of its stanzas. Divided into three books, on Virtue, Wealth, and Enjoyment, it is still considered by Tamil-speaking people as a masterpiece of literary structure and of profundity of thought, and has received similar praise from many European scholars. It has been ascribed to the 2nd or 3rd cent. (Barnett, *Catalogue*, p. 111), but its style is simple—far more so than works ascribed to a much later period.

The same famed Tamil Academy is also traditionally held to have been responsible for the gathering together, at the court of the king of Madura, of 800 Jain ascetics, who issued a collection of 400 quatrains known as the *Nālaḍiyār*, to serve as a Tamil Veda, or Book of Wisdom, for the daily use of the people. These quatrains are said to have been composed 4000 years ago, but, as a matter of fact, date back, at the furthest period to which they can be assigned, to the 2nd or 3rd cent. A.D. In the outpourings of the soul—tossed from birth to re-birth through the evil of deeds—over the weariness of life and the joy of release from ceaseless transmigrations, there is no evidence of any distinctive school of belief, either Jain, Buddhist, or Śaiva, and no mention of a deity. One quatrain alone (243) gives a faint clue to the existence of a difference between northern and southern faiths, by stating that

> 'many of the southern people have entered heaven (*svargam*), while many of the northern have lived in vain; the future of every one depends on his own deeds.'

In these early centuries Jainism and Buddhism flourished throughout South India side by side with the rising claims of Śaivism to gather the southern people into one common national faith, founded on the belief in a personal deity able to enter into communion with his votaries. From the beginning of the 1st cent. (A.D. 23) to the beginning of the 3rd (A.D. 218), the Buddhist faith flourished vigorously, especially in the Telugu country. Here, under the rule of the Āndhra-Bhṛtyas, the famed Buddhist tope at Amarāvatī, near the Kistna River, was built. This great Buddhist memorial is now in ruins, and the surrounding country desolate; but in the neighbouring hills are cut out rock-hewn caves, once the abodes of ascetic monks, who must have wandered far and wide, inculcating the faith of their founder and begging alms.

The Jainist negation of the belief in a soul and Buddhist nescience as to the existence of a personal Deity were doomed to failure, removed as these doctrines were in the south from the sources of their birth in far-away Kapilavastu, 200 miles north of Benares. The great revolt of the Dravidian races against both Jainism and Buddhism arose in the 5th and 6th centuries, and continued until the indigenous deity Śiva was left supreme. The land of the Dravidians became henceforth the land

[1] There is no pure Dravidian word for 'faith.' The Skr. word *bhakti* is used (= Tamil *patti*) in Tamil literature as early as the 8th or 9th century.

[2] Sanskrit forms of Tamil words are used throughout, as being more generally known. *Tiru*—the Tamil method of pronouncing the Skr. *śri*, 'blessed'—is retained, as it is of common occurrence.

of a belief in a First Cause, who by His grace created a cosmos wherein souls might work out the fatality of *karma*, or deeds, and so gain release from the haunting terrors of endless births and re-births, the uncertainties of awards in heavens or terrors in hells.

An account of South India, seemingly authentic, at this period is given by Hiuen Tsiang, a Chinese pilgrim, who travelled all over India to trace the footsteps of Buddha and to learn the condition of the Buddhist faith. It is recorded that this visit took place in A.D. 640, in the reign of the Western Chālukyan monarch, Pulikeśin II. (A.D. 608 to 642), who ruled at Vātāpi, and is said to have conquered the Southern Pallava monarch, Narasimha Varma, who ruled (A.D. 625 to 645) at Kāñchī (Conjeeveram). The Chinese pilgrim describes Kāñchī as a city five miles round, containing many Jains, 10,000 Buddhist monks, and 80 Brāhman temples. At Mālākūṭa (country south of the Cauvery) he records that the people did not care for learning, but were given to commercial gain. He says that the country possessed many ruins of old monasteries, but that only the walls were preserved. There were many hundred Deva temples, and a multitude of heretics, mostly Jains. He also describes one Buddhist *stūpa*, or burial-mound, 'in the Chola country, and another in the Drāvida or Pāndya kingdoms, as ascribed to Aśoka' (V. A. Smith, *Aśoka*, p. 47). From this it is clear that the coming struggle was to be between the advancing power of Śaivism as opposed to the Jain belief and the fading influence of Buddhism. There is further internal evidence in the great classical Tamil romances—the *Maṇimēkhalai*, and *Śillapp'adhikāram*—of the 2nd cent. that at that period Buddhists, Jains, and Śaivas lived in harmony, whereas the third great Tamil classic—the *Jīvaga Chintāmaṇi* of the 10th cent.—gives evidence of the hostility of both Jains and Śaivas to the Buddhist faith.

3. **Sacred hymns of the Śaivas.**—The revival of the Dravidian worship of Śiva led to the collection of all the early Śaiva hymns, composed for singing in the temples to Śiva during worship, into what is known as the *Tiru Murai*, or Holy Sayings. The first three books of this collection contain the poems of the most renowned sage and saint of the Tamils, Tiru Jñāna Sambandhar, of the middle of the 7th cent. A.D. (V. Venkayya, *Tamil Antiquary*, No. 3 [1909]), whose image is still worshipped in Śaiva temples of the south. The next three were the poems of Appar, or Tiru Nāvukk'araṣu; and the seventh—the last—those of Sundarar, of the 8th and 9th centuries. The poems of this collection, or *Dēvāram*, are held to be Divine revelation, and are daily recited, in Tamil lands in the Śaiva temples, by a special class of priests. To this collection are further added, as the 8th part of the *Tiru Murai*, the poems of Māṇikka Vāchakar, known as the *Tiru Vāchakam*,[1] or Holy Sayings, which date from A.D. 800 to 900 (J. Vinson, *Siddhānta Dīpika*,[2] Aug. 1908; V. Venkayya, *Tamil Antiquary*, No. 3, p. vi). A ninth collection, by nine minor poets, is known as the *Tiru Iṣaipā*, one hymn of which relates to a temple built by Rajendra Chola I. (A.D. 1012) (*IA* xxxvi [1907] 288). The 10th is by a mystic, Tiru Mūlar; and an 11th contains some poems by Nakkīrar Devar of the 5th or 6th cent. A.D. The last ten poems of this 11th collection are by Nambi Āṇḍār Nambi; the last three form the basis of a legendary History of Saints, which is known as the *Periya Purāṇam*, composed by Śēkkirar, under the patronage of Kulottuṅga Chola II. (A.D. 1070–1118) (Sundaram Pillai, *Milestones*, p. 3; see Barnett, *Catalogue*, for a nine-fold collection of the *Tiru Murai*).

[1] Hereafter cited as *T. V.* [2] Hereafter cited as *S.D.*

The collection of early devotional literature, together with the poems of fourteen later Santāna teachers, are sometimes called the 'Sacred Sūtras of the Śaivas.'

The 10th cent. is noted for the sacred Śaiva poems of Paṭṭanattu Pillai, while in the 16th or 17th cent. all the floating legends concerning the many manifestations of the energies of Śiva were collected together as 'The Sacred Sports of Śiva,' or *Tiru Vilai āḍal Purāṇam*, by Parañ Jōti. The most popular and sweetest singer of Śaiva mystic raptures was Tāyumānavar, who wrote about A.D. 1650.

This period of revival of the adoration and worship of Śiva exhibits, as an outward expression of the inward devotion of the people to their Deity, the bestowal of an almost incredible amount of labour and skill on the erection in A.D. 985 of the famed temple at Tanjore, the walls of which were covered with inscriptions telling of the great victories of the Chola king, Rāja Rāja Deva (A.D. 985). In the time of the earlier Chola king, Parāntaka I. (A.D. 907), the temple to Śiva at Chidambaram is recorded to have been covered with gold (*S.I. Inscriptions*, vol. i. p. 112).

The most revered of all these early poets was Tiru Jñāna Sambandhar, who is said

> 'to have looked upon the overthrow of the Jains and Buddhists as the one object of his life—of every one of his numerous hymns the tenth verse is uniformly devoted to their condemnation' (Sundaram Pillai, *Milestones*, p. 79).

He is said to have converted the ruling Pāṇḍya monarch at Madura from Jainism back to the ancient faith in Śiva, to which the monarch's wife and prime minister had adhered. The *Periya Purāṇam* records that not only did he convince the king of the truths of Śaivism, and defeat all the arguments brought forward in support of Jain doctrines, but that he afterwards took care that 8000 Jains should be massacred—a massacre which is still commemorated at Madura. The second greatest of these early poets was Māṇikka Vāchakar, the author of the *T. V.*, who in the 9th cent. A.D. is recorded, in the *Vāthav ūrar Purāṇam*, to have totally defeated the Buddhists, and to have finally established the Śaiva faith in the Chola kingdom. The king of Ceylon is said to have arrived with his surrounding Buddhist missionaries at the court of the Chola monarch, who vowed to exterminate them if Māṇikka Vāchakar could establish the truths of the Śaiva faith in opposition to the arguments of the Buddhists.

It is strange that at this early period one of the keenest philosophical arguments against the whole underlying basis of Buddhism and idealism was raised by the Tamil sage. The Buddhists, in their arguments before the Chola king, stated the cardinal doctrine of their belief that all 'knowledge appears and in an instant of time disappears: all is ceaseless flux.' The answer of Dravidian India came in the retort of Māṇikka Vāchakar, that in all thought, in all perception, there must persist a momentary consciousness, a moment of apprehension, which persistence was in itself evidence of reality. The argument was urged by Māṇikka Vāchakar, who asked how he could reply to a Buddhist who uttered madness, for,

> 'before thou didst finish uttering forth thy words and meanings, since thine understanding must have passed away, what revelation of truth and virtue can there be?' (Pope, *T. V.* p. lxix).

The Buddhists, after long disputations, had to confess and in despair cry:

> 'Thou sayest that we possess neither God nor salvation. What, then, is your God and your salvation?'

The best non-doctrinal answer to this question is to be found in the *T. V.* of Māṇikka Vāchakar, now available for English readers in the versified tr. by Pope. These 'Holy Sayings' are, in the words of the translator (p. ix, preface):

'daily recited in all the great Śaiva temples of South India, are on every one's lips, and are as dear to the hearts of vast multitudes of excellent people there as the Psalms of David are to Jews and Christians.'

It is held that in South India the influence of these hymns was such that

'by the close of the 9th century both Buddhism and Jainism had become inert and dead' (*S.D.*, July 1909; Nallaswami Pillai, *Saiva Religion*).

In these hymns, or devotional songs of mystic rapture over the works and grace of Śiva, and telling of the ecstatic joy of release from the bondage of ignorance and deeds, Pope saw everywhere the influence of the Bhagavad-Gītā, the deity Śiva taking the place of Kṛṣṇa, the heroic deity of the Sanskrit poem (dating in its earliest form from 400 B.C. to A.D. 200). The doctrine of *bhakti*, or faith of the Bhagavad-Gītā, finds expression in the Saiva doctrine of the love and devotion of the soul to the belief and hope that Śiva will, through his grace, grant knowledge of the soul's trne nature, by which revelation of knowledge the soul would obtain release (*mukti*) from transmigrations. According to the Saiva *Āgamānta*, either the position of the soul with regard to the grace of the Deity is helpless, in the position of a kitten towards its mother, until the grace of the Deity seizes it and brings it into salvation—a doctrine known as *mārjārī-bhakti*, or cat-like faith; and this has been described as the lowest (*sā bhakti adhamaḥ*) form of faith. Or, the soul may co-operate in securing salvation, being in the position of a young monkey grasping its mother—a doctrine known as *markaṭātmaja-bhakti*, or monkey-like faith, which is commended (*S.D.*, Oct. 1910, Agamic note, p. 192).

Pope held that this doctrine of *bhakti*, or faith, permeated the whole after-history of Śaivism in a form in which

'the fervent self-negating love and worship of Śiva is represented as including all religion and transcending every kind of religious observance' (*T.V.* p. lxvii).

The flame of revolt against Jainism and Buddhism is said to have been fanned to a fiery persecution in the 8th cent. by Kumārila Bhaṭṭa (a Brāhman from Behār), who preached all over India antagonism to Buddhists and Jains alike, and inculcated a purer Brāhmanism. It was left to Śaṅkarāchārya, towards the end of the 8th or beginning of the 9th cent., to give the death-blow to Buddhism in the south, and to lay the foundations of a wider and more philosophic Śaivism than its earlier forms. Born a Nambūtiri Brāhman, in South India, at Malabar, he died at the early age of 32 in the Himālaya mountains, having crowded into a short life an enormous outpouring of his genius and learning in commentaries on the Upaniṣads, Brahma-sūtras, and Bhagavad-Gītā, while a vast number of revivalist short poems, still recited in the south, are ascribed to him.

In these commentaries India saw its culminating point, in philosophic reasoning, in the doctrine he taught of *advaita*, or non-duality—the Indian form of monistic idealism. The monistic doctrine of Śaṅkara, with its underlying principle of a fictitious *māyā*, conjuring up an unreal cosmos of dream life, with an abstract subject of thought as ultimate entity, was too vague and idealistic to form a basis for a religion sufficient to satisfy the demands of the non-Brāhmanical Dravidians for realism and personal worship and love for a Deity. Śaṅkara, therefore, admitted, as a preliminary to full knowledge of his *advaita* doctrines, the worship of various manifestations of Śiva as forms of the All-God, inculcating a more refined form of the worship, as opposed to the popular worship of the *śaktis*, or female divinities. He founded throughout India four monasteries, and his immediate disciples established ten orders of Śaiva ascetics to carry on the attack against the rival Buddhist monastic orders. The present *guru*, or spiritnal head—thirty-third in succession from Śaṅkara—of the monastery he founded at Sriṅgēri, in Mysore, is the acknowledged head of the Tulu-speaking Smārta Brāhmans who adhere to the *advaita* doctrine of Śaṅkara, which is still taught among Smārtā Brāhmans in every considerable village in the south.

The spread of the worship of Śiva was in the 10th cent. further fostered by the conquests by the Chola Śaiva monarch, Rāja Rāja Deva (A.D. 985), of the ancient Chera and Pāṇḍya kingdoms and Ceylon, until finally the whole east coast became a united Chola and Eastern Chālukyan empire by matrimonial alliances between the two kingdoms. In the Deccan a great revival of Śaivism is recorded to have taken place in the time of Bijjala, a Jain who had usurped the throne of the last of the later Chālukyan monarchs, Someśvara IV. An inscription, of about A.D. 1200, gives an account of how the deity Śiva

'specially created a man in order to put a stop to the hostile observances of the Jains and Buddhists' (Thurston, *op. cit.* iv. 239).

There is, further, a tradition that an incarnation of the bull—always associated with Śiva as a form of his energy—was sent to earth in order to restore the worship of Śiva, and that this incarnation appeared as a Kanarese Brāhman, born near Bijapur and called *Basava* (Kanarese for 'bull') (Fleet, *IA* v. [1876] 239). Basava in due course had the usurping Jain, Bijjala, assassinated, after which Chenna Basava, the nephew of Basava, established the Śaiva religion in the Kanarese country. The Śaivas there are known as *Vīra Śaiva*, 'champions of Śiva,' or *Śaiva Bhaktas*, forming the sect of Liṅgāyats, who wear the *liṅgam* and worship Nandi, the bull of Śiva.

4. Vaiṣṇavism and Hindu reformers.—The worship of Viṣṇu, as opposed to that of Śiva, was taught by Rāmānujāchārya, a Brāhman born in the 12th cent. [Barnett, *Bhagavadgītā*, 1905, p. 55, says A.D. 1017], near Madras. Faith in, and worship of, a Supreme Being, Viṣṇu or Vāsudeva, as Cause and Creator of the world as a real objective existing cosmos, were inculcated, with the belief in soul as different from the Universal Soul. The doctrine taught respecting the Deity is that known as *viśiṣṭādvaita*, or qualified non-duality, in opposition to the earlier *advaita* doctrine of Śaṅkara. The Supreme Deity, according to this doctrine, is both the cause of the material world and the substance out of which it was created. Faith in this Deity became the centre of a revived Bhāgavatism. The persecution of Rāmānuja by the Chola monarch, Kulottuṅga or Rājendra Chola II. (A.D. 1070 to 1118), led eventually to the spread of these new Bhāgavat doctrines all over India. This was not finally accomplished until the 14th cent., when a new southern teacher, Rāmānanda, brought up at St. Thomé, near Madras, became a convert to Bhāgavatism in a worship of Rāma Chandra, an incarnation of Viṣṇu, which he preached as a faith for the mass of the people. The contact of Aryan learning and Dravidian religious feeling thus led to a revival of Hinduism all over India, for from Rāmānuja in the 12th century

'were spiritually descended Rāmānanda in the 14th, and Vidyāpati and Chaitanya in the 15th—the three apostles of Vaishnavism in Hindustan, Behar, and Bengal' (Hoernle, *Hist. of India*, 92).

The chief followers of Rāmānuja, known as *Śrī Vaiṣṇavas*, are divided into two schools or sects—those of the North and those of the South, or *Vaḍa galai*, and *Ten galai*. Both schools hold to the Vedas and Vedāntas, the Northern school being more orthodox in holding them as authoritative revelations. The Northern school, further, recognizes a male and a female energy in the Deity, and

'strongly insists on the concomitancy of the human will for securing salvation, whereas the South School maintains the irresistibility of Divine grace in human salvation' (Kennet, *IA* iii. [1874]).

The two schools are thus—like the Śaiva Āgamic schools—divided on the subject of cat-like and monkey-like faith. The Southern school, in place of the Vedas, use their own canonical books of scripture, consisting of 4000 verses in Tamil, known as the *Nālayira Prabandham*. These verses are ascribed to saints called *ālvārs*, held to have been incarnations of the Deity. These *ālvārs* are described as 'those drowned in or maddened with God love' (A. Govindāchārya, *Lives of the Āṛvārs*, Mysore, 1902). The modern Bhāgavata doctrine of faith of the South school of the Śrī Vaiṣṇavas has been raised to sublime heights in the *Artha Pañchaka* of Pillai Lokāchārya (A.D. 1213), until this faith

'in its outward progress becomes more and more intense and rapturous. Instead of compelling it becomes inviting, instead of repelling it becomes bewitching. Effort is merged in craving. Self-assertion gives place to self-abandon. The heart has become poured into the intellect, or rather, the intellect has become fused with the heart' (tr. A. Govindāchārya, *JRAS*, July 1910).

The last great Southern apostle of Vaiṣṇavism was Madhvāchārya, born 1331 as a Śaiva follower of Śaṅkara, who became a fierce opponent of the Śaivas and of the *advaita* philosophy. He preached, in opposition, pure duality, or *dvaita*, holding that the Supreme Being and the soul are different from matter, *māyā*, which he held to be real and eternal. The Supreme Soul of Being was by him held to be Viṣṇu or Nārāyaṇa, incarnated as Kṛṣṇa, and salvation was held to be gained by *bhakti*, or love for Vāyu the son of Viṣṇu.

In the South Kanarese country most of the Tulu-speaking Brāhmans are followers of Madhva, and, as might be expected, most of the Dravidian Hindu classes are Śaivas. At present a wide-spread revival of interest in Śaivism is taking place in South India, which demands the close attention of all those interested in the future religious life of India, which seems destined to be influenced by the principle underlying the formulated doctrines of the Śaivas. At a recent Śaiva conference, held in 1909, at Trichinopoly, attended by Śaivas from most of the Southern districts and even from Ceylon and Jaffna, it is reported that the proceedings were opened by the recitation of some verses of the *Dēvāram* and *T.V.*, 'which the Saivites like to call their Psalms.' The report further states that 'the Saiva *Siddhānta* has been from the beginning chiefly the philosophy of the Śūdras.' The spirit of the present revival may be seen from the comments made on the report by the learned editor of the *S.D.*, V. V. Ramaṇan—first, to the effect that there were as many Brāhmans present 'as could possibly be expected in such strictly religious functions'; and, second, that 'the greatest Apostles of God whose teachings constitute the *Śaivādvaita Siddhānta* were for the most part Brāhmans, and they threw open the flood-gates of true spiritual life for all children of God.' A further significant fact in connexion with this revival of interest in the history of the Śaiva religion is the increasing use made by Śaiva writers of Scriptural phrases and analogies. A knowledge of the formulated doctrines of the Śaiva *Siddhānta* will, therefore, become an increasing necessity for all those anxious to understand, or who are brought into contact with, the religious life of South India, which seems to tend towards a change in the direction of greater tolerance for surrounding religious beliefs, and in the direction of purifying Śaivism from the degrading elements contained in the grosser forms of Śakti-worship.

5. Formulated doctrines of the Śaivas.—The scholastic theological doctrines of the Śaivas were in mediæval times set forth in metrical stanzas, with necessary commentaries for their proper interpretation, by a series of poet-philosophers held to have been spiritually descended from the first of these poets who received the earliest form in which they exist in South India, as a revelation from the Deity. This first form is known as the *Śiva Jñāna Bodham*,[1] or 'Enlightenment in Śiva-knowledge.' It was composed—or arranged—by Mey-kaṇḍar Devar, the Divine Seer of the Truth, in or about A.D. 1223. Mey-kaṇḍar was followed by Maṛai Jñāna Sambandhar, who wrote the *Śaiva samayā-neri*, and whose disciple, the famed Kotta-vaṅguḍi Umāpati Śivāchāryar, composed, in or about A.D. 1313, the *Śiva-prakāśam*,[2] or 'Light of Śiva,' the *Tiru Aruṭ Payan*,[3] or 'Fruit of Divine Grace,' and the *Saṅkarpa Nirākaraṇam*. The *S.J.B.* of Mey-kaṇḍar is held to be the most authoritative of all these works, as being a direct revelation from Śiva,

'for the purpose of pointing out the way to proceed from the knowledge of the body full of sorrow to the knowledge of the soul and thence to the knowledge of the Supreme Spirit' (tr. Nallaswami Pillai, Madras, 1895).

It is a free translation into Tamil—in Āśiriyam metre with a commentary in Vembā metre—of twelve Sanskrit stanzas said to have formed part of *Raurava Āgama*, of which *Āgamas*, or early works in Sanskrit inculcating the mystic worship of Śiva and Śakti, there are said to be 28, now gradually coming to light, of which two have been translated.[4] The Tamil stanzas of Mey-kaṇḍar are of such

'extreme terseness of diction and brevity of expression that even the ordinary Pundits are not able to understand them without proper commentaries, and very few Pundits can be found in Southern India who are able to expound the text properly even now' (Nallaswami Pillai, *op. cit.* p. viii).

Barnett has recently contended (*JRAS*, July 1910)—and his view has been accepted in Śaiva centres in Madras—that the formulated doctrines of the Śaivas, as they first appear in the *S.J.B.*, reached the Southern Dravidians from the north. His contention is therefore that the

'living faith of the majority of living Tamils is almost in every respect, and certainly in all essentials, the same doctrine that was taught in Kashmir about the beginning of the 11th cent. by Abhinava Gupta.'

Both of the schools he traces to the *Śvetāśvatara Upaniṣad*, and points out that

'the elements of the Tamil Śaiva *Siddhānta*, the Sanskrit *Āgamas*, and the Śaiva theology of Kashmir are all contained in the *Śvetāśvatara Upaniṣad*, which was canonical long before the days of Śaṅkara' (*S.D.*, June 1910).

These ideas of the *Śvetāśvatara Upaniṣad* were in Kashmir formulated into the Spanda and Pratyabhijñā schools, and, according to Barnett,

'meanwhile filtered down through various channels into the lands of the Dravidians, for whose ancient cults it supplied a theological basis.'

Whatever may be the final conclusion on this point, as to whether the formulated doctrines of the Śaivas descended from north to south or ascended from south to north—for the *Śvetāśvatara Upaniṣad* and the various current schools of Indian philosophy, such as the Sāṅkhya, Yoga, and Vedānta, were in the 5th cent. equally well known in the south and in the north, and Sanskrit was used for literary purposes in the south as well as in the north—all the technical terms of the system and its essential features are contained in Śaiva devotional literature of South India from the 7th and 8th centuries. These technical terms and essential features are—as set forth, towards the end of the 8th or beginning of the 9th cent., in Śaṅkara's Commentary on the Brahma Sūtras (ii. 2. 37)—that

[1] Hereafter cited as *S.J.B.* [2] Hereafter cited as *S.P.*
[3] Hereafter cited as *T.A.P.*
[4] A full account of the *Āgamas* is given by V. V. Ramaṇan in his tr. of Appaya's Commentary on Vedānta-sūtras (Madras; now being printed in parts).

'the Lord (Pati) was the operative cause of the world, and that the bonds (*pāśam*) of the soul (*paśu*, or animal) were broken by the teachings of the Lord.'

The formulated doctrines, as they first appear in the *S.J.B.*, merely give the scholastic explanation of these terms, and teach the means whereby the middle term (in *pati pāśam paśu*), the 'bond,' or *pāśam*, may be sublimated, and how the soul, or *paśu*, free from the fetter, may then unite with its Master, the Lord.

These formulated doctrines, so far as it has been found possible to extract a consistent account from conflicting interpretations, are as follows:—

i. ŚIVA, THE EFFICIENT CAUSE OF CREATION.—A First Cause is postulated from a principle of effect and cause. According to the *S.J.B.*, because the Universe is seen differentiated into forms known as 'he, she, and it,' and undergoes changes of devolution, continuation, and involution, it requires a First Cause; just as, when one sees a pot, a cause—the potter—is required. This First Cause is not, however, reduced to the *advaita*, or non-duality of Śaṅkara—One only without a Second—where the cosmos is a delusion conjured up as a dream by an unreal *māyā*. The Śaiva system is, nevertheless, held to be *advaita*, and to be founded on strict non-duality. Śiva is, accordingly, the Sole Cause, without any other co-operating deity such as Brahmā or Viṣṇu, the Brāhmanic Creator and Preserver, for 'we cannot find out cause for ultimate cause' (*Śiva Jñāna Ratnāvali*[1] [a modern catechism]). Śiva stands supreme; all the deities of later Brāhmanism are merely of the nature of highest souls, dependent on Śiva to carry out his disposition or energy. He alone is the source from which the cosmos is energized throughout its course of creation, preservation, and involution. He is never the object of thought, he remains eternally pure Subject. He is neither spiritual form, nor is he formless (*S.P.* xiv.).

Almost the first—the ever repeated—verse of the *Kural* declares: 'He has neither likes nor dislikes (desires nor non-desires).' To the question, Has God form or no form, or is He both form and formless? we find the answer, 'He has all the above three and none of these' (*S.J.R.*). It is also declared that 'He is form and not form, but to those who know Him he has the form of knowledge' (*T.A.P.* i. iv.). He is also said to be 'incomprehensible by His greatness, by His minuteness, by His great grace, and in the benefits He confers' (*S.J.B.* i. 3). Being neither spirit nor form, but 'being Absolute Being (or *sad*) or pure Subject, he can never be the object of cognition' (Hoisington, *S.P.* xiii.). The full definition of Śiva, considered to be the true and only full One, is: 'That which is perceived by the senses is *a-sat* (not-Being or Changeable). That which is not so perceived does not exist. God is neither the one nor the other, and hence called *Śiva Sat* (pure Being) by the wise, *chit* (pure Intelligence) or *Śiva*, when not understood by the human intelligence, and *Sat* (Being) when perceived by divine intelligence' (*S.J.B.* vi.). He is, as transcendent Being, in inseparable connexion with dispositions or higher energies, the *parā śaktis*, of Being, Intelligence, and Bliss, or *Sat, chit, ānanda*.

Notwithstanding these fundamental doctrines of the *advaita* nature of Śiva as Final Cause and Abstract Subject of Thought, he is, in one form or another, represented in the many Śaiva temples. It is contended, by the modern Śaiva reformer, who sees that 'the worst feature of modern Hinduism is its idolatry' (Nallaswami, *op. cit.*, Preface), that all these forms in temples are merely symbolical of some idea or thought respecting a Deity who eternally remains formless. In popular imagination these temple-forms are viewed as the very abode of a deity, to whom food and offerings are presented for material enjoyment. The two idols to which popular Śaivism pays peculiar adoration are,

'first, the *liṅgam* and *liṅgi*; and, secondly, the image of Śiva accompanied with Umā, whose form is generally combined into one with his. These really represent one idea, Śiva and Śakti, the god and the energy which is inseparable from him, which combine to create, sustain, and destroy the Universe' (Pope, *T.V.* p. xxxv).

[1] Hereafter cited as *S.J.R.*

The worship of the *liṅgam* and *liṅgi* is explained by intellectual Śaivas to be the worship not of phallic emblems, but of the representatives of the pillar or temple of the Deity, and various other ideas told of in the Purāṇas, such as the pillar of fire in which the energy of Śiva appeared before Brahmā and Viṣṇu, to show his supremacy, so that thenceforth

'the worship of the *liṅgam* has been inaugurated in the world. The pedestal (*liṅgi*) is Mahādevi, and the *liṅgam* itself is the visible Maheśvara' (Pope, *T.V.* 152).

(*a*) *The necessity for creation.*—There exists, it is held, an eternal necessity that a cosmos must be created, because souls, which never vary in number and are eternal, require a cosmos wherein to work out the result of *karma*, or deeds, which is also eternal.

The *S.P.*, therefore, says that

'Creation is an act of grace; in the world alone souls are able to eat their *karma* and to rid themselves of impurity and attain *mukti*, union with God' (Goodwill, *S.D.*, March 1903, p. 148).

The underlying principle of this doctrine is that deeds, or *karma*, must be *ripened* before they can be eaten or consumed; and, as a place for this process of ripening is necessary, a cosmos must of necessity be evolved, and this evolution can take place only through the grace, or love, of Śiva. It is not until deeds of the past births, deeds of the present birth, and deeds of the enlightened done between enlightenment and final release are 'balanced' that final union of the soul with Śiva ensues. The *T.A.P.* (vi. 1) clearly states that it is not possible for release to take place until 'the unequal good and evil become balanced.' All deed being an evil, as merely leading to re-births, it becomes necessary that Śiva, through his grace, should evolve a Universe, at the end of each æon, for the benefit of the flock of souls who have not attained the balancing of their deeds and release in previous existences of the phenomenal Universe. At the commencement of each æon

'the unconscious souls shrouded in that primeval darkness are responsible—in some inexplicable fashion—for the old, eternal deeds, the fruit of which must be consumed by each at the time of its maturity' (Pope, *Nālaḍiyār*, p. 67).

The *S.P.*, which of all the texts gives the clearest exposition of this Dravidian method of dealing with the soul's state of 'original sin,' does so by merely saying that it is the soul's natural state; that there is no assignable cause for it; that, while the Deity is pure, the soul is impure in the natural state, just as the coat of rust is natural to copper (Hoisington, p. 149).

(*b*) *Method and source of creation.*—Absolute Being having been accepted by the Dravidians as the highest philosophic truth that could be extracted from surrounding current Yoga, Sāṅkhya, and Vedānta philosophies, it became a necessity to bring this philosophic conception into conformity with the religious wants of the people. The ordinary intelligence of the Dravidian folk—whom it was necessary to enfold in Hinduism—demanded a beneficent Deity, all-powerful and all-gracious, willing and able to save the soul from the haunting terrors of transmigrations in higher and lower forms, the awards of deed, and a real Universe. Realism—the banner of the revolt under which the Dravidian intellect fought against Aryan non-duality—finally conquered, and, as a result, the so-called *advaita*, or non-duality, of the philosophic conception of Śiva had to become graduated down till it became what is virtually a form of *dvaita*, or duality.

The stages of reasoning by which this transition is graduated could hardly ever have appealed to popular imagination, or even to common intelligence. Śaiva philosophy, loth to hold the cosmos as unreal, as the dream product of unreal *māyā*, and still keen to call its system *advaita*, or non-

duality, had, nevertheless, to frame a theory to explain Effect from Śiva, Ultimate Cause. To postulate matter (see SĀṄKHYA) would have at once reduced the system to pure duality, inconsistent with the conception of Śiva; accordingly there was postulated merely the existence of an underlying basis of creation, an essence, a form of matter, elemental matter which was called pure (*śuddha*) *māyā*. This pure *māyā*, or elemental abstract matter, is held to co-exist with Śiva eternally, producing differentiated spheres of action for souls. Pure *māyā* has, however, no connexion with souls, which are associated with an impure form of elemental matter (akin to the Sāṅkhya *prakṛti*) known as impure (*aśuddha*) *māyā*. In this impure *māyā* inhere the *malas*, or impurities of souls—those of *karma*, or deed, and *āṇavam*, ignorance, the state or condition of the soul (*aṇu*) (*Tattva Kaṭṭalei*, p. 14).

Śiva, co-existing with pure *māyā* as an efficient cause of creation, is pure thought (*chit*), pure bliss (*ānanda*), as dispositions or energies, as well as having the dispositions or energies of desire or will (*icchā*), action (*kriyā*), and knowledge (*jñāna*). These are the highest of Śiva's energies, his *parā śaktis*, essentially connected with him, but over which he stands aloof and supreme. From the first two of these *parā śaktis*, thought and bliss, are successively developed the *parā śaktis* of desire, action, and wisdom.

All existence, from Absolute Being to earth, is differentiated as possessing essential natures, categories, or properties called *tattvas*. Of these *tattvas* there are 36 primary, which produce a cosmos of 60 subordinate *tattvas*. The 36 primary *tattvas* contain 5 pure *tattvas*, which spring into being by the grace of Śiva's *parā śaktis*. Of the 5 pure *tattvas* the 1st is Nādam, the male energy of Deity, developed from pure *māyā*; the 2nd is Vindu, the female energy of Deity, developed from Nādam; the 3rd, developed from Vindu, is Sadā Śiva, or the state of Śiva before assuming forms for the enlightenment of souls; the 4th is Īśvara, developed from Sadā Śiva, which is the obscuring element; and the 5th, developed from Īśvara, is pure knowledge, the pure element which enlightens souls (Hoisington, 'Tattva Kaṭṭalei,' *JAOS*, 1854). The Sadā Śiva *tattva* is that in which the two energies of action and knowledge are equal, the Īśvara *tattva* is that in which action predominates over knowledge, and the pure knowledge *tattva* is that in which the energy of knowledge predominates over that of action.

It follows from this that Śiva may be taken as the efficient cause of creation, the *parā śaktis* being the instrumental cause, and *māyā* the material cause.

The process is explained, perhaps more clearly than elsewhere, in *S.P.* (xxii.). Here it is stated that the Nādam, or Śivam, or male energy, the first of the Śiva *tattvas*, is developed from *kuḍilei*, or germ, or pure *māyā*, by the operation of Śiva's *parā śakti*, knowledge; and that, by the co-operation of the *parā śakti* of action, Vindu, or separately organized female energy, is developed from Nādam; thence Sadā Śiva, Īśvara, and pure knowledge.

These 5 pure *tattvas* pertain only to the highest order of souls, the *vijñāna kalars*, who have only the single *mala* of *āṇavam*; for souls associated with the impure form of elemental matter—impure *māyā*—there is a five-fold investment, or *pañcha kañchuka*, developed, by the grace of Sadā Śiva, of 5 impure *tattvas*: Kālam (time), Niyati (necessity), Kalā (determination), and—developed from Kalā—Vidyā (finite knowledge), and Rāgam or Icchā (desire). In addition to the above five-fold investment, there is developed—by the grace of pure knowledge—first, *mūla prakṛiti*,[1] the source (material) of all the subsequent developments: (1) *chittam* (the will), (2) *buddhi* (the judgment), (3) *ahaṁkāram* (the individuality or the I-maker), and (4) *manas* (mind or understanding); thence—very much after the manner of all Sāṅkhyan and other Indian metaphysics—the 20 primary elemental natures, *tattvas*, or categories, earth, water, fire, and ether; ears, skin, eyes, tongue, nose; *tanmātras*, or the rudimentary elements of sound, touch, form, smell; and organs of actions, hands, feet, mouth, excretion, and generation. From these primary *tattvas* are developed, in the usual manner of Indian philosophy, the subordinate 60 *tattvas*, or visible physical external organs (Hoisington, *loc. cit.*).

ii. THE SOUL.—The soul is held to be enclosed from eternity in a fine or subtle body, or *sūkṣma śarīra*. This is an inherent covering which persists with the soul through all its transmigrations. It passes with the soul to the various heavens or hells, where rewards or penalties for good and evil deeds are experienced, and it also envelops it during re-birth. The soul is called *aṇu*—a word derived from *aṇu*, 'atom,' because it is exceedingly small; and it is so called because, when associated with ignorance or *āṇavam*, the state of the atom is very small, although it is a Vindu (cosmic germ) in its natural state (Nallaswami, *S.J.B.* p. 4). It is also said that the soul (Skr. *ātmā*) is called *aṇu* ('atom'),

'because the all-pervading nature of the soul (*ātma*) has become limited to an atom by its bondage' (*S.J.R.*).

The soul—from eternity being associated with the impurities, or *malas*, of *āṇavam*, *māyā*, and *karma*—has first to arouse the grace (*arul*) of the Deity to appear as an obscuring energy or *tirodha śakti*, before the soul, freed from its *malas*, can gain knowledge and 'see the truth of its oneness with Śiva' (*S.J.B.* vi.).

The soul is defined in the *S.J.B.* (i.) as '*māyāvi yantra tanuvinul ānmā* (*ātmā*),' or as existing within the body as a *māyā*-made instrument. All souls are divided into (1) *vijñānakalars*, (2) *pralayākalars*, and (3) *sakalars*. The first, or highest, order of souls—the *vijñānakalars*—are freed from *māyā* and *karma* (matter and deeds), and have only one *mala*, or impurity, of *āṇavam*, or nature of the soul. These souls have reached the sphere of the 5 pure *tattvas*, and, being freed from future births and re-births, merely await final union with Śiva. The second class of souls—the *pralayākalars*—are under the influence of the two *malas* of *āṇavam* and *karma*, which condition them to renewed births and re-births. The third class—the *sakalars*—which includes all human beings and the ordinary gods or devas, have the three *malas* of *āṇavam*, *karma*, and *māyā*, and are subject to sense perception, having corporeal existences, wherein *karma* has to be balanced. The soul which has corporeal existences is described as proceeding at death from its physical body, or *sthūla śarīra*, to

'undergo its experiences in heaven or hell, and forgetting such experiences, just as a dreamer forgets his experiences of the waking state, passes as an atom in its Sūkshma Śarīra state into a suitable womb at conception, impelled thereto by the desire created by its previous karma' (Nallaswami Pillai, *S.J.B.* p. 13).

iii. THE BOND AND THE RELEASE OF THE SOUL.—The *pāśam*, the bond, which fetters the soul's intelligence is a rope of three strands made up of *āṇavam*, two-fold deeds, and *māyā*. *Āṇavam*, or state or character of the soul (*aṇu*, 'atom'), is the first strand of the rope which fetters the soul, and it persists beyond the other two strands. This *āṇavam* is an essentially inherent *mala*, or defilement, which darkens the soul's light or

[1] 'The Sāṅkhyas maintain that Prakṛiti is eternal. But that is not correct; for, as it is multifariously varied among all classes of souls, it is not eternal (is perishable) like an earthen vessel. Hence its source or cause is Māyā' (*S.J.B.* xii. [Hoisington]). This is opposed to the Sāṅkhya theory that *mūla prakṛiti*, primordial matter, can self-develop the cosmos.

intelligence, so that it cannot understand its true nature (*S.J.B.* iv.), its oneness with Śiva.

This ignorance or darkness of the soul must receive enlightenment, two-fold deeds must be balanced, and *māyā* sublimated, before the soul gains its final release (*mukti*, Skr.; *mutti* or *vīḍu*, Tamil). The soul was, by the grace of Śiva, sent into sense-perception with a cosmos,

'in order that, the effect of deeds (*a parte ante*) being removed or cancelled, the soul might at length be enlightened by special grace and so become gradually disentangled and purified; the consummation of which is *mutti*, or final emancipation and mystic ineffable eternal union with Śiva' (Pope, *T.V.* p. xlvi).

The Final Cause, Śiva, being pure Subject of thought, could never be an object of knowledge to the soul. Soul being associated with sense-perception cannot 'rise above itself in intelligence.'

The soul can daily become more contemplative; more conscious that there must be some final solution of its unrest; more spiritual (1) by performing all the usual devotional altruistic practices (*charyā*), (2) by practice of religious ritual and worship of the Deity and Divine teachers as symbolized in the temples (*kriyā*), and (3) by practices (*yoga*) of a physical nature to aid in the contemplation of the Deity (see YOGA). All these three—*charyā*, *kriyā*, *yoga*—can only add to *karma* further transmigrations. They, however, so spiritualize the soul that it becomes fit for final leading to enlightenment.

The *S.P.* (sūtra lxxvi.) sums up the final doctrine of release by declaring that the triple bond of *āṇavam*, *karma*, and *māyā* can be destroyed only by the grace of Śiva, which is the same as the *parā śakti* of pure knowledge; this alone will 'cause the soul to unite with the Divine feet of Śiva.' The *S.J.B.* (sūtra viii.) shows how the grace (or *arul*) of Śiva supplies a Divine teacher, or *guru*, to enlighten the soul:

'The Lord, appearing as *guru* to the soul, which has advanced in *charyā*, *kriyā*, and *yoga*, instructs him that he is wasting himself by living among the savage five senses; and the soul, understanding its real nature, leaves its former associates, and, not being different from Him, becomes united to His feet.'

The Śiva system thus ascribes the self-illumination of the soul, as pure subject of thought identical with the supreme subject of thought, to the grace, or highest disposition or energy, of the Deity energizing the soul to this self-illumination by means of a Divine teacher. This knowledge is said to spring up spontaneously to *vijñānakalars*, or highest order of souls; to the *pralayākalars* it comes through a *guru*, or teacher in Divine form; and for the *sakalars* the Deity conceals Himself as a *guru*, or teacher, in human form, and imparts knowledge. The soul, while awaiting final release, must (1) listen with desire to the *guru's* teaching, and must practise (2) meditation, (3) understanding, and (4) abstraction from all objects of sense (*S.P.* xxxiii.). These and the constant inaudible repetition of the five mystic syllables *śi-vā-ya-na-ma* ('salutation to Śiva') will have the result that 'the *tirōdha*, "energy" (Skr. *tirōdhā*='conceal'), in them will herself remove the *malas* and cause *arul* to appear' (*S.P.* xciii.).

There are ten imperfect forms of emancipation, including that of the gaining of supernatural powers—so commonly professed in India—as the result of acquiring the nature and powers of the Divinity. This power over supernatural powers has been described as the teaching of some Śaivas who profess that

'the soul acquires mystic miraculous powers; that, in fact, the emancipated one is so made partaker of the Divine nature and attributes that he is able to gain possession of and exercise miraculous powers, which are called the eight "*siddhis*." Persons professing to wield such magical powers are not infrequently found in India, and there is in them a bewildering mixture of enthusiasm and fraud' (Pope, *T.V.* p. xliii).

In the recognized form of emancipation, or union with the Deity, an essential feature of the Śaiva religion is that there is

'no annihilation of the soul, but its individuality or egoism is lost,—its karma having been eaten. Its identity is lost but not itself' (Nallaswami, *S.J.B.* p. 59).

The soul has, as the result of release, this conscious immortality in a separate existence; for, although 'sharing the blessedness and wisdom of the supreme, it is unmingled with His essence' (Pope, *T.V.* p. lxv).

S.P. (lxxxi.) says that the soul, when freed,

'is closely united with the higher knowledge, the *parā śakti*, by whom it is illuminated, and in whom it has a firm footing—and the soul becomes so intimately united with Śiva that they constitute *advaita*, non-duality, and thus it rests in him as the air rests in space, and as salt dissolved in water.'

T.A.P. says (viii. 75) distinctly that, if the soul and Śiva become one, there is nothing; if there is duality, no release, or *mukti*, could arise; therefore, in the mystic union of the soul and Śiva there is neither duality nor non-duality. The union is to be held similar to that seen when the words *tāl*, 'foot' (soul), and *talai*, 'head' (Śiva), are joined; according to the rules of Tamil phonetics, the combined word becomes *tāḍalai*, the *l* and *t* becoming united into *ḍ*; 'so consider the union of soul and Śiva' (viii. 77).

Before the soul passes to its eternal rest in Śiva, it is a *jīvan muttar*, 'freed from life,' but living 'in the body still for a little while, but is one in feeling, soul, and power, and faculty, with the Infinite Eternal. He has put off his rich garments and adornments, is besmeared with white ashes, and wears the peculiar habiliment of the ascetic. From his head depends the braided lock of the Śaiva ascetic; one hand grasps the staff, and the other the mendicant's bowl; he has for ever renounced the world—all the worlds—save Śiva's self' (Pope from *Vāthavūrar Purāṇam* [*T.V.* p. xiii]).

LITERATURE.—L. D. Barnett, *Catalogue of Tamil Books in the Brit. Mus.*, London, 1909, artt. in *JRAS* and *Siddhānta Dīpika*; *Linguistic Survey of India*, vol. iv. 'Muṇḍa and Dravidian Languages'; J. M. Nallāswāmi Pillai, *Śaiva Religion*, Madras, 1909; tr. of *Śiva Jñāna Bodham*, Madras, 1895, *Light of Grace* (*Tiru Aruḷ Payan*), pamphlet, Madras, 1896 (for critical purposes the original must be referred to); G. V. Pope, trr. (London), with valuable notes, of *Kural*, 1886, *Nālaḍiyar*, 1893, *Tiru Vāchakam*, 1900 (original Tamil should always be referred to); V. V. Ramaṇan, Notes and trr. in *Siddhānta Dīpika*, tr. of *Vēdānta-Sūtra-Śaiva-Bhāṣya*, with notes and commentaries, Madras (now being issued in parts); M. Śēshagiri Śāstri, *Essay in Tamil Literature*, Madras, 1897; *Siddhānta Dīpika*, monthly journal, Madras (early parts difficult to obtain: British Museum has copies); Sundaram Pillai, *Some Milestones in Tamil Literature*, Madras, 1895, reprinted with postscript in *Tamil Antiquary*, 1909 (with valuable preface by V. Venkayya); *Tamil Antiquary*; publications of Tamil Archæological Society (established 1903), Madras; E. Thurston, assisted by K. Rangachari, *Castes and Tribes of Southern India*, 7 vols., Madras, 1909; J. Vinson, *Légendes bouddhistes et djainas*, Paris, 1900 (containing summaries of three Tamil classics—*Chintāmaṇi*, *Sillapp'adhikāram*, and *Maṇimekhalai*).

DREAMS AND SLEEP.

DREAMS AND SLEEP.—**I. General.**—From the point of view of psycho-physiology, dreaming is only a part of the more general phenomenon of sleep, and cannot be fully treated except in connexion with the wider topic. The physiology of sleep and dreams is still very little understood, as will be seen by comparing the earliest scientific treatment of the subject, that of Aristotle, with the latest hypotheses of modern physiological psychology.

According to Aristotle (*de Somno*, *de Somniis*, and *de Divinatione per Somnum*), sleep is a

periodical phenomenon found in all animals, and in animals only. It is thus an affection of that phase of mental life which is common and peculiar to animals, the faculty of presentation (τὸ φανταστικόν). Its *raison d'être* is the need for periodical recovery of the organs of presentation from the fatigue attendant on long-continued exercise. Since this state of fatigue attacks the whole presentative machinery simultaneously, the conditions characteristic of sleep must be sought principally, not in any of the special sense-organs, but in the κοινὸν αἰσθητήριον, or central seat of presentation, the heart. More precisely the recurrence of sleep is due to changes in the blood consequent on the taking of food. Food, when taken into the blood, evolves heat and evaporation; the evaporation is suddenly cooled on reaching the brain, and a movement of antiperistasis is set up, in which most of the vaporized matter is repelled again downwards. It is to this that the muscular relaxation and sensory inactivity of sleep are due. Aristotle thus anticipates both the views that the immediate cause of sleep is a changed condition of the 'highest centres,' and that the change is due to the temporary presence of toxic substances in the blood. Dreams are affections of the central organ of consciousness (κοινὸν αἰσθητήριον), which must be carefully distinguished from actual sense-percepts. In perception the affection is originated by a real physical stimulus; in sleep such actual perceptions occur sporadically, but they are not the main stuff which dreams are made of. The direct cause of the dream is the persistence in the 'common' or central sensorium of faint relics of the motions formerly aroused by actual stimulation. These residual motions are equally present in waking life, but are not attended to because they are obscured by the more violent motions due to actual present stimulus. In sleep, where actual stimulation is excluded, the more minute affections of the system due to these minimal disturbances become apparent. Hence we are enabled to give a rationalistic explanation of genuine prophetic or 'veridical' dreams, when they are not due, as most of them are, to mere coincidence. Veridical dreams of impending illness, or recovery, or death are 'indications' of the coming event, due to the dreamer's sensibility to minute organic disturbances which are imperceptible in waking life. In other cases a dream may actually be the cause of its own fulfilment, by providing the first suggestion of an action which is afterwards dwelt on and carried out in the waking state. Veridical dreams about the condition of our intimate friends are accounted for on the ground of our special preoccupation with their concerns, which renders the sleeping soul exceptionally sensitive to those minimal disturbances in its surroundings which originate in the friend's organism. It is never permissible to ascribe such dreams to the direct agency of God; if they came from God, they should be specially vouchsafed to the wisest and best men (which is not the case), and their occurrence should exhibit marks of intelligent design instead of being, as it is, sporadic and casual.

The best modern accounts of the subject as a part of general psychology are perhaps those of Volkmann von Volkmar (especially good on the descriptive side) and Wundt (see Lit. below). The following summary is taken from Wundt.

The causes of sleep, as of other periodical functions of the organism, must be looked for in the central nervous system. It is probably a condition due to the temporary exhaustion of the available energies of the nervous system, and has for its purpose the accumulation of fresh 'tensional forces,' which is favoured by muscular inactivity and diminished production of heat. A second condition is the complete or partial abolition of attention. (Animals regularly fall asleep if deprived of their usual sensory stimuli, and so do men of low mental capacity.) It is probable that this nervous exhaustion is merely a general condition favourable to sleep, its direct exciting cause being a specific alteration of condition in the central nervous system which is normally accompanied with the relaxation of attention. It is most likely that narcotics produce their effect by inducing this central change. Hence Purkinje and others have held that the direct cause of sleep is to be found in the partial using up of the oxygen of the nervous system effected by the accumulation of carbonic acid, the final product of respiration. In what region of the brain the assumed 'sleep-centre' lies is not known. The physiological changes induced are in general of the nature of inhibitions, *e.g.* diminution of the activity of heart and respiratory apparatus, probably due to contraction of the smallest cerebral blood-vessels. The period of deepest sleep appears to begin about three-quarters of an hour after its commencement, and to last about half an hour. Then follows a period of lighter slumber of several hours' duration, which forms a preparation for waking. The period of deepest sleep is probably, as a rule, one of complete, or all but complete, unconsciousness. Dreaming, on this view, is an accompaniment of the gradual transition from sleep to waking. Similarly, Volkmann divides the processes into five stages: (1) drowsiness; (2) falling asleep; (3) complete sleep; (4) lighter sleep, attended by dreams; (5) waking. The dream has two chief characteristics: (*a*) the memory images of which it is largely composed are hallucinatory, *i.e.* they are mistaken for real and present physical things; (*b*) the process of apperception is altered, so that the actual percepts which enter into the dream are interpreted in an illusory fashion.

Dream-appearances, which Volkmann classes as hallucinations, are more accurately regarded by Wundt as generally, if not always, based on illusion; *i.e.* they are misinterpretations of actual minimal sense-impressions, such as those due to slight noises, to the position of the sleeper's limbs, to trifling pains, slight difficulties in breathing, palpitations, and the like. A slight intercostal pain is mistaken for the stab of an enemy's dagger, a movement of the foot for a fall from a tower, the rhythm of our own breathing for the rhythmical motions of flying, etc. The visual dream is based on erroneous interpretation of internal retinal stimulations, which appear to the dreamer as flights of birds, butterflies, fishes, etc. (The present writer does not believe that he ever has dreams of this kind, which Wundt regards as remarkably common.) Dreams of water are explained by Wundt as due to *Urindrang* in the sleeper's body. Hence again the exceptional frequency of dreams of fishes. (The present writer, in general a constant and vivid dreamer, never dreams of fishes at all, nor do several persons of whom he has made inquiries.) The common dream in which we hunt for an object that can never be found, or start on a journey and have repeatedly to return for something that has been forgotten, is explained as due to disturbances of the *Gemeingefühl*, the general mass of organic sensations. The successive illusions of the dream are woven into a continuous story by association with memory-images. Wundt attaches special importance to memories from the immediate past, particularly those connected with deep emotional excitement. Thus he accounts for our dreams of the recently dead by the emotion with which we watched their last moments and attended their

burial. (This explanation is clearly insufficient. We dream regularly of those for whom we have cared the most, though their death may not have been recent, and may have taken place at the other end of the world. Wundt also omits to take account of the common tendency to dream of events from our early childhood, even when they are of a trivial kind and not likely ever to have been attended with any special degree of emotional excitement.)

In general this account would seem to lay too much stress on the element of illusion and too little on that of hallucination. It is probably true that actual minimal sensations form *points de repère* in all our dreams, but there is no reason to confine the element of genuine hallucination to the one function of establishing links of connexion. Nor is association by itself a sufficient principle to explain the way in which the dreamer interprets his minimal percepts. The individual's habits of diet, no doubt, largely determine the type of his dreams. A man who eats a heavy meal just before going to bed is likely to dream very differently from one whose meals are light and who eats and drinks nothing for several hours before going to sleep. But, in the main, the cue for our interpretation of our dream-sensations is given by our emotional interests: we dream most about the things and persons wherein we are interested. Hence dreams often exhibit a more rigidly logical sequence of events than the facts of waking life. Since the ordinary avenues of intercourse with the extra-subjective world are all but cut off in sleep, the dream can follow its course without interruption, whereas in waking life we have constantly to suspend the working-out of a course of thought or action to attend to wholly irrelevant issues. In much the same way we may explain two of the most familiar peculiarities of dreams—their extraordinary vividness, and the curious foreshortening of time which seems to occur in them. The vividness seems to be due to the absence of the mass of complex and uninteresting detail in which the really interesting experiences of waking life are framed. The interesting presentation stands out alone, or almost alone, and thus engrosses the whole available attention of the sleeper; if we see a sunlit meadow, we see also the shadows that sweep across it, but in a dream we may be aware of the light without the shadow. So with the apparent shortening of time. The dream is wholly made up of the interesting moments, without the uninteresting detail which would form their setting in real life. We may dream, *e.g.*, of eating a dinner, but we do not dream each bite separately, though we should have to perform each separately in real life. Or we dream of an important interview, without dreaming of all the uninteresting and irrelevant 'padding' which would really spin it out. Hence the apparent contraction of events which would really fill hours or days into a dream which occupies a few seconds of real time.

The question whether sleep is always accompanied by dreams or not is one which there seems no means of answering. The general opinion of psychologists appears to be that the deepest sleep is entirely unconscious, and that all our dreams belong to the phase of gradual return to the waking state. This is not, however, proved by the fact that we seem only to remember dreams which immediately precede waking. For it is a common experience to wake, like Nebuchadnezzar (Dn 2), with the firm conviction that we have had a striking dream which we are totally unable to recall. In such cases, it often happens that the lost dream is suddenly remembered towards the evening. The cognate facts of hypnotism also show the fallacy of arguing that an interval from which we can recall nothing must have been one in which we were aware of nothing. Whether 'the mind thinks always,' as Descartes and Leibniz maintain and Locke denies, must, for want of evidence, be left an open question.

One of the most curious features of the dream is the modification of the central personality of the dreamer which not infrequently occurs. We dream that we are committing, with a light heart, misdemeanours or even crimes which would be impossible to us in waking life. Or a man may dream that he is a woman (or *vice versa*), and the assumed rôle may be kept up throughout the dream with remarkable dramatic verisimilitude. Or one may assume, for the purposes of the dream, the personality of some familiar historical character, such as Mary Stuart or Oliver Cromwell. Or, again, if the present writer can trust his analysis of his own dreams, the sense of individual personality may be temporarily completely submerged; the dreamer may drop out of the list of *dramatis personæ* of his dream, which then approximates very closely to Schopenhauer's 'will-less intuition.' The reverse process seems also to occur. One may begin by dreaming that he is reading or hearing a story of adventure, and may then unconsciously become the hero of the incidents dreamed of. Similarly, in the common type of dream in which we are transported back into the time of our childhood, we usually assume a suitable personality. We think and feel as children, not as our adult selves. Presumably these shiftings of personality, which may fairly be called examples of 'alternating personality,' are immediately due to a passing change in the mass of *Gemeingefühl*, or general organic sensation. They may be compared with similar modifications instituted by hypnotic suggestion or by the direct introduction of toxic substances into the nervous system.

2. In Greek literature.—The belief in the Divine and prophetic character of dreams is universal throughout Greek literature. In the classical language the exposition of dreams is regularly subsumed under *μαντική*, as one special province of the art of the *μάντις*, or seer. Aeschylus, writing early in the 5th cent., when the rise of 'Sophistic' was giving a special impetus to the glorification of 'culture heroes,' includes the discovery of the rules of oneiromancy among the chief things for which mankind are indebted to Prometheus (*Prom. Vinct.* 485: κἄκρινα πρῶτος ἐξ ὀνειράτων ἃ χρὴ | ὕπαρ γενέσθαι, κτλ.). In Homer the sender of dreams is Zeus; it is, *e.g.*, he who directly dispatches the lying dream to Agamemnon in *Iliad*, ii. 5 ff. [Homer regards dreams as actual beings; there is a 'people of dreams' on the dim path to the land of the dead (*Od.* xxiv. 12). In the case of Agamemnon's false dream, Nestor says: 'Had any other of the Achæans told us this dream, we might deem it a false thing and rather turn away therefrom; but now he hath seen it who of all Achæans avoweth himself the greatest' (*Il.* ii. 80–83). As the over-lord, in Homer, is lord by the will of Zeus, he is apparently supposed (without much positiveness) to receive from Zeus counsel in dreams, while other men's dreams are of no account, unless, indeed, some accepted ὀνειροπόλος, or dealer in dreams, accredits them. The word occurs but once in Homer (*Il.* i. 63: 'some soothsayer or interpreter of dreams, for dream, too, is from Zeus'). In parts of Australia the natives believe that a supernatural being, 'Kutchi of the Dieri, Bunjil of the Wurunjerri, or Daramulun of the Coast Murring,' may visit the medicine-man in dream or vision and reveal to him matters of importance (Howitt, *Native Tribes of S.E. Aus-*

tralia, London, 1904, p. 89). The dream-visitant may also be a ghost; the dreamer then consults the medicine-man, who pronounces on the merits of the vision (*ib.* 434).—A. Lang.]

Elsewhere in Greece we find traces of a cruder and more primitive belief. In Hesiod's *Theogony* (211-213), Night gives birth, without father, to 'Doom and black Weird and Death and Sleep and the family of Dreams'; elsewhere it is Earth who produces prophetic visions of the future (Eurip. *Iphig. in Tauris*, 1261 f.: *νύχια χθὼν ἐτεκνώσατο φάσματ' ὀνείρων*). This suggests that the original view was that the prophetic character of the dreams got at certain spots, such as Delphi, was due to the inherent virtues of the locality itself; the later and more refined theory was that the dreams are directly inspired by the god to whom the seat of prophecy is consecrated. Thus the oracle of Delphi came into the possession of Apollo, and Apollo, besides revealing the future through the mouth of his 'inspired' prophetess, is the great sender of veridical visions and dreams. It is he who in Aeschylus hounds Orestes on to his revenge by threats conveyed perhaps in horrible dreams, and prepares the way for the enterprise by sending the dream which Clytaemnestra misinterprets as signifying her son's death. Similarly the practice of obtaining prescriptions for ailments by *incubation* (*i.e.* by dreaming on a spot of special and proved prophetic virtue) is, in historical times, peculiarly under the patronage of Asclepius, and his great temple at Epidaurus is the most famous of the sanctuaries at which such dream prescriptions could be received. It was usual for the god in person to 'appear in a dream' to the patient and dictate the remedy, or even leave it behind him. When we remember that there was a widely circulated popular scientific literature of medical works addressed to the lay-public and containing directions for diet and exercise, and prescriptions for common disorders, we can readily understand the considerable repute obtained by sanatoria of this kind. Apart from these great sanctuaries, there were also private professional exponents of the science of interpreting dreams (*ὀνειροκρίται*), who were regularly at the service of the credulous. Thus Theophrastus (*Charact.* xvi. 11) notes it as characteristic of the *δεισιδαίμων*, or *dévot*, that, 'when he sees a dream, he goes to the *ὀνειροκρίται*, the *μάντεις*, or the augurs (*ὀρνιθοσκόποι*), to ask to what god, male or female, he should offer prayer.' There were also, as with ourselves, handbooks of the science, for private use, one of which, that of Artemidorus, belonging to the 2nd cent. A.D., has come down to us. Even apart from the performance of special ritual purifications (*ἀποδιοπομπήσεις*) to avert the fulfilment of evil dreams, it was held an effectual method of banishing them, as of baulking the effect of evil forebodings generally, to come out into the open air and 'tell them to the sky,' as Iphigenia does with her sinister dream in Euripides (*Iphig. in Tauris*, 42: *ἃ καινὰ δ' ἥκει νὺξ φέρουσα φάσματα | λέξω πρὸς αἰθέρ' εἴ τι δὴ τόδ' ἔστ' ἄκος*). The same remedy could be practised against presages of evil of any kind, as is done, *e.g.*, by the nurse of Medea in the prologue to that play (Eurip. *Med.* 57 f.: *ἵμερός μ' ὑπῆλθε γῆι τε κοὐρανῶι | λέξαι μολούσηι δεῦρο δεσποίνης τύχας*). The complete ritual further involved purification of the bedroom and the dreamer with torches and hot water (cf. the burlesque of the performance in Aristophanes, *Frogs*, 1338: *ἀλλά μοι ἀμφίπολοι λύχνον ἅψατε | κάλπισί τ' ἐκ ποταμῶν δρόσον ἄρατε, θέρμετε δ' ὕδωρ, | ὡς ἂν θεῖον ὄνειρον ἀποκλύσω*).

The belief in the Divine and prophetic nature of dreams plays an important part in the Orphic religion and its descendant, the Pythagorean philosophy. The familiar Orphic doctrines, that the body is the 'grave' of the soul, and that it is only when free from the body that the soul awakes to its true life, led naturally to the view that in sleep the soul converses with eternal things and receives communications from Heaven to which it is not accessible by day. This doctrine is specially prominent in Pindar and Aeschylus—poets who stood in specially close connexion with Sicily, one of the chief homes of Orphicism and Pythagoreanism. Thus Pindar says in a well-known passage from the Θρῆνοι (fr. 131, ed. Schröder) that the soul 'slumbers while the body is active; but, when the body slumbers, she shows forth in many a vision the approaching issues of woe and weal' (*ἐν πολλοῖς ὀνείροις | δείκνυσι τερπνῶν ἐφέρποισαν χαλεπῶν τε κρίσιν*); and Aeschylus (*Eumen.* 104) declares that 'in slumber the eye of the soul waxes bright, but by daytime man's doom goes unforeseen' (*εὕδουσα γὰρ φρὴν ὄμμασιν λαμπρύνεται, | ἐν ἡμέραι δὲ μοῖρ' ἀπρόσκοπος βροτῶν*). So in the speech of Diotima in Plato's *Symposium* (which is demonstrably Orphic in its origin) we are told that it is through the agency of Eros (himself an Orphic figure) that the 'communion and converse of gods with men is effected, for the sleeping as well as the waking' (*Symp.* 203 A). In Aeschylus we further find in several passages a sort of simple naïve psychological theory of the machinery of these prophetic dreams, which is apparently based on the doctrine of the physicist and Orphic prophet Empedocles, that 'the blood surrounding the heart is that with which we think' (*αἷμα γὰρ ἀνθρώποις περικάρδιόν ἐστι νόημα*). The soul is represented as sitting in the heart, like a *μάντις* in the prophetic chair, and reading off the visions presented in the blood that drips before it, just as the modern 'scryer' reads off the pictures in his crystal (*Agamem.* 178: *στάζει δ' ἔν θ' ὕπνωι πρὸ καρδίας | μνησιπήμων πόνος*; 975: *τίπτε μοι τόδ' ἐμπέδως | δεῖμα προστατήριον | καρδίας τερασκόπου ποτᾶται, | . . . οὐδ' ἀποπτύσας* [*v.l.* *ἀποπτύσαι*] *δίκαν | δυσκρίτων ὀνειράτων, | θάρσος εὐπιθὲς ἵζει φρενὸς φίλον θρόνον* [where (?) read *ἀποπτύσαν* and render: 'Confidence dares not spit it away like a riddling dream and take its wonted seat in my soul']; the *θρόνος* is not, as in the curiously parallel line of Shakespeare, 'My bosom's lord sits lightly in his throne' [*Romeo and Juliet*, v. i. 3], that of a monarch, but that of a seer or prophet). Presumably the reason why the soul can 'scry' in nightly dreams only, is that by day its attention is diverted from the figures formed in the *αἷμα περικάρδιον* by the sights of the outer world. The Orphic doctrine of prophetic dreams was apparently, like the rest of Orphicism, refined and spiritualized in Pythagoreanism. Iamblichus refers more than once to the moral discipline exercised by Pythagoras over the sleeping and dream life of the Order. In particular, he tells us that it was the custom of the Society to prepare for sleep by listening to tranquillizing music, with the effect that their unruly passions were stilled, their sleep light, their dreams few and happy and prophetic (*Vita Pythag.* §§ 65, 114). Some writers regarded the famous tabu on beans as intended to banish bad dreams.

A similar theory re-appears in Plato, *Republic*, 571 C ff., where Socrates maintains that the dreams of the good man are pure and prophetic, because even in sleep the lower elements in his soul retain their subjection and leave the noblest element to lead a free and unfettered life of its own. Since the *Timaeus* (71 D ff.) sets a much lower value on dreams, maintaining that in them revelations are made only to the lower and irrational nature, and that the revelation requires subsequent interpretation by reason to be properly understood, the theory of the *Republic* is presumably one held by

the actual Socrates but not shared by Plato. Even the account of the *Timaeus* may possibly represent views current among the Pythagoreans of the late 5th cent., to which Plato would not have wholly subscribed. It should be noted that the famous dreams ascribed to Socrates in the *Crito* and the *Phaedo* are clearly of Orphic-Pythagorean *provenance*. The vision which warned Socrates that the trireme had left Delos and would reach Athens on the morrow is manifestly the 'fetch' of the boat itself, which is just leaving the island, and is sent therefore by Apollo of Delos, the great god of Pythagoreanism. The other vision, which bade Socrates 'practise music,' clearly comes from the same source, as he obeyed it by composing a pæan to the Delian Apollo (Diog. Laert. ii. 42). From the Academy the doctrine of Pythagoreanism about prophetic dreams would appear to have passed to the Stoics; hence we find Zeno advising his followers to use their dreams as a test of their advance towards virtue (Plutarch, *de Profect. in Virt.* 12; von Arnim, *Fragmenta Stoicorum*, Leipzig, 1905, i. 56: *ἠξίου γὰρ ἀπὸ τῶν ὀνείρων ἕκαστον αὑτοῦ συναισθάνεσθαι προκόπτοντος, κτλ.*).

A. E. TAYLOR.

3. Savage and modern dreams.—These Greek beliefs or theories, like most of our theories on such matters, are only more artificial statements of the conclusions of savage reasoners. 'The Narrang-ga think that the human spirit can leave the body in sleep, and communicate with the spirits of others [telepathy] or of the dead' (Howitt, 434). The sleep of the body is the holiday of the spirit, which, in sleep, as after death, can ascend to the spiritual place above the sky, and is free from the bonds of time and space.

Among ourselves, people tell us that they have seen unknown places in dreams, and have later come to and recognized them in scenes which they had never before visited in the body. In the same way Howitt writes (p. 436):

'A Mukjarawaint man told me that his father came to him in a dream, and said that he must look out for himself, else he would be killed. This saved him, because he afterwards came to the place which he had seen in the dream, and turned back to where his friends lived, so that his enemies, who might have been waiting for him, did not catch him' (p. 435). One of the Kurnai tribe, being asked 'whether he really thought that his *Yambo* [spirit] could "go out" when he was asleep . . . said, "It must be so, for when I sleep I go to distant places, I see distant people, I even see and speak with those who are dead."'

These experiences and this philosophy of the experiences are common to most races in the lower culture (see E. B. Tylor, *Prim. Cult.*[4], 1903, vol. i. pp. 397–400). The belief in the interpretation is, of course, reinforced by what Tylor calls 'double narratives,' namely those in which the experience is mutual. A dreams of B, B (awake or asleep) sees A in the circumstances of the dream.

Tylor quotes St. Augustine (*de Civ. Dei*, xviii. 18) for a story told to the saint by a friend. This gentleman, before going to sleep, saw a philosopher of his acquaintance, who came to him and expounded certain Platonic passages which he had previously declined to elucidate. 'I did not do it,' said the philosopher, when questioned, 'but I dreamt I did.' In another case a student in Africa was 'coached' in some Latin difficulties by Augustine, who was in Italy. But Augustine did not dream, or did not remember dreaming, anything about the matter (*de Cura pro Mortuis*, x–xii; *Ep.* clviii.).

There are many modern tales of this 'mutual' experience. One may be mentioned which was written out and signed by the dreamer and his mother, who was in the house at the time of the events:

The Rev. Mr. B. fell asleep in his club, in Princes Street, Edinburgh. He dreamed that he was late for dinner, and that he went home to the house of his father, Sir John B., in Abercromby Place. He could not open the door with his latch-key, but it was opened by his father. He then ran upstairs, and, looking down from the first landing, saw his father below gazing after him. He then awoke, found that he was in his club, and that the hour was ten minutes to midnight. He hurried home, and found the front door bolted. His father opened it and said, 'Where have you been? You came in ten minutes ago and ran upstairs; where have you been since?' Like the Platonic philosopher of St. Augustine's tale, Mr. B. answered, 'I did not do it, but I dreamt I did.' Sir John B. was dead when the written narrative signed by Mr. B. and Lady B. was communicated to the writer. Other cases, equally well attested (by five witnesses on one occasion, and by the dreamer) might be given, but enough has been said to illustrate this mutual type of experience.

It is clear that primitive thinkers could explain their dream experiences only by the belief in an indwelling spirit of each man; and, when the dream proved to be 'clairvoyant' (as of a place not previously seen, but later found), or 'mutual,' the theory would be corroborated. Persons with such experiences must inevitably arrive at the conception of spirits, both incarnate and discarnate, and manifestly this belief has been one of the most potent influences in the evolution of religion. As Tylor says (*op. cit.* p. 445), speculation passed 'from the earlier conviction that a disembodied soul really comes into the presence of the sleeper' (or of persons wide-awake) 'toward the later opinion that such a phantasm is produced in the dreamer's mind' (or in the mind of the wide-awake observer) 'without the perception of any external objective figure.'

There are, practically, the two hypotheses: (1) of an 'astral body,' a real space-filling entity; and (2) of 'telepathic impact.' But rationalistic, if not reasonable, thinkers will dismiss both hypotheses as figments made to account for events which never occurred. These varieties of opinion, however, do not concern us; we merely remark that dreams (with other psychical experiences) account for the animistic or spiritual element in religion.

A man's dream 'comes true'; he finds that what he saw in dream was, though he had no normal means of knowing it, true in reality; he therefore infers: 'something within me can go out of me and wander into places where I have never been.' A modern instance, narrated to the writer by the dreamer, may be given:

At a ball in Stirling, some fifteen years ago, several persons were poisoned by eating ill-conditioned oysters, and some died. The husband of the narrator was among the sufferers. On becoming aware of his condition, he wrote and fastened up two letters to two different firms of stockbrokers in Glasgow, which his wife posted. On the night of his funeral she dreamed, and told the dream to a sister-in-law who slept with her, that she went to two different offices in Glasgow, and in each saw an open ledger, and on a page in each her husband's name at the head of a long list of curious names, of which she mentioned a few. They were the designations of mines in the Transvaal. At the foot of each page figures were written showing the state of the account. In one the loss was smaller, in the other larger; the amount was something over £3000. The lady had no idea that her husband was speculating till she saw the addresses of his letters to the stockbrokers, and, on seeing these, before his death she wrote to them, asking them to wind up affairs. To abbreviate—her dream, unhappily, proved exactly correct.

The interpretation by a professor of psychology in a Scottish University is that the speculator had often told his wife all about his dealings in gold mines, but that she had never listened, and the information, till revived in a dream, slumbered unknown in her sub-consciousness. But a primitive thinker could not possibly hit on this theory, which, in fact, did not commend itself as possible to the dreamer.

When a dream discloses *future* events, it produces a great impression on many minds, and in unscientific ages is explained as a Divine revelation. The Homeric explanation, that true dreams come through the gate of horn, false dreams through the ivory gate, is based merely on a pun in the Greek. We now account for prophetic dreams in the mass by saying that, out of so many shots as our dream-selves make, it would be a miracle if none hit the bull's eye. Moreover, even if a dream, later fulfilled, is recorded contemporaneously, or impels to action taken on the moment, the theory of mere fortuitous coincidence is applied; while every one knows that, in telling a dream, we almost inevitably give rational shaping to what was not rational, and, generally, decorate the anecdote. The number of dreams about winners of any great horse race is so great that some must

coincide with the result. In one curious case the explanation is easy.

An Eton friend asked Colonel A. B., 'What is the Latin name for the south-west wind?' 'Favonius,' was the answer. 'I dreamed that a horse with the Latin name of the south-west wind won the Derby, but, when I wakened, I could not remember the Latin name.' The friends found no Favonius in the betting, and none, on the Derby day, was coloured on the card. But it was announced that 'the Zephyr colt' had just been named Favonius. The friends naturally backed Favonius, which won. It is clear that the well-known Zephyr (west wind) colt had, in the dream, suggested the south-west wind by its Latin name, which, when awake, the dreamer could not remember.

Another explanation of a fulfilled dream is that the dream was never dreamt, but was an illusion of memory.

Thus Mr. F. W. Greenwood published and spoke to the writer about a dream of going into a strange house, and finding a human hand on a chimney-piece. He did, next day, visit at a house in which he had never been before; he had forgotten about his dream till he noticed the hand of a mummy on the chimney-piece. When told that, in all probability, he had never dreamed the dream, but only had a sense of the *déjà vu* when he saw the hand, and supposed that 'the previously seen' had been seen in a dream, Mr. Greenwood, a man of sturdy common sense, revolted against the methods of science. This was not unnatural.

It frequently happens that, in the course of the day, some trivial incident reminds us, by association of ideas, of some trivial last night's dream which we had temporarily forgotten. In such cases science does not say that we are under the sense of the *déjà vu*: that explanation is given only in cases where, if it is *not* given, a dream must be recognized as premonitory.

An interesting essay on premonitions in dreams, with examples, by Mrs. Henry Sidgwick, may be read in *Proceedings of the Society for Psychical Research*, vol. v. pp. 311–351. The objections are firmly stated in general terms; especially the objection that memory, if no record be instantly made, improves the case, while the memory of any person to whom the dream was narrated before the coincidence of dream with fact was known is as subject to error as that of the narrator. It will be observed that perhaps the best authenticated premonitory dreams are concerned with quite trivial matters, for example (this case is not given by Mrs. Sidgwick), a series of incidents in a golf match played on links and with an opponent both entirely strange to the dreamer at the time of the dream. (For examples, see Mrs. Sidgwick's essay, pp. 338, 339, 343, 346–351.)

A dream, communicated to the writer at first hand, is picturesque, and may be briefly told. The dreamer one night dreamed that she was in Piccadilly. The street was covered with snow, and a black sleigh was driven quickly past. Looking round, she saw the late Duke of Edinburgh, with whom she was acquainted. He said, 'They are taking the news to Clarence House.' The following day she read in the newspaper the news of the murder of the Duke's father-in-law, Alexander II. of Russia.

This aspect of dreams (if the facts are accepted) may, of course, be viewed from the side of Myers' theory of 'the subliminal self,' as stated in his book, *Human Personality* (1903). By those who accept, more or less, Myers' hypothesis some dreams are taken to be 'supernormal,' and bear witness to unexplained ranges of human faculty. In other cases they merely show that incidents which have left no trace on the ordinary memory are none the less treasured in the subconscious memory, and may be communicated to the upper consciousness through the mechanism of remembered dreams. If no men dreamed, it is probable that religion and philosophy might never have evolved the conception of spirit; while, if only five per cent of mankind dreamed, it is fairly certain that the other ninety-five per cent would regard them as merely mendacious.

A. LANG.

DREAMS AND SLEEP (Babylonian).—The dream played an important part in the life and religion of the Babylonians. In the dream the deity was believed to reveal himself in a special way to the individual, declaring the will of heaven and predicting the future. The *bârû*, or 'seers,' constituted a particular class of priests, and one of the titles of the Sun-god was *bârû terêti*, 'the seer of the revealed law.' Prophetic dreams, however, might be sent to the ordinary layman as well as to the professional 'seer,' and there were books for interpreting their meaning. It would seem that answers to prayer could be obtained through sleeping in a temple and invoking Makhir, the goddess (or god) of dreams. At all events, in a penitential psalm (*WAI*, iv. 66. 2) we read: 'Reveal thyself to me and let me behold a favourable dream. May the dream that I dream be favourable; may the dream that I dream be true. May Makhir, the god(dess) of dreams, stand at my head. Let me enter E-Saggila, the temple of the gods, the house of life.' The little temple discovered by Mr. Hormuzd Rassam at Balawât (15 miles E. of Mosul) was specially dedicated to Makhir, and may have been frequented by those who thus sought 'favourable' dreams.

In the Epic of Gilgameš dreams play a conspicuous part. In the struggle of the Babylonian hero with Khumbaba three dreams are needed to assure him of success. The loss of his friend Ea-bani is foretold in a vision of fire and lightning, and in the story of the Deluge the impending destruction of mankind was said to have been revealed to Utu-napištim in a dream. The historical inscriptions are equally full of references to dreams. The will of heaven was made known to Gudea of Lagaš through a dream, and the army of Aššur-bani-pal was encouraged to cross a river by the appearance in a vision of the goddess Ištar, who declared: 'I march before Aššur-bani-pal the king, who is the creation of my hands.' Aššur-bani-pal himself, when overwhelmed with despair at the outbreak of the war with Elam, was similarly reassured with a promise of victory. He prayed to Ištar, and on the self-same night 'a seer (*sabrû*) slept and dreamed a dream,' wherein Ištar of Arbela appeared with a quiver on either shoulder and a bow in her hand, and bade the dreamer announce to the king: 'Eat food, drink wine, enjoy music, exalt my divinity until I have gone to accomplish this deed: I will give thee thy heart's desire; thy face shall not grow pale, thy feet shall not totter, thy strength shall not fail in the battle.' It was in a dream that Aššur commanded Gyges of Lydia to pay homage to the Assyrian king and so obtain help against his Cimmerian enemies, and the prediction that the power of the Manda would be overthrown, as well as the order to rebuild the temple of the Moon-god at Harran, was revealed to Nabonidos in a dream. In the historical framework of the Book of Daniel the dreams of Nebuchadrezzar occupy a leading place, and in one instance the wise men of Babylon were required not only to interpret the dream, but even to recall it to the memory of the king.

Oneiromancy was studied by the Babylonians with that exaggerated devotion to details which otherwise characterized them. The official texts relating to the interpretation of dreams took note of everything, however bizarre or unlikely, which

might occur to the imagination of the sleeper. These texts or 'Dream-books,' which were probably collected in a single work, were naturally included by Aššur-bani-pal in his library at Nineveh, and formed the quarry from which Artemidorus drew the materials for his five books of the *Oneirocritica*. The nature of them may be gathered from the following quotations: 'If a date appears on a man's head, it means woe. If a fish appears on his head, that man will be strong. If a mountain appears on his head, it means that he will have no rival. If salt appears on his head, it means that he will apply himself to build his house.' Or, again: 'If a man dreams that he goes to a pleasure-garden, it means that he will gain his freedom. If he goes to a market-garden, his dwelling-place will be uncomfortable. If he goes to kindle a firebrand, he will see woe during (his) days. If he goes to sow a field, he will escape from a ruined place. If he goes to hunt in the country, he will be eminent (?). If he goes to an ox-stall, [he will have] safety. If he goes to the sheepfold, he will rise to the first rank.' Could a pseudo-science end in greater puerilities?

A. H. SAYCE.

DREAMS AND SLEEP (Egyptian).

—**1. Introduction.**—Although dreams were not considered of such importance in Egypt as in Chaldæa, Phœnicia, or the Hellenic world, the rôle allocated to them was much larger than is generally thought; they occupied a constant place in Egyptian life. The relative scarcity of information is a result of the nature of the monuments at present published. While the epigraphy of the temples furnishes only a very few official examples of dreams, we find (1) that, in spite of this scarcity, dreams are of constant occurrence in the literary papyri; and (2) that the instances of Egyptian dreams mentioned by late authors are proved by a correct exegesis to be of Egyptian origin. These two points give us ground for thinking that the deciphering of the still unpublished papyri and *ostraca* will yield an unknown wealth of information. Further, the study of unpublished *ex voto* stelæ ought, to all appearance, to furnish large additions to the list of cases of miraculous healing obtained by the medium of dreams. If to all this we add the passages in our sources in which dreams are not expressly mentioned, but are implied by the fact that formulæ are employed similar to those used in cases of dreams related expressly as such, we are forced to the conclusion that the current ideas as to the frequency and importance of dreams in Egypt stand in need of considerable modification.

2. Classification of material.—Dreams in which the gods intervene directly may be divided into three groups: (*a*) unsolicited dreams in which they appear in order to demand some act of piety towards themselves; (*b*) dreams in which they give warnings of various kinds spontaneously; and (*c*) dreams in which they grant their worshippers an answer to a question definitely stated. The cases of unofficial magic forcing dreams into its service form a separate class.

This classification has the advantage of arranging the facts in a fixed number of groups, which bring into greater prominence the essentially Egyptian characteristics, and so help to decide whether a certain number of dreams mentioned in the Greek and Roman classics can be regarded as really Egyptian. This is an important question to settle for the general theory of dreams.

3. Unsolicited dreams.—Of this first class the well-known dream of Thothmes IV. is the best specimen contained in our sources. Falling asleep, during the chase, at the foot of the statue of the Great Sphinx, the young prince heard the voice of a god. It promised him the throne of Egypt, and required him to repair the god's temple, which was threatened with ruin. This story leaves no doubt that the dream of Nectanebo, though handed down to us in Greek form (cf. Leemans, *Papyri Græci*, Leyden, 1838, p. 122), is an adaptation of an Egyptian document. As in the case of Thothmes IV., the god (under the form Anhuri) appeared to the king, and complained of the failure to complete certain works at his temple. On waking, the king was greatly perturbed, and gave the necessary orders to have the works completed with all expedition. It is quite certain that this Hellenized legend sprang from the remains of a stela, like that of the Sphinx of Gizeh, on which the priests had had an account engraved of the marvellous incident that caused the repairing of the temple.

The case reported by Plutarch (*de Is. et Osir.* 28) of the dream of Ptolemy Soter belongs to the same category. The king dreams of a colossal statue which orders him to take it back to Alexandria, where it was formerly situated. He makes inquiries on awaking, and finds that Sosebius had once seen an image at Sinope like the one described by the king as seen in his dream. The statue, in short, is found there, and brought back to Alexandria; and Timotheus, as well as Manetho, recognizes it as one of Serapis. Here we see a Hellenized adaptation of Egyptian legends relating to the repair of monuments and the restoration of cults of Divine statues; and this is in complete harmony with the historical fact that the Ptolemys took a great deal of trouble to bring back the national sacred statues which had been carried off from the Nile Valley by Asiatic conquerors.

The question of the absolute authenticity of these documents cannot be discussed here. It was proved long ago that the majority of these stelæ devoted to dreams, miracles, and gifts made after Divine intervention bear inscriptions of a much later date than is attributed to them (*e.g.*, the Stela of Cheops at Gizeh, the Stela 'of the Famine,' Stela of Bakhtan, etc.; the Stela of the Sphinx, in particular, has been shown by Erman to be a new version of an analogous legend attributing an identical dream to another prince). It still remains to be proved, however, that these 'forged' documents are not adaptations of ancient inscriptions or transcriptions on stone of ancient papyri. The only important facts to be kept in view here are: (1) that official Egypt admitted as a regular process this method of Divine warnings by dreams; (2) that numerous restorations of temples and cults were really the outcome of dreams actually experienced, and accepted by the king, on awaking, as certain signs of the will of the gods. An examination of the official texts relating to the restorations of monuments would shew, by the parallelism of formulæ, that these cases are much more numerous in Egypt than is usually supposed.

Besides cases like the above, in which the gods may be said to have been working primarily in their own interests, unsolicited dreams were granted also for the benefit of humanity. The revelation by a dream of the hiding-place of some wonderful chapter, for use in funerary or medical magic, seems to have been the traditional origin of a number of formulæ or groups of formulæ inserted later in the great compilations which became the 'Books of the Dead' and the first medical papyri. All that the gods of Egypt did in such circumstances was to show the continuity of their legendary rôle of 'beneficent masters of this whole earth.' Their intervention sometimes took an even more direct form, warnings being given by dreams to the kings, who were the Divine heirs, or to important personages, princes, or even simple mortals loved by the gods. Sometimes they revealed the action to be taken in the man's own interest. It is, *e.g.*, in obedience to a dream that Shabaka (Sabacōs) retires into Ethiopia (Herod. ii. 139). Sometimes they foretell final success, without requiring, as in the case of Thothmes IV., a personal service in exchange.

The famous Ethiopian Stela 'of the Dream' is the typical example of this class. We are told how Tonutamon 'sees in a dream in the night two serpents, one on the left, one on the

right,' and how it was explained on his awaking that these two serpents signified the heraldic emblems of the two Egypts (North and South) of which he would soon be master.

In other cases the gods do not scorn to foretell happy events to certain persons in whom or in whose descendants they are particularly interested—perhaps with a view to the good that will result for the whole of Egypt. The story of Satni, father of the great magician Senosiris, is an example:

'Now Satni went to sleep and dreamed a dream. Some one spoke to him, saying: "Thy wife hath conceived, and the child she will bear will be called Senosiris, and many are the miracles that will be done by him in the land of Egypt."'

Sometimes, again, a dream directly reveals the wish of a god. Thus the prince of Bakhtan saw in his sleep a hawk flying away towards Egypt; this was a sign that he had to send back to Thebes the miraculous statue of the god Khonsu, which had formerly exorcized a demon from his daughter. Sometimes, also, the Divine spirit warns the king in a dream to avoid certain projects, either immediate or far ahead, which would turn out harmful to the kingdom. However adapted they may be in non-Egyptian compositions, the dream of Menander and Pharaoh's dream (interpreted by Joseph [Gn 41]) are two good examples, the constituent elements of which are similar to those of Egyptian accounts of such Divine warnings.

The first of these stories has come down to us in fragments of a Coptic romance—the fabulous Life of Alexander: 'Then Menander had the following dream, and saw this vision: he saw a lion loaded with chains and cast into a pit. A man spoke to him: "Menander, why dost thou not descend with this lion, since his purple is fallen? Get thee up now, and seize him by the neck of his purple." Menander's grief at this dream, and his conviction that the lion signified his master, were not mistaken—in the morning a messenger announced the death of Alexander at treacherous hands.' It is highly probable that, if the legend is of late Egyptian date, it borrowed its general form from the ordinary type of historical dreams attributed to the Pharaohs of national legend.

The same remark applies to the Scripture story of the dream of Pharaoh, and the part played by Joseph. In the present state of our knowledge, we cannot assert that this episode belongs to any particular reign in the Egyptian dynasties, nor even that it belongs, for a fact, to some authentic fragment of the national folk-lore relating to the legend of the Pharaohs of the romantic cycle. But Egyptology is in a position to state with assurance that none of the elements of the story is *a priori* in conflict with the Egyptian data relating to dreams. We know from history that the subject itself (the periods of drought and fertility resulting from the annual overflowing of the Nile) was one of the chief interests of the Egyptian monarchy; the famous stela of the island of Sehel (the 'Famine Stela'), *e.g.*, is evidence that facts of this kind were of great importance in monumental religious history, where the gods and the kings both witnessed to the vital importance of this matter—the former by warnings, the latter by acts of piety. The symbolic method of warning, in the figures of fat and lean kine or ears of corn, is analogous to that of the serpents in the Ethiopian 'Dream Stela.' Finally, the calling in of Joseph to interpret the dream, after all the magicians and wise men had been consulted in vain (Gn 41[8]), is likewise in agreement with Egyptian usage: the popular tales relate that, on the failure of the regular interpreters, the king applied at will to private persons noted for their wisdom, as, *e.g.*, in the case of the wise old man consulted by the Pharaoh in the 'Story of Cheops and the Magicians.'

The interpretation of symbolical dreams was the business of special persons—the 'Masters of the Secret Things,' or the 'Scribes of the Double House of Life' (a very poor modern translation; the real meaning of the title is rather 'the Learned Men of the Magic Library'). At no time do these 'official dreamers' seem to have had the prominence they enjoyed in other civilizations. As regards mantic codification of the signification of beings, things, and phenomena seen in dreams, it is hardly likely that Egypt did not possess lists of this kind in the temples; but, as a matter of fact, we do not possess at the present moment a single papyrus of the same kind as the collections of 'omen tablets' of the Chaldæan civilization. It is not a question, of course, of looking for a theoretical work or anything approaching the *Oneirocritica* of Artemidorus; all we could expect would be lists of facts and interpretations conceived on the model, *e.g.*, of the horoscopic calendars.

4. Solicited dreams.—Of more frequent occurrence is Divine intervention by means of dreams sought and obtained, either in exceptional circumstances or in regular arranged form. Good examples of the first class are furnished by the historical cases of kings finding themselves in a difficult situation, and imploring a god to grant them some light on the future or on the course they should follow. The classical inscription of Merenptah (Great temple of Karnak) is a good example:

'Then his majesty saw in a dream as if a statue of Ptah were standing before Pharaoh. He was like the height of. . . . He spake to him, "Take thou (it)," while he extended to him the sword, "and banish thou the fearful heart from thee." Pharaoh spake to him, "Lo . . ."' (Breasted, *Ancient Records of Egypt*, Chicago, 1906, iii. 582).

This passage throws light upon Herodotus' story (ii. 141) of the dream of Sethos, a priest of Hephæstus, during his struggle against Sennacherib:

'The monarch . . . entered into the inner sanctuary, and, before the image of the god, bewailed the fate which impended over him. As he wept, he fell asleep, and dreamed that the god came and stood at his side, bidding him be of good cheer, and go boldly forth to meet the Arabian host, which would do him no hurt, as he himself would send those who should help him.' Cf., on Sennacherib, 2 K 19[35ff.].

This is a faithful account—though Hellenized—of what the classical Pharaoh did. He did not 'bewail his fate,' as the Greek author thought, but he stated his case in a prayer, the model of which is given in Maspero, *Contes pop.* (see Lit.); and the appearance of the god in a dream was not an unexpected phenomenon, but a necessary consequence of the prayer. The rest of the story—the entering of the temple, speaking before the statue, incubation, and, lastly, the response of the god—are pure Egyptian characteristics, and are in complete agreement with what we learn on this point from the inscriptions and popular tales.

The various sources of information that have come down to us prove that incubation in the temple in order to obtain a remedy or a mantic response was a current practice, not only among princes, but also among private individuals. It is wonderful to find, once more, and in this connexion, that the Græco-Roman authors were often more accurately informed than is usually believed. Before Egyptological knowledge had supplied the necessary proof, the accuracy of Diodorus (i. 28) was contested (Wilkinson, *Manners and Customs*, Lond. 1878, ii. 356), when he says that 'in Egypt, dreams are regarded with religious reverence, especially as means of indicating remedies in illnesses'; and that 'the prayers of worshippers are often rewarded by the indication of a remedy in a dream.'

The story of Satni tells of Mahituaskhit going to the temple of Imuthes (=Asklepios) in Memphis, praying to the god, then falling asleep in the temple, and receiving from the god in a dream a cure for her sterility: 'When to-morrow morning breaks, go thou to the fountain of Satni, thy husband; there thou shalt find growing a plant of colocasia; pull it up, leaves and all, and with it make a potion which thou shalt give to thy husband; then shalt thou sleep with him, and that very night shalt thou conceive.'

This story is not simply a literary fabrication; for we have the famous Memphite Stela of Pshereuptah, of the Augustan period, giving epigraphical evidence of another case of sterility being similarly cured by a remedy revealed in a dream by the same god Imuthes.

By piecing the various texts together, we gradually arrive at a re-construction of the 'processus' of the Egyptian dream by incubation in the temple. The patient entered one of the sanctuaries where the gods were reported to give responses to those who came to sleep within the sacred enclosure.

Our information is fully verified by the texts, at least for the temples of Imuthes in Memphis, and of Thoth in Khimunu. All indications of a scientific nature lead to the same conclusion for the temple of Thoth Teôs at Medinet-Habu, near Thebes (see DISEASE AND MEDICINE [Egyp.]), and for the celebrated sanctuary of Isis at Philæ (cf. Revillout, in *PSBA* x. [1887] 58). Finally, we are assured by Petrie that there were special places in the temple of Sarbut el-Qadem, in Sinai, for people who desired dreams from the goddess Haithar (Hathor) relating to the locality of turquoise mines (cf. *Egypt and Israel*, London, 1911,

p. 49, and *Personal Religion*, do. 1909, pp. 27, 81). But the same author is probably wrong in thinking that this practice represents a borrowing from ancient Semitic religion.

When inside the temple, the worshipper prayed the deity to reveal himself: 'Turn thy face towards me'; and besought him by his well-known virtues: ''Tis thou who dost accomplish miracles and art benevolent in all thy doings; 'tis thou who givest children to him that hath none,' or ''Tis thou who hast created magic, and established the heavens and the earth and the lower world; 'tis thou who canst grant me the means of saving all.' The god was adjured to '*hear* the prayer' (and this formula is, in the present writer's opinion, decisive proof that the various stelæ on which ears [*sotmu*] are found are, after all the discussion on this point, votive offerings of the worshippers whose supplications the god had heard [*sotmu*] in cases of dreams by incubation). After these invocations, the inquirer waited for the god to come and answer him in sleep.

There is one important point still obscure. We do not know whether, as in so many other savage and semi-savage religions, the coming of the dream was facilitated by the swallowing of some narcotic or intoxicating substance (see Tylor, *PC*[3], London, 1891, ii. 416 f.). Of the two other equally frequent conditions—prayer and fasting—the former has been discussed. As regards fasting, it is almost certain, from a number of evidences and parallelisms, that it was an essential duty of the worshipper desiring a dream. It was originally based, as in uncivilized races, on magical notions which gave a pseudo-scientific interpretation to the hypersensibility to dreams caused by fasting; therefore it developed into the idea of moral purification, as has happened in so many other cases (see Petrie, *Personal Religion*, 'The Ascetics,' p. 70, for the idea of fasting in general in the Egypt of the later period).

The god next appeared in a dream. The usual formula is: 'The god N [or 'some one,' instead of the Divine name *honoris causa*] spake to him, saying. . . .' The deity begins, as a rule, by specifying the identity of the person he is addressing: 'Art thou not *such an one*, son (or father, or wife, etc.) of *so and so*?' (cf. Maspero, *Contes populaires*[3], Paris, 1905, p. 137, for the dream of Mahituaskhit, and p. 147 for the dream of Horus, son of Panishi). When this is settled, the god next tells what should be done 'when morning comes,' and he uses no dark or symbolic language; indeed, it is with most exact details that he tells, *e.g.*, at what place a sealed *naos* will be found, or a certain kind of box, containing a certain book, which must be copied and replaced, to be followed by a certain result, etc. The divinatory dream of an ordinary Egyptian type for incubation is thus a case of oneiromancy, not requiring a metaphysical interpretation, but with the direct instructions of the gods in clear terms. It is by these examples also that the sense of the passage of Hermes Trismegistus is established, referring to 'these prophetic statues which foretell the future by dreams and otherwise.'

5. **Dreams evoked by magicians.**—Besides these official methods of soliciting dreams from the gods, private magic taught means of obtaining dreams without recourse to the loftier temple procedure. The papyri of later centuries have preserved the pitiable mixture of material details and barbarous jingles of words that form the clearest of those methods.

Papyrus 122 in the British Museum, l. 359 ff., says: 'Take a clean linen bag and write upon it the names given below. Fold it up and make it into a lamp-wick, and set it alight, pouring pure oil over it. The words to be written are: "Armiuth, Lailamchouch, Arsenophrephren, Phtha, Archentechtha." Then in the evening, when you are going to bed, which you must do without touching food, do thus: Approach the lamp and repeat seven times the formula given below, then extinguish it and lie down to sleep.' [The formula is too long to give, but ends thus: 'I require, O lords of the Gods, give me the information that I desire'; cf. Budge, *Egyp. Magic*, London, 1901, p. 216.]

Magic also taught analogous means of getting dreams on unspecified subjects from the popular god of dreams, Bes, whose figure is carved or engraved on numerous pillows on which Egyptian heads reclined. With these formulæ we enter imperceptibly the domain of pure and simple superstition and the current practices of Egyptian society.

The same British Museum papyrus gives, in l. 64 ff., the method of drawing 'on the left hand' a figure of Bes, then writing on a piece of cloth, with ink made of special ingredients, a formula of adjuration; this cloth is then wrapped round the hand, and its end is rolled round the patient's neck. The god of dreams is summoned to come 'this very night.'

It is doubtful whether the more enlightened members of Egyptian society admitted that the gods lent themselves so readily to the commands and threats of men. It is universally admitted, on the other hand, that the dead, who always had power to come and give dreams to the living on their own initiative, were capable, in certain circumstances, of being called into the service of private magic.

Cases of direct intervention by the dead are not of great frequency in the literature at present known to us. The view of Pierret (*Dict. d'arch. égyp.*, Paris, 1875, *s.v.* 'Songe'), that the famous papyrus of 'The Teaching of Amenemhat' has reference to an appearance of the king's father, who came in a dream to instruct his son, is nothing more than hypothesis. The same is true of the interview of Khonsu-m-habi with a dead man (this may have been a waking vision). The most certain cases are those indicated by the formulæ found by Erman in the Berlin magic papyrus, to be employed for driving off the ghosts that torment children in sleep (see art. CHILDREN [Egyptian]). The well-known Leyden papyrus is the type *par excellence* of cases of a dead woman coming to torment her husband in dreams. The way to get rid of this torment was to make a statuette of the dead wife and tie upon its wrist a list of the husband's good deeds during his wedded life, and then a summons to the ghost to stop her persecution, under the threat of proceedings before the god of the dead.

The magicians took full advantage of this readiness of the dead to evoke dreams. They did not employ all ghosts, but only those whose wretched condition had deprived them of their habitations, family-cult, or tomb, and who had consequently to beg assistance of the living and to put themselves at their service in order to exist (see DEMONS AND SPIRITS [Egyp.]); hence the importance attached in necromancy to the spirits of shipwrecked people, suicides, executed criminals, etc. Most of the Egyptian books of magic include private formulæ for sending dreams in this way (cf. the Louvre papyrus 3229, the Gnostic papyrus of Leyden, and the late incantations in Greek). The dreams thus sent belong to two general categories: (*a*) dreams which torment and devour by witchcraft; and (*b*) dreams sent to inspire some one with an ardent love, to encourage a loved one's fidelity, or to bring hostility to a rival or make him physically impotent. In all such cases the sending of the dream is usually complicated by a casting of spells through the medium of a figure of the person to whom the dream is sent (see Maspero, *Histoire*, Paris, 1895, i. 213; and the cases of 'love figures' given by Budge in his *Egyptian Magic*, p. 94 ff.). The whole combines, later on, with Chaldæan, Jewish, and Greek magic to form the involved processes of *tabellæ devotionis*, where dream, incantation, and necromancy are all confused, the dream-sending, however, remaining the chief element (cf., on this difficult question, Maspero, *Études de myth. et d'archéol. égyp.*, Paris, 1893, pp. 297, 311; and the fine studies of Revillout, 'Amatoria,' in *Revue égyptologique*, i. [1881] 69 ff.). A papyrus in the British Museum commends the sending of love-dreams by the method of tracing words with a nail 'taken from a wrecked ship' and then throwing them into the sea; or by making this declaration before a lamp filled with oil of a special composition: 'I desire to appear in the dream of the daughter of N. . . .' By gradual stages the magician adds to these spirits of the dead in his service spirits of demons or of ill-disposed gods, and we see developing the system of black magic

which lasted throughout the centuries in the Mediterranean world and in Christian Europe.

This general theory of the dreams sent by magicians fits in exactly with the accounts of pseudo-Callisthenes relating to the legendary birth of Alexander, and proves the Egyptian nature—mistakenly contested—of the dreams that were sent to Olympias and to Philip. The first dream, sent to the queen, is accompanied by a ceremony of spell-casting with a wax figure and unctions of magic herbs analogous to all the practices mentioned above. The dream-visit of Amon to the queen's room is purely Egyptian, and falls in with the theory of Divine conceptions by dreams described at Luxor and Deir el-Bahari for the Thebans of the XVIIIth Dynasty. Finally, the dream in which the hawk is sent from Egypt to announce to Philip the miraculous birth of Alexander is equally in agreement with the mechanism employed by the magicians of the Nile Valley.

6. **General.**—It will be observed that in none of the cases mentioned as yet do we see an ordinary living person taking any part at all in a dream (giving a warning, coming from a distance, announcing an approaching death, etc.); there is nothing of the nature of the interview of Patroclus and Achilles (*Il.* xxiii. 65 ff.). And, on the other hand, we have no Egyptian examples of the dreamer going to a distant land in his dream, living the past over again, seeing future events, or, in a word, playing any of the parts that are so frequent in dreams of other religions. Besides the dreams already mentioned, in which the dead appear, the only other apparitions seem to have been of gods speaking on definite questions in the clear language of earth, and, sometimes, but more rarely, calling the attention of the sleeper to certain symbolical figures that must be interpreted.

We now come to the final question of what theory was probably held in Egypt as to the mechanism of the dream. No formal explanation has ever been given of this in any Egyptian text known to us, and there is little chance that there ever existed an oneirocritical work analogous to those possessed by the Mediterranean world. The Egyptian dream is not connected rationally either with the mechanism of omens, or with the theory of 'influences,' or with the process of 'intersigns.' It is a tangible reality and is regarded as such, without mysticism and, as a rule, without symbolism. There is not even any allusion, as by Penelope in the *Odyssey* (xix. 560 ff.), to the possibility of a fallacious dream. On the other hand, the absence of dreams in which the soul goes away or in which living persons appear is significant. As it is evident that the Egyptians, like other men, must have had dreams of this type, the fact that they omit to mention them in the texts proves that they did not consider them of importance. Now, if we admit, with Tylor (*Prim. Cult.*[3], i. 121, 440, ii. 24, 49, 75, 416), that these types of dreams are included in the list of the fundamental elements of primitive religious phenomena, it must be concluded that Egypt was already far beyond these conceptions, and had travelled far, in this connexion, from the ideas as to the rôle and nature of dreams cherished by the majority of contemporary African peoples. In the last place, the theory of the dream seems to the present writer, after a careful examination of the Egyptian ideas, to be based not upon the separation or the journey of one of the souls of a human being during sleep, but upon the hypersensitiveness of the sleeping man. This fact may be of great interest for the history of comparative religion. There would seem to correspond, in short, to the sleeping state a special sensitiveness enabling the individual to see and hear beings that are always in existence, but cannot be perceived in a waking state because the senses are too gross. This would agree with the belief that on certain occasions or by certain processes man can actually acquire this lucidity, by way of exception, in a waking state (*e.g.* 'to see invisible spirits' by rubbing the eyes with a magic substance; or 'to read sealed writing' through the matter of the case, etc.). The whole hypothesis agrees, however, with the practice that we have established as fact or suspected as preliminary conditions in Egypt of obtaining a dream: prayer (*i.e.* an attenuated form of incantation), fasting, etc. The whole question would thus come under the general theory of the ecstatic process. Far from being, as in other religions, a sort of death, sleep in Egypt was a state of lucid supersensitiveness of the various souls contained in the individual. In support of this view, there is a very important phenomenon to be noted, viz. the ecstatic sleep of the *sam*, so often described or represented in the ritual and in the scenes of the famous ceremony known as the 'Opening of the Mouth' of the dead. It is during this sleep that the *sam* acquires the power of seeing and hearing the soul of the dead 'in all the forms which it takes,' as the dreamer declares on awaking.

LITERATURE.—There is no monograph on the subject. Various facts are briefly given in: A. Erman, *Religion*, Fr. ed., Paris, 1907, pp. 81, 211, 222; V. Ermoni, *Relig. de l'Égypte ancienne*, Paris, 1910, Index; G. Maspero, *Histoire*, i. (Paris, 1895) 213, 266; Ph. Virey, *Relig. de l'anc. Égypte*, Paris, 1910, pp. 129, 226; see, for the examples taken from the classics, J. G. Wilkinson, *Manners and Customs of the Anc. Egyptians*, ed. London, 1878, i. 139, ii. 356, 464, iii. 95. The text of the principal Pharaonic documents is given in J. H. Breasted, *Ancient Records of Egypt*, Chicago, 1904–1907, ii. 815, iii. 532, iv. 922; Maspero, *Contes populaires*[3], Paris, 1905, pp. 132 f., 145, 147, 157, 166, 255, 267. The only works in which the subject is approached theoretically are: E. A. W. Budge, *Egyp. Magic*, London, 1901, pp. 94, 206; G. Maspero, 'Imhotep,' in *Journal des Savants*, 1901, and 'Comment Alexandre devint Dieu' (*Annuaire de l'école des hautes études*, 1899), p. 26 f.

GEORGE FOUCART.

DREAMS AND SLEEP (Teutonic).—Dreams played a considerable part in the lives of the Teutons, but their significance was only prophetic. They were thought to foreshadow events in the future of the dreamer or his immediate surroundings, but there is no hint that they played any part in religion. The idea that revelations as to the nature of the gods could be made through the agency of dreams seems to have been foreign to Teutonic conceptions, and the later mystical dreams of the Middle Ages must, therefore, be held to be a Christian growth. In Scandinavia, whence almost all our information for heathen times is obtained, dreams were not only divorced from religion, but also to a great extent from magic. The art of interpreting dreams was in no way connected with magical powers, but was usually found in combination with a philosophical attitude towards life, and a wide knowledge of the world. Thus, in the *Laxdale Saga*, Gudrun appeals to no witch-wife, but to Gest the Wise, a chief universally esteemed for his ripe wisdom, for the interpretation of her dream; and in the *Heimskringla* we find King Halfdan the Black consulting his wisest counsellor about his dream. Every one, however, was acquainted with the rudiments of the art of interpretation, and there seems to have been a general consensus of opinion as to the significance of certain phenomena in dreams: thus Gudrun, in the *Lay of Atli*, says that dreaming of iron portends fire; and Högni, in the same poem, declares that his wife's dream of a polar bear only foretells a storm from the east. The fact that most of the recorded Scandinavian dreams are of ominous import must be ascribed to the selective process exercised by the authors of Saga or poem. The value of dreams, used as a literary device to deepen the atmosphere of doom which surrounds a fated house, was fully appreciated by them. So, before the catastrophic ending of the Atli (Attila) poems, the wives of Högni and Gunnar in vain strive to stay their husbands by

the recital of their dark dreams; and the unsuspecting Atli wakes Gudrun to tell her the dream which foreshadows his own death at her avenging hands. In many of the Sagas the suspense before a tragic happening is enhanced by dreams woven into the story, notably in the Saga of Gisli the Outlaw. However, Snorri Sturluson makes good use of a more cheerful type of dream in his histories of the Norwegian kings, shadowing forth the glory of the royal line in the dream of a lofty tree, many-branched, spreading all over Norway and beyond it. Saxo Grammaticus, in his *Gesta Danorum*, tells us of a dream of King Gorm of Denmark which has a similar significance, and one is also recorded from Sweden.

It is worth while to examine a little more closely the various classes of foreboding dreams. The simplest type is merely a dream vision of what is to come; thus a great blaze indicates the burning of a house, and so on. But the dreams most frequently mentioned in the old Scandinavian sources image forth the persons involved under animal form, showing how deeply rooted was the idea of the *fylgja*, the materialization, as it were, in animal form, of a man's spirit, which attended him through life, and could be seen in dreams, or by waking persons before the death of its owner (see SOUL [Teut.]). Thus, in *Njáls Saga*, a dream of a bear followed by two dogs is at once read as shewing the presence, in the neighbourhood, of the warlike Gunnar, with two companions. Thorstein Egilsson, in the *Gunnlaugs Saga*, dreams of two eagles fighting over the possession of a swan: the eagles are the *fylgjur* of the two rivals for the love of his daughter, whose *fylgja* is the swan. There is a remarkable similarity between this dream and that in the *Nibelungenlied*, where Kriemhild sees two eagles tear her pet falcon to pieces. Charlemagne's dream of the meeting of a bear and a leopard, recorded in the *Song of Roland*, evidently belongs to this class. In other dreams, again, it is the guardian spirit, or a deceased member of the family, who appears to the living representative to warn him of danger or death—in two stories the warning conveyed is of a landslip, from which the dreamer is thereby enabled to escape. In later Christian times we find St. Olaf or one of the popular Icelandic bishops fulfilling this warning function. In the short Icelandic tale entitled the *Dream of Thorstein*, three female guardian spirits come weeping to Thorstein, imploring him to be wary, for that his thrall Gilli seeks to murder him; but their warning is in vain. Similar is the last dream of Glaumvör, in the *Lay of Atli*, in which she sees dead women, clothed in sad-coloured weeds, come to call her husband Gunnar to the realms of the dead. It is characteristic of the stern Teutonic conception of the workings of Fate that dreams are only seldom warnings to be profited by; oftener they are foreshadowings of an inevitable doom. The gods never appear in dreams until faith in their divinity has been extinguished by Christianity. On the other hand, we must note that evil dreams beset the god Balder before his death (Vegtamskviða, in the Older Edda). Nightmares were not classed as dreams among the Teutonic people, but were (and indeed frequently are) attributed to the actual presence on the bed of a supernatural being, a *mara*, *alp*, or *trude*, or to the witchcraft of an ill-disposed neighbour.

In Scandinavia, where the interpretation of dreams was a secular art, unassociated with either magic or religion, the introduction of Christianity did not lessen the esteem in which it was held. Thus it is evidently no disgrace to the Icelandic bishop St. Thorlák that he took great pleasure in the recital of dreams. In England, however, the study of dreams is denounced by an early archbishop, together with magical practices, soothsaying, and the like. That it held a lower place in England than in Scandinavia seems also clear from the absence of dreams as a literary device in Old English poems. In Germany, as we have seen, the *Nibelungenlied* affords evidence for the same views on dreaming as prevailed in Scandinavia; but, on the other hand, we find Walther von der Vogelweide making fun both of dreams and of the wise women who professed to interpret them. At the present day, however, Germany is full of 'Traumbücher,' giving rules for the interpretation of dreams, and especially as to the methods of detecting, in some detail of a dream, a lucky number in the State lotteries. These books have an immense sale, and it is a significant fact that in some parts of Germany the lottery agents themselves sell 'Traumbücher,' and that in Austria they have been forbidden by law to do so. In Franconia, the interpretation of dreams for lottery purposes is a kind of secret knowledge, very profitable to its professors.

It is a firm belief in most Teutonic countries that to sleep in a new house, or at least in a new bed, is the best method of securing a dream; it was the method known in the Middle Ages, and was recommended to King Gorm of Denmark in heathen times. A curious variant of this practice was adopted by King Halfdan the Black. This Norwegian king slept in a pig-sty in order to cure himself of the habit of dreamless sleep, which was considered a disquieting mental disease. In some parts of Germany it is thought that, if the dreamer refrains from telling a bad dream until after midday, its accomplishment will be prevented. The frequent refusal of persons in the Icelandic Sagas to relate their dreams, or their protests of disbelief in dreams, may possibly be due to a similar idea. Without parallel in Teutonic sources is the death-bringing dream mentioned in the Icelandic *Ljósvetning Saga*, where the dream had such power that the first person who heard it must die.

Certain nights, whose significance dates from heathen times, are considered the most important for dreams almost all over Teutonic Europe, especially the Twelve Nights (the heathen Yule), and Midsummer Night. Both in Sweden and in Germany it is the custom to lay a bunch of nine different varieties of flowers under the pillow on Midsummer Eve, to ensure that the dreams of the night shall come true.

Grimm, *Deutsche Mythologie*[4], Berlin, 1875–78; O. Schrader, *Reallexikon der indogerm. Altertumskunde*, Strassburg, 1901, s.v. 'Traum.'

B. S. PHILLPOTTS.

DREAMS AND SLEEP (Vedic).—The chief passage in Vedic literature for the explanation of the psychology of dreams is *Bṛhadāraṇyaka Upaniṣad*, iv. 3. 9–14. Two theories are advanced: (1) in dreams the soul takes its material from the world and constructs for itself by its own light the objects which it sees; (2) in sleep the soul abandons the body and roams where it will, hence the injunction not to awaken suddenly one who is sleeping, for in that case the soul may not find its way back to the body—an evil which is hard to cure. For the later workings over of this passage in the attempt to harmonize these theories, see Deussen, *Allgem. Gesch. der Philos.*, 1894 ff., I. ii. 271–274. For the present purpose the second hypothesis is the more important. Its difference from the first theory is ascribed by Deussen to the poetic form in which it is presented. More probably the difference is deeper, and we have in these verses a poetic version of an extremely old belief frequently found among peoples at a low stage of civilization, the existence of which among

the Vedic peoples must be posited to explain the efforts made, from the Rigveda onwards, to remove the fancied effects of evil dreams.

A number of stanzas both in the Rigveda and in the Atharvaveda speak of an evil dream (*duḥsvapna, duḥṣvapnya*) as a calamity comparable with sin, disease, and witchcraft, or are employed in the ritual for the expiation of evil dreams. From the Rigveda may be cited: i. 89. 8–9, 99. 1, 114. 1, 120. 12, ii. 28. 10, v. 82. 4–5, viii. 47. 14–18, x. 36. 4, 37. 4, 127. 1 (the *Rātrisūkta*, or rather its *khila*), and 164. 1. The thirty-third *Pariśiṣṭa* of the Atharvaveda gives as the *duḥsvapnanāśanagaṇa* (list of hymns that destroy the effects of evil dreams): Atharv. iv. 17. 5, vi. 45. 1, 46. 1, vii. 100. 1, 108. 1–2, ix. 2. 2–3, x. 3. 6, xvi. 5. 1, and, as far as the subject-matter is concerned, might have included also: vi. 121. 1 = vii. 83. 4, xvi. 6. 2, 8–9, xix. 56. 1, 57. 1. The last two hymns are employed at a ceremony called *svastyayana*, performed each morning to secure good fortune for the king (cf. Atharv. *Par.* viii. 1. 3). For the most part these stanzas contain little that is distinctive. Typical is Rigveda x. 37. 4: 'O Sūrya, with that light with which thou dost conquer darkness, with that sun with which thou dost rise over all living creatures, with that drive away from us all weakness, impiety, disease, and evil dreams.'

In the hieratic literature the manipulation of these stanzas in the ritual is also quite commonplace. Thus at *Aitareya Araṇyaka*, iii. 2. 4. 18, one who has had an evil dream is ordered to fast, cook a pot of rice in milk, make oblations of it, each accompanied by a verse of the *Rātrisūkta*, feast the Brahmans, and eat the leavings of the oblation. Similar directions are given in *Śāṅkhāyana Gṛhya Sūtra* v. 5. 3–13, with the additional requirement that the milk must be from a cow that is not black and that has a calf of the same colour. Furthermore, Rigveda i. 89. 8–9 must also be recited. In *Āśvalāyana Gṛhya Sūtra* iii. 6. 5–6 the oblation is of rice grains, and is made to the sun with Rigv. v. 82. 4–5, viii. 47. 14–18, or ii. 28. 10. With the first of these verses Sāmaveda i. 141 is identical. Its muttering is prescribed at *Gobhila Gṛhya Sūtra* iii. 3. 32 (cf. *Sāmavidhāna* i. 8. 7) in case of bad dreams. *Hiraṇyakeśin Gṛhya Sūtra* i. 17. 4 orders in a similar case a sacrifice of sesame and *ājya*, accompanied by verses, one of which is equivalent to Atharv. vii. 101. Similar is the practice of *Mānava Gṛhya Sūtra* ii. 15. *Kātyāyana Śrauta Sūtra* xxv. 11. 20 in the same case directs that a *dīkṣita* (one who has taken the bath that consecrates him for the performance of a sacrifice) must mutter a verse practically equivalent to Atharv. vii. 100. 1 (cf. also *Āpastambīya Śrauta Sūtra* x. 13. 11). The *Rigvidhāna* i. 23. 2, 24. 1, 25. 1, 30. 1, ii. 33. 2, iv. 20. 1 also enjoin the muttering of a number of verses to destroy the consequences of evil dreams. Noteworthy also is the fact that *Śāṅkhāyana Gṛhya Sūtra* i. 7. 2 includes most of the verses from the Rigveda in the list of verses to be recited each morning.

In the Atharvan ritual the practices are more striking; of them *Kauśika* xlvi. 9–13 gives a list. While reciting Atharv. vi. 45 and 46, the person who has had a bad dream washes his face. When the dream was very bad, he offers with these hymns a cake of mixed grains, or deposits, while reciting the hymns, such a cake in the land of an enemy. Or after a bad dream one may recite Atharv. vii. 100. 1 and turn on the other side. Whenever any one dreams that he has eaten, he must recite Atharv. vii. 101 and look round about him. Atharv. vi. 46. 2–3 may be substituted for any of the above mantras. Among the *Pariśiṣṭas*, the *Ghṛtāvekṣaṇa* viii. 2. 5 comprises in its effects the destruction of evil dreams, and in Atharv. *Par.* xxxiii. 1. 3 it is stated that Indra formerly suffered from such dreams until the *Ghṛtakambala* afforded him relief.

The ceremonies show that their purpose is not to secure immunity from the actual discomforts of nightmare, and also that the dream is not looked upon merely as a bad omen, but rather as an actual contamination. This view is but the logical result of combining the theory that in dreams the soul leaves the body and actually undergoes the experiences which the waking mind remembers with the Vedic belief that sin is not only a moral delinquency, but much more, a *quasi*-physical contamination. Under these circumstances an excursion into dreamland must have appeared to the Vedic mind as fraught with possible dangers. The methods taken to remove them naturally resemble the attempts to remove actual impurities, physical or spiritual—viz. ablutions and the transferring of the burden to another. The latter means, which is symbolized in the Atharvan ritual by the depositing of the cake in the enemy's land, is expressed in the Rigveda itself, viii. 47. 14 ff., by the prayer to Uṣas (Dawn) to transfer the evil dream to Trita Āptya, the scape-goat of the gods. For this mythological concept the Atharvaveda characteristically shows in its re-modelling of the stanzas a human enemy. In some cases apparently the contamination arises from association with spirits of the dead. Thus at *Śatapatha Brāhmaṇa* xiii. 8. 4. 4, persons returning from a funeral, among other precautions to escape the uncanny influences, wipe themselves with an *apamārga* plant, imploring it to drive away, among other evils, bad dreams. The association with the world of Yama may also be seen in Atharv. vi. 46, xix. 56; and it is most probable that the 'friend' of Rigv. ii. 28. 10 (= *Māitrāyaṇī Saṁhitā* iv. 229. 3) who speaks to one of danger in sleep, and against whom Varuṇa's protection is implored, is a departed spirit.

Auspicious dreams naturally appear much less frequently in the ritual. At *Chhāndogya Upaniṣad* v. 2. 8–9 it is stated that if, during the progress of a sacrifice intended to procure the fulfilment of a wish, the sacrificer sees in his dreams a woman, he may infer the success of his sacrifice.

Divination by means of dreams is attested by *Sāmavidhāna* iii. 4. 1–2, where two ceremonies are described that ensure prophetic dreams.

Dreams as omens.—That the interpretation of dreams must have begun to occupy the attention of the Brahmans at a very early period is implied in the very fact of the recognition of the evil character of some dreams. It is also corroborated by the mention at an early time of certain minute particulars as constituting evil dreams. Thus Rigv. viii. 47. 15 mentions as ominous the making of an ornament, or the weaving of a garland (for explanation of these omens from the later literature, cf. Pischel, *ZDMG* xl. 111). The *Aitareya Āraṇyaka* iii. 2. 4. 16 ff. gives a number of dreams that forebode death: *e.g.*, if a person sees a black man with black teeth and that man kills him, if a boar kills him, if a monkey jumps on him, if he is carried swiftly by the wind, if he swallows gold (emblematic of life) and vomits it, if he eats honey or chews stalks, or wears a single (red) lotus, or drives a chariot harnessed with asses or boars, or, wearing a wreath of red flowers, drives a black cow with a black calf towards the south (cf. Aufrecht, *ZDMG* xxxii. 573 ff.). The explanation of the requirement (see above) that dreaming of eating shall be followed by an expiation is doubtful. Caland regards it as an omen of lack of food, on the principle that dreams go by contraries. But dreaming of eating is in itself a good omen (cf. Pischel, *Album-Kern*, Leyden, 1903, p. 115 ff.). Pischel's explanation, that it is the failure to find

in the morning the food dreamed of which constitutes the omen, seems forced. The commentator's remark, that while reciting Atharv. vii. 101 he looks around as if he had eaten food, suggests a different explanation. His soul has incautiously eaten food—an act surrounded by superstitious practices because of the supposed danger of the entrance of a demon (see DISEASE AND MEDICINE Vedic]),—and the dreamer now seeks to take the precautions which his soul omitted in the dream.

LITERATURE.—The minuteness of the omens cited points to a full development of this pseudo-science at an early period. In agreement with them are the systematic expositions of the subject, although the surviving works are of a much later date. First among these is to be mentioned the sixty-eighth *Pariśiṣṭa* of the Atharvaveda, entitled *Svapnādhyāya* (the chapter on dreams). Cf. *The Pariśiṣṭas of the Atharvaveda*, ed. G. M. Bolling and J. v. Negelein, vol. i. Leipzig, 1909–10. Certain phases of the subject are treated in the Purāṇas (cf. *Matsya P.* 242, *Mārkaṇḍeya P.* 43, *Vāyu P.* 19, *Agni P.* 228. 14, *Brahmavaivarta P.* iv. 76) and the astrological works. The Epics also contain tales of prophetic dreams; cf. *Mahābhārata* v. 143. 30 ff.; *Rām.* ii. 69. 15 (Schlegel), v. 27. 14 ff. (Gorresio). The instances of visions mentioned in Indian literature have been collected by L. Scherman, *Materialien zur Gesch. der ind. Visionslitteratur*, Leipzig, 1892; cf. also E. Hultzsch, *Prolegomena zu des Vasantarāja Çākuna*, do. 1879, p. 15 ff. A detailed treatment of the dream superstitions of the Hindus is about to be published by J. v. Negelein.

G. M. BOLLING.

DRESS.—An analysis of the relations of man's clothing with his development in social evolution will naturally be chiefly concerned with psychological categories. When once instituted, for whatever reasons or by whatever process, dress became a source of psychical reactions, often complex, to a greater extent (owing to its more intimate connexion with personality) than any other material product of intelligence. Some outline of the historical development of dress will be suggested, rather than drawn, as a guide to the main inquiry. The practical or, if one may use the term, the biological uses and meaning of dress, are simple enough and agreed upon. These form the first state of the material to be employed by the social consciousness. Its secondary states are a subject in themselves.

1. Origins.—The primary significance of dress becomes a difficult question as soon as we pass from the institution in being to its earliest stages and its origin. For speculation alone is possible when dealing with the genesis of dress. Its conclusions will be probable, in proportion as they satisfactorily bridge the gulf between the natural and the artificial stages of human evolution. The information supplied by those of the latter that are presumably nearest to the natural state, to *Protanthropus*, is not in itself a key to the origin of clothing, but, on the other hand, the mere analogy of animal-life is still less helpful. An animal has a natural covering more efficient for the two uses of protection against the environment and of ornamentation as a sexual stimulus. An animal may become adapted to a change, for instance to an Arctic climate, by growing a thick fur which is white. It may be supposed that, to meet a similar change, man invents the use of artificial coverings. But this old argument is contradicted by all the facts.

It may serve, however, to point by contrast the actual continuity of the natural and the artificial stages, the physical and the psychical stages, of our evolution. If we say that man is the only animal that uses an artificial covering for the body, we are apt to forget that even when clothed he is subject to the same environmental influences as in the ages before dress. Again, there is no hint that the approach of a glacial epoch inaugurated the invention of dress. But it is an established fact that the survivors of immigrants to changed conditions of climate and geological environment become physically adapted by some means of interaction and in certain directions of structure, which are just coming to be recognized. The British settlers in North America have assumed the aboriginal type of the Indian face and head; migrants from lowlands to uplands develop round-headedness; from the temperate zone to the tropics man develops frizzly hair, and so on. The most obvious of these natural adaptations, physiologically produced, to the environment is pigmentation. The skin of man is graded in colour from the Equator to the Pole. The deeper pigmentation of the tropical skin is a protection against the actinic rays of the sun; the blondness of northern races, like the white colour of Arctic animals, retains the heat of the body.

If we followed the analogy of the animal, we should have to take into account the fact that a mechanical intelligence enables it to obviate certain disadvantages of its natural covering. The animal never exposes itself unnecessarily; its work, in the case of the larger animals, is done at night, not in the glare of the sun. Automatically it acquires an artificial covering in the form of shelter. If man in a natural state followed a similar principle, he would be at no more disadvantage than is the animal. A similar argument applies to the other use mentioned above, namely, sexual decoration. What these considerations suggest is that man was not forced by necessity to invent. The reason is at once deeper and simpler. Again, we get the conclusion that one primary use and meaning of dress is not so much to provide an adaptation to a climate as to enable man to be superior to weather; in other words, to enable him to move and be active in circumstances where animals seek shelter. The principle is implicit in the frequent proverbial comparison of clothing to a house.

Dress, in fact, as a secondary human character, must be treated, as regards its origins, in the same way as human weapons, tools, and machines. Dress increases the static resisting power of the surface of the body, just as tools increase the dynamic capacity of the limbs. It is an extension (and thereby an intension) of the passive area of the person, just as a tool is of the active mechanism of the arm. It is a second skin, as the other is a second hand.

Further, if we take an inclusive view of evolution, admitting no break between the natural and the artificial, but regarding the latter as a sequence to the former, we shall be in a position to accept indications that both stages, and not the former only, are subject to the operation of the same mechanical laws, and show (with the necessary limitations) similar results. These laws belong to the interaction of the organism and the environment, and the results are found in what is called adaptation, an optimum of equilibrium, a balanced interaction, between the two. In this connexion we may take examples from two well-marked stages in the evolution of our subject, the one showing a deficiency, the other a sufficiency, of the artificial covering of the body. A good observer remarks of the Indians of Guiana, not as a result of habituation, but as a first impression of their naked forms, that

'It is a most curious but certain fact that these people, even as they wander in the streets of Georgetown, do not appear naked.'[1]

The other case is that of the Chaco Indians:

'The Indian is perfectly suited to his environment; even his picturesque costume and the ornamental painting with which he adorns his body is in perfect harmony with his surroundings. The colours blend so beautifully that there is no doubt whatever that the Indian has, in a very great degree, the idea of fitness and harmony.'[2]

If we qualify in the last sentence the word 'idea'

[1] E. F. Im Thurn, *Indians of Guiana*, 1883, p. 194.
[2] W. B. Grubb, *An Unknown People in an Unknown Land: The Indians of the Paraguayan Chaco*, 1911, p. 55.

by the adjective 'automatic' or 'unconscious,' we shall have a sound explanation of a very remarkable phenomenon. The point of the phenomenon is that the evolution of man's artificial covering maintains a balance or harmony with the environment, particularly in respect to light, just as was the case with the naked Indian skins, arrived at just as mechanically, but through the unconscious reaction of the retina. Thus, there is a real continuity between the adaptive colour of the chameleon, and similar cases of so-called protective coloration (which is primarily merely a mechanical attuning to the environment), and the harmony which human dress may show with its surroundings. The selective process has not been conscious, but neither has it been accidental. It is the result of law. Equally unconscious in its first stages was the adaptation of dress to temperature.

This brings us no nearer to the origins of dress, though it clears the ground. Still further to simplify speculation, we may notice some prevalent hypotheses on the subject. Dress being a covering, it assumes, when instituted, all the applicable meanings which the idea of covering involves. But it by no means follows that all of these, or even any, were responsible for its original institution.

There is, first, the hypothesis that clothing originated in *the decorative impulse.* This has the merit of providing a cause which could operate through unconscious intelligence, automatic feeling. Stanley Hall found that of the three functions of clothing whose realization and expression he investigated in a *questionnaire*—protection, ornament, and Lotzean self-feeling—the second is by far the most conspicuous in childhood. The child is unconscious of sex, otherwise this statistical result might be brought into line with the sexual ornamentation of animals. And, though it is unsafe to press any analogy between the civilized child and the savage, the savages known to science are, as a rule, very fond of finery, absolutely, and not always in relation to the other sex.

'The natural man,' says Ratzel,[1] 'will undergo any trouble, any discomfort, in order to beautify himself to the best of his power.'

Dandies, Im Thurn[2] remarks, are about as frequent among the Indians as in civilized communities. At Port Moresby, in New Guinea, young men actually practise tight-lacing, to be smart and fashionable.[3] In these spheres, indeed, it is chiefly the young, if not mere children, who express the impulse to decoration. Of the Dayaks of Borneo a good observer has remarked that a

'love of finery is inherent in the young of both sexes; the elderly are less fond of it and often dress very shabbily, and save up their good clothes for their offspring.'[4]

It is in accordance with the rule among animals that among primitive peoples the male sex chiefly assumes decoration. Ornaments among the Indians of Guiana are more worn by men than by women. The stock ornamentation is paint; scented oils are used as vehicles.

'A man, when he wants to dress well, perhaps entirely coats both his feet up to the ankles with a crust of red; his whole trunk he sometimes stains uniformly with blue-black, more rarely with red, or he covers it with an intricate pattern of lines of either colour; he puts a streak of red along the bridge of his nose; where his eyebrows were till he pulled them out he puts two red lines; at the top of the arch of his forehead he puts a big lump of red paint, and probably he scatters other spots and lines somewhere on his face.' Down is often used with red paint.[5]

But this analogy is not to be pressed, though it is sound as far as it goes. It applies, that is, up to a certain point in social evolution. Beyond that point the balance inclines the other way, and for the last five hundred years of European civilization decorative dress has been confined to women. During a previous period of some centuries—to be regarded as one of unstable equilibrium—not only did the curve of luxury in dress reach its highest point, but there were attempts—spasmodic, it is true—to put down any tendency towards such luxury on the part of women, prostitutes being excepted. The previous stage—one of very considerable length—is still that of Islām; its significance and origin will concern us later. Its chief feature was the principle that female dress should be not ornamental, but protective—of the rights of the husband. Thus we may infer that, in the latest stage, woman as a sex has not only gained freedom, and the right to fascinate, previously possessed by the courtesan alone, but has also shifted the equilibrium of sex to a more permanent and efficient position. The story of woman's unconscious struggle for a monopoly of beauty in dress thus illustrates an important social movement.

In practical investigation it is difficult, as Ratzel[1] observes, to say 'where clothing ends and ornament begins,' or, on the previous hypothesis, where clothing springs out of ornament. Since either may obviously develop into the other when both are instituted, it is idle to examine such cases. Cases where one or the other is absolutely unknown might serve, but there are no examples of this. If an instance, moreover, of the presence of clothing and entire absence of ornament were observed, it would be impossible to argue that clothing cannot be subject to the decorative impulse. In any case, there is the self-feeling, satisfaction in individuality, to be reckoned with, for the impulse to finery is only one phase of it.

The supporters of the ornamentation hypothesis of the origin of dress have an apparently strong argument in the Brazilians and the Central Australians. These recently studied peoples possess no clothing in the ordinary sense of the term. But they wear ornament, and on special occasions a great deal of it. Brazilian men wear a string round the lower abdomen, the women a strip of bark-cloth along the perineum, tied to a similar abdominal thread. This is sometimes varied by a small decorative enlargement. The Central Australian man wears a waist-string, to which is tied a pubic tassel. Corresponding to the last in the case of the women is a very small apron. Leaving the waist-string out of account, we have remaining the question of the erogenous centre. In both the decoration hypothesis and the concealment hypothesis this centre is the focus of speculation. If the Australian tassel of the male sex and the leaf-like enlargement of the Brazilian woman's perineal thread are considered superficially, they may appear to be, if not ornaments, at least attractions. But if this be granted, it does not follow that we have here the first application of the idea of dress.

It would be impossible to make out a case to prove that these appurtenances can ever have satisfied the idea of *concealment*, as on the next hypothesis is assumed. This hypothesis is to the effect that male jealousy instituted clothing for married women. Ratzel[2] observes that, if clothing was originally instituted for purposes of protection only, the feet and ankles would have been protected first. Clothing, he holds, stands in unmistakable relation to the sexual life. 'The first to wear complete clothes is not the man, who has to dash through the forest, but the married woman.' The primary function of her dress is to render her unattractive to others, to conceal her body from other men's eyes. In the lower strata of human evolution he considers that dress as a protection from rain and cold is far less common.

[1] *Hist. of Mankind*, Eng. tr. 1896–8, i. 95. [2] *Op. cit.* 199.

[5] Im Thurn, *op. cit.* 195 ff.

[1] *Op. cit.* i. 95. [2] *Ib.* i. 98 f.

But, if we may argue from the practice of existing savages, this hypothesis cannot hold even of the origin of female clothing. Only by straining can it be applied to that of men. It is certainly a *vera causa*, at a certain stage in barbarism (the stage when wives became 'property'), of the customs of shrouding and veiling women, and of confiscating all a maiden's ornaments and finery when she became a wife. But it does not explain the origin of the small apron worn in very early stages, or of the mere thread in the earliest, and we cannot deny these articles a place in the category of dress.

A frequent corollary of such views is that modesty is a result, not a cause, of clothing (so Sergi). But, as Havelock Ellis observes,

'many races which go absolutely naked possess a highly developed sense of modesty.'[1] Andamanese women 'are so modest that they will not renew their leaf aprons in the presence of one another, but retire to a secluded spot for this purpose; even when parting with one of their *bōd*-appendages [tails of leaves suspended from the back of the girdle] to a female friend the delicacy they manifest for the feelings of the bystanders in their mode of removing it almost amounts to prudishness'; yet they wear no clothing in the ordinary sense.[2] The Guiana Indians, when they want to change their single garment, either retire from sight or put the new over the old, and then withdraw the latter.[3] Modesty is 'in its origins independent of clothing; . . . physiological modesty takes precedence of anatomical modesty; and the primary factors of modesty were probably developed long before the discovery of either ornaments or garments. The rise of clothing probably had its first psychic basis on an emotion of modesty already compositely formed of' these elements.[4]

This last statement, of course, cannot hold of the ultimate genesis of clothing. But, once instituted, it was sure to coincide with emotions of modesty. The general connexion between modesty and dress is a subject of little importance, except in so far as it has involved the creation of false modesty, both individually and socially. Modesty, where there is dress, tends to be concentrated upon it mechanically. When clothing is once established, the growth of the conception of women as property emphasizes its importance, and increases the anatomical modesty of women. Waitz held that male jealousy is the primary origin of clothing, and therefore of modesty. Diderot had held this view. Often married women alone are clothed. It is as if before marriage a woman was free and naked; after marriage, clothed and a slave.

'The garment appears—illogically, though naturally—a moral and physical protection against any attack on his [the husband's] property.'[5]

But the fact of dress serving as concealment involved the possibility of *attraction by mystery*. Even when other emotions than modesty, emphasized by male jealousy, intervene, they may work together for sexual attraction.

'The social fear of arousing disgust combines easily and perfectly with any new development in the invention of ornament or clothing as sexual lures. Even among the most civilized races it has often been noted that the fashion of feminine garments (as also sometimes the use of scents) has the double object of concealing and attracting. It is so with the little apron of the young savage belle. The heightening of the attraction is indeed a logical outcome of the fear of evoking disgust.'[6]

Similarly we find in the most primitive clothing a curious interchange of concealment, protection, decoration, and advertisement. As has been hinted, when an appurtenance has come to be attached to the sexual area, the resulting psychical reactions are significant. In the previous natural stage there is no artificial stimulus; now, there is such an addition to the natural stimulus, first by mere attraction or signification, and later by decoration or veiling. In the mind of the subject also there comes, first, the consciousness of sex, and later the enhancing of self-feeling, which in the case of dress generally, and not merely sexual, is distributed throughout the personality. The subject's material personality is increased by clothing, and his psychical reaction is proportional to this. The result is a rich complex of self-consciousness, modesty, and self-feeling generally, the balance between them varying according to circumstances. But it is highly improbable that such impulses could have led to the invention of dress, much less of mere attachments and appurtenances. Their only means of expression would have been ornament.

[5] *Ib.* 41.
[6] *Ib.* 39.

Finally, there is the *protection-hypothesis*. Sudden falls in the temperature, rains and winds and burning sunshine, the danger of injuring the feet and the skin of the body generally when in the forest, and the need of body-armour against the attacks of insects and of dangerous animals seem obvious reasons for the invention of dress. But they do not explain the process of invention, which is the main problem. The cloak, the skirt, the apron, cannot have been invented in answer to a need, directly, without any stages. The invention of cloth was first necessary, and this was suggested by some natural covering. The only line of development which seems possible is from protective ligatures. There are numerous facts which apparently point to such an origin of clothing. One of the most characteristic 'ornaments' of savages all over the world is the armlet. It is quite probable that this has an independent origin in the decorative impulse, like the necklace. But here and there we find bands worn round the ankles, knees, wrists, and elbows, the object of which is clearly to protect the sinews and muscles from strains. The pain of a strained muscle being eased by the grip of the hand, the suggestion of an artificial grip might naturally follow, and a system of ligatures would be the result.

The Nāgas wear black rings of cane round the knee—as some say, to give strength for climbing.[1] The Malays wear bands and ligatures to protect the muscles and prevent strains, as, for instance, round the wrists and below the knee.[2] Ratzel observes that arm-rings may be useful in striking and warding off blows. But the idea of a cestus is unlikely to be the primary motive for ligatures.[3] The Chacos wear anklets of feathers, chiefly to protect their feet against snake-bites.[4]

Wild peoples, in fact, understand quite well the limitations and the capacity of the human organism in respect to the environment. We may credit them with an adequate system of supplying natural deficiencies, and of assisting natural advantages also. For instance, the Malays explain the object of the papoose for infants as being to prevent the child from starting and so straining itself.[5] And it seems probable that there is a connexion between the earlier use of the ligature and the prevalent custom of wearing metal rings or wire as a decoration. Men and women of the Watusi wear round the ankles innumerable coils of iron wire, representing a weight of many pounds. The women wear heavy bracelets of brass.[6] It is possible, also, that in certain cases dress itself might have been developed from the same source. Thus, when we compare the following type of body-dress with the frequent use, in earlier stages, of a pliant bough or cane as a girdle, we can imagine the possibility that the invention of the sheet-form of covering might have been delayed by the extension of the bandage-form.

The garment, termed *lumiet*, of the Sakarang women, is a series of cane hoops covered with innumerable small brass links. The series encasing the waist fits close. It sometimes extends right up to the breasts. The Ulu Ai and Ngkari women wear eight to ten parallel rows of large brass rings round the waist. They are strung on rattans, and fixed to a cane network inside them. Dense coils of thick brass wire are also worn on the legs.[7]

But the ligature as a primary stage of sheet-clothing might have developed merely by adding to its breadth. Given a girdle, we might suppose a natural enlargement of its depth. And among the various bands used by the lowest peoples there is a gradation of the kind. The armlets of the Indians of Guiana are broad cotton bands or string.[1] Yet there is no evidence to show that such a development, from the belt to the kilt, has been the main origin of the skirt-form of dress. A skirt supplying its own belt is generally a late modification.

Examination of the earliest peoples inevitably leads to a rejection of the ligature-hypothesis. Every consideration goes to show that the earliest ligature was not intended to support the muscles. It is inconceivable that the use of string in the Guiana example can be intended for such a purpose. In the next place, it must be borne in mind that the chief area of the organism with which dress proper is concerned is the central part of the body, the trunk. Now, the great majority of the lowest peoples known wear no clothes. Shelter is used instead. But there is very commonly a waist-string, and it is more used by men than by women. We assume that the girdle is the point of departure for the evolution of dress, and the mechanism of that departure will be presently discussed. But for the origin of body-clothing it is necessary to find the origin of the girdle. The civilized idea of a girdle is to bind up a skirt or trousers. This is certainly not its object among the earliest peoples, who have nothing to tie up. It might be supposed that the original purpose of the girdle was that of the abdominal belt, useful both as a muscle-ligature and to alleviate the pangs of hunger. But the earliest girdles are merely strings, and string is useless for such purposes. String, moreover, made of grass or vegetable fibre, or animal sinew or human hair, is an earlier invention than the bandage. Its first form was actually natural, the pliant bough or stem.

It is significant that this waist-string is chiefly a male appendage, and that it is worn neither tight nor very loose. Both facts are explained by the purpose for which the string is worn. It is neither a bandage nor a suspender, but a continuous pocket. The savage finds it indispensable for carrying articles which he constantly needs, and which otherwise would encumber his hands. Once fitted with a waist-string, the body, as a machine, is enormously improved, being able to carry the artificial aids of manual operations ready for use as occasion requires, without hampering the work of that universal lever, the hand.

We can only speculate vaguely as to the series of 'accidents' which led to the idea of the waist-string. It was, no doubt, analogous to the series which ended in the invention of artificial hands in the shape of weapons and tools, but it was certainly much later in time. The varied unconscious ideas of holding, gripping, and encircling, which the muscular experience of the hand imprinted on the brain, might have evolved the principle and practice of a hold-all round the trunk, without the occurrence of any fortunate accidents whatever. The natural position of the hands when at rest would be rejected by unconscious reasoning in favour of a more convenient spot, slightly higher, which would not interfere with the movements of the legs. The downward tapering of the thigh, moreover, renders it impossible to keep a string in position. In this connexion it is worth noting that knee- and ankle-bands are commonly used in various stages of culture for the purpose of holding implements.

The waist-string, therefore, being earlier than clothing proper, and being, as we have suggested, the point of departure for the wearing of coverings, we have next to examine the mechanism of the connexion between them. The use of the string as a holder being given, it would serve not only as a pocket, but as a suspender for leaves or bunches of grass, if for any reason these were required. The point to be emphasized here is that the presence of a suspender would suggest the suspension and therefore the regular use of articles for which there had been no original demand. If, for occasional purposes, a decoration or covering was desired, there was the waist-string ready for use. Central as it was, the decoration or covering would fall below it and be thus applied automatically to the perineal region. Similarly, the hair of the head is a natural holder, though much less efficient, and it is used to support leaf-coverings or flower-decorations.

It is unnecessary to enter upon a description of the various zones of the body which require protection, such as the spine at the neck and in the small of the back, against sun and cold, or the mucous membranes of the perineal region, against insects. The use of clothing of certain textures and colours to maintain a layer of air about the skin at a temperature adapted to that of the body, and to neutralize those rays of light which are deleterious to the nervous system and destructive of protoplasm, is also out of place here. We may note, however, that by unconscious selection the evolution of dress has probably followed a thoroughly hygienic course. But no principles of such hygiene, except the very simplest, can have occurred to primitive man. One of the simplest, however, we may admit for tropical races—the use of a protection against insects. The perineal region is most subject to their attacks when man is naked, owing to the sebaceous character of the surface and its relatively higher temperature. These facts, no doubt, more than anything else, are the explanation of primitive habits of depilation. But depilation is not a complete protection. Something positive is required. The use of bunches of grass or leaves is natural and inevitable, as soon as there is something to hold them, namely, the waist-string. A parallel method is the use of a second string depending from the waist-string in front and behind, and passing between the legs. The Brazilian strip of bast used by women, and the red thread which takes its place in the Trumai tribe, though 'they attract attention like ornaments instead of drawing attention away,' yet, as Von den Steinen[1] also satisfied himself, provide a protection against insects, a serious pest in the forests of Brazil. These inter-crural strings protect the mucous membrane, without, however, concealing the parts, as do leaves and grass. In the present connexion their chief interest is the use made of the waist-string. When cloth was invented, the first form of the loin-cloth was an extension of the inter-crural thread. It may be illustrated from the Indians of British Guiana, though it is practically universal, significantly enough, among tropical and sub-tropical peoples.

The Guiana man wears a narrow strip, called *lap*; it is passed between the legs, and the ends are brought up at back and front and suspended on a rope-like belt. The women wear an apron, called *queyu*, hung from a string round the waist. Very young children before wearing a cloth have a string round the waist. The *lap* is often made of bark, beaten till soft.[2] The *lap* method is employed by the Veddas of Ceylon,[3] and by numerous early races throughout the world.

As the various methods of draping and tying developed with man's familiarity with sheet-dress,

the later form of loin-cloth naturally superseded the earlier. A length of cloth passed round the waist and between the legs, the ends depending, was both more convenient and more comfortable. In the first place it supplied a broader bandage, and, being two articles in one, was more easily kept in position. This is the familiar and widely prevalent 'loin-cloth.' Secondly, it supplied a more efficient method of binding the male organs. There is no doubt that the naked male often finds it desirable, for obvious anatomical reasons which do not trouble the animal (whose organs are practically withdrawn into the perineal surface), to confine these parts. Hence, it may be conjectured, the use of a perineal cloth for men and of a mere apron or skirt for women—a distinction of the earliest date and generally maintained. As showing the practice of such confinement, it is enough to point to a common use of the earlier waist-string. The end of the organ is placed under the string, made tight enough to hold it flat against the abdomen.[1]

The development of the apron and skirt is a simple extension (given the suspensory string and the invention of cloth) of the use of leaves hung from the waist. The frequent use of a rear-apron as a sitting-mat is a later detail, having no influence upon the skirt, which developed independently. A frequent variation is the fringe. A combination of front- and rear-aprons no doubt preceded the complete skirt. When the latter was developed, new methods of suspension were adopted, among them being one similar to that of the loin-cloth, the upper edge serving as a bandage. The use of the waist-string by women, for keeping an inter-crural cloth or tampon in place during the periods, may be referred to; but it did not lead to the development of any article of attire. One example of its use, however, is instructive, as showing how a temporary protection may pass into a regular appendage.

Among the majority of the Nyasa tribes a woman during her periods wears a small piece of calico corresponding to a diaper. The same is worn after childbirth. This is the case generally in Nyasaland. But Angoni women 'always wear them.'[2]

The protection-hypothesis of the origin of dress may thus be adopted, if we qualify it by a scheme of development as suggested above. When once instituted as a custom, the wearing of leaves or bark-cloth upon the abdominal region served to focus various psychical reactions. One of the earliest of these was the impulse to emphasize the primary sexual characters. It is an impulse shown among the great majority of early races in their observances at the attainment of puberty, and it is, as a rule, at that period that sexual dress or ornament is assumed. Among civilized peoples, in the Middle Ages and in modern times, the impulse is well marked by various fashions—the phallocrypt and the tail of the savage having their European analogues. A less direct but even more constant instance of the same recognition is the assigning of the skirt to women as the more sedentary, and trousers to men as the more active sex. The suggestion sometimes met with, that the skirt is an adaptation for sexual protection, need only be mentioned to be dismissed. The Central Australian pubic tassel and similar appendages will here find significance, but it is improbable that such accentuation was their original purpose. Once instituted for protection, the other ideas followed. Another of these, which at once received an artificial focus, was the emotion of modesty. It has been observed among the higher animals that the female by various postures guards the sexual centres from the undesired advances of the male. The assumption of a waist-cloth does not actually serve the same purpose, but it constitutes a permanent psychical suggestion of inviolability. Similarly, the use of any appendage or covering involves the possibility of attraction, either by mere notification, by the addition of decoration, or, later, by the suggestion of mystery.

Further than this speculation as to origins need not be carried. The various forms and fashions of dress, and the customs connected with it, will supply examples of the material as well as of the psychological evolution of the subject.

2. Material and form.—It is proposed to describe the types of human dress and the materials of which it has been composed only so far as is necessary to illustrate the religious and social significance of dress as an index to psychological evolution.

If dress be taken to include anything worn on the person other than offensive and defensive armour, there is hardly a single known substance, from iron to air, which has not for one reason or another been employed; while for purposes of decoration or protection against the supernatural, the very utmost use has been made of the natural covering of the organism, in the way of hair-dress, skin-painting, and tatuing, and the wearing of ornaments and amulets on or in the projecting points of the body, particularly various orifices. In the earlier stages two features are prominent—the savage is apt to regard anything he wears as an ornament, though it may be actually a protection. Also, the less body-covering there is, the greater tendency to painting, scarification, and tatuing. 'Having,' as Gautier said, 'no clothes to embroider, they embroider themselves.' As examples of the earliest stages the following are typical:

The Niam-Niam negress wears a single leaf only, suspended by a string from the waist.[1] The Indians of Central Brazil wear a string round the lower abdomen. It is worn after puberty, but it conceals nothing, of course. The women wear a little strip of bast passing between the legs; in some tribes the *uluri*, a triangular decorative piece of bark bast, is worn.[2] 'Except for waist-bands, forehead-bands, necklets, armlets, and a conventional pubic tassel, shell, or, in the case of the women, a small apron, the Central Australian native is naked.' The waist-string is made of human hair. The pubic tassel is a fan-shaped structure of fur-strings, about the size of a five shilling piece. Being covered at corrobboree times with gypsum, it serves as a decoration rather than a covering. The Arunta and Luritcha women do not wear even an apron.[3] In the Western islands of Torres Straits the men are naked; the women wear a tuft of grass or split *pandanus* leaves; for dancing, a short petticoat of shred *pandanus* leaves is worn over this.[4] In Samoa the only necessary garment was for men and women an apron of leaves.[5]

The New Ireland men 'go absolutely naked'; the women wear aprons of grass, suspended from cinctures made of beads strung on threads of aloe-leaves. A bonnet of palm leaves is also worn by the women.[6] The Australians of the South show an advance on those of the Centre. The Euahlayi woman's *goomillah* is a waist-string of opossum-sinew, with strands of hair in front. The Central Australian woman has not even a string. The Euahlayi man's *waywah* is a belt, six inches wide, of sinews and hair, with four tufts. Opossum-skin rugs are worn in winter.[7]

Among the Curetu of the Amazons, the men wore a girdle of woollen thread, but the women were entirely naked. The neighbouring Guaycurus reversed the custom, the men being naked and the women wearing a short petticoat.[8] In other tribes of the same region both sexes were quite nude.[9]

'The costume and ornamentation prevalent with the Lower Congo men is principally confined to a grass loin-cloth, and mutilation of the two incisor teeth of the upper jaw; the women wear a small apron in front and behind, and ear decorations of wood and metal.[10] The Garo petticoat was less than a foot in depth. To allow freedom of movement it was fastened only at the upper corners.[11] The Wankonda men wear nothing

but a ring of brass wire round the abdomen. The women wear a tiny bead-work apron, exactly resembling that of the Kaffirs.[1] The women at Upoto wear no clothes whatever.[2] In the Shortlands the men are naked; the women wear leaves in a waist-string. In New Britain both sexes are nude.[3] Of Central Africa, Angus gives as his experience: the more naked the people and the more to us obscene and shameless their manners and customs, the more moral and strict they are in the matter of sexual intercourse.[4] The fact should be noted, in leaving the subject of the scantiest form of dress, as being a regular concomitant of nakedness.

Variations of the most opposite character in the same stage of culture are a frequent problem. In some cases they may be accounted for by foreign influence. But any accident may institute a fashion. Thus, the Upoto women are entirely nude;[5] but among the Akikuyu the smallest girl wears an apron.[6]

In tropical countries the use of *leaves* as occasional or permanent garments is regular. Several peoples, such as the East Indian islanders, in Ceram, for example, and the Polynesians, elevated the practice into an art. Noticeable details are the single-leaf head-dress, and leaves fixed in arm-bands.

The Samoans wore girdles of *ti*-leaves (*Cordyline terminalis*), gathered when turning yellow.[7] Adorned with flowers, their figures were a notable example of adaptation to island scenery. The Niam-Niam negress wears a leaf tied to a girdle.[8] Paliyan women are sometimes dressed in a leaf-girdle only. Goṇḍ women wear bunches of twigs round the waist. The Juáṅgs of Chotā Nāgpur are famous for their leaf-dresses. When dry and crackly, they are changed for fresh leaves.[9] The Semangs of the Malay Peninsula wear girdles of leaves. On festive occasions, ligatures of *Licuala* leaf were used to hold flowers on the arms; flowers were also fastened in the girdle and the head-fillet, both made of this leaf. The Sakai wear a waist-cord from which leaves depend in a fringe.[10] This is retained under the cloth *sarong*. At feasts their dress is like that of the Semang, a wreath of leaves or a turban of cloth being indifferently used. The dancing-dress of the Jakun is made of the leaves of the *serdang* palm, and consists of an elaborate fringed head-dress, a bandolier, and belt. Leaf-aprons are still worn by Kōragar women.[11]

Another natural covering is *bark*.

'In tropical regions of both hemispheres, where scanty clothing is needed, certain trees weave their inner bark into an excellent cloth, the climax of which is the celebrated *tapa* of Polynesia.'[12] Taken from the *wauki*, or paper-mulberry (*Morus papyrifera*),[13] the bark was beaten to a soft consistency. In tropical Africa a species of *Brachystegia* (Order *Leguminosæ*) is generally used as a source of bark-cloth. The bark is made into kilts, cloths, band-boxes, canoes, roofing, and various useful articles.[14] The Guiana Indian wears sandals of the leaf stalk of the *aeta* palm (*Mauritia flexuosa*). They are made in a few minutes, and careful measurements are taken. They wear out in a few hours.[15]

The Kayans use bark-cloth, which they dye red and yellow.[16] Throughout Eastern Asia, the Malay Archipelago, and Polynesia, the girdle of bark-cloth is widely diffused. The Sakai hammer the bark of the *ipoh* tree (*Antiaris toxicaria*) and of the wild breadfruit (*Artocarpus*) so as to expel the sap. It is then washed and dried. The loin-cloth made of this by the Semang is the loin-cloth proper, folded round the waist, and tucked through the front after passing between the legs. Both this and the women's fringe of leaves are worn under the Malay *sarong*, where this has been introduced.[17]

The Woolwa Indians make their clothes, the *tounoo* and the sleeping-sheet, from the bark of trees. The women beat this on a smooth log with a mallet shaped like a club and having grooves which give to the bark-cloth the texture and appearance of a mesh. The better sort of garments are made of stout cotton, of many colours and mixed with the down and feathers of birds.[18] Watusi women wear bark-cloth fastened above the breasts and falling below the knees.[19] Formerly the Veddas of Ceylon made bark-cloth from the *riti* (*Antiaris innoxia*).[20]

The 'shirt-tree' of Brazil is a *Lecythis*. Its pliant bark is easily stripped. From a length of the trunk a cylinder of bark is taken, and beaten soft. Two arm-holes are cut, and it is ready for wear.[1] The bark of the 'sacking-tree' is still used for clothes in Western India. The men of the Abors of Assam wear loin-cloths of bark. Bark-cloth was worn by the ancient Hindu ascetics.[2]

Various circumstances, which need not be detailed, make certain peoples adopt *leather* or *fur* garments. Against cold and rain these are still unsurpassed.

The men of the Akamba wore cloaks of ox-hide before the introduction of trade-blankets.[3] The Masai wore dressed skins before cotton cloth was introduced.[4] The only garment of a Chaco Indian woman is a skin petticoat, but in cold weather a mantle of skins is worn.[5] The Ainus use bear-skins for clothing.[6] Arctic and sub-Arctic peoples, like the Eskimo, have made fur-dress into a very perfect covering.

Such ready-made articles of early dress contained both the suggestion and the material of *manufactured cloth*. The animal, insect, and vegetable worlds were gradually exploited for the purpose. Animals like the sheep and the llama, trees like the palm, have both supported man and inspired his invention. Thus from the Mauritia palm the natives of the Orinoco derived wood for building; from its leaf they made clothing, fishing nets, and hammocks. Its sap supplied a fermented drink.[7] Materials which have complex possibilities are more likely to encourage the inventive impulse than is sheer necessity. 'Weaving is the next art, after agriculture and building, to acquire economical importance.'[8] The hair of domesticated animals superseded skins; cotton and linen superseded leaves, grass-matting, and the rougher vegetable fibres, palm, aloe, hemp, and the like. With the introduction of an artificial dress-material the savage stage of the evolution comes to an end. But for various reasons many barbarian peoples draw at times upon the old natural fabrics. In some cases, like that of the Sakai leaf-girdle,[9] it is regularly used in combination with woven material. The earliest stages of the barbarian period are illustrated by the following typical account of home-made fabric, dye, and dress.

The dress of the Fulas is 'universally the cotton cloths made by themselves out of the plants grown in almost every village; it is carded by an instrument, probably imported, which is very much like a wire brush about 8 inches by 9 inches, and woven on an ingenious loom.' The cotton is dyed blue with indigo, cultivated by the natives, and is marked by a white pattern produced by tying portions of the cloth together before dipping it.[10]

It is significant that in these stages the form of the material leads to actualization of its possibilities, and emphasizes simultaneously covering, concealment, and decoration. The third type of the perineal garment becomes regular: namely, for men, the loin and inter-crural cloth combined in one length, and for women the folded petticoat. For example, the ordinary garment of Fula women is a single cloth, either folded round and tucked in under the arms or wound round the waist, leaving the breast exposed.[11] This type has been largely used by both sexes. In an extended form it is the *sarong* of the Malays. The loin-cloth of men is the *maro* of the Polynesians. Both garments have the same method of fastening—a double or treble wrapping round the waist. From it have developed the suspended or belted skirts of women and kilts of men. A combination of this principle with that of the shoulder-wrap leads to the tunic and robes generally. The toga-form of the outer robe is an echo, in its method of wrapping, of the earliest folded garment for the lower body. The loin-

cloth proper of the male sex has an extremely wide prevalence.[1]

As an example, the *tounoo* of the Woolwa Indians, or *palpra* of the Mosquitos, is a cloth, 24 inches wide, worn by men round the waist, the ends being passed between the legs, and hanging down in front to below the knee.[2] The *tjawat* of the East Indian Islands is a bark cloth or manufactured cloth twice wound round the waist and then passed between the legs from back to front, the end hanging over centrally. It sometimes survives into early civilization, as among the Hindus.

With improvement in cloth and consequent increase in lightness and folding capacity, a modification was made by many peoples, namely, in the omission of the inter-crural method. Externally there is little difference in appearance except for the greater volume of the newer fashion. The two styles are often confused under the term 'loin-cloth.' The second is the *kain* of the Indonesians, developing into the *sarong* of the Malays.

From the loin-cloth proper were developed drawers and trousers, a type of garment not seldom found among women instead of the petticoat. In all these later extensions of the idea of a loose and modifiable artificial skin, the earliest addition to the natural surface, the primitive waist-string, is still visible. As a girdle and belt it supports various garments; by creating folds it supplies once more its original purpose as a pocket. Mantles, cloaks, and caps in the barbarian stages are confined to their particular purpose, protection against rain, wind, and sun. In the latest civilizations their use becomes regular for outdoor life; the barbarian cloak is duplicated into the coat and the overcoat; the cap into the hat and the umbrella. Of the tribes of Nyasaland it is reported that 'the amount of clothing worn varies very considerably, from nothing to European garments.'[3] Such a case will serve to combine in one short view some of the contrasts of the various stages and some of the principles of dress.

The young children of the Yao and Angoni run naked. Sometimes one has a strip of cloth suspended from the waist-string. A man wears a similar loin-cloth, and a woman an apron, eighteen inches deep. Both are suspended from the waist-string. The more prosperous men wear calico from the waist to the knee, wrapped round the body and held by a belt. Sometimes it is extended to fold across the chest. Women wear a cloth folded across the upper part of the chest. Often men and women have two cloths, one for the waist, the other for the chest. The Angoni wear the latter toga-fashion, a fold being carried on the left arm. A chief wears three such togas—blue, white, and another colour. European calico is now used; formerly bark-cloth and skins. Men now wear a turban, introduced by Arabs. In the house a woman still wears only a bead apron.[4]

In spite of the underlying similarity of principles, universally found, dress more than any external feature distinguishes race from race and tribe from tribe. While distinguishing a social unit it emphasizes its internal solidarity. In this latter sphere there is, again, room for individual distinction. Some types of racial and communal costume may be sketched.

'The ordinary male attire [of the Dayaks of Borneo] consists of a *sirat* or waist-cloth, a *labong* or head-dress, and a *takai buriet* or seat-mat; the full dress consists of the above with the addition of a *klambi* or jacket, and a *dangdong* or shawl.' The female attire is a *bidang* or short petticoat; when out of doors, a *klambi* or jacket is added.[5] The *sirat* (*chawat* of the Malays)[6] is six yards long, but young men wear it as long as twelve or fourteen yards, twisting and coiling it 'with great precision round and round their body until the waist and stomach are fully enveloped in its folds. . . . A practised eye can tell in a moment

[6] This is the loin-cloth proper, not the *kain*.

to what tribe or section of a tribe an individual belongs, not merely by the length of his waist-cloth and the way in which it is wound on, but also by its colour and the fashion in which it is decorated at its extremities.' The *labong* is a cloth a yard or two in length, and worn as a turban, but one end stands up straight from the forehead. Some wear a cap, *selapok*, made of plaited rush or cane. The *takai buriet* is a small mat tied with string round the waist so as to cover the hindquarters and serve as a portable seat. It is made of split cane. The *klambi* (*baju* of Malays) is of home-grown cotton. The sleeves are open under the armpits. There is a great variety of fashions in the cut and colour of the *klambi*. The *dangdong* is slung over one shoulder. The *bidang* is a petticoat reaching from waist to knee, folded over in front and tucked in on one side. The *klambi* is like that of the men, but larger. Marriageable girls wear chaplets of odoriferous berries.[1]

The Kayan petticoat is open on one side to enable the wearer to walk with freedom.[2] This is a general result of the 'natural' petticoat folded round the hips.

The skin garments of North American Indians comprise a skirt of buckskin with a belt, leggings attached to the belt, moccasins, socks of sage-brush, and the skin robe or shawl, generally superseded by the blanket.[3] The only difference between the dress of the two sexes is that the women's skirt reaches below the knee, the men's to the middle of the thigh, and that the coiffure is not the same.

The male Samoyed wears 'a tunic with the hair inside, which is called the *militza*. It is an ample garment reaching below the knee, but in cold weather the Samoyed girds it up round his waist with a leathern girdle of an unusually decorative character, and thus, leaving it baggy round the upper part of his body, secures to himself a layer of warm air.' He wears breeches of deerskin and boots (*pimmies*) of deerskin. This is 'undoubtedly the best form of Arctic boot that we know.' In severe weather he wears over all a *sovik*, a larger tunic, with the hair outside, and a hood.[4]

Among the Malagasy the *salaka* of the men corresponds to the *maro* of Polynesia, the loin-cloth which is inter-crural; the *kitamby* of the women corresponds to the *paru* of Polynesia, the short apron. The upper garment is very distinctive. This is the *lamba*, a toga-like mantle, hung over the left arm by men, over the right by women. The women wear also an upper garment or blouse.[5] The Morocco Berbers wear 'a piece of oblong white blanket or dark blue cotton with a longitudinal slit in the centre for the head—like the Mexican *poncho*.' The women fasten a skirt-cloth over this on the left hip. 'A toga-like arrangement of a light blanket serves as overall.' The *khaneef*, a thick black waterproof cloak of goat-hair, with a hood, is the most characteristic garment. On the back is an assegai-shaped yellow patch denoting the clan. Round the shaven head is worn a band of flannel, cotton, or camel-hair.[6]

The dress of Korean women is a pair of very full white cotton trousers, almost a divided skirt, and over these a very full skirt, tied under the arms. In summer, basket-work frames are worn on the arms, back, and chest, under the robes, to keep the latter clean and also for the sake of coolness.[7] The trousers of Korean, Turkish, and the women of various other peoples is probably, as the term 'divided skirt' suggests, not lineally descended from the trews, but a later application of the principle to the skirt.

The basis of men's dress in India is the *dhoti*. It is a loin-cloth passed round the loins and between the legs in the universal manner. The typical garment for women is the *sāri*. It may be worn round the shoulders and draped over the head.[8] Ten or fifteen yards long, it is wound round the waist first, and then brought gracefully over the shoulder. A bodice is worn underneath the *sāri*, and some women have adopted the Muhammadan fashion of wearing drawers. The men's upper garment, the *uttariya*, is worn somewhat like a toga. Generally an under-jacket, *aṅgarakṣa* (body-protector), is worn underneath. A scarf for cold weather is carried on the arm. The long coat of calico, usually worn by servants, apparently is a compromise, like the frock coat elsewhere, between the jacket and the toga. The turban was borrowed from the Muhammadans.[9] In fact, throughout parts of India 'all external distinctions have been effaced between Hindūs and Musalmāns,' the only mark often being that 'the former buttons his tunic on the right hand, and the latter on the side of his heart.'[10]

The characteristic male attire in Islām consists of the turban, white cotton drawers or full trousers, the *qamīs*, or shirt, the *kaftān*, or coat, the *lungi*, or scarf. The *qamīs* corresponds to the Greek χιτών and the Heb. *kᵉtōneth*; the *kaftān* to the

ἱμάτιον, Heb. *mᵉʿîl*.[1] The turban, generally of muslin, may be from sixty to seventy yards long. The tarbush and the fez are other forms of head-gear.

Pollux gives a classic account of ancient Greek, and Varro of ancient Italian dress.[2] It is significant, sociologically, that the classic type, characterized by the loose tunic and toga, which with some differences was that chiefly affected by the great Oriental races, and is adapted both to the Oriental ideal of repose and to the classic ideal of aristocratic contemplation, was discarded, as the Empire developed into the States of Europe, in favour of what the Greeks styled barbarian dress, chiefly characterized by trousers—a dress adapted to activity. Trousers, the Sanskrit *chalana*, had been connected in India, as now in the East Indian Archipelago, with the dress of warriors and chiefs.[3]

The early Hebrews, like the Egyptians, wore the loin-cloth, originally, according to monuments of the latter, of the *lap* form. Drawers developing from this were first used as a priestly garment. Together with all Semitic peoples and the barbarians of Europe, they differed from Greek peoples in this one garment, though becoming assimilated in the tunic and mantle. The *sādin* was a shirt. Generally it was of the Greek type, and formed indoor dress. Overlapping by means of the girdle, it provided a pocket; it was slit at each side for ease in walking. The outer garment had two types, the long coat, corresponding to the *ἱμάτιον*, and the full-dress cloak, the *mᵉʿîl*, worn by wealthy persons and the priests. Both deserted the toga type in possessing sleeves. It was similar, generally, to the Chinese and Muhammadan long coat.[4]

The early Christians wore the ordinary dress of the country. They always evinced a strong feeling against luxury, display, and immodesty in dress.[5] This is to be attributed not merely to their revolt against Imperial paganism and its luxury and vice, but to their own class-feeling and class-prejudice, an impulse of the pride in lower class conditions of simplicity and poverty. This impulse is paralleled in modern labour and socialist psychology, where the workman's garb becomes a fetish of caste. Early Christian literature contains stories of Christians being tortured for refusing to put on garments indicative of idolatry.[6] All colour was avoided in dress, except the 'natural' colours of the cloth. Under the Frankish Emperors a prohibition was enacted against the wearing of a combination of wool and linen.[7] Such ideas gradually gave way, and the dress of the country, more and more of the 'barbarian' type, even in the South, was still worn by Christian Europeans without any limitations, country and creed being now identical. Among details to be noted are the following:

In Germany and Europe generally, till the 16th and 17th centuries, night garments were not worn; every one slept nude.[8] Sixty years ago in England the use of drawers was almost unknown, and was regarded as immodest and unfeminine.[9] The tight-fitting hose were the men's characteristic garment. The doublet or jacket was replaced among the academic class by the long coat. An extraordinary variety of fashions prevailed from the Middle Ages onwards. Knee-breeches later replaced the long-hose, and the longer jacket the doublet. The peasant's overall, smock, or blouse goes back to early European times. Finally, the modern trousers superseded the knee-breeches.

The evolution of material includes some abnormalities of special interest. Some extreme cases may be selected to illustrate these. Among the

Central Australians, human hair is used for various purposes, especially for the manufacture of girdles. The giving and receiving of it constitute an important right and duty. A married man's chief supply is obtained from his mother-in-law.[1] The mediæval use of the hair-shirt as a mode of penance depended on the coarseness of the fabric for the mortification of the flesh. Similar is the use of hempen fabric, sack-cloth, in mourning. In foot-gear an analogy is seen in the use of dried peas to make walking painful.

The famous feather-fabric of the Nahua nations, who lived in a paradise of gorgeously coloured birds, was made by skilled artists, termed *amantecas*. This feather-cloth, with its brilliantly hued and scintillating patterns was used for mantles and dresses by the nobles and the wealthy, as well as for tapestry and similar drapery.[2] The most skilled nation was the Toltec.[3]

The interweaving of precious metal with dress-fabric is a luxurious custom, often merging in superstition. Thus Hindus and Chinese consider it lucky to wear gold, however minute the quantity, in some form on the person.

Colour in dress involves many problems of æsthetic, psychological, and biological importance. Behind fashion in colour there seems generally to be a principle of unconscious adaptation to environment. Æsthetic principles, originally unconscious, were superimposed upon this. The varied symbolism of colour in dress has a psychological foundation. Towards the tropics the tendency to gaudiness becomes marked; subdued tones are preferred by inhabitants of the temperate zone. Conversely, there is adaptation to racial and individual skin-colour.

The Enahlayi Australians think red to be a 'devil's colour.'[4] Such cases show an unconscious appreciation of the powerful stimulus of red. Its erotic connexion no doubt explains its frequent use in marriage ceremonies.[5] A natural association of ideas connects white with the purity of virgins and priests. The following are typical cases of doubtful origin:

Blue was a sacred colour among the Mayas; the priests and the sacred books were clothed in blue. At a certain feast, all instruments used in all occupations, and all children, were painted blue.[6] The Yezidis hate blue. Their strongest curse is 'May you die in blue garments!'[7] In the following example a tabu against mixtures may be involved. According to the Atharvaveda a combination of blue and red savoured of witchcraft.[8] Blue and red, however, were worn in the Hebrew high priest's ephod, which was employed for divination (Ex 28^{8} *et al.*).

The special colours of Hindus and Buddhists in Northern India are red and saffron. The Hindu abominates indigo. The Sikh wears blue or white, and abominates saffron. The Musalmān wears indigo, or, if a descendant of the Prophet, green; never red.[9] Tradition, social inertia, and race-feeling perpetuate such preferences when once established.

Superstitious reasons for wearing a particular colour are probably always secondary, as, for instance, in the following cases from India:

For six days before marriage the Indian Musalmān bride wears old tattered yellow clothes, to drive away evil spirits. A wife meeting her husband after a long absence is dressed in yellow. Most Hindus of the West explain the custom of rubbing the body with turmeric in the same way. Among most high-class Hindus the bride's cloth, *vadhūvastra*, is yellow.[10] The Sannyāsi wears yellow clothes.[11] The Lamas of Tibet wear yellow, and yellow is the colour of Buddhist priestly dress universally.

A constant tendency may be observed for the colour, as well as the form, of the dress of the sacred world to be the precise opposite of that of the profane. In later stages, asceticism is also in-

volved, and simplicity of form is combined with absence of colour in the ordinary priestly garb.

The purple of the Greek world, as worn by the great, and particularly by royal persons, is an expression of super-personality, as distinguished from the abnormal or the contradictory. Royalty among most races wears special colours as well as special dress. For example, the Malay rajas have a monopoly of saffron, for the Malay royal colour is yellow. White is regarded as 'more exalted and sacred'; it is used to conciliate spirits. It is believed at the same time that the blood of kings is white.[1] As absence of colour, or the 'natural' colour of a fabric, implies negation or contraction of personality, so splendour—as in the various shades of crimson used by the ancient world under the one term of 'purple'—implies expansion of personality, and is suitable for festal occasions, both sacred and profane.

The negation of splendour is often expressed by black or dark blue. Superstition, when using these, relies upon their minimum of attraction rather than upon any optical adaptation. According to the *Rās Mālā*, dark clothes are a protection against the evil eye.[2] The Gujarāt Musalmān believes that black or indigo clothes keep spirits away.[3] In Roman Catholicism, as elsewhere, blue or violet is a colour symbolic of death. Blue is also connected with the external attributes of the Virgin Mary, possibly as mourning her dead Son. Such facts show a sentimental adaptation to circumstances. Red and yellow, being connected with organic growth, are the colours of well-being, and of the affirmation of energy and expanded personality; the blue end of the spectrum represents the negation of these, in proportion to its deleterious influence on the organic world. Where mythological speculation has coloured theology, adaptations in priestly and other garb may occur: blue may represent the sky; yellow the sun; silver the moon; red the sacrificial blood, and so on. In social life, colour no less than dress or uniform becomes a distinguishing mark, either by accident or by design. The gild, the club, the social state (as in the case of the blue blouse and similar status-garb), even the seasons of a Church, are represented by colours.

The following adaptations to sacred circumstances have much the same meaning as the injunction to wear 'decent apparel' on solemn occasions. Among the various tabus affecting tin-miners in Malaysia is one forbidding the wearing of black coats, except for the *pawang*, engineer-in-chief.[4] Local accidents have much to do with the fixing of such rules. In the above it is possible that a sympathetic harmony with the white colour of the sacred metal is alone intended. In the next case, purity alone may be intended. The Druid wore a white robe when cutting the mistletoe. For a similar function the Cambodian priest wears white.[5]

The following is an excellent example of the principle of adaptation. The state to which the person is to be assimilated is, no doubt, the succeeding state of cessation of the blood-flow, white being used by way of contrast with red.

A ceremonial system, termed *beroemboeng*, is followed by some Dayaks in the case of girls at puberty. The girl is washed, and dressed in white. Then she is incarcerated for a year. During this period she eats only white food; the hutch in which she lives is of white wood; at the end she is white herself. A feast is given to celebrate her release; at this she sucks the blood of a young man through a bamboo.[6]

Green has been used to represent sympathy with the growth of green things upon the earth, as in many agriculture rites and spring ceremonies. As a contrast there is the Black Demeter; this is 'plainly a mythical expression for the bare wintry earth stripped of its summer mantle of green.'[1] The use of green is also known to express the non-festal seasons of a religious year. Occasionally green figures as expressive of corruption. The association of green with certain forms of organic decay may explain this.

3. **Dress of head and feet.**—Foot-gear and head-dress show an evolution as varied, *cæteris paribus*, as dress in general. The constant ideas of dress are seen here, even that of decency. Thus, where special attention is paid to clothing the foot, as among Chinese women, or the face, as among Musalmān women, the resulting modesty is real, but not primary. Decency is a secondary and artificial idea, and there is no biological or psychological difference between its application to the foot or the face and its application to the primary sexual characters. But in the former there is not, while in the latter there is, a primary impulse of modesty, the instinct to protect, though not necessarily to conceal, the sexual centres.

Most natives in India never wear shoes. Even the rich dispense at least with stockings. Leather is avoided for reasons of ceremonial purity.[2] The impulse towards physical cleanliness finds particular expression in foot-gear. It is not so obvious in the case of dress covering the passive areas of the body. The religious rule of removing the shoes before entering a sacred place is identical with that observed in social custom, and the original motive is no doubt merely to avoid carrying dirt or dust into the house either of God or of man.

Head-dress and coiffure involve ideas of ornament and distinction in a more marked degree than any other forms of dress. In so far as these illustrate the principles of dress generally, they are here in point. The Karens wear a head-dress in order to please the *tso*, the soul which resides in the head.[3] The Javanese wear nothing on the head, which is regarded as holy.[4] A Zambesi rain-maker never cuts his hair, for fear the familiar spirits may desert him.[5] Fashions and superstitions are equally innumerable in the matter of coiffure. No part of the external surface of the body has been more variously manipulated than the hair. The coiffure marks differences of race, tribe, clan, sex, age, and social status.

Flowers in the hair are worn by Dayak women; the hair is in a knot at the back of the head. Among Dayak men it is a common practice to grow the back hair long and shave the front hair.[6] The Kayans of Borneo shave all the scalp except a large tuft of long hair which hangs down the back. Hose considers this to be a 'last remnant of the Chinese pigtail.'[7] The latter and the Amerindian tuft are the converse of the priestly tonsure. The hair is either emphasized by concentration or negated by central denudation. Similar principles have been applied in the varying fashions of wearing the beard.

Where the hair is emphasized as a human, or as a masculine or feminine, character, its æsthetic appeal is parallel to that of dress, which also emphasizes by various harmonies of colour and form the æsthetic value of the body. Especially in woman long hair is regarded as beautiful, as her glory (cf. 1 Co 11[15]). From savagery up to modern civilization this attribute has been emphasized by addition, no less than by decoration.

False hair is regularly worn by the Veddas, who never brush, or oil, or wash their heads.[8] The latter fashion, though nearer to the animal, may

be an expression of personal pride in the organism, no less than is scrupulous cleanliness.

The use of the fillet has two purposes—to confine the hair, and to prevent sweat from reaching the eyes. The protection of the eyes and the spine of the neck from the deleterious rays of the sun has been understood in very early stages. The general tendency is towards ornament in female, protection in male, head-gear.

Korean head-gear is remarkable. The men's hats are like inverted flower-pots, with broad, straight brims, similar to the Welsh tall hat. The brims measure two feet across. The hats are made of horsehair, and are varnished. They are stained black, except in half-mourning, when they are string-colour. The court officials wear hats so fantastic that 'it is perfectly impossible to describe them.' The women wear no head-gear, except fur-caps in winter.[1] Such hats as the Korean and the modern European tall hat are the expression of ideas of the dignity of the head, just as was the crown.

4. Ornaments and amulets.—Though dress of the simplest description has an ornamental value, there has always been a precise distinction between dress and ornament. There is little possibility of confusion between them, whether the ornament is directly applied to the body or is actually an addition to the dress, meant to decorate this rather than the wearer. Ornament is often *de rigueur.* No Hindu woman 'would dare to hold up her head' unless well provided with eight kinds of ornaments —nose-rings, ear-rings, necklaces, bracelets, armlets, finger-rings, anklets, and toe-rings.[2]

Lower races are fond of the necklace-method, using shells, seeds, and beads threaded on string. The women of Guiana load themselves with seeds and beads in great ropes.[3] Almost as prevalent is the use of metal cinctures, which subsequently acquire the value of protective armour or amulets. Originally they seem to have been an extension of the ligature-principle.

Amulets are practically innumerable in their variety. They may be worn on the body or on the dress, and are usually abnormal in material. Dress itself may acquire the virtue of an amulet. The Malays write charms on paper or cloth, and wear them next the skin.[4] The Musalmān and Hebrew amulets of sacred texts are familiar examples. The principle employed is that of assimilation of the sacred force by contact. The people of Surinam wear the 'strong metal,' iron, on their bodies, to acquire its strength.[5] In armour dress reaches the climax of its protective functions.

5. Dress as currency.—In the absence of coinage, commercial transactions often take the form of mutual gifts, especially in the case of transactions which are more or less purely financial. At such stages any article representing work and intrinsic value, such as clothing, is an obvious medium for presentation or exchange. In savagery, gifts of clothing are less frequent than gifts of food; in barbarism they are more frequent.

The Trojans placed a robe on the knees of the goddess to induce her to save their city.[6] In the East Indian Islands clothes are a frequent offering to the spirits.[7] Blankets were a common gift among the N. American Indians.[8] To show appreciation of an actor's playing, the Japanese used to throw their clothes on the stage. At the end they were purchased by the donors, and the actor took the money.[9] Blankets form the chief property of the Kwakiutl and Haidas. They are treated as money, and lent at interest.[10] A large proportion of the taxes paid by the Nahuas was in the form of cloths and made-up clothes. The labour involved in providing the tribute was one main aspect of the *Nahua*, 'Rule of Life,' which gave the people their name. Also a considerable amount of dress was annually expended in sacrifices.[11] The remarkable institution of the Indians of British Columbia, known as the *potlatch*, is a distribution of property, such as blankets, undertaken by each member of society in turn, according to his status or opportunity. The system is essentially financial gambling. Similar is the frequent obligation of the king in early culture to redistribute the gifts which his subjects make to him.[1] A *potlatch*, distribution of property, accompanied initiation to the Bear Totem of the Carrier Indians. The candidate gave presents of clothes to all concerned.[2]

Ornament and currency are interchangeable, Ratzel points out, in early times. There is no safer place for property than the owner's person. But clothing proper is a parallel form of currency, either as made up into garments, or as prepared material.

Among the Tlingits, seal and other skins are both worn and circulated as money. The fine mat-garments of the Samoans were their most valuable property, and were used as currency. The Wa-ganda use unbleached calico for the purpose, measuring the unit by the length of the forearm.[3] The Garos use cotton cloth as a medium of exchange.[4] Mat-money is used in the Northern New Hebrides. The mats, which are plaited by women, are called by the same term—*malo*—as women's mat-cloths. They are long, narrow pieces, and the value increases with the folds, which are usually counted in tens. In the Banks Islands, crimson-dyed feathers, the favourite decoration, are used as currency.[5] Formerly braid was so used in the Loyalty Islands. In Florida and Saa, disks of shells are used both as ornaments and as money.[6] In Africa, New Britain, Melanesia, among the Californians, Tlingits, and Eskimo, beads, shells, and the like decorations are used for exchange. The Khalkas discontinued the wearing of their valuable silk scarves, and retained them solely as a form of money.

The famous New Britain shell ornaments, termed *dewarra*, were chiefly in the form of extended collars. The wearing of *dewarra* was abandoned as soon as it was found, on the arrival of Europeans, to have commercial value. The shells were tabu. A man's greatest object in life was to collect as large a hoard as possible. 'With *dewarra* they buy their ornaments and their wives; with *dewarra* they buy themselves free from all troubles and complications; with *dewarra* they appease their bitterest enemy, even though they may have killed his nearest relative.' For daily expenses a man carries about with him a yard or a few fathoms of this money. 'The rest is deposited in the *dewarra*-house, a hut specially set apart for keeping the property of all the villagers, the thousands of fathoms belonging to the rich, as well as the smallest savings of the poor. From fifty to a hundred or even two hundred and fifty fathoms are rolled up in a bundle, which is wrapped in bright-coloured leaves. . . . The *dewarra* bank is always guarded by several sentinels.' At the death of a capitalist, his *dewarra* is distributed among the depositors. When a man deposits a large amount, the drum is beaten to summon an audience.[7] Shell arm-ornaments are used as currency by the Southern Massim of New Guinea.[8]

6. Dress symbolism.—Dress acquires ideal valuations from its various uses, materials, and associations. All languages are full of metaphors recording such ideas. According to the *Śatapatha Brāhmaṇa*, 'the priests' fee consists of a hundred garments, for that—to wit, the garment—is man's outward appearance, whence people (on seeing) any well-clad man ask, "Who can this be?"; for he is perfect in his outward appearance; with outward appearance he thus endows him.'[9] This example well illustrates the idea that dress is both an expression and an extension of personality, in its superficial aspect.

The symbolism of the virgin zone, the girdle, the royal robe and crown, needs no illustration. In rare cases, an article of value used in exchange acquires the virtue of such objects as *regalia* and the Australian *churinga*. The *wampum* of the North American Indians

'has, no doubt, grown out of the cords on which were strung shell-beads of divers colours for adorning the neck and arms, and which first served as ornaments, but later circulated in the land as real money. . . . Exchange may have taken place to cement a friendship or a treaty. . . . The *wampum*-belt acquired an extraordinary measure of importance; in it was evolved a certain kind of documentary script.' The speaker at meetings held a *wampum*-belt in his hand. 'Brothers,' he might say, 'with this belt I open your ears that you may hear; I take care and sorrow from your hearts.' At the conclusion of a treaty, tribes exchanged *wampums*, which had a representation of the

event woven into them. The Iroquois supported the office of hereditary *wampum*-keeper, who was more or less a depositary of the history of the people. Every year the whole collection was exhibited and explained to the whole tribe.[1]

The eagle-plumes of American warriors' head-dress signified by their numbers and particular marks the achievements of the wearer. Similar marks of honour were made on their garments.[2] It is, however, misleading to characterize such phenomena as dress-language.

Out of the extensive list of metaphors from dress only one or two types can be included in illustration. A proverbial saying of 16th cent. knighthood contained the phrase, '*Mon harnois ma maison*.'[3] Besides implying the homelessness of the knight-errant, this also involves the application of dress and armour as external shelter no less than as bodily covering. The most prevalent metaphor in all languages, that of dress as a covering, often loses its force as a species of covering, and comes to be a synonym for the genus, owing to its constant use. In proverbs, the wisdom of many and the wit of one employs the simplest and the most complex ideas of dress.

In Masailand the Suahili proverb is used, 'to cut out the tunic before the child is born,' equivalent to the English 'counting your chickens before they are hatched.'[4] A popular Chinese book of moral instruction says: 'Brothers are like hands and feet. A wife is like one's clothes. When clothes are worn out, we can substitute those that are new.'[5]

The metaphorical wealth of Indian literature suggests two points. In the first place, dress is more than covering; it imparts an anthropomorphic value to the object. According to the Vedic texts on 'Soma,' the mixture of *soma* with milk, sour milk, and barley is a 'garment.'[6] Water, say the Upanisads, is 'the dress of breath.'[7] In the second place, there is no doubt that a good deal of mythological creation is due to metaphor, not as a disease of language, but as a deliberate use of association of ideas for the purpose of artistic and religious invention. Metaphors, like those of dress, serve, first, to personalize an object, and then to humanize it. There need be no confusion between the two uses; they are simply two methods of viewing one thing. Nor need there be any fetishism behind such cases.

On the other hand, the OT and NT use is purely abstract and literary. But there is no ground for supposing that this is a secondary stage, and that such metaphors were originally material identifications. The lowest savages, for instance, use metaphors merely as such. The pastures 'clothed with flocks'; the heavens 'clothed with blackness'; a woman 'clothed with the sun'; clothed 'with cursing,' 'with vengeance,' 'with drowsiness,' 'with strength and honour'; and flowers clothing 'the grass of the field'[8]—these are examples of Biblical metaphor. Dress-metaphors may be morally applied. Clothed 'with salvation,' 'with righteousness,' or 'with humility'[9] is a pure metaphor. In Zoroastrian texts it is said that the garments of the soul in the life to come are made from acts of almsgiving.[10] A beautiful metaphor like this is not degraded if it becomes concrete; it is merely translated into materiality.

The great bifurcation of dress is sexual. Besides the obvious symbolism and metaphor which this involves (as in phrases like 'petticoat government' and 'wearing the trousers'), there may be mentioned an attempt on the part of asceticism to express the non-sexual idea. The attempt is made both in ideal pictures and in actual priestly garb. The garment selected is the long tunic, which survived here for other reasons, and the colour is white. Thus all indication of primary sexual characters is veiled; the dress not only covers but replaces the body. White is at once pure, free from 'mixture,' as a mixture of all colours, and neutral, between splendour and shame.

It has been suggested[1] that the Egyptian *crux ansata*, the symbol of life, is a picture of the loin-cloth. In the Hervey Islands a frequent name for a god is *tatua manava*, 'loin-belt.'[2] A similar notion is that of the girdle, symbolic of eternity, as the circle is of infinity.

The relation of soul and body is often expressed in terms of dress. The expression may be merely metaphorical; it may also be real. The body is not only a house or a tomb, as in some early Christian literature; more aptly is it an exactly fitting duplicate, covering the soul. Thus, the body, according to Malay psychology, is the *sarong* of the soul. Conversely, the Gnostics spoke of the soul as a 'garment.' In the one case the inner soul, in the other the outer or filmy soul, seems to be intended.[3] In a famous passage St. Paul combines the metaphors of house and dress in reference to the super-terrestrial body: with this man desires to be 'clothed upon,' 'not for that we would be unclothed, but clothed upon, that mortality might be swallowed up of life.' At the same time the body terrestrial is a 'house,' a 'tabernacle.'[4] The Déné Indian when sick regains his soul by the following method. His moccasins are stuffed with down and hung up. If the down is warm next morning the soul has entered the shoes, and it may be reunited with the body if the patient puts them on.[5] Here the presence of personal warmth, associated with actual wearing, represents the presence of the soul in the dress.

The metaphorical and symbolical applications of the idea of dress thus show an oscillation between very distant extremes, which may be summarized as on the one hand a sheltering house, and on the other hand an almost organic skin.

7. The social psychology of dress.—(1) *The dress of mystery.*—The results of the free play of the social mind on the subject of dress in magical, religious, and moral opinion and ritual may be introduced by some such observation as that early folklore regards weaving as a mystical art.[6] In other words, the operation has significance, attracts attention, and may inspire wonder. But the ultimate reason is merely that it is outside the normal plane of ordinary human or, more exactly, animal activity. It is not because there is any reference either to dress or to magic.

The invention of fairy tales illustrates, by extravagant emphasis, various ideas connected with dress, but overlaid with that secondary form of magical belief which is merely æsthetic, literary, or generally fanciful. Stories of magical dresses[7] are numerous. The *motif* illustrates either the connexion of dress with personality or the use of dress as a protection, disguise, or honour. There is, for instance, the shirt of snowy whiteness which turns black when the owner dies.[8] The emphasis on sympathetic connexion is constant. The shirt which never needs mending while the

wearer remains faithful[1] is a contrast to the shirt of Nessus.

In German folklore a shirt spun and stitched by a maiden who has kept silence for seven years can undo spells and render the wearer spell-proof.[2] St. Theresa was presented by the Virgin with an invisible cope which guarded her from sin.[3] The clothes and caps which make invisible were familiar subjects of mediæval lore.

Malay folklore tells of the cloth, *sansistah kallah*, 'which weaves itself, and adds one thread yearly of fine pearls, and when that cloth shall be finished the world will be no more.'[4] An old-time raja 'wore the trousers called *beraduwanggi*, miraculously made without letting in pieces'; also a waist-band of flowered cloth, which thrice a day changed colour—'in the morning transparent as dew, at mid-day of the colour of *lembayong* [purple], and in the evening of the hue of oil.' His *sarong* was 'a robe of muslin of the finest kind; . . . it had been woven in a jar in the middle of the ocean by people with gills, relieved by others with beaks; no sooner was it finished than the maker was put to death, so that no one might be able to make one like it. . . . If it were put in the sun it got damper, if it were soaked in water it became drier.'[5]

The idea that dress is a secondary skin, an outer bodily surface, has a connexion with many stories of metamorphosis.

A Javanese magician transforms himself into a tiger by means of a miraculous *sarong*, the Malay garment, half robe and half shirt. This is believed to have such marvellous elasticity that at first it will only cover his great toes, but it stretches till it covers the whole body. It resembles in texture and colour the hide of the Bengal tiger. When it is on, a few muttered charms complete the transformation of the magician into a tiger.[6]

(2) *Dress and personality.*—One of the simplest cases of association is the idea that a person may be represented by his dress. Dress is here analogous to the name, the effigy, and the image.

In China, when a man dies in a foreign land, he is buried in the form of his clothes. The soul is summoned, and then 'the burial of the evoked soul' takes place. In the case, for instance, of an empress in ancient times, her soul was to be evoked 'with the aid of her sacrificial robe; then this robe must be placed on a soul-carriage . . . then the dress must be taken to the sacrificial hall . . . be covered with a corpse-pall, and finally be buried.'[7] If the son of a dead Chinese cannot attend the funeral, he is represented by a suit of sackcloth garments carried on a tray in the procession.[8] At a Celebes festival, a woman's and a man's dress represent deceased ancestors.[9] Among the Eskimo the first child born after a death 'represents' the dead man. These namesakes eat and drink the provisions and wear the clothes offered to the dead at feasts, on their behalf. At the end the shades are sent back wearing the spiritual essence of the clothes, while the gross substance is kept by the namesakes.[10] When the office of high priest in Tonga was vacant, the priestly dress was placed on a chair, and yams were offered to it. It was regarded as an equivalent for the person.[11] If a Zulu lightning-doctor is unable to attend a case, he sends his blanket to be placed in front of the storm as an equivalent for himself.[12]

Bathing in clothes[13] is a form of ceremonial purification which shows the connexion of dress and person. If dress is a part of personality, it follows that it must share in the duties imposed on the natural body. Similarly, if the soul of a dead person is a replica of his ordinary personality in life, the soul after the death of the body is regarded as wearing clothes. This was, for instance, the case with the Egyptian *ka*.

The anointing of garments is a practice found in fashion, ritual, and ordinary life (see art. ANOINTING). As a detail of full dress, the wedding garments of the Masai bride are oiled before being put on.[14] The robes of the Hebrew high priest, no less than his head and person, were anointed with the sacred oil.[15] The hygienic purpose of oiling the skin is also fulfilled by oiling the garments worn.

In many cases the dress is not merely a representative symbol of the person, but a usable substitute for a more or less sacred and therefore unusable reality. A Masai man swears to the truth of a statement 'by my sister's garment,' a woman 'by my father's garment.'[1] The converse of this idea may be seen when regalia or royal robes are more sacred than the person of the monarch. These associations, in connexion with the innate love of finery, are concerned in certain observances during sickness and at death.

In serious illness, a Mongol's best clothes and ornaments are spread round him in order to tempt the absent soul to return.[2] A similar practice is recorded of the Greenlanders and the Todas.[3] In China 'a coat belonging to the sick man, and very recently worn, is suspended on a bamboo.' Incantations are performed to induce the errant soul to enter the coat. When the pole turns round in the hands of the holder, the soul has arrived, and the coat is placed on the sick man's body.[4] For the Chinese ceremony of 'calling back the dead,' the dead man's favourite costume is employed. The idea is to entice the soul into it, for it should be 'inclined to slip into such of its garments as it had been proud to wear during life.' The dress is held out by a mourner, crying 'Ho! come back.' Then, the soul being supposed to have entered, it is placed on the body of the dead man.[5] The Mongols try to persuade the soul of a sick man to return by putting out his best clothes, washed and perfumed.[6] The Maoris enticed the soul of a dead chief by the bait of a piece of its body or its clothes, in order to instal it in the *Wahi Tapu*.[7] Souls are commonly charmed into a cloth or caught in the same receptacle.[8]

The custom of dressing the dead in his best clothes may often be based on similar associations (see below).

The principle of impersonation is easily applied to dress. Particular cases are assimilation to totemic or other animals, and may be regarded as a fusion of personalities, or rather the assumption of a secondary personality.

The natives of the Upper Congo blacken their faces with oil and charcoal in resemblance of a species of monkey; they explain that by so doing they derive 'monkey cunning.'[9] Bechuana warriors wear the hair of a hornless ox in their hair and the skin of a frog on their cloak, that they may be as hard to hold as are these animals.[10] The Bororo of Brazil regard themselves as being identical with red-plumaged birds. They decorate themselves with their feathers.[11] All African tribes, says Schweinfurth (but the statement needs considerable qualification), imitate in their attire some animal, especially those for which they have 'reverence.' 'In this way it frequently happens that their superstition indirectly influences the habits of their daily life, and that their animal-worship finds expression in their dress.'[12] Among the Vaydas of Cutch the bridegroom is dressed as a monkey when he goes to the house of the bride.[13]

The purposes of impersonation are naturally manifold, and require no general illustration. When a sick Eskimo child is made to wear a dog's harness, and is consecrated as a dog to the goddess Sedna,[14] the idea is, no doubt, change of condition as resulting from change of personality. On a similar principle, the Galelareese, concluding that a barren tree is a male, turn it into a female by placing a woman's petticoat upon it.[15]

Assimilation of dress to person has innumerable gradations, passing ultimately into identity or duplication. The principle is complicated by the belief that inanimate objects have souls. There is an Irish belief that the clothes of a dead man wear out more quickly than those of a living man.[16] The Hindus hold that the dress and ornaments of the gods and deified mortals do not decay.[17] Garments, like other inanimate articles, have souls, as in Fijian and Tongan belief.

practices of sympathetic magic are abundantly illustrated by dress. A few typical cases may be cited.

Among the Toradjas of Celebes, when the men are on campaign, those remaining behind may not put off their garments or head-dress, lest the warrior's armour may fall off.[1] The principle of like producing like is frequently applied. A Malay woman explained that her reason for stripping the upper part of her body when reaping rice was in order to make the rice-husks thinner.[2] During the festival of the Mexican 'long-haired mother,' the maize-goddess, women danced with their long hair unbound, that the tassel of the maize might grow in equal profusion.[3] In a Kashmir story, a weaver offers the king some cloth for a shroud. The king held that the man wished his death.[4] A rain-maker in Mabuiag paints himself white and black, with the explanation 'All along same as clouds, black behind, white he go first.' A woman's petticoat also is put on to signify clouds.[5] In ancient India, the Brâhman rain-maker wore black garments and ate black food. He had to touch water thrice a day.[6] Generally it is a rule that to make rain the operator must himself be wet, to make dry weather he must be dry. 'Who drives fat oxen should himself be fat.'

Magical injury is effected upon a person by means of his dress, as having been in contact with or as representing him. The practice of injuring or slaying a man by burning or otherwise destroying fragments of his clothes or food, and the like, is world-wide.[7]

A rejected lover in Burma gets an image of the lady, containing a piece of her clothes or of something she has worn. This is then hanged or drowned.[8] A Wotjobaluk wizard would roast a man's opossum-skin rug before a fire, in order to make him ill or die. The only cure was to soak the rug in water, when the sick felt cooler and recovered.[9] The Tannese wizard practised a similar method with a cloth which contained the sweat.[10] Prussian folklore has it that if you cannot catch a thief you may get hold of a garment he has dropped in his flight. If this is beaten soundly, the thief falls sick.[11] The last case suggests that the dress is regarded as a part of personality, or an exterior and superficial layer of personality. The practices illustrated above are perhaps better explained on this principle than on the hypothesis that things once in contact retain a magical continuity.

The converse method of enforced assimilation produces intimacy and identity by means of dress. To obtain a favour or to conciliate feeling, a Zulu gets some article or fragment from the person he has in mind, and wears it next his skin.[12]

More numerous are cases of actual transmission of properties by means of dress. A South Slavonian woman who desires a child puts a chemise on a fruitful tree. Next morning she places it on her own person.[13] According to Swiss folklore, the dress of a dead child will kill any child who wears it.[14] Such examples need not be multiplied, but their interpretation cannot be found merely in the idea of contagion of physical or magical properties. For early thought it is an obvious inference that a man's nature

'inheres not only in all parts of his body, but in his dress. . . . Probably the interpretation of odour has led to this belief. If the breath is the spirit or other-self, is not this invisible emanation which permeates a man's clothing and by which he may be traced, also a part of his other self?'[15]

But inference from odour does not, any more than the idea of contagion, satisfy all the conditions. There is also, as already suggested, to be taken into account the general ideas derived from the specific idea of dress. A garment is an expression of personality, and, as such, its significance is enforced by its application to other personalities, while this application receives a concrete meaning

and the general idea is concretely realized from the mere fact that the object expressive of personality possesses and may retain the material impress of the person. These ideas enter into many of the superstitious uses of dress. One or two types may be cited:

The Kayans believe that to touch a woman's clothes would enervate them and make them unsuccessful in hunting and war.[1] The Siamese consider it unlucky to pass under women's clothes hung out to dry.[2]

The Queensland natives would take off the skin of a slain enemy and cover a sick man with it, in the hope of curing him.[3] In this and similar cases, as in the practice of blood-drinking, merely the application of organic activity and strength is intended.

It is doubtful if cases like the following imply as much as they seem to do. The desire to have an article clean and new is irreducible, but upon it may be developed habits and beliefs of a mystical nature. The people of Nias, after buying clothes, scrub them carefully in order to rid them of all contagion of the original owners.[4]

The irradiation of ideas of contact has remarkable power and extension, as is shown by beliefs concerning the dress of members of the sacred world. Such garments are impregnated with the *mana* of the wearer, as was Elijah's mantle. But, as pointed out before, metaphors like 'impregnated' cannot always be elevated into reasons. The idea that 'sanctity,' for instance, may inhere in garments as an effluvium or a force is possibly a late explanation, and not the original reason for the practices and beliefs concerned.

The Mikado's clothes, by reason of their 'sanctity,' caused pain and swellings if worn by other persons. Similarly, to avoid injuring others, his eating and drinking vessels were destroyed, immediately after use.[5]

The garments of a Maori chief would kill any man who wore them. In other words, the chief's *tapu*, inherent in them, had the power of destroying.[6] In Fiji there was a special disease, *kana lama*, caused by wearing the clothes of a chief.[7]

The principles of ceremonial purity and defilement have produced some remarkable forms of dress and rules of toilette.

Among the Mekeo of New Guinea, a woman after childbirth must wear gloves made of coco-nut fibre when pouring water.[8] The Tinné or Déné girl during her first period wears a skin bonnet with fringes reaching to the breast, because the sight of her is dangerous to society.[9]

(4) *Personality and state.*—For the psychology of dress a class of facts relating to murderers and menstruous women, and illustrated by the Eskimo theory of tabu, have an important significance.

It is a frequent rule that persons who have shed blood, or emit blood, shall indicate their state in a peculiar way. Thus, the homicide among the Northern Indians of America had to paint his mouth red before eating.[10] The original intention was probably not protective, but merely an unconscious impulse to adapt the person to the particular state. The idea of protection may be superposed upon this. The Omaha murderer was not allowed to let his robe fly open; it was to be pulled close about his body, and kept tied at the neck, even in hot weather.[11] Such cases, if their meaning is protective, are perhaps better explained as reactions to a vague and indeterminate impulse to concealment rather than as direct attempts to evade the ghost of the murderer's victim.

The smearing of the blood-shedder with blood as a means of adaptation to the state of bloodshed is exactly parallel with any investiture with a sacred

dress, as a means of adaptation to a sacred state. The 'dressing' is a frame to the picture.

The Eskimo theory of tabu brings this out. Both personality in general, and particular states of a given personality, form round themselves an expression of their essence. The Eskimo hold that a man who has transgressed tabu appears to animals to be of a dark colour or surrounded by a vapour; for example, the hands of a menstruous woman appear to be red. This colour becomes attached not only to the soul of the agent, but to the souls of the animals with which he has to do; in fact, of everything with which he may establish contact. If a child is sick, the *angekok* removes a black attachment from its soul, caused perhaps by the child having taken oil-drippings from the lamp. A dead man's clothes may not be worn, for a hunter wearing them would appear dark and the seals would avoid him.[1]

Behind all this is the instinct against incongruity, mal-adaptation. A hunter must not wear the dress of a dead man or of a mourner; equally a mourner must not wear the dress of a hunter. The passage from one state to the other, or the transgression of tabu, is not the primary notion. The spiritual garb, resulting from a particular state, is not originally the result of any transgression; it is an automatic effect of the state, a psychological echo of the adaptation, assimilation, or identification of the individual with his particular condition.

Again, it is believed by the Greenlanders that, if a whale-fisher wears a dirty dress, or one contaminated by contact with a dead man, the whales will desert the fishing-grounds.[2]

In such cases it is probable that there is originally no notion of contamination or contagion at all; there is merely the incongruity between the full-dress, and complimentary circumstances of the hunt,—the quarry being approached respectfully and regardfully,—and the undress slovenliness of dirty clothes or the ill-omened and tactless reference to death contained in any connexion with a corpse.

The garment of a particular state must be discarded when that state is past. By this means and by bodily 'cleansing' transition to the new state or to the normal is effected.

The Hebrew high priest after offering the sin-offering had to wash himself and put off the garments he had worn.[3] Similarly the Greek worshipper after an expiation might not enter a city or his house until he had washed himself and his clothes.[4]

Such rules are of world-wide extension. The principle of contamination in its secondary and ordinary meaning cannot cover all the facts. The original meaning of 'mixture,' and conversely the original meaning of 'purity,' as an unmixed state, supply an adequate explanation, in the principle of a psychical (and, as expressed in action, a material) adaptation to state. In customs such as the following the original motive is obscure, but the secondary idea of removal of a dangerous effluvium is suggested.

Among the Berbers of South Morocco, 'persons who have been wrongly accused of a crime sometimes entirely undress themselves in the sainthouse, when going to swear. They believe that, if they do so, the saint will punish the accuser; and I conclude,' observes Westermarck, who reports the custom, 'that at the bottom of this belief there is a vague idea that the absence of all clothes will prevent the oath from clinging to themselves.'[5]

Secondary also is the principle that sacred appurtenances may only be used once; when emptied of their force, they must be destroyed.[6] Nor can we regard as primary the principle that change or removal of dress is a rite of separation from the previous state. The important thing is not the moment of transition (and there is no evidence that any danger is attached to this), but the state itself. Passage from one state to another is marked frequently by change of apparel, but it is unnecessary to labour the point of transition. It is clear that the principle of adaptation to state or circumstance has, as a corollary, the principle of change, which may be more or less emphasized. Thus, the Lapps strip themselves of the garments

in which they have killed a bear,[1] just as after any sacred ceremony the participants put off their ceremonial appurtenances. The particular state is over and done with; therefore its exterior adaptation must likewise be removed. Ideas of removing the sacred and dangerous influence are probably secondary.

These considerations, in connexion with the principle that solemnity in dress must accompany solemnity of circumstance and function, may explain the following types of these customs.

For the harvest festival the two officiating elders of the Nāgas wash carefully and put on new clothes.[2] The Greeks put on clean clothes before worship.[3] Before officiating the Shintō priests of Japan put on clean garments.[4] It is a precept of Islām that the clothes and person of a worshipper shall be clean.[5] A Muhammadan 'would remove any defiled garment before he commences his prayer, or otherwise abstain from praying altogether.'[6] In ancient Christian baptism the novices put off their garments, and clothed themselves in new white robes.[7] At the consecration of a Catholic virgin the novice puts off her ordinary clothes, and puts on the habit and the veil; also the ring on the finger—the ceremony being actually a marriage to Christ.[8] The putting away of the skin dress of the noviciate and the assumption of new clothes were part of the 'ordination' of the ancient Brāhman.[9]

Whether the new state is the extraordinary state of sacredness or the ordinary state of common life, adaptation to it equally involves change of assimilative costume, preceded by removal of that previously worn.

In order to assume the crest of the *Lulem*, the Bear, the Carrier Indian took off all his clothes, and spent some days and nights in the woods. On his return he joined in the Bear Dance, in which he was dressed as a bear. During initiation to secret societies in the Congo States the candidate is naked.[10] In British Central Africa, boys during initiation wear bark-cloth. At the conclusion new clothes are put on. Entrance to the various 'gilds' is marked by a change of costume. Girls after initiation put on new calico.[11] When their initiation ceremonies were over, Kaffir boys were chased to the river, where they washed off the white clay with which their bodies had been painted. Everything about them was burned. They were smeared with the ordinary unguent and were given new karosses.[12]

Frazer has suggested that the practices of depilation, and painting the body white or red, at puberty, are in view of the belief in re-birth.[13] The Kikuyu, for instance, hold that a boy is born again at circumcision, and he pretends so to be.[14] But this idea is *ex post facto.*

When her period is over, a woman puts on new clothes. This is the ordinance of the *Shāyast lā-Shāyast*, of the Mosaic and Hindu law, and of the vast majority of savage and barbarian customary social codes.

Thus, the Kharwar woman after her period bathes and washes her clothes.[15] The Thompson Indian girl has the special dress she wore during her seclusion at puberty burnt on her re-entry into society.[16]

At the end of the *hiri*, the annual trading expedition, which partakes of the nature of a solemn pilgrimage, the Koita of New Guinea bathes, anoints himself, and puts on a new *sihi*, loin-cloth. His wife, who has stayed at home, also bathes and puts on new garments.[17]

A sort of mechanical link between purification by lustration and the assumption of new clothes is made by anointing. After childbirth the Kaffir mother is anointed ceremonially with the ordinary fat and red clay.[18] This is equivalent to the resumption of decent apparel.

New clothes express a new state or condition.

There is an impulse to rhythmical change in human life, coinciding with later ideas of morality. The Incas, at a purificatory festival which was to banish all evil, shook their clothes, crying 'Let the evils be gone!'[1] In such cases the idea of newness, owing to the contrast between the old state and the new and to the impulsive belief in change as producing good fortune, tends to predominate over the principle of adaptation to the new state. In other words, the important thing is not the succeeding state but the riddance of the old.

At the Creek festival of new fruits, the *busk*, new clothes and new utensils were provided by each person; the old clothes were burned.[2] At the Tongan festival of first-fruits all were clad in new clothes.[3] The Hindus wear new clothes at the festival of the new year, *saṁvatsarādi*.[4] The Chinese ceremony of 'raising the head' is the putting on of special clothes for marriage. A suit of white body-clothes of linen is made for both bride and groom. Brand-new they are, and are worn during the marriage-ceremonies, for on this occasion they themselves 'become brand-new people.' The suits are then put away, only to be worn again in the tomb.[5] In Korea, on the 14th day of the first month, any one entering upon 'a critical year of his life' dresses an effigy of straw in his own clothes and casts it away. Fate is believed to look upon the individual in his new clothes as another man.[6]

Here the secondary principle of disguise intrudes. Ideas of disguise by change of dress have been developed in many cases.

Thus, in the seventh month of pregnancy, a Ceramese woman is rubbed with dough of seven colours. A new ornamental *sarong* is placed on her. This the husband slices in two with a sword and immediately runs away. She is dressed seven times in seven colours.[7] The Bulgarian, to cure scrofula, will creep naked through an arch of boughs, and then hang his clothes on a tree, donning other garments.[8] In Uganda a sick man is made to jump over a stick, and let his bark-cloth fall off. The priest takes the cloth and runs in the opposite direction.[9]

Often it is enough to follow the principle of the fantastic as a strong contrast to the previous state which has suffered misfortune.

Thus, in South Guinea a sick woman is dressed in a fantastic garb, and her body is painted with streaks of red and white. She then stands in front of her hut brandishing a sword.[10] The last detail is a later stratum. The Mosquito Indians believe that the devil (*Wulasha*) tries to seize the corpse. It is hurried to the grave by four men 'who have disguised themselves with paint.'[11] A Siberian shaman will paint his face red when about to accompany a soul to the spirit-land, expressly to disguise himself from devils.[12] The Tongans, when at war, changed their costume before every battle by way of disguising themselves.[13] Similarly, the king of Israel disguised himself at Ramoth-Gilead.[14]

Disguise may take the form of impersonation, and the agent may be a person or a thing.

The people of Minahassa delude the evil spirit by placing on the sick man's bed a dummy dressed in his clothes.[15] Abyssinian kings had a sort of small bodyguard who dressed exactly like their royal master. 'So that the enemy may not distinguish him' was the reason assigned.[16]

The protective value of dress is often expressed merely as that of a covering.

Thus, when the angel appeared to Muhammad, he hastened to his house, crying, 'Cover me with cloth!' Then God spoke to him: 'O thou, enwrapped in thy mantle, arise and warn!' From this point the prophet commenced his composition of the Qur'ān.[17] A Hindu mother passing a haunted place draws her robe over her child. In old Bengal there was a prayer for the protection of children till they were dressed in clothes.[18]

In its sexual and supernatural uses alike the veil protects both the face or head from sight and the eyes from seeing the forbidden or dangerous object. To see and to be seen are often interchangeable, and often combined as media of dangerous influences. In early Arabia handsome men veiled their faces to preserve themselves from

the evil eye.[1] Here there is no doubt a combination of subjective and objective methods. The veiling of women and the consequent artificial modesty concerning the exposure of the face are a remarkable characteristic of Musalmān social life, and illustrate the secondary habits induced by dress. Ceremonial veiling of a temporary nature is found in the case of puberty, marriage, and widowhood. The novice during initiation to the *Ko'tikili* of the Zuñi wears a veil, and is supposed to see nothing.[2] Similar practices attend initiation to many forms of secret society. The veiling of the bride is more or less universal. A Musalmān woman takes the veil, just as does a nun. Momentary veiling occurs in the presence of death and in approaching a deity. Socrates and Julius Cæsar veiling their faces at the moment of death typified the Greek and Italian national custom. To interpret, as Van Gennep does, these latter cases as rites of passage, with the purpose of separating one's self from the profane world, is fanciful.[3] The habit is more probably a motor reaction to the impulse for concealment before an object of fear. The veil of the bride is a ritual concession to, and a material accentuation of, the sexual character of modesty, rather than a rite of separation from the previous state. To apply the idea of separation from the previous state to the habit of veiling at the moment of death is clearly impossible. In the case of many secret societies veiling is probably intended merely to accentuate the sense of mystery.

In connexion with marriage there are customs of stripping or forcible removal of dress. In some cases these seem to point to a diminution of personality, in others they are preparatory to the assumption of a new dress, often presented by the bridegroom. Among the Roro tribes of New Guinea a nubile girl is tatued, and wears ornaments every day. After marriage, for a few weeks she decorates herself every afternoon. She may not visit her father's village until after a ceremony in which she is stripped of all her finery.[4] The idea, no doubt, is to affirm her subjection to her father's family.

The exchange of presents of dress, a prevalent custom at marriage, may be extended.

Thus, the Koita of New Guinea hold the *heni* ceremony when a first-born child is three weeks old. The infant is decked with various finery, and is carried by the mother, also dressed up, to her mother's house. Her husband follows her with an empty pot, a spear, a petticoat, and a firestick. After smoking and betel-chewing, the wife of the child's maternal uncle strips the ornaments and clothes from the mother and the child. These and the articles carried by the father become the property of the *raimu* and the *wahia*, the grandfather and grandmother on the maternal side. A return present is given.[5]

Customs which prescribe the wearing of best clothes or of rags illustrate the most important psychological result of the invention of dress. This is a secondary human character, the feeling for dress, and is one aspect (consisting in extension of self-consciousness) of the reaction to extension of personality. It is really distinct from the feeling for ornament and the impulse to protection, but is correlated with the more physical impulse to cleanliness, and the dermal and nervous refinement which dress has introduced into the human organism. Connected with the latter development are various reactions in the spheres of art and etiquette. Stanley Hall finds that 'of the three functions of clothes—protection, ornament, and Lotze's self-feeling'—the second is by far the most conspicuous in childhood.[6] But the sense of personal dignity and physical pride is only latent in childhood. Of the psychical resultants of dress this adult character is the most significant. As Lotze

6 *AJPs*, 1898, p. 366.

put it, clothes extend the limits of self and enable the wearer to feel himself to the extremity of each garment. A precise analogy is found in the psychology of tools. Add the sexual factor, and

'the mere presence or possession of the article [of clothing] gives the required sense of self-respect, of human dignity, of sexual desirability. Thus it is that to unclothe a person is to humiliate him; this was so even in Homeric times, for we may recall the threat of Ulysses to strip Thersites.'[1]

Similarly, to foul a person's garments is a secondarily direct insult. When the sense of well-being is at a maximum, fine dress is an expression of it and an adaptation to it. Also, on momentous occasions a man of any period will dress very carefully, unconsciously intending to affirm and emphasize his personality. Conversely, to express misery, the negation of well-being, or humility, a negative form of dress is employed; value, colour, and style are at a minimum. The diminution of personality is echoed by wearing rags, sackcloth, or colourless or torn or dirty clothes, which act as adaptations to the negative state. Momentary diminutions of personality can only be expressed by partial unclothing or by fouling or tearing the dress. In both cases the dress or its treatment has a reaction on the psychical state of the individual.

On these foundations luxury and superstition have erected a mass of fashions. Two typical cases follow.

Great personages in Siam used to wear clothes of a different colour for each day of the week. As an example, white was worn on Sunday, yellow on Monday, green on Tuesday, red on Wednesday, blue on Thursday, black on Friday, violet on Saturday.[2]

The primary meaning of the dress next cited is not talismanic, but a suggestion of well-being. Its magical content is secondary, and it is therefore considered here particularly. The Chinese *siū i*, 'the garment for a long life,' is a long gown of valuable silk, blue or red-brown, with a lining of bright blue. It is embroidered all over with gold-thread characters, representing the word 'longevity.' 'It purports in the first place to prolong the life of the owner, who therefore frequently wears it, especially on festive occasions, in order to allow the influences of longevity, created by the many characters wherewith it is decorated, to work their full effect upon his person. On the anniversary of his birth he will scarcely ever neglect doing so, it being generally acknowledged among the Chinese that it is extremely useful and necessary then to absorb a good amount of vital energy, in order to remain hale and healthy during the ensuing year. Friends and kinsmen who throng the house to take part in the festivities will then, as a rule, greatly admire the dress and tender their reiterated congratulations to the happy wearer, whose children have been so filial, and so blessed by fate as to have bestowed a present of such delicate and precious description.' The longevity garment is generally the gift of children who are filial enough to wish their parent to live long. There is considerable ceremony about the presentation. The garment should be made if possible in a year which has an intercalary month; such a year naturally has an influence on length. In accordance with Chinese ideas about sympathy between ascendants and descendants, the garment also ensures long life to its wearer's posterity.[3]

In hunting, as in war, the human impulse is to emphasize personality. This is more powerful than the impulse to protection, though the two may be combined.

The Dayaks wear as war-dress a basket-work hat, *katapu*, and a jacket of skin or quilted cotton. The crown of the helmet is adorned with feathers or full plumes. The *gagong*, or war jacket of skin, has the animal's face on the wearer's stomach, and its back hanging over his shoulders. It is little defence, though the head is covered with a plate or shell to protect the pit of the stomach.[4]

The mere fact that in all periods social meetings are the occasion for the wearing of best clothes indicates the social significance of dress. Dress loses half its meaning except in relation to society. The principle of extension of personality refers to the individualistic aspect of dress; the principle of adaptation to state is its social side. The vaguely termed 'festival' of lower cultures is expressive of mutual well-wishing and of common well-being.[5] At festivals the Ainus dress in their best clothes. The statement applies to all peoples. The individualistic form of the social meeting is amphitryonic.

As is the rule with all peoples, the Guiana Indian, 'when expecting guests, grooms himself carefully and puts on his best dress and ornaments, these often, as in this case, consisting only of a narrow waist-cloth by way of dress and of a necklace and armlets of white beads by way of ornament.'[1]

A few types of festal dress may be cited from a variety which exceeds all other forms of human inventiveness—a fact which illustrates both man's physical pride and his tendency to shift its focus to an artificial and variable substitute.

The Manipuri festal head-dress is remarkable. 'A white turban is bound tightly round the head, and over the top and in front is wound round a *shumzil*, a horn-shaped construction of cane bound over with cloth or gold braid, and ending above in a loop and below in three flat loops which are concealed under the turban. The *shumzil* is over a foot high, and curves slightly backwards; from the loop at its end hangs an embroidered streamer. On each side of the head a plume made of peacocks' feathers and the tail feathers of the hornbill are inserted in the turban. . . . The whole structure is bound together by a narrow band of red and white embroidery, wound round and round and tied, under the chin, with ends hanging down nearly to the waist.'[2] On high days Tangkhul men wear a kilt, and the *luhup* head-dress adorned with toucan feathers and tresses of hair.[3] The Woolwa Indians wear on festal occasions coronets made of the curly head-feathers of the curassow, and on the arms, feathers of the macaw, or yellow tail-feathers of the *Ostinops montzuma*.[4] The women wear great masses of beads round the neck, sometimes occupying the whole space from the bosom to the chin. A petticoat of bark-cloth extends below the knee; it is wrapped round the loins, and the end is tucked in over the hip. The exposed parts of the skin are dyed a deep vermilion, the colour being extracted from the pod of the *arnotto* shrub.[5]

The Ackawoi wear for festivals a dress made of the bright, greenish yellow, young leaves of the Aeta palm (*Mauritia flexuosa*). The Macusi wears a head-dress of bright parrot and macaw feathers, a ruff of black curassow and white egret feathers, and a strip of waist-cloth, as a dancing dress.[6] At the feasts of the dead, Quoireng men wear a 'glory.' This consists of bands of yellow and red thread, one and a half inches wide, bound round the head. In them are fixed rays of bamboo with feathers inserted, the structure being eighteen inches in height.[7]

The dance is a social language, a motor expression of individuality in society. As a rule, best clothes are worn. Various circumstances often impose different fashions. For ceremonial dancing the Vedda puts on the *hangala*, a white cloth tied round the waist. Formerly leaf-girdles were used.[8] Probably such costumes are merely for the facilitation of movement. In other cases regard is paid to the dance as such. The female dancing dress of the Fulas is elaborate, made of velvet or ornamental cloth, sometimes decked with bells which sound in time to the music.[9]

Meetings of society in its magical or spiritual character are no less marked by fine clothes. The Qur'ān says: 'Wear your goodly apparel when ye repair to my mosque.'[10] The injunction applies to all religions, with the limitation (due to the difference between well-willing and well-being, and later to the distinction between worshippers and deity) that excess of luxury is forbidden or discouraged. Cleanliness of attire is regularly enjoined, originally, perhaps, for the avoidance not of defilement, material or supernatural, but of mixture of states.

Just as all sacrifice should be precious, so should a dress-wearing victim be well dressed. The human victim sacrificed by the Pawnees was dressed in the richest raiment.[11] The *meriah* of the Khonds was dressed in a new garment before the sacrifice, anointed, and adorned with flowers.[12] For scapegoats the case may be different. When the image of the god is clothed it necessarily wears the richest raiment (see below).

The connexion of fine dress with well-being, and the estimate of clothing as a necessary of existence,[13] are combined in the Hebrew belief that

Jahweh was the ultimate donor of food and raiment.[1] The teaching of Christ against 'taking thought' for raiment, illustrated by the natural dress of the lilies of the field,[2] was a wise protest against extravagance in the cult of this secondary body, and a timely rehabilitation of the body itself, no less than of the higher claims of personality.

Diminution of personality is symbolized by various customs of removing part of the dress. In India a low-caste man passing through a high-caste street must take off shoes and turban.[3] That the reason for such uncovering is not the assumption of an unprotected state, by removing a garment of defence, is shown by such a case as the following. All persons when interviewing Montezuma put off their usual costume and 'appeared in plain coarse dresses and barefooted.'[4] The modern European fashion of removing the hat is a salutation of respect of a similar order, and not a removal of defence.

A permanent inferiority of person or status is expressed by inferiority of dress.

'In Flores the sons even of rich families are dressed like slaves at public feasts, so long as the father lives, as also at his funeral. This . . . is apparently the external sign of a strict *patria potestas*, which remains in force till the funeral; until then the son is the father's slave.'[5] It is a very marked custom of the Mpongwe for the young to show deference to the old. 'They must never come into the presence of aged persons or pass by their dwellings without taking off their hats, and assuming a crouching gait.'[6]

An artificial assumption of humility may be employed to emphasize the succeeding magnificence, or to deprecate the ill-luck which may follow pride. For some days before marriage the bride and bridegroom among the Musalmāns of the N.W. Provinces wear dirty clothes.[7] Such practices may soon take on the ideas connected with disguise and protection from the evil eye. Similar, though of more obscure origin, is the custom, found in old English coronation ceremonies, that the king shall appear in poor garments before he is invested with the royal robes. German peasants dress a child in mean clothes to protect it against the evil eye. In Egypt the children who are most beloved are the worst clad. A fine lady may often be seen in a magnificent dress, with a boy or girl, her own child, by her side, with its face smeared with dirt, and wearing clothes which look as if they had not been washed for months. The intention is to avoid attracting the evil eye. The method employed is not disguise, but humiliation, negation of well-being, either deprecatory or to escape notice. The evil eye is stimulated by finery and splendour, and its constant emotion is envy.[8]

Penance and asceticism often coincide in method. Sackcloth is in this connexion the analogue of fasting and humiliation.

For penance, Manu prescribes clothes of cow-hair, with the wearer's own hair in braids.[9] Among the rules of penance in mediæval Christendom was the wearing of dirty clothes.[10] An ancient rule for Buddhist monks was that their dress should be made of rags taken from a dust-heap.[11] Early Christian ascetics disdained clothes, and crawled abroad 'like animals covered only by their matted hair.'[12] Hindu ascetics similarly practised nudity as the least of their mortifications, 'until British law interposed to prevent the continuance of the nuisance.'[13]

A curious question is raised by certain fashions of cleanliness in connexion with dress. Physical cleanliness is a habit which has undergone evolution, and the fact perhaps suffices as an explanation for the following cases.

The ancient Huns and Mongols, and the modern Kalmuks, are reported to avoid the washing of their clothes—in the last case, apparently, for religious reasons.[1] The Śūdras of the Carnatic never leave off a suit of clothes when once it has been put on. It drops off as it rots. The custom is said to have been religiously observed, and persons transgressing it and found changing garments before the old set was thoroughly decayed were excluded from the caste.[2] Jenghiz Khan ordered clothes to be worn till they dropped off in tatters. The wearing of clothes in this way is recorded of several peoples. Cold climates encourage such habits.[3] 'Poverty,' says Westermarck, 'is for obvious reasons a cause of uncleanliness; "a starving vulture neglects to polish his feathers, and a famished dog has a ragged coat."'[4] Cleanliness, again, is frequently 'a class distinction.' Among the Point Barrow Eskimo, as amongst many modern European nations, the poorer people are often careless about their clothes and persons, whereas 'most of the wealthier people appear to take pride in being neatly clad.'[5] Peoples who are much addicted to bathing are not on that account necessarily cleanly in habits of toilet and dress. The Californian Indians are fond of bathing, but are very uncleanly about their lodges and their clothes.[6] The case of the Australian native, who never takes off his girdle of hair, is rather different;[7] the analogy here is the non-removal of such articles as rings. Thus, while her husband is alive, no Masai woman dares to take off her ear-rings, which are part of the symbols of marriage.[8]

Ideas of ceremonial cleanliness have probably had an important collateral influence upon the evolution of habits of cleanliness. Some such idea as the avoidance of mixture of condition and environment may account for the origin of ceremonial purity, whereas during the early stages of the evolution of dress there seems to be no *a priori* reason why clothes, as such, should be periodically cleaned. The case of the Sabæans illustrates the connexion between cleanliness of dress and of person. The candidate for the priestly office is instructed not to dirty himself; and he must change his dress daily.[9] Given the existence of a natural impulse to personal and other cleanliness, its foundation being similar to that of ceremonial purity—an unconscious preference for clearness and distinctness in objects, a preference for the thing itself in its essential, specific, and individual, or unmixed, purity of character—asceticism, when, as is often the case, encouraging uncleanliness, is a biological perversion and a social danger. Early Christianity was largely tainted with this.[10] St. Jerome approves the observation of Paula, that 'the purity of the body and its garments means the impurity of the soul.'[11]

The ritual and emotional removal or tearing of dress is apparently derived from several motives. The Hebrew widow repudiating the levirate takes off her sandal and spits on the ground.[12] In Van Gennep's terminology this is a rite of separation from the husband's family. Among the ancient Arabs, women when mourning not only uncovered the face and bosom, but also tore all their garments. The messenger who brought bad news tore his garments. A mother desiring to bring pressure to bear on her son took off her clothes. 'A man to whom vengeance was forbidden showed his despair and disapproval . . . by raising his garment and covering his head with it, as was done in fulfilling natural necessities.'[13] Among the Chuwashes, Cheremiss, and Wotyaks, the husband effects divorce by tearing his wife's veil.[14] Similar customs, especially the rending of the garments to express indignation or repudiation, were prevalent among the Hebrews. The British

Columbian expresses indignation against a wrong by destroying a number of blankets, the native currency. His adversary is expected to destroy an equal number to satisfy honour and heal the quarrel.

The rending of garments is perhaps a development from the reflex impulse to destruction generated by anger, indignation, or despair. When it becomes symbolic it may take on the character of a rite of separation, the rending of the garment indicating the severance of a tie or the isolation of the person from calamity or injury. In the Hebrew custom the latter seems to be the prevailing meaning of the rite—a meaning which might naturally be superposed upon an original unconscious reaction to emotions of resentment or sorrow. Stripping, as an indignity or penance, is applied to any person. Thus, when his guardian-spirit fails to please him, the Eskimo will strip it of its garments.[1]

(5) *Dress of the dead.*—Like other states, death is marked and solemnized by a change of dress. In modern civilization, the corpse, whether embalmed or not, is swathed or loosely wrapped in linen or cotton cloths, and covered with the garment, if any, most typical of the dead person's official position. In particular cases, customs like that of placing the busby on the coffin involve the idea that official dress is more than individual personality, a special covering representing specialized social functions, whereas lay garments represent generalized.

Among earlier peoples it is the general rule to dress the dead person in his best clothes. Typical cases are the American Indians, Burmans, Tongkingese, Maoris, Greeks, and Chinese.[2] Careful washing and scrupulous toilette are no less significant and prevalent parts of the more or less ceremonial investiture of the dead.

Among the Tshi and Ewe peoples the dead body is washed, dressed in the richest clothes, and adorned.[3] The Yorubas dress the corpse in the best raiment. The exposed parts of a woman's body are dyed red. The body is wrapped not in clothes, but in grass mats.[4] Among the Koita of New Guinea the dead man is washed, oiled, and painted; a new loin-cloth and ornaments are put on him.[5] The Greenlanders undress a man when at the point of death, and put his best clothes upon him.[6] This detail recurs in China. The Hindus wash, shave, and dress the corpse in rich garments.[7]

According to Homer, the corpse was covered with a soft cloth, over which a white robe was placed.[8] The Greek dead were shrouded in the handsomest garments the family could afford; there was an idea of keeping them warm on the passage to Hades, and of preventing Cerberus from seeing them naked.[9] The modern Greeks dress the dead in best clothes, but these are rendered useless by being snipped with scissors or drenched with oil.[10]

The grave-clothes of a Chinese are arranged round his dying bed. His boots are by his feet, his hat by his head, and so on. He rejoices, in his last moments of consciousness, 'that he will be fashionably attired in the regions beyond the grave.' It was the old custom to strip the man of his clothes just before expiring, and to put the new clothes on, if possible, before death actually occurred.[11] The Chinese ritual of dressing the dead is most elaborate. The curious point is that the corpse is swathed almost as thickly as an Egyptian mummy, but in suits of clothes, not bands of cloth. A distinction is made between inner and outer garments, the former being specially prepared for wear in the grave, the latter being, as a rule, a person's best or favourite clothes. Five suits of garments are forbidden, because the number five is a synonym of evil.[12] Nine and thirteen are usual numbers. Even numbers symbolize the *Yin* part of Nature, cold, darkness, and evil; they are therefore avoided; and odd numbers typifying the opposite blessings are used.[13] Confucius was buried in eleven suits and one court dress; on his head was a *chang-fu* cap. But, in accordance with the ancient division of the dressing into three stages, the body-clothes, the 'slighter' dressing, and the 'full' dressing,[1] the eleven suits comprised the first stage only, and over them were the 'slighter' and the 'fuller' dressings.[2] The clothes are exhibited to those present before each suit is put on, and the very elaborate rules of the *Li-ki* about the dressing of the dead are followed.[3] Previously the best or favourite suit is placed round the dying man. Before being placed on the corpse, the clothes are put on the chief mourner. He is stripped, and stands on a tray resting on a chair, 'so as not to pollute the earth'; he wears a large round hat, 'so as not to pollute heaven.' Then each garment is put upon him in its proper order, and afterwards taken off and put on the corpse. In the case of a woman, the eldest son, as chief mourner, still has to put the clothes on.[4] The *Li-ki* explains the custom by the analogy of a dutiful son testing a medicine before his father drinks it.[5] As the dressing proceeds the mourners wail and 'howl.'[6] Wide drawers, lined, for comfort, with silk, are first put on. Stockings and a jacket follow. An ordinary jacket of linen, cotton, or silk, and trousers of the same material come next. A second jacket or even a third—the more there are the more devotion is expressed—may be added. When the body-clothes have been put on, the outer suits follow. The long blue gown of the middle class is a common type. It overlaps to the right, and is buttoned at the side. Over this is a jacket with short sleeves, extending, that is, only to the finger-tips; it is the kind of jacket used in winter as an overcoat. A common skull-cap of silk or horse hair, ordinary shoes and stockings, complete the suit. The costly silk clothes used on festive occasions are preferred by those who possess them. They represent the true sacerdotal attire of the paterfamilias, as high priest of the family.[7] These include an outer and an inner cloak, neither having a collar; the sleeves of the inner cloak project, and are of a horse-hoof shape. The inner is dark blue; for summer wear, white or yellow; the outer is dark blue or brown. A sash is worn round the waist. The boots are of silk. The winter suit alone is used for the dead, even in summer. Women wear their best embroidered clothes, such as the official dress of mandarins' wives, which is the regular bridal costume. It includes a dragon petticoat of green silk, a dragon mantle of red silk, a mantilla of black silk, and boots of red silk. The bride's hood, or phœnix cap, is a quarter-globe of thin twined wire, covered with butterflies, leaves and flowers of thin gilt copper, and symbols of felicity, joy, wealth, and longevity. Great care is taken with the coiffure.[8]

Such is the *tho phao*, attire of the dead. Women, as a rule, wear the 'longevity garment,' but men prefer the true 'sacrificial' robes, the *tho phao*.[9] One prepares them, 'the clothing laid out for old age,' at about the age of 50 or 60. They are preferably cut out and sewn by a very young woman, such a person being likely to live long, and part of her capacity to live 'must surely pass into the clothes, and thus put off for many years the moment when they shall be required for use.'[10]

If these clothes have ever been lent to a friend, not of one's own clan, they may not be used for their chief purpose. Another suit must be prepared. However it may happen, it is a curious fact that the grave-clothes are often cut carelessly, and merely pasted, not sewn.[11] Quite poor people use cheap mats. It is probably Buddhist influence that forbids the use of leather. Metal buttons may not be used, because metal is supposed to injure the body during decomposition.[12]

The Malays shroud the dead body in fine new *sarongs*, sometimes as many as seven.[13]

The bandages of the mummy are a development (for a particular purpose) from the use of the ordinary garments of life. In ancient Egypt the gods were invoked to grant clothing to the dead. The bandaging of the mummy corresponds in its ritualism very much, for example, with the Chinese dressing of the corpse. For instance, a sorrowing husband reproaching his wife for haunting him says: 'I have given clothes and bandages for thy burial. I have given to be made for thee many clothes.' The application of the swathes was 'a divine task.' In funeral rituals there are the chapters 'of putting on the white bandages,' 'of putting on the green,' and 'of the light red and dark red bandages.' The quantity used was a 'measure of the affection of the relatives.'[14]

As a type of simpler customs the following explains itself, and is significant for the whole theory of the subject:

The Samoyeds dress the corpse in the clothes he was wearing at death, and wrap the whole in birch bark or deer skins.[15]

Rare cases occur where derogatory garments are applied. The Avestan horror of death and its defilement sufficiently explains the following rule:

Zoroastrian law ordained 'clothing which is useless; this is that in which they should carry a corpse.' In the case of still useful clothing, which had been touched by a corpse, a very thorough and minute process of cleaning was applied.[16]

[16] 'Pahlavi Texts' (E. W. West), in *SBE* v. (1880) 269.

When preservatives are not applied to the grave-clothes, some peoples periodically renew them.

The bodies of the Ccapac-Incas were preserved and clothed, new clothes being supplied as required.[1] At stated periods the Malagasy open the tombs of their ancestors, removing the rotten *lambas* and rolling the bones in new ones.[2]

A simpler method is to place changes of raiment in the grave, just as other articles of use are there deposited.

In Vedic times, clothing and ornaments were placed with the dead for their use in the life to come.[3] The Chinese place clothes and silk in the grave, besides the numerous suits in which the dead man is clothed.[4] Clothing, according to Pahlavi texts, was to be put upon the sacred cake of the 'righteous guardian spirit'—both for its use in the other world.[5] The clothing and weapons deposited in the Kayan grave are of the highest value, no broken or damaged article being deemed worthy of a place.[6] On the other hand, many peoples render such articles useless by cutting or breaking them before deposition; and a principle commonly occurs that in this way the souls of the articles are released (as is the soul from the broken body of the dead man), and are thus able to accompany him to the place of the departed.

There is naturally some doubt as to the condition of the soul in its super-terrestrial home.

Thus the soul of the Mexican, at death, entered the new life naked;[7] whereas the soul of the dead Iroquois wears 'a beautiful mantle' when it departs towards the other world in the west.[8] The ghost is believed by Africans to wear the white cloth in which the body was buried.[9] But, as has been seen, the person in the life to come wears similar dress to what he wore on earth. There are refinements; Christian eschatology in its popular aspects is inclined to invest the blessed with fine raiment and crowns of gold.

As for the meaning behind these customs, there seems to be, as usual, a series of moral strata or psychological layers. Various emotions might be supposed to be in competition as soon as attention was directed to the dress of a man just dead. Other things being equal, and before ideas of contagion on the one hand and of a future life on the other had been developed, principles of property and feelings of sorrow would first come into play, together with the principle of dress as an adaptation to state.

Thus the Samoyed type may be one of the earliest. The corpse retains the garments he wore at death. He is prepared for the new state by the protective (both of external and of internal direction) covering of bark or similar substance, which takes the place of the coffin.

Sorrow and affection would make the stripping of the corpse an act impossible for relatives. As the various ideas relating to the state of the dead became clearer, regard would be had to the comfort of the dead. No less than the living they must have the two great necessaries, food and raiment. Naive examples of the idea are numerous.

For instance, the natives of New South Wales wrapped the corpse in a rug, for the purpose, expressed, of keeping the dead man warm.[10] In Voigtland peasants have been known to put an umbrella and goloshes in the coffin, as a protection against the rainy skies of the other world.[11]

Later still there would supervene the idea, of complex origin, that articles in the house of death must be, like the occupant, broken and soulless. One component of this idea is perhaps as early as any, namely, the realization that articles of value, permanently deposited in a place by no means secure, and practically known to be unused, should be rendered useless, to avoid robbery and the attendant distressing results of exhumation.

With the custom of dressing the dead in his richest raiment, and in many suits, the problem becomes less simple. First of all, as soon as the social consciousness realizes that death is a social state, and therefore to be solemnized, a change of garb is necessary. What are significantly termed in various languages 'the last offices' express this principle, as well as the feelings of sorrow and affection, and the desire to do honour to the dead, as for the last time. In such conditions it is inevitable that the best of everything should be accorded to him. But another factor perhaps is included in the complex psychosis, at least in the earlier stages. This is economic. In early culture, clothes are property. Just as a man's property is called in and realized at his death, so a similar process is universal in mankind. The dead man is still a member of society; and the most personal and most distinctive of his property fittingly remains with him—his personal attire. Equally fitting is it that this item should be of the best, as representing him in the last of his social functions. By a pathetic paradox he is arrayed in his best clothes, as if to assert his personality and to express it in its highest terms, for the last time, though actually that personality is no more.

It is not likely that the dressing in fine clothes to tempt the departing or absent soul to return has any reference in this connexion. The custom of using many suits of raiment, carried to logical absurdity by the Chinese, is one of those problems that elude all rationalism. There is the analogy of the mummy-swathings, which suggests that the suits may be intended as a protection; there is also an idea of placing on or with the corpse all his available assets. The custom of dressing the dead in their best clothes, as of placing food with them, has been explained by Frazer as originating 'in the selfish but not unkindly desire to induce the perturbed spirit to rest in the grave and not come plaguing the living for food and raiment.'[1] But the intellectual atmosphere which the explanation assumes is far from primitive or even from early thought. It represents a late, and somewhat abnormal or excessive, development of spiritualistic belief uncontrolled by social custom or dogma, in fact, an anarchic period of individualistic spiritualist licence.

The dress of the dead seems to preserve only in two or three details the principle of adaptation to state. The reason, no doubt, is that affection and other emotions naturally repudiate the physical actuality of that state, and substitute a moral ideal. But the binding of the corpse, or of its limbs, with cords or ropes, and the later swathing with bandages, accentuate the fact that the body is motionless and the limbs quiescent. At a later stage there might intervene the notion that by these means the possibly dangerous activity of the ghost would be checked. But social habits do not originate from such clear-cut rationalistic motives.

Some sporadic customs have probably an original intention that is not dissimilar. The Koreans fasten blinkers over the eyes of the corpse.[2] Various objects, coins and the like, are placed on the eyes of the dead by various peoples. Such habits, no doubt, were in origin intended unconsciously to emphasize, to realize by accentuation, the sightless state of the dead. With this intention is combined the necessity—both from subjective reasons of vague fear of the staring eyes, and from the natural though sympathetic impulse to close them—of mechanically depressing the eyelids after death. Possibly the custom of placing a mask over the face of the dead has a connected origin, as supplying, so to speak, like the swathings of the mummy, a permanent dermal surface over that which is destined to decay.

The ancient Aztecs, the earliest Greek peoples, the Aleuts, Shans, and Siamese, masked the faces of the dead, particularly of kings and chiefs.[3] In some cases, as those of the Greeks and the Shans, the mask is of gold or silver.

(6) *Mourning dress.*—The social significance of dress is well brought out in mourning customs, among which it is the most prominent. The variations are innumerable, but the principles involved are fairly clear. A few types only can be mentioned here.

Among the Masai, as mourning the wife puts off her ornaments, and the sons shave their heads.[1] As mourning, the Andamanese smear themselves with clay; ancient and modern Egyptians throw mud on their heads.[2] In China the near relatives wear a mourning dress of brown coarse sackcloth.[3] As regards other clothes, white is the colour of mourning. The Kiñahs of Borneo 'wear bark cloth round their caps (as we wear crape round our hats) to show they are in mourning.'[4] In New Guinea, women in mourning wear a net over the shoulders and breast. In some parts men wear netted vests; in others, 'when in deep mourning, they envelop themselves with a very tight kind of wicker-work dress, extending from the neck to the knees in such a way that they are not able to walk well.'[5] The Koita widow wears fragments of her dead husband's loin-cloth, locks of his hair, and bits of his tools, as a necklace. She is painted black, and wears a petticoat reaching to the ankles. Over the upper body she has two netted vests, the outer ornamented with seeds and feathers. A network cap is on her head. This costume is worn for six months, after which she is relieved of her mourning by the *robu momomo* ceremony, and the petticoat is burnt. The widower is also painted black all over.[6] Among the Roros, a neighbouring people of New Guinea, bones of the dead are worn by the mourners. A dead man's jaw is often worn as a bracelet.[7]

The principle of adaptation in colour is well exemplified. The most frequent colours used are black, white, dark blue, and the natural colours of, as a rule, cheap and common fabrics.

The mourning colour in Korea is that of raw hemp or string. For a year the mourner wears the well-known mourner's hat. Its shape is that of an enormous toadstool, and the face is completely hidden.[8] Among the Dayaks of Borneo, white, 'as being the plainest and most unpretending, is worn in mourning and during out-door labour; it is cheap and will wash.' Dark blue is the commonest colour for ordinary wear. A white head-dress is often worn in mourning.[9] Women wear as mourning a deep indigo blue *bidang* petticoat.[10] Among the Tlingits, mourners blacken their faces, and cover their heads with ragged mats.[11] Calabrian women put on a black veil at the moment when a death occurs. At sunset it is taken off.[12] Roman women put on black *pallæ* after a funeral. Black clothes as mourning are the fashion in ancient Greece and Italy, modern Greece, and modern Europe generally.[13] White mourning is recorded for Korea, Tongking, China, Siam, in Imperial Roma for women, and in various parts of modern Europe.[14] In old England, white scarves, hatbands and gloves were worn at the funerals of infants and the unmarried.[15] At Singapore a white sash is worn, but apart from this there is no mourning costume in Malaysia.

Mourners among the Tshi people wear dark blue clothes, which they assume as soon as the burial is over.[16] Among the Yorubas a dark blue head-cloth is worn.[17] Among the Ewes of Dahomey blue bait is worn, or merely a blue thread is placed round the arm.[18] This fashion is paralleled by the modern European custom of wearing a black band round the sleeve. In parts of Germany blue is worn as mourning by women, and in ancient and modern Egypt a strip of blue is worn round the head by women at funerals. Widows on the Slave Coast wear black or dark blue. Anne Boleyn wore yellow for Catherine of Aragon. Guatemalan widowers dyed themselves yellow.[1] Sophocles wore grey or dark blue clothes in mourning for Euripides. Grey was the mourning colour of the Gambreiotai.[2]

Simultaneous with change of dress are changes of bodily appearance, especially of the coiffure. The practice of cutting the hair short as a sign of mourning is extremely common. On the other hand, some peoples allow the hair to grow long, as the ancient Egyptians, the Hindus, the Chinese, and the Jews.[3]

Mourning as a social state is pre-eminently a suspension of social life; society is avoided, work is discontinued, and the mourner generally is under a ban. The degrees of mourning depend on the degrees of nearness to the dead. The period of mourning is frequently synchronous with the state of death; that is to say, it ends when the corpse is thoroughly decomposed. Throughout early thought there runs the idea that a person is not absolutely dead until every fragment of the viscera has disappeared. At the end of the time the state of ordinary life is re-entered in the usual way.

Thus, the Ewe people burn their mourning clothes and put on new raiment when mourning ends.[4] A widow among the Koossas, at the end of her month of mourning, threw away her clothes, washed her whole body, and scratched it with stones.[5] The last detail is probably merely an extraordinary method of purification. The period of tabu undergone by murderers among the Omahas might be ended by the kindred of the victim. The formula employed was, 'It is enough. Begone, and walk among the crowd. Put on moccasins and wear a good robe.'[6]

The prevalent explanations of mourning dress are based on the fear of the ghost and of the contagion of death. Frazer has suggested that the painting of the body and the wearing of special costumes by mourners are attempts to disguise themselves so as to escape the notice of the ghost.[7] Westermarck is of opinion that 'the latter custom may also have originated in the idea that a mourner is more or less polluted for a certain period, and that therefore a dress worn by him then, being a seat of contagion, could not be used afterwards.'[8] But such customs originate in unconscious motivation. Of course, concealment may be aimed at, unconsciously. But several considerations place the theory of disguise out of court. Savage philosophies seldom hit on correct explanations; being *ex post facto*, they are out of touch with origins. But they do refer to present conscious motives, which again may not be the underlying primary reason. The motive of disguise may often be superposed on some original unconscious motive, but the following case shows that the opposite may exist. In some of the Central Australian tribes it is said that the object of painting the body of a mourner is to 'render him or her more conspicuous, and so to allow the spirit to see that it is being properly mourned for.'[9] Again, the prevalent custom of wearing the clothes or the bones of the dead is an absolute negation of the principle of concealment. On animistic theory these appurtenances should attract the ghost.

Frazer notes that the customs of blackening the face and of cutting the hair after a death are observed not only for friends but for slain foes, and suggests that in the latter case the explanation of their use as being a mark of sorrow cannot apply. They may therefore, he adds, be explained as intended to disguise the slayer from the angry ghost of the slain.[10] The practice of blackening the body

with ashes, soot, and the like is found in America, Africa, New Guinea, Samoa, and very generally throughout the world.[1] The precise reason for the choice of this medium is obscure.

When spiritualism has once become a part of social belief, such views may enter into the complex of current motives without cancelling the deep-seated original motive of the unconscious mind. Mourning dress, for example, may take on the character of a spiritual armour, as a defence against the evil spirits who often act as a syndicate of death, removing and devouring the souls of the living.

At a Chinese funeral the grave-diggers and coffin-bearers tie their shadows to themselves by tying a cloth round their waists.[2] A Northern Indian murderer wraps himself up tightly. The Thompson Indian widow wears breeches of grass to prevent attempts at intercourse on the part of her husband's ghost.[3]

Similarly the principle of contagion may be superposed on the primary meaning of mourning costume.

Maoris who had handled a corpse were tabued, and threw away the special rags they had worn, lest they should contaminate others.[4] It is stated of the Greenlanders that, 'if they have happened to touch a corpse, they immediately cast away the clothes they have then on; and for this reason they always put on their old clothes when they go to a burying. In this they agree with the Jews.'[5] A Navaho who has touched a corpse takes off his clothes and bathes.[6] Such cases fall into line with other extensive groups of ceremonial observances. For example, at an annual festival the Cherokees flung their old clothes into a river, 'supposing then their own impurities to be removed.' A Maori, before entering a sacred place, which would *tapu* him, took off his clothes.[7] But the earliest peoples, like the Australians, actually cover themselves with, and otherwise assimilate, the contagion of death.

On the other hand, de Groot holds that mourning costume in China originated in the custom of sacrificing to the dead the clothes worn by the mourner. In the time of Confucius it was the custom for mourners to throw off their clothes while the corpse was being dressed.[8] But this view cannot be seriously entertained.

There are several considerations to be adduced by way of leading up to a more probable explanation. The complex of emotions produced by the death of a near relative may be supposed to be in the primitive mind composed of awe, sorrow, and, to some extent, indignation. In later culture the chief component is sorrowful affection, and mourning costume is regarded as a respectful symbol of this feeling. In the next place, the dead and the living together form a special society intermediate between the world of existence and the world of nothingness.[9] Again, the principle of adaptation to state has to be taken into account. This particular social state calls for particular solemnization.

'Mourning customs' (and, in particular, costumes), says Frazer, 'are always as far as possible the reverse of those of ordinary life. Thus at a Roman funeral the sons of the deceased walked with their heads covered, the daughters with their heads uncovered, thus exactly reversing the ordinary usage, which was that women wore coverings on their heads while men did not. Plutarch, who notes this, observes that similarly in Greece men and women during a period of mourning exactly inverted their usual habits of wearing the hair—the ordinary practice of men being to cut it short, that of women to wear it long.'[10] The Mpongwes are very fond of dress, but when in mourning a woman wears as few clothes as possible and a man none at all.[11]

This reversal of habit is better explained on the principles we have assumed than on the principle of disguise. Death is a violent break of social life; sympathetic adaptation to it necessitates an

equally violent suspension or reversal of ordinary costume. Such adaptation coincides with sorrow and indignation on the one hand, and with diminution or negation of personality on the other. A number of customs, of which the following is a type, confirms this. When a death occurs, Tshi women tear their hair and rend their clothes.[1] From this it is but a step to the assumption of torn or ragged clothes and a shorn coiffure. Sorrow and indignation prompt the mourner to tear and lacerate both his body and his external coverings; sympathy with the state so violently induced prompts him to deny or humiliate his personality; this motive is helped by sorrow. Absence of colour, as in the hue of black, or apparent absence, as in white, and variations of these, as dark blue or self-colour in fabrics, are material reflexes of this motive of self-negation, which also coincide with the symbolism of colour as light and life, and of absence of colour as darkness and death. A particular case is the adoption of an uncleanly habit. Dirty clothes, dirty skin, and unshaven face were the mourning characters of the Romans. The custom of blackening the face with ashes has perhaps the same meaning. In the primitive camp the most obvious medium for dirtying the person is, not the earth, but the ashes of the camp-fire, which with water form, as does coal-dust in coal-countries, a dye as well as a defilement.

A paradox similar to one already noted is the result of this adaptation to state; and sorrow, and with it an equally praiseworthy intention to honour the dead, are the feelings which produce it. The dead man is dressed in his best, arrayed like Solomon in all his glory; for the last time his personality is augmented to superhumanity, while his kin temporarily assimilate themselves to his actual state, socially substitute themselves for him, and practically negate and cancel their living personality and abrogate their social functions.

8. Nudity and dress.—When clothing is firmly established as a permanent social habit, temporary nudity is the most violent negation possible of the clothed state. Ceremonial nudity is a complex problem, but the idea of contrast, of an abnormal as contrasted with a normal state, may go far to explain many of its forms. At ceremonies of fumigation the Malay takes off his *sarong*.[2] Such cases are no doubt to be explained in the obvious way; the purificatory influence has more effect when the body is stripped of all coverings. But other examples of the practice are more obscure.

In time of drought, Transylvanian girls strip naked when performing the ritual for rain.[3] In India the practice is regular.[4] To make rain, Kabui men go on the roof of a house at night, and strip themselves of all clothes. Obscene language is interchanged.[5] To induce rain to fall, Ba-Thonga women strip themselves naked.[6] Baronga women, to make rain, strip themselves of their clothes, and put on instead leaf-girdles or leaf-petticoats and head-dresses of grass.[7] At a festival of Sarasvati, Bengali students danced naked. A Gujarāt mother whose child is ill goes to the goddess's temple at night, naked, or with only a girdle of *nim* (*Melia*) or *asopalo* (*Polyalthea*) leaves.[8]

The principle in the above seems to be that a violent change in the course of Nature may be assisted by a violent change of habit on the part of those concerned. It is adaptation to the desired contrast by instituting a contrast in the officiators. The use of obscene language is, like nudity, a break with the habits of normal life. The use of leaf-girdles is probably no survival of a primitive covering, but merely a method of toning down the

violence of the extraordinary state. Similarly, the idea of nakedness is often satisfied by the removal of the upper garment only. Ideas of fertility and outpouring as connected with leaves and with the genital organs are probably later.

The whole subject is illustrated by the following:

The headman of certain New Guinea tribes becomes holy before the fishing season. Every evening he strips himself of all his decorations, a proceeding not otherwise allowed, and bathes near the location of the dugongs.[1] An Eskimo may not eat venison and walrus on the same day, unless he strips naked, or puts on a reindeer skin that has never been worn in hunting the walrus. Otherwise his eating gives pain to the souls of the walrus. Similarly, after eating walrus he must strip himself before eating seal.[2]

The principle of assimilation to special circumstances is here conspicuous. Possibly in the New Guinea example the later extension of the principle to assimilation by contact is involved.

Dress being, as will be more fully illustrated below, not only essentially a social habit, but one of the most distinctly social habits that have been evolved, the public removal of garments and nudity generally come under the regulation of custom and law. Dress, like other habits, is a second nature, and social inertia may fix it more securely; hence such curiosities of legalism as the pronouncement of Zoroastrian law, that it is a sin to walk with only one boot on.[3]

The sexual instincts of modesty and attraction give life to the idea of dress, and a balance is seldom exactly attained between them and legalism. In modern times the missionary movement has practically corrupted many a wild race by imposing upon them, as the most essential feature of Christian profession, the regard for clothing developed in a cold climate among peoples inclined to prudery and ascetic ideals; hence a factitious sentiment of hypocritical decency. In other races, legalism has evolved similar conditions.

In Uganda it is a capital offence to strip naked.[4] In most European countries 'exposure of the person' is a criminal offence. The Roman Catholic Church taught, and still teaches in convent schools, that it is wrong to expose the body even to one's own eyes.[5] 'Moslem modesty was carried to great lengths, insufficient clothing being forbidden. . . . The Sunna prescribes that a man shall not uncover himself even to himself, and shall not wash naked—from fear of God, and of spirits; Job did so, and atoned for it heavily. When in Arab antiquity grown-up persons showed themselves naked, it was only under extraordinary circumstances and to attain unusual ends.'[6] These latter have been illustrated above.

Such excess of the idea of decency renders still more powerful both the magical and the superstitious use of nudity and also its sexual appeal. In the sphere of art it may be the case that peoples accustomed to nakedness, like the Greeks, employ it as a regular subject for artistic treatment, but it does not necessarily follow that it is better understood than among peoples not so accustomed. It lacks the force of contrast. Similarly in the sexual sphere, both natural modesty and natural expansion may be enhanced by the artificial limitations of decency. In this respect dress plays an important part in social biology. By way of showing the contrast, the African and the European conditions may be sketched.

Of the Wa-taveita, Johnston remarks: 'Both sexes have little notion or conception of decency, the men especially seeming to be unconscious of any impropriety in exposing themselves. What clothing they have is worn either as an adornment or for warmth at night and early morning.' Of the Wa-chaga he observes: 'With them indecency does not exist, for they make no effort to be decent, but walk about as Nature made them, except when it is chilly, or if they wish to look unusually smart, in which cases they throw cloth or skins around their shoulders.'[7]

Among Englishmen, a race very observant of the decencies of civilization, Herrick is fairly typical. His attitude to sexual dress is thus described by Havelock Ellis: 'The fascination of clothes in the lover's eyes is, no doubt, a complex phenomenon, but in part it rests on the aptitudes of a woman's garments to express vaguely a dynamic symbolism which must always remain indefinite and elusive, and on that account always possess fascination. No one has so acutely described this symbolism as Herrick, often an admirable psychologist in matters of sexual attractiveness. Especially instructive in this respect are his poems, "Delight in Disorder," "Upon Julia's Clothes," and notably "Julia's Petticoat." "A sweet disorder in the dress," he tells us, "kindles in clothes a wantonness"; it is not on the garment itself, but on the character of its movement that he insists; on the "erring lace," the "winning wave" of the "tempestuous petticoat."'[1] Herrick, of course, is dealing with the dynamic quality of dress, but its static meaning is hardly less explicit in the English and European mind.

The significance of dress as an expression of the body will be referred to below in the sexual connexion. Meanwhile the general idea thus illustrated may be regarded as the norm in modern civilization. Its opposite or complementary is the increased value given to legitimate nudity. A movement is even proceeding, particularly in Germany, for an extension of this individual privilege into a restricted and occasional social habit—the so-called *Nacktheit* movement.

Such tendencies coincide with the twofold attitude towards the human organism which dress has emphasized—regard for the body in itself and regard for its artificial extension. Periodic social phenomena accentuate one or the other aspect. The Spartan practice of nudity in athletics was based on a reasoned theory of health from exposure and of purity from knowledge. The Papuans have been said to 'glory in their nudeness, and consider clothing fit only for women.'[2] Temporary nudity, when in obedience to natural impulse, should be regarded not as a reversion,[3] still less as a survival of a primitive state, but as a rhythmical movement. The point is well illustrated by the use of nudity as a love-charm.[4]

9. Dress and social grade.—Dress is the most distinctive expression in a material form of the various grades of social life. The biological period thus becomes a social period of existence, and the individual is merged in a functional section of the community. The assumption of a grade-dress is, whether explicitly or implicitly, *ipso facto* a social rite—in Van Gennep's term, a rite of aggregation.[5]

(1) *Childhood.*—The swaddling-clothes of infants have their analogue in the earliest cultures, in the form of various modifications of the papoose-system. In this the reasons of protection and cleanliness are obvious. After earliest infancy the children of primitive peoples are quite naked in the warmer climates. Clothing proper is first assumed either at puberty or at the age of six or seven. Probably the former date represents an earlier stratum of fashion. Children, whether first clothed at the earlier age or not, assume adult costume at puberty.

In the New Hebrides, girls and boys are naked till five years of age.[6] Among the Veddas dress is assumed at the age of six or seven.[7] Children of well-to-do Hindus are naked till the third year, those of the poor till about six or seven.[8] Running about uncovered, say the Zoroastrian texts, is no sin, up to the age of 15; and it is no sin to be without the sacred girdle till that age.[9]

In cold climates, where the constant purpose of dress is protection, differences of juvenile and adult costume may be reduced. For example, Samoyed children 'are dressed precisely as their parents, sex for sex.'[10]

There is little to notice in the matter of coiffure in the child-stage. Cases like the following are exceptional:

Young Nāga children have the hair shaved. When a girl is of marriageable age it is allowed to grow long.[11]

(2) *Maturity.*—Examples of the ritual assumption of the adult garb may be confined to a few types.

In Florida (Melanesia) the male 'wrapper' is assumed with some ceremony at the age of six or seven. In Santa Cruz the adult male dress is ample. Its assumption is celebrated by a feast and pig-killing. Big boys whose parents are too poor to give a feast may be seen going about naked. The custom in the New Hebrides is the same, and after assumption the boy begins to be reserved towards his mother and sisters.[1] The Koita boy of British New Guinea receives his *sihi*, loin-cloth, from his maternal uncle, *raimu*, to whom in return he owes certain services, such as a share of any fish or animal he kills. The *raimu* makes the cloth, and puts it on the boy in the presence of the relatives on both sides of the family, who then eat together.[2] A similar ceremony of investiture at puberty is practised by the Koro tribes.[3] The last initiation of a New Hebrides boy is the investing of the belt. This is a broad band of nutmeg bark about six inches wide, encircling the waist twice and confined by a small strip of plaited grass. 'An underneath strip of grass cloth or calico supports the very scanty clothing' of the natives. The belt is therefore an ornament, corresponding to the *toga virilis*, but usually not attained (from inability to provide pigs for the feast) until a man is twenty or older.[4] The old Japanese made a ceremony for the 'breeching' of boys and the 'girdling' of girls.[5]

The Hindu *upanayana* is the investiture with the sacred thread, which renders a man 'twice-born,' and before which he is not, in religion, a 'person,' not, as it were, individualized, not even named. The thread is of three slender cotton filaments, white, and tied in a sacred knot, *brahma-granthi*, each of the three consisting of three finer filaments. It is consecrated by *mantras*, and holy water is sprinkled upon it. The wearer never parts with it. As the Catholic priest changes his vestments, so the Brāhman alters the position of the thread. When he worships the gods he puts it over his left and under his right shoulder; when he worships ancestors, the position is reversed; when he worships saints, it is worn like a necklace.[6] The earliest mention of this sacred cord, *yajñōpavita*, of the Brāhman, is perhaps in the Upanisads.[7] Worn over the left shoulder, its position is altered according to the particular act in which the wearer is engaged. This *yajñōpavita* is of one skein when put on the youth: when he is married it must have three, and may have five skeins. An imitation cord is put on first, then taken off and the real one placed in position. Then the father covers his own head and that of his son under one cloth and whispers the Gāyatrī prayer. A new cord is put on every year at the festival in *Śrāvaṇa*. If one touches a Pariah, the cord must be replaced. The Sannyāsi, having entered the fourth or last stage of the Brāhman's life, does not wear the *yajñōpavita*.[8] Manu says that the first birth of a Hindu is 'from his natural mother, the second happens on the tying of the girdle of Muñja grass, and the third on the initiation to the performance of a Śrauta sacrifice.'[9] 'Birth' in such contexts as the assumption of the adult state is an almost universal metaphor. In many well-known instances the metaphor itself has been translated into ritual, as being a convenient and impressive mode of affirming the change. But neither the metaphor nor the idea of re-birth is the ultimate reason of initiation ceremonies.

The sacred thread-girdle, the *kōsti*, worn by every member, male and female, of the Zoroastrian faith, after the age of 15, is a badge of the faithful, a girdle uniting him or her to Ormazd and his fellows. Bread and water were to be refused to all who did not wear it. It must be made not of silk, but of goat or camel hair; of 72 interwoven filaments; and it should 'three times circumvent the waist.' The other garment necessary to salvation was the *sudara*, or sacred shirt, a muslin tunic with short sleeves, worn high, not lower than the hips. At its 'opening in front' is a pocket, 'the pocket for good deeds.' When putting it on the faithful looks at the pocket, asking himself whether it is full. Both shirt and girdle are to be kept on during the night, 'for they are more protecting for the body, and good for the soul.' To wear the girdle is to gird one's loins 'with the Religion.'[10]

The distinctive garb of the Athenian *ephebos* was the *chlamys*. It was ceremonially assumed. The Roman boy at sixteen laid aside the *bulla* and the *toga prætexta*, and assumed the white toga of manhood, *toga pura* or *virilis*. The page in mediæval chivalry was made a squire at fourteen. At twenty-one knighthood followed, and new white robes were ceremonially assumed, with a satin vest and a leather collar, over the suit of mail. The Nāga kilt is not assumed till puberty.[11] At puberty the Chaco girl is decorated, and for the first time wears the longer skirt of the women.[12]

There are, of course, exceptions to the rule that the assumption of social dress is a rite. Thus the Mekeo tribes have no ceremony in connexion with the assumption of the male band or the female petticoat.[1] Elsewhere the rite involves such usual complications as the following. Before a boy is circumcised, the Masai father puts on a special dress, and lives secluded in a special hut. On his return he drinks wine and is called 'father of So-and-so.' Then the operation takes place.[2] The designation of the father points to the fact, expressed by the dress, that fatherhood, as elsewhere, is a special social grade.

In many examples there is a distinctive dress worn during the marginal stage of initiation, and discarded at the end for the adult dress proper.

Thus, during the initiation of a Kamilaroi youth he was invested with a kūt of wallaby skin, suspended in front by a girdle. It is described as a 'badge.'[3] The West African boy at initiation is naked and smeared with clay. He may wear a cap of bark, hiding his face. Often he pretends at the conclusion of the sequestration to have forgotten everything and to know nothing.[4] At initiation A-kamba girls wear goat-skins.[5] The Déné girl at puberty wore 'a sort of head-dress combining in itself the purposes of a veil, a bonnet, and a mantlet. It was made of tanned skin, its forepart was shaped like a long fringe, completely hiding from view the face and breasts; then it formed on the head a close-fitting cap or bonnet, and finally fell in a broad band almost to the heels. This head-dress was made and publicly placed on her head by a paternal aunt, who received at once some present from the girl's father. When, three or four years later, the period of sequestration ceased, only this same aunt had the right to take off her niece's ceremonial head-dress. Furthermore, the girl's fingers, wrists, and legs at the ankles and immediately below the knees were encircled with ornamental rings and bracelets of sinew intended as a protection against the malign influences she was supposed to be possessed with.'[6]

Entrance into the grade of social puberty is generally equivalent to nubility.

Among the Tshi-people a girl announces her eligibility for marriage by dressing up and wearing ornaments. She is escorted through the streets, under an umbrella.[7] Infant betrothal complicates this. In the Northern New Hebrides a girl betrothed in childhood wears nothing except on great occasions. When growing up she is clothed, but in the house wears only the *para*, or fringe. In the New Hebrides generally clothing and tatuing are a step towards the marriage of a girl.[8] The Nāga youth, however, is nude until marriage. Only then does he assume the loin-cloth.[9]

Frequently a special dress or modification of the adult dress marks a distinction between maturity and nubility.

Among the Koita of New Guinea tatuing is confined to the women. When a girl is engaged, the region between the navel and the neck, hitherto untouched, is tatued. Just before marriage the V-shaped *gado* is tatued between the breasts.[10]

The passage from childhood to youth, and from youth to nubility, is often marked by a change in the mode of wearing the hair.

As an example, among Nāga women the coiffure is a mark of status.[11] When children, Reharuna girls have their heads shaved, except for the front and a tuft on the crown; at puberty, the hair is allowed to grow, and is worn in chignon-form; when married, they divide the hair into two large plaits hanging down the back; when they become mothers, they wear these plaits over the breast.

(3) *Sexual dress.*—The assumption of dress to initiate the social grade of maturity is the assumption of a social sexual differentiation. The most distinctive social division is the permanent division of sex. Up to puberty this is more or less ignored, and the neutral quality of the previous stage is often indicated by the neutral connotation of the term 'child,' and by a neutral fashion of child-dress. It is natural that the growth and maturity of the primary sexual characters should give these a prominent place in the principles of the distinguishing garb, and that they should, as it were, mould the dress into adaptive forms. The idea of social sexuality is well brought out in the stories of

children failing to distinguish girls from boys when nude. The adaptation of the distinctive feminine and masculine garments, skirt and trousers, to the activity of the respective sexes has already been referred to. The main idea of dress as a material expression in a social form of the psychical reflexes from personality, and, in this case, sexuality, has here particular prominence. To regard the affirmation, by means of dress, of primary sexual characters as intended to attract the attention of the other sex by adorning them is a superficial view. Such intention is secondary, though, of course, it has an important social bearing. Goethe's remark is in point for the consideration of dress as an affirmation of personality: 'We exclaim, "What a beautiful little foot!" when we have merely seen a pretty shoe; we admire the lovely waist, when nothing has met our eyes but an elegant girdle.'

Special cases of an intensification of sexual characters may be illustrated by the following:

A type of female beauty in the Middle Ages represents forms clothed in broad flowing skirts, and with the characteristic shape of pregnancy. 'It is the maternal function, . . . which marks the whole type.'[1] The type possibly survived in 'that class of garments which involved an immense amount of expansion below the waist, and secured such expansion by the use of whalebone hoops and similar devices. The Elizabethan farthingale was such a garment. This was originally a Spanish invention, as indicated by the name (from *verdugardo*, 'provided with hoops') and reached England through France. We find the fashion at its most extreme point in the fashionable dress of Spain in the seventeenth century, such as it has been immortalized by Velasquez. In England, hoops died out during the reign of George III., but were revived, for a time, half a century later, in the Victorian crinoline.'[2] It is curious, but not exceptional to the view here expressed—it is, in fact, corroborative of it, because of the necessity of emphasizing feminine characters which is characteristic of the class—that this, like most other feminine fashions in dress, was invented by courtesans. The crinoline or farthingale is the culmination of the distinctive feminine garment, the skirt, as a protection and affirmation of the pelvic character.

Augmentation of the mammary character is similar. In mediæval Europe an exception is found in a tendency to the use of compressing garments. The tightening of the waist girth is a remarkable adaptation, which emphasizes at one and the same time the feminine characters of expansion both of the breasts and of the abdominal and gluteal regions. 'Not only does the corset render the breasts more prominent; it has the further effect of displacing the breathing activity of the lungs in an upward direction, the advantage from the point of sexual allurement thus gained being that additional attention is drawn to the bosom from the respiratory movement thus imparted to it.'[3] The development of the corset in modern Europe has been traced from the bands, or *fasciæ*, of Greek and Italian women. The tight bodices of the Middle Ages were replaced in the 17th and 18th centuries by whalebone bodices. The modern corset is a combination of the *fascia* and the girdle.[4]

In the sphere of masculine dress and the affirmation by its means of sexual characters, it is sufficient to note two mediæval fashions:

The long-hose which superseded the barbarian trews and preceded the modern trousers emphasized most effectively the male attribute and social quality of energy and activity as represented by the lower limbs, the organs of locomotion. The *braguette*, or codpiece, of the 15th and 16th centuries is an example of a protective article of dress, originally used in war, which became an article 'of fashionable apparel, often made of silk and adorned with ribbons, even with gold and jewels.'[5] Its history supplies a modern repetition of the savage phallocrypt, and throws light on the evolution of the ideas of dress.

With regard to secondary sexual characters, sexual dress, itself an artificial secondary sexual character, carries on various adaptations. 'The man must be strong, vigorous, energetic, hairy, even rough . . . the woman must be smooth, rounded, and gentle.'[6] These characters are echoed in the greater relative coarseness and strength of fabric of masculine dress, and the softness and flimsiness of feminine. 'A somewhat greater darkness of women is a secondary . . . sexual character;[7] in this connexion a harmony is unconsciously aimed at; the tendency is for men to wear darker, and women lighter clothes. Women tend to 'cultivate pallor of the face, to use powder,' and 'to emphasize the white underlinen.'[1] The attraction of sexual disparity, so important in sexual selection, reaches its culmination in the matter of clothing, and

'it has constantly happened that men have even called in the aid of religion to enforce a distinction which seemed to them so urgent. One of the greatest of sex allurements would be lost and the extreme importance of clothes would disappear at once if the two sexes were to dress alike; such identity of dress has, however, never come about among any people.'[2]

The assumption of sexual dress at maturity raises the question of the original meaning of special coverings for the primary sexual characters. Their probable origin in an impulse towards protection against the natural environment has been suggested. When dress becomes more than a mere appendage and produces the reaction of an affirmation of personality, its meaning inevitably becomes richer. The decorative impulse and sexual allurement take their place in the complex. But the chief, and the distinctively social, factor is always that of affirming by a secondary and artificial integument the particular physiological stage which society transforms into a human grade of communal life. This is well illustrated by such facts as the frequent absence of the skirt, for example, until marriage, and, more significantly, until pregnancy or motherhood. In other cases, as in the frequent confinement of sexual covering to the mammary region, the principle is still logically followed. Thus, among many negro peoples, as the natives of Loango, women cover the breasts especially.[3] Nāga women cover the breasts only. They say it is absurd to cover those parts of the body which every one has been able to see from their birth, but that it is different with the breasts, which appear later.[4]

The evolution of sexual dress involves some side-issues of thought and custom which are not without significance.

The harmony between the ideas of sexual dress and its temporary disuse for natural functions is brought out in many customs and aspects of thought. The following is an instance:

The Mekeo tribes of New Guinea have folk-tales of which the motive is that a man surprising a girl without her petticoat has the right to marry her. After any marriage it is still the custom for the husband to fasten ceremonially the bride's petticoat.[5] The ceremonial loosing of the virgin zone embodies similar ideas.

Savage folklore is full of stories connected with disparity of sexual dress. Difference of custom in different peoples leads to comment when coincidences occur. The Dinka call the Bongo, Mittoo, and Niam-Niam 'women' because the men wear an apron, while the women wear no clothes whatever, getting, however, daily a supple bough for a girdle.[6] Sexual disparity, natural and artificial, has often led to speculation.

Repudiating the sexual element, Clement of Alexandria argued that, the object of dress being merely to cover the body and protect it from cold, there is no reason why men's dress should differ from women's.[7] The Nāgas of Manipur say that originally men and women wore identical clothes. The first human beings were seven men and seven women. 'By way of making a distinction the man made his hair into a knot or horn in front; the woman behind. The woman also lengthened her waist-cloth, while the man shortened his.' As a fact the *dhoti*, loin-cloth, is still the same for both sexes though worn in different ways.[8] The waist-cloth differentiates in evolution very simply into either *dhoti* or skirt, both being fastened in the same way, and differing only in length.[9] It is probably a similar accident of national fashion that makes the 'longevity garment' of the Chinese identical for both sexes.[10]

Spinning, weaving, dress-making, and connected arts have been the work of women until modern

times. Before the rise of organized industry, every family was self-sufficing in the production of clothes for its members. Washing and repairing have been also women's work, equally with cookery. In barbarism, as among the Chaco Indians, all the making of clothes is done by the women. The men's large and cumbersome blankets each take four months to weave.[1]

In the lowest stages each adult prepared and looked after his or her attire. As soon as manufacture began with bark-cloth, the preparation of the material devolved upon women, like other sedentary and domestic arts; but, since the style of the dress depended not upon measurement and cut, but upon folds and draping, women were not actually the makers of dress. In the ancient civilizations the slave-system of industry was applied in two directions. Skilled male artists were employed irregularly by the luxurious; while the regular method of domestic manufacture came to include dress-making and tailoring. Among the ancient Greeks and Italians the making of clothes was carried on in the house by the female slaves under the superintendence of the lady of the house. This system gradually gave way to external production, though female attire still retained its claims upon domestic art up to modern times.

In modern civilization the broad distinction of sexual dress has reasserted itself in the sphere of occupation. The dress of men is prepared by men, that of women by women. Special knowledge rendered this inevitable, as soon as cut and shape superseded draping in both female and male attire. But, as in other arts, the male sex is the more creative, and the luxurious women of modern society are largely catered for by male dressmakers.

In the majority of modern nations the care and repair of the clothes of the family is part of the domestic work of women. The washing of clothes is usually women's work. Yet in Abyssinia it is the man who washes the clothes of both sexes, and 'in this function the women cannot help him.'[2] In the sphere of industry Chinese men provide another exception.

(4) *Wedding garments.*—The sexual dress is at marriage intensified by the principle of affirmation, not of sexuality, but of personality. It is an occasion of expansion, of augmentation; as the social expression of the crisis of love (the culmination of human energy and well-being), it is precisely adapted. Often, for example, the pair assume super-humanity, and are treated as royal persons. A special and distinctive dress for the bride is a widely spread fashion. As a rule, the bride herself is supposed to make the dress. With marriage, housekeeping begins, and, as in Norway, Scotland, India, and elsewhere, the bride supplies the household linen, often including the personal linen of the husband. The variety of wedding dress is endless. Frequently each family supplies the other.

In North India the bride's dress is yellow, or red—colours which 'repel demons.' The Majhwār pair wear white, but after the anointing put on coloured clothes.[3]

English brides wear a white dress. So did Hebrew brides. Old English folklore directed that a bride must wear 'Something old, something new, something borrowed, something blue.'[4] The Hindu bridegroom supplies the cloth for the wedding robes of the bride. The fact is (see below) that there is among the Hindus, not merely a dowry, but an interchange of gifts; furniture and clothes being the principal components. When presented, the clothes are put on; this forms a preliminary marriage-ceremony.[5] The gorgeous flowered embroidery, *phulkāri*, of the Jāts is prominent in their wedding dress.

Magnificence, generally, is the characteristic of wedding garments throughout the world; white is frequent, as an expression of virginity. Red is often used, as an unconscious adaptation to the circumstances of expansion.

Special garments or specialized forms of garments are less common than 'best clothes' and ornament.

The Korean bridegroom elect, often betrothed at the age of five, wears a red jacket as a mark of engagement.[1] On the day before marriage the Roman bride put off the *toga prætexta*, which was deposited before the Lares, and put on the *tunica recta* or *regilla*. This was woven in one piece in the old-fashioned way. It was fastened with a woollen girdle tied in the knot of Hercules, *nodus Herculeus*.[2] In European folklore an analogue is to be found in the true lovers' knot, the idea being a magical and later a symbolical knitting together of the wedded pair. The hair of the bride was arranged in six locks, and was ceremonially parted with the *cœlibaris hasta*. She wore a wreath of flowers, gathered by her own hands.[3]

Some cases of investiture follow.

On the wedding night the bride of the Koita people is decorated. Coco-nut oil is put on her thighs. She wears a new petticoat. Red lines are painted on her face, and her armlets are painted. Her hair is combed and anointed with oil, and in her locks are scarlet *hibiscus* flowers. The groom wears a head-dress of cassowary feathers; his face is painted with red and yellow streaks, and his ears are decorated with dried tails of pigs.[4] The Hindu at marriage is invested by the bride's parents with the two additional skeins necessary to make the full complement of the *yajñōpavita*, the sacred thread, of the married man.[5] The Javanese bridegroom is dressed in the garments of a chief. The idea is 'to represent him as of exalted rank.'[6] The Malays term the bridegroom *rajasahari*, the 'one-day king.'[7] The dressing up of both bride and groom and all parties present, for the bridal procession of the Minangkabauers, is very remarkable.

The bridal veil, originally concealing the face, occurs in China, Korea, Manchuria, Burma, Persia, Russia, Bulgaria, and in various modified forms throughout European and the majority of great civilizations, ancient and modern. In ancient Greece the bride wore a long veil and a garland. The Druse bride wears a long red veil, which her husband removes in the bridal chamber. An Egyptian veil, *boorko*, conceals all the face except the eyes, and reaches to the feet. It is of black silk for married and white for unmarried women.[8] Various considerations suggest that the veil is in origin rather an affirmation of the face, as a human and particularly a sexual glory, than a concealment, though the emphasizing of maidenly modesty comes in as a secondary and still more prominent factor. The veil also serves as an expression of the head and the hair. These are also augmented by various decorations.

The wedding dress often coincides with, or is equivalent to, the grade-dress of the married.

The *stola* as a badge of lawful wedlock was the distinctive garment of ancient Roman wives.[9] It was an ample outer tunic in design, and possibly is to be identified with the bridal *tunica recta*. Among the Hereros, after the wedding meal, the bride's mother puts upon the bride the cap and the dress of married women.[10] The 'big garment,' ear-rings, and the iron necklace distinguish Masai married women from girls.[11]

Further social stages are marked by distinctive dress, such as pregnancy, motherhood, and, more rarely, fatherhood.

As soon as a Wa-taveita bride becomes pregnant, 'she is dressed with much display of beads, and over her eyes a deep fringe of tiny iron chains is hung, which hides her and also prevents her from seeing clearly.' An old woman attends her, 'to screen her from all excitement and danger until the expected event has taken place.'[12] Among Cameroon tribes is found the custom of

girls remaining naked until the birth of the first child[1] (see above). The bride in South Slavonia used to wear a veil until the birth of the first child.[2] When the birth of twins takes place, the Herero parents are immediately undressed, previously to being specially attired. The detail shows the importance of immediate assimilation to the new state.

After childbirth the mother passes through a stage of recovery, of isolation, with her babe, often expressed by a costume. At its end she assumes the costume of normal life which has been temporarily suspended, or a special costume of her new grade of maternity.

(5) *Secondary social grades.*—The distinction of dress is carried into all divisions of society that are secondary to the biological. In India the various castes wear clothes differing both in colour and in cut.[3] In ancient times the law was that the Śūdra should use the cast-off garments, shoes, sitting-mats, and umbrellas of the higher castes.[4] All Brāhmans, as all members of each caste, dress alike, except as regards the quality of material.[5] The turban in India, borrowed from the Musalmāns, is folded differently according to caste.[6]

The chief epochs in military uniform are marked by metal-armour, which, when rendered obsolete by fire-arms, gave place to the other component, splendour or gaudiness; and lastly, in recent years, by adaptation, for concealment, to the colour of the country.[7] Amongst the Nahuas the standing of warriors was marked by distinctive costumes. The sole test for promotion was the capture of so many prisoners.[8] A secondary motive of splendour in uniform is illustrated by the grotesque costumes often worn in barbarism, in order to strike terror into the enemy. The Nāgas wear tails of hair, which they wag in defiance of the foe. The hair of the head is long and flowing, and is supposed to be useful in distracting the aim.[9]

The investiture of a knight in the period of chivalry was practically a sacrament, and the arms were delivered to him by the priest.[10] Even in the mimic warfare of the tournament, the armour was placed in a monastery before the jousting began.[11]

The so-called secret societies of the lower cultures have their closest parallel in the masonic institutions. Mediæval gilds and similar corporations, together with the modern club, are, apart from special purposes, examples of the free play of the social impulse. At the initiation to the Duk-Duk secret society of New Britain the novice receives a ceremonial dress; this terminates the process.[12]

Throughout barbarian and civilized history professions and offices of every kind have followed the rule of a distinctive costume. Various factors in social evolution tend to reduce these differences in Western civilization by an increasing use of mufti on official occasions, but the inertia of such professions as the legal resists this. In the East, on the other hand, European dress invades the ancient culture, but the assimilation is still problematic. To the Mandarin, for instance, his dress is a second nature.

(6) *The dress of sanctity.*—One of the longest and most varied chapters in the history of dress is that dealing with the garb of permanent sacred grades, priestly, royal, and the like, and of temporary sacredness, as in the case of worshippers, pilgrims, and victims. Some examples have been incidentally noticed; a brief reference to certain types must suffice here.

In ancient India the ascetic had to wear coarse, worn-out garments, and his hair was clipped. The hermit wore skins or tattered garments—the term may include bark- or grass-cloth—and his hair was braided. The *Snātaka* wore clothes not old or dirty. He wore the sacred string. He was forbidden to use garments, shoes, or string which had been worn by others. The student for his upper dress wore the skin of an antelope or other animal, for his lower garment a cloth of hemp, or flax, or wool. He wore the girdle of a Brāhman, a triple cord of *Muñja* grass. A *Kṣatriya* wore as his cord a bow-string; a *Vaiśya* a cord of hemp.[1] The religious character of this caste-system renders the inclusion of the four last grades convenient.

Temporarily, in worship and on pilgrimage, the ordinary member of an organized faith assumes a quasi-sacerdotal character.

For the *hajj* to Mecca the Musalmān must wear no other garments than the *iḥrām*, consisting of two seamless wrappers, one passed round the loins, the other over the shoulders, the head being uncovered. The ceremony of putting them on at a pilgrims' 'station' is *al-iḥrām*, 'the making unlawful' (of ordinary garments and behaviour and occupations). The ceremony of taking them off is *al-iḥlāl*, 'the making lawful.' The *hajji* shaves his head when the pilgrimage is over.[2] According to some, the *iḥrām* is the shroud prepared in the event of the *hajji's* death.[3] More likely it is preserved and used as a shroud when he dies.

The most important item in the costume of Japanese pilgrims is the *oizuru*, a jacket which is stamped with the seal of each shrine visited. 'The three breadths of material used in the sewing of this holy garment typify the three great Buddhist deities—Amida, Kwannon, and Seishi. The garment itself is always carefully preserved after the return home, and when the owner dies he is clad in it for burial.'[4]

The dress of worshippers varies between 'decent apparel' and garments of assimilation to the god or the victim or the priest. As in the case of Baal-worship,[5] the garments were often kept in the shrine, and assumed on entrance. In certain rites both Dionysus and his worshippers wore fawn-skins. The Bacchanals wore the skins of goats.[6] The veil of the worshipper has been referred to. In the earliest Christian period a controversy seems to have taken place with regard to female head-dress during worship.[7] In the modern custom the male head-dress is removed, the female is retained. Academics sometimes preserve the rule of a special vestment for worshippers, whether lay or priestly.

It has been noted that the dress of *jogleors*, troubadours, and *trouvères* was an assimilation to the sacerdotal.[8] From the same mediæval period comes the record of 'singing robes.'

(7) *Priestly and royal robes.*—The dress of the sacred world tends to be the reverse of the profane. Apart from the impulse—to be traced in the mentality of medicine-men—to impress one's personality upon the audience by the fantastic and the grotesque, there is here the expression of the fundamental opposition between natural and supernatural social functions.

The garb of Tshi priests and priestesses differs from ordinary dress. Their hair is long and unkempt, while the lay fashion is to wear it short. The layman, if well-to-do, wears bright cloth; the priest may wear only plain cloth, which is dyed red-brown with mangrove-tan. Priests and priestesses, when about to communicate with the god, wear a white linen cap. On holy days they wear white cloth, and on certain occasions, not explained, their bodies are painted with white clay. White and black beads are generally worn round the neck.[9] The Ewe priests wear white caps. The priestesses wear steeple-crowned hats with wide brims. Priests wear white clothes. Priestesses wear 'gay cloths' reaching to the feet, and a kerchief over the breast.[10]

The survival of some antique mode often suffices, through various accidents and modifications, for the priestly garb, other than sacerdotal vestments. Thus, the *ricinium*, a small antique mantle, was

worn by the *magister* of the *Fratres Arvales* and by *camilli* generally.

The history of the dress of the Christian priesthood is a striking example of this. Here also we find the principle of opposition to the lay-garb. The democratic and non-professional character of primitive Christianity may be seen in the fact that in A.D. 428 Pope Celestinus censured Gallican bishops who wore dress different from that of the laity. They had been monks, and retained the *pallium* and girdle instead of assuming the tunic and toga of the superior layman.[1] It is curious that the social instinct towards differentiation of dress to mark differentiation of social function was resisted so long. But in the 6th cent. the civil dress of the clergy automatically became different from the dress of the country, since, while the laity departed from the ancient type, the clergy withstood all such evolution. Thus, in the Western Empire the clergy retained the toga and long tunic, while the laity wore the short tunic, trousers, and cloak of the Teutons, the *gens bracata*. Gregory the Great would have no person about him clad in the 'barbarian' dress. He enforced on his *entourage* the garb of old Rome, *trabeata Latinitas*. This cleavage was gradually enforced, and from the 6th cent. onwards the clergy were forbidden by various canons to wear long hair, arms, or purple, and, generally, the secular dress.

The characteristic garb of the Christian clergy, both civil and ecclesiastic, was the long tunic. Originally it appears to have been white. Then its evolution divided; the alb derived from it on the one side, the civil tunic in sober colours on the other. For the civil dress the dignified toga was added to constitute full dress; for use in inclement weather the *casula* or *cappa*, an overcoat (*pluviale*) with a cowl, was adopted. The last-named garment similarly divided into the ecclesiastic *cope*, and the civil over-cloak. The long tunic still survives in three forms—the surplice, the cassock, and the frock coat. Its fashion in the last instance superseded the toga, which again survives in the academic gown.

The evolution of vestments is in harmony with the psychology of dress generally, and in many aspects illustrates it forcibly. With the vestment the priest puts on a 'character' of divinity. By change of vestments he multiplies the Divine force while showing its different aspects. The changing of vestments has a powerful psychical appeal. The dress is a material link between his person and the supernatural; it absorbs, as it were, the rays of Deity, and thus at the same time inspires the human wearer. The dress is accordingly regarded not as an expression of the personality of the wearer, but as imposing upon him a super-personality. This idea is implicit in every form of dress. Dress is a social body-surface, and even in sexual dress, military uniform, professional and official dress the idea that the dress has the properties of the state inherent in it is often quite explicit. Further, the dress gives admission to the grade. In particular cases of solemnity a dress serves to render the person sacrosanct. Thus the Australian messenger is sacred by reason of his red cap.[2]

A temporary sacred garment may even be used sacrificially. At the Zulu festival of the new fruits, the king danced in a mantle of grass or of herbs and corn leaves, which was then torn up and trodden into the fields.[3] In such cases there is

[1] Cheetham, in Smith-Cheetham's *DCA*, *s.v.* 'Dress.'

[2] J. Fraser, 31.

[3] J. Shooter, 27; N. Isaacs, ii. 293. Frazer, who cites the custom, suggests that in earlier times the king himself was slain and placed on the fields (*GB*[2] ii. 328). The suggestion is unnecessary.

perhaps a reverse assimilation of virtue from the sacred person.

Royal dress in civilization tends to combine the principles of military dress and the tradition of the long robes of ancient autocracy. The subject needs a special analysis. The distinctive head-dress, the crown, probably is an accidental survival of a military fillet, confining the long hair which among the Franks was a mark of royalty.[1] But its significance is in line with the general principle, and it is eventually an affirmation of the dignity of the head, the crown of the human organism.

Among the earliest cultures, social authority tends to adopt a specific garb.

The headmen of the Nâgas wear a special dress.[2] The priest-king of the Habbés wears a distinctive costume.[3] The Nyasaland tribes commission the man who buried the dead chief to cover the new chief with a red blanket. 'This he does, at the same time hitting him hard on the head.'[4]

Ideas of purity readily attach themselves to priestly and royal garments. In the following case there seems to be some survival from Zoroastrianism.

Among the Kafirs of the Hindu Kush, men preparing for the office of headman wear a semi-sacred uniform which may on no account be defiled by coming into contact with dogs. These men, *kaneash*, 'were nervously afraid of dogs, which had to be fastened up whenever one of these august personages was seen to approach. The dressing has to be performed with the greatest care in a place which cannot be defiled with dogs.'[5]

Other less prevalent details of royal raiment are such as the girdle and the veil.

In ancient Tahiti the king at his investiture was girded with a sacred girdle of red feathers, which was a symbol of the gods.[6] In Africa veiling the face is a general custom of royalty.[7] The pall of European monarchs, originally bestowed by the Pope, typifies their sacerdotal function.

There is a tendency for each article of a royal panoply to carry a special symbolism, significant of the kingly duties and powers, just as the articles of the sacerdotal dress express Divine functions and attributes.

(8) *The dress of the gods.*—Frazer has shown reason for believing that the costume of the Roman god and of the Roman king was the same. Probably the king was dressed in the garments of Juppiter, borrowed from the Capitoline temple.[8] In the earlier theory of society the gods are a special class or grade in the community. Their dress has not infrequently been an important detail in the social imagination, and has even formed a considerable item in the national budget. In so far as they stand for super-humanity, it goes without saying that their raiment is the costliest and finest that can be obtained.

Amongst the Nahuas, clothes were not the least important material both of sacrifice and of ministration to the gods. 'The finest cotton and woollen stuffs are not only employed in their clothing, but are lavishly burnt in their sacrifices.'[9] The gods of Peru had their own herds of llamas and pacos, whose wool was woven for their robes,[10] and virgin-priestesses spun and wove it and made it up into dress.[11] The Vedic gods wore clothes.[12] The Egyptian and Chaldæan priests dressed their gods and performed their toilet,[13] as Hindu priests do now. The ancient Arabs clothed idols with garments.[14] In Samoa sacred stones were clothed;[15] and the images of the ancient Peruvians wore garments.[16]

The most artistic of races preserved for a long time the non-æsthetic but anthropomorphic custom of clothing statues with real clothes. The image of Apollo at Amyclæ had a new coat woven for him every year by women secluded for the work in a special chamber.[17] Every fourth year a robe woven by a college of sixteen women was placed on the image of Hera at Olympia.

Before starting work they purified themselves with water and the blood of pigs.[1] The image of Asklepios at Titane wore a mantle and a shirt of white wool.[2] Zeus in an oracle commanded the Athenians to give Dione at Dodona new clothes.[3] The image of Hera at Samos possessed a wardrobe of garments, white, blue, and purple; some the worse for wear.[4] The bronze statue at Elis of a man leaning on his spear, called the Satrap, wore a garment of fine linen.[5] The image of Brauronian Artemis on the Acropolis was covered with many robes, offered by devout women. The same was the case with the image of Ilithyia at Ægium.[6] The magnificent robe, first used as a sail for the sacred ship and then presented to the image of Athene at the Panathenæa, is famous. The image was the old wooden Athene Polias of the Erechtheum. It was clothed in the robe. This was woven every fourth year by two Arrhephoroi.[7]

The dress of the god not seldom becomes a thing in itself, just as the dress of a priest or a king may itself be his substitute.

The Polynesians employed *tapa* in many ritualistic ways. Idols were robed in choice cloths. Every three months they were brought out, exposed to the sun (the term for this being *mehea*), re-anointed with oil, and returned to their wrappings. The god Oro was supposed to be contained in a bundle of cloths.[8] Matting and sinnet were similarly used. Papo, the Savaian god of war, was 'nothing more than a piece of old rotten matting about 3 yards long and 4 inches in width.' Idols were covered with 'curiously netted sinnet,' just as was the ὀμφαλός at Delphi. In Mangaia the gods were 'well wrapped in native cloth'; one god was 'made entirely of sinnet.'[9] The Tahitian word for sinnet is *aha*, and the first enemy killed was called *aha*, because a piece of sinnet was tied to him.[10]

The term 'ephod' in the OT apparently bears three meanings. (1) It is part of the high priest's dress. Worn over the 'robe of the ephod,' it was made of gold, threads of blue and scarlet, and fine linen. Its shape and character are doubtful. Held at the shoulders by two clasps, it was bound round the waist with a 'curious' girdle. (2) The term seems to be used for a garment set apart for priestly use only. (3) There is the ephod which is an image or its equivalent. Passages like Jg 8[27] make it difficult to interpret it as a garment. But, apart from questions of verbal interpretation which in some cases are very obscure,[11] it is possible to regard the ephod as a worshipped garment, the practice being found elsewhere, or as a garment enclosing or covering an image.[12]

Various Divine objects, symbols, or emblems may be clothed. In Uganda a jar swathed in bark-cloth, and decorated so as to look like a man, represented the dead king.[13] The Bhagats make an image of wood and put clothes and ornaments upon it. It is then sacrificed.[14] Such cases involve impersonation. Even an emblem like the Cross, when veiled on Good Friday, or sacred centres like the Ka'ba and the ὀμφαλός, when clothed, decorated, or veiled, acquire a certain personal quality. The line is not always easily drawn between covering and clothing.

In the highest stages of theistic imagination the dress of a god tends to be metaphorical. He is clothed with the blue sky,[15] with light, with clouds, or with thunder, with majesty, power, and splendour.

(9) *The dress of victims.*—By dressing an inanimate object, an animal, or a plant, a human quality is placed upon it. It thus becomes a member of society, by which capacity its saving force is enhanced. It does not follow that being so garbed it is a substitute for a previous human sacrifice. Even gifts may be so personalized. The Malays dress and decorate buffaloes which are presented as a gift.[16] But the principle is remarkably dominant in the case of sacrifices and effigies.

There are cases of a reverse impersonation:

After killing a bear, the Koriaks dress a man in its skin, and dance round him, saying that they had not slain the bear.[1] When Nutkas had killed a bear, they put a chief's bonnet on its head and offered it food.[2]

Ordinary impersonation is more frequent.

Russian peasants dress up a birch tree in woman's clothes.[3] At the Little Dædala the Platæans dressed a wooden image made roughly from a tree, and decorated it as a bride.[4] The last sheaf of corn and similar representations of the corn-spirit are dressed in women's clothes at European harvests.[5] The old Peruvians had a similar rite, and dressed a bunch of maize in women's clothes.[6] The effigy called 'Death,' torn in pieces by Silesian villagers, is dressed in their best clothes.[7] The image of 'Death' in Transylvania is dressed in 'the holiday attire of a young peasant woman, with a red hood, silver brooches, and a profusion of ribbons at the arms and breast.'[8] The Iroquois sacrificed two white dogs, decorated with red paint, wampum, feathers, and ribbons.[9] The human scapegoat of Thuringia was dressed in mourning garb.[10] The scapegoat of Massilia was dressed in sacred garments.[11] The human victims of the Mexicans were dressed in the ornaments of the god, in gorgeous attire. In some cases when the body was flayed, a priest dressed himself in the skin to represent the deity.[12] The human victim of Durostolum was clothed in royal attire to represent Saturn. The mock-king in various lands is dressed in royal robes, actual or sham.[13] The reasons for the various dresses just enumerated are sufficiently clear.

Dress, by personalizing a victim, provides a convenient method of substitution. When the oracle ordered the sacrifice of a maiden, a goat was dressed as a girl and slain instead.[14] Such cases may be ætiological myths, but they may well have actually occurred. It does not follow, however, as has already been urged, that all cases of a humanly clothed animal or vegetable victim represent substitution for an originally human sacrifice.

The principle of assimilation to a particular environment, which is the focus of the ceremony, has striking illustrations.

In a folk-drama of Moravia, Winter is represented by an old man muffled in furs, and wearing a bearskin cap. Girls in green danced round a May-tree.[15] A common practice in European and other folk-custom is to dress a person representing the spirit of vegetation in flowers or leaves. 'In time of drought the Servians strip a girl to her skin and clothe her from head to foot in grass, herbs, and flowers, even her face being hidden behind a veil of living green. Thus disguised she is called the Dodola, and goes through the village with a troop of girls.'[16] A remarkable case is seen in Sabæan ritual. When a sacrifice was offered to 'the red planet Mars,' as Longfellow calls it, the priest wore red, the temple was draped with red, and the victim was a red-haired, red-cheeked man.[17] The girl-victim sacrificed by the Mexicans to the spirit of the maize was painted red and yellow, and dressed to resemble the plant. Her blood being supposed to recruit the soil, she was termed *Xalaquia*, 'she who is clothed with the sand.'[18] The similar victim of the Earth-goddess occupied her last days in making clothes of aloe fibre. These were to be the ritual dress of the maize-god. The next victim, a man, wore the female victim's skin, or rather a portion of it, as a lining for the dress she had woven.[19] The victim of Tezcatlipoca was invested for a year with the dress of the god. Sleeping in the daytime, he went forth at night attired in the god's robes, with bells of bronze upon them.[20] At the festival of Toxcatl, Tezcatlipoca's image was dressed in new robes, and all the congregation wore new clothes.[21]

10. **Social control of dress.**—Dress expresses every social moment, as well as every social grade. It also expresses family, municipal, provincial, regional, tribal, and national character. At the same time it gives full play to the individual. A complete psychology of the subject would analyze all such cases with reference to the principle of adaptation.

The least reducible of all distinctive costumes are the racial and the sexual. For instance, the

Hindu fastens his jacket to the right; the Musalmān to the left.[1] In European dress the male fashion is to fasten buttons on the right, the female on the left. Where a division is central, the former still has the buttons on the right side, the latter on the left, the respective garments thus folding over in opposite directions. The larger differences are obvious, and need not be repeated.

A remarkable tendency is observable at the present day, which is due to increased facilities of travel and inter-communication, towards a cosmopolitan type of dress, European in form.

The sense of solidarity distinguishing social from individual life is sometimes expressed, as culture advances, in laws referring not only to the preservation of social grades as such, but to their economic delimitations. Various particular reasons which do not call for examination here have been the immediate inspiration of sumptuary laws in various races and nations. The sumptuary law proper is often combined with regulations of grade-fashion.

One of the earliest 'laws' of the kind is to be found in the *Li-ki* of the Chinese.[2] The Koreans have strict 'sumptuary' laws relating to dress. 'The actual design of the dress is the same for all classes; but it is the material of which it is made and its colour that are affected by the law. The lower and middle classes may wear none but garments of cotton or hemp; while silk is the prerogative of the officials, who have the right also of wearing violet, which is a sign of good birth or officialdom.' The dress itself, usually white, consists of an enormous pair of trousers, tied under the armpits, and two or more coats reaching to the ankles. The sleeves of these are large, like those of the Japanese *kimono*. The poor wear sandals, the rich leather-lined shoes. In wet weather work-people wear wooden clogs in shape like the French *sabots*.[3] 'Silk,' according to Zoroastrian law, 'is good for the body, and cotton for the soul.' The former is derived from a 'noxious creature'; the latter acquires from earth and water, which when personified are angels, part of their own sacredness.[4] The Qur'ān forbids men to wear silk or gold ornaments. The Prophet forbade also the wearing of long trousers 'from pride.' His injunction was: 'Wear white clothes . . . and bury your dead in white clothes. . . . They are the cleanest, and the most agreeable.'[5]

The military Dorian State passed laws against luxury in female dress. The Solonian legislation apparently followed its example. The *lex Oppia* of the Romans forbade, *inter alia*, the wearing by women of a dress dyed in more than one colour, except at religious ceremonies. The Emperor Tiberius forbade the wearing of silk by the male sex. Philip the Fourth enacted a law against luxury in dress. The law of the Westminster Parliament of 1363 was concerned chiefly with regulating the fashion of dress of the social orders. The law passed in 1463 (3 Edw. IV. c. 5) regulated dress generally, on the lines of the Mercantile Theory of Economics, as had been the case, though less explicitly, in the previous English sumptuary legislation. Luxury in dress (so the theory was applied) merely increased the wealth of other countries. A Scottish law of 1621 was the last of the kind.[6]

It is natural that social resentment should follow breaches of the most characteristic of all social conventions. The mere fact of strangeness as disturbing the normal environment is enough. Thus, in children and uneducated persons, 'anger may be aroused by the sight of a black skin or an oriental dress or the sounds of a strange language.'[7] In accordance with this essentially social instinct, the *Lī-kī* denounces the wearing of 'strange garments' as a sin, adding that it 'raises doubts among the multitudes.' The offence was punishable with death.[8]

Various ideas of personal dignity are apt to be outraged by such breaches. Even in low cultures, carelessness in dress reflects upon both subject and object. Unless a Masai girl is well dressed according to native ideas, and anoints herself with oil, she is not admitted into the warriors' kraals,—a social privilège,—and is regarded as outcast.[9] In view of such social feeling, it is not surprising that

in countries like India there is no liberty of the subject as regards dress. Nor is there actually any more liberty in the matter for members of European or American societies. Decency, essentially a social idea, has here its widest meaning: to contravene any unwritten law of dress is an offence against decency—in itself an adaptation to environment and state.

11. **Inversion of sexual dress.**—The remarks of Frazer may introduce this part of the subject, which is curiously large: 'The religious or superstitious interchange of dress between men and women is an obscure and complex problem, and it is unlikely that any single solution would apply to all the cases.' He suggests that the custom of the bride dressing as a male might be a magical mode of ensuring a male heir,[1] and that the wearing by the wife of her husband's garments might be a magical mode of transferring her pains to the man.[2] The latter mode would thus be the converse of the former. We may also note the importance assigned to the principle of transference or contagion. Such ideas, it may be premised, are perhaps secondary, the conscious reactions to an unconscious impulsive action, whose motivation may be entirely different. The whole subject falls simply into clear divisions, which may be explained as they come. The Zulu 'Black Ox Sacrifice' produces rain. The officiators, chief men, wear the girdles of young girls for the occasion.[3] To produce a change in nature, it is necessary for man to change himself. The idea is unconscious, but its meaning is adaptation. Its reverse aspect is a change of luck by a change of self. The most obvious change is change of sex, the sexual demarcation being the strongest known to society, dividing it into two halves. The following shows this more clearly:

In order to avert disease from their cattle, the Zulus perform the *umkuba*. This is the custom of allowing the girls to herd the oxen for a day. All the young women rise early, dress themselves entirely in their brothers' clothes, and, taking their brothers' knobkerries and sticks, open the cattle-pen and drive the cattle to pasture, returning at sunset. No one of the male sex may go near them or speak to them meanwhile.[4] Here a change of officiators, sexually different, produces a change of luck and of nature. Similarly, among the old Arabs, a man stung by a scorpion would try the cure of wearing a woman's bracelets and ear-rings.[5] In Central Australia a man will cure his headache by wearing his wife's head-dress.

On this principle, as a primary reason, a large group of birth customs may be explained.

When a Guatemalan woman was lying in, her husband placed his clothes upon her, and both confessed their sins.[6] Here and in the next three cases the intention seems to be a change of personality to induce a change of state. A German peasant woman will wear her husband's coat from birth till churching, 'in order to delude the evil spirits.' When delivery is difficult, a Watubella man puts his clothes under his wife's body, and a Central Australian ties his own hair-girdle round her head. In China the father's trousers are hung up in the room, 'so that all evil influences may enter into them instead of into the child.'[7] In the last case the dress itself acts as a warning notice, representative of the father's person.

In the following is to be seen the principle of impersonation, the reverse method of change of personality, combined, no doubt, with an impulsive sympathetic reaction, equivalent to a desire to share the pain.

In Southern India the wandering Erukalavandhu have this custom—'directly the woman feels the birth-pangs, she informs her husband, who immediately takes some of her clothes, puts them on, places on his forehead the mark which the women usually place on theirs, retires into a dark room, . . . covering himself up with a long cloth.'[8] In Thuringia the man's shirt is hung before the window. In South Germany and Hungary the father's smock is worn by the child, to protect it from fairies. In Königsberg a mother puts her clothes over the child, to pre-

vent the evil *Drud* carrying it off, and to dress a child in its father's smock brings it luck. Among the Basutos, when a child is sick the medicine-man puts a piece of his own *setsiba* garment upon it. In Silesia a sick child is wrapped in its mother's bridal apron. A Bohemian mother puts a piece of her own dress on a sick child. At Bern it is believed that to wrap a boy in his father's shirt will make him strong. Conversely, in some parts of Germany it is unlucky to wrap a boy in his mother's dress.[1]

In the above cases, secondary ideas are clearly present. In particular, the influence of a person's dress, as part of or impregnated with his personality, is to be seen.

A holiday being a suspension of normal life, it tends to be accompanied by every kind of reversal of the usual order. Commonly all laws and customs are broken. An obvious mode of reversal is the adoption of the garments of the other sex.

In the mediæval Feast of Fools the priests dressed as clowns or women. In Carnival festivities men have dressed up as women, and women as men. In the Argive Ὑβριστικά festival men wore women's robes and veils, and women dressed as men. At the Saturnalia, slaves exchanged positions and dress with their masters, and men with women. In Alsace, as elsewhere at vintage festivals and the like, men and women exchange the dress of their sex.[2] In the mediæval feasts of Purim, the Jewish *Bacchanalia*, men dressed as women, and women as men.[3]

The result, and in some degree the motive, of such interchange is purely social, expressive of the desire for good-fellowship and union.

Numerous cases fall under the heading of sympathetic assimilation. Magical results may be combined with an instinctive adaptation, or may follow it.

In Korea, soldiers' wives 'are compelled to wear their husbands' green regimental coats thrown over their heads like shawls. The object of this law was to make sure that the soldiers should have their coats in good order, in case of war suddenly breaking out. The soldiers have long ceased to wear green coats, but the custom is still observed.'[4] The explanation is obviously *ex post facto*. It seems more probable that the fashion corresponds to the European custom of women wearing their husbands' or lovers' colours. Every autumn the Ngente of Assam celebrate a festival in honour of all children born during the year. During this, men disguised as women or as members of a neighbouring tribe visit all the mothers and dance in return for presents.[5] In the Hervey Islands a widow wears the dress of her dead husband. A widower may be seen walking about in his dead wife's gown. 'Instead of her shawl, a mother will wear on her back a pair of trousers belonging to a little son just laid in his grave.'[6] In Timorlaut, widows and widowers wear a piece of the clothing of the dead in the hair.[7]

The custom is very frequent at pubertal ceremonies and at marriage festivities.

At the ceremony of *pollo*, connected with the puberty of their girls, Basuto women 'acted like mad people. . . . They went about performing curious mummeries, wearing men's clothes and carrying weapons, and were very saucy to men they met.'[8] The Masai boy is termed *sipolio* at his circumcision. The candidates 'appear as women,' and wear the *surutya* ear-rings and long garment reaching to the ground, worn by married women. When the wound is healed they don the warrior's skins and ornaments, and when the hair has grown long enough to plait they are styled *il-muran*, or warriors.[9] When an Egyptian boy is circumcised, at the age of 5 or 6, he parades the streets, dressed as a girl in female clothes and ornaments borrowed for the occasion. A friend walks in front, wearing round his neck the boy's own writing-tablet. To avert the evil eye a woman sprinkles salt behind.[10] In the old Greek story the boy Achilles lived in Scyros as a girl, dressed as a girl, to avoid being sent against Troy. He bore a maiden name, Issa or Pyrrha.[11]

In such cases we may see, at the initiation to the sexual life and state, an adaptation to it in the form of an assimilation to the other sex.

The principle of sympathetic assimilation is clearly brought out in the following two examples:

At the ceremonial burying of the placenta, Babar women who officiate wear men's girdles if the child is a boy, but women's *sarongs* if a girl. At the festival celebrating a birth, Fijian men paint on their bodies the tatu-marks of women.[1] In West Africa certain tribes have the custom of the groom wearing his wife's petticoat for some time after marriage.[2] In ancient Cos, the groom wore women's clothes when receiving the bride. Plutarch connects the custom with the story of Heracles serving Omphale and wearing a female dress. The Argive bride wore a beard 'when she slept with her husband,' presumably on the bridal night only. The Spartan bride wore a man's cloak and shoes when she awaited the coming of the bridegroom. In English and Welsh folklore there are cases of dressing the bride in men's clothes.[3]

The custom of inversion of sexual dress is very common at wedding feasts among European peasantry. All these are cases of sympathetic assimilation to the other sex. The principle is brought out by such customs as that mentioned by Spix and Martius, of Brazilian youths at dances with the girls wearing girls' ornaments.[4]

Many cases of the custom at feasts are complicated by various accidents. Sometimes it is meaningless except as a necessity.

Among the Torres Islanders women do not take part in ceremonies. Accordingly, at the annual death-dance deceased women are personated not by women but by men, dressed in women's petticoats.[5]

In other cases the data are insufficient for an explanation.

Thus, at harvest ceremonies in Bavaria, the officiating reaper is dressed in women's clothes; or, if a woman be selected for the office, she is dressed as a man.[6] At the vernal festival of Heracles at Rome men dressed as women. The choir at the Athenian *Oschophoria* was led by two youths dressed as girls.[7]

Cases occur of change of sexual dress by way of disguise; it is more frequent in civilization than in barbarism.

A Bangala man troubled by a bad *mongoli*, evil spirit, left his house secretly. 'He donned a woman's dress and assumed a female voice, and pretended to be other than he was in order to deceive the *mongoli*. This failed to cure him, and in time he returned to his town, but continued to act as a woman.'[8]

The last detail and the psychological analysis of modern cases suggest that a congenital tendency towards some form of inversion is present in such cases. On the face of them, we have to account for the choice of a *sexual* change of dress.

A Kolta homicide wears special ornaments and is tatued. The latter practice is otherwise limited to the female sex.[9]

Women's dress may involve the assumption of women's weakness and similar properties.

The king of Burma suggested to the king of Aracan to dress his soldiers as women. They consequently became effeminate and weak.[10]

The Lycians, when in mourning, dressed as women. Plutarch explains this rationalistically, as a way of showing 'that mourning is effeminate, that it is womanly and weak to mourn. For women are more prone to mourning than are men, barbarians than Greeks, and inferior persons than superior.'[11] If the document is genuine, we may apply to the Lycians the principle adopted in regard to mourning costume generally. The state of mourning is an absolute suspension, and it may come to be regarded as an absolute reversal or inversion of the normal state of life.

Death, the negative of life, has taken place and made a violent break with the tenor of existence; hence such an adaptation as an inversion of sexual dress. Occasions might well be conceived when, if change of attire was desired, the only obvious attire presenting itself would be that of the other sex.

One of the most complex cases, at first appearance, is that of the adoption of feminine dress by priests, shamans, and medicine-men. Where for various mythological reasons an androgynous deity

exists, it is natural that the attendant priests should be sympathetically made two-sexed in their garb, and even that the worshippers should invert their dress. Sacrifice was made to the Bearded Venus of Cyprus by men dressed as women, and by women dressed as men.[1]

As a rule, however, the deity is an invention intended, unconsciously enough, to harmonize with a traditional habit of priestly life. This particular habit is of wide extension, and involves a whole genus of psychoses. Some examples may precede analysis:

Chukchi shamans commonly dress as women.[2] The *basir* of the Dayaks make their living by witchcraft, and are dressed as women.[3] The priestesses, *balians*, of the Dayaks dressed as men. Sometimes a Dayak priest marries simultaneously a man and a woman.[4] Among both the Northern Asiatic peoples and the Dayaks it frequently happens that a double inversion takes place, so that of the wedded priestly pair the husband is a woman and the wife a man. It is said by the Koryaks that shamans who had changed their sex were very powerful.[5] The Illinois and Naudowessie Indians regarded such men as had 'changed their sex' as *manitous* or supernaturally gifted persons.[6] But it is unnecessary to assume that the practice is intended to acquire special magical powers attributed to women. This idea may supervene. Possibly the fantastic nature of the change itself, as mere change, has had some influence.

Patagonian sorcerers, chosen from children afflicted with St. Vitus' dance, wore women's clothes. Priests among the Indians of Louisiana dressed as women.[7] In the Pelew Islands a remarkable change of sex was observed. A goddess often chose a man, instead of a woman, to be her mouthpiece. In such cases the man, dressed as a woman, was regarded and treated as a woman. One significance of this is in connexion with the Pelewan social system. Frazer regards this inspiration by a female spirit as explaining other cases when sex is exchanged, as with the priesthoods of the Dayaks, Bugis, Patagonians, Aleuts, and other Indian tribes.[8] It is stated of some North American cases that the man dreamed he was inspired by a female spirit, and that his 'medicine' was to live as a woman.[9] In Uganda Mukasa gave oracles through a woman, who when she prophesied wore clothes knotted in the masculine style.[10] The legends of Sardanapalus (Assur-bani-pal) and Heracles, as well as the cases of the priests of Cybele and the Syrian goddess, would come under the explanation.[11] Heracles' priest at Cos wore a woman's raiment when he sacrificed. The story of Heracles himself may be a reminiscence of such effeminate priests, who were priest-gods. Dionysus Pseudanor is a similar embodiment of the principle.

Eunuchs in India are sometimes dedicated to the goddess *Huligamma*, and wear female dress. Men who believe themselves to be impotent serve this goddess, and dress as women in order to recover their virility.[12] A festival was given among the Sioux Indians to a man dressed and living as a woman, the *berdashe* or *i-coo-coo-a*. 'For extraordinary privileges which he is known to possess, he is driven to the most servile and degrading duties, which he is not allowed to escape; and he, being the only one of the tribe submitting to this disgraceful degradation, is looked upon as "medicine" and sacred, and a feast is given to him annually.'[13]

Among the iron-workers of Manipur, the god Khumlangba is attended by priestesses, *maibi*. But a man is sometimes taken possession of by the god. He is then known as *maiba*, and wears at ceremonies the dress of a *maibi*, viz. white cloth round the body from below the arms, a white jacket, and a sash. A fine muslin veil covers the head. 'The *maibi* is looked on as superior to any man, by reason of her communion with the god; and therefore if a man is honoured in the same way he assumes the dress of the *maibi* as an honour. If a man marries a *maibi*, he sleeps on the right of her, whereas the ordinary place of a woman is the right, as being the inferior side. It appears that women are more liable to be possessed by the god, and the same may be observed among all the hill tribes of these parts.'[14]

The *nganga*, medicine-men, of the Bangala, in certain ceremonies after a death, for the purpose of discovering the slayer dress up as women.[15] Off the coast of Arracan there were 'conjurers' who dressed and lived as women. On the Congo a priest dressed as a woman and was called Grandmother.[1] The Nahanarvals, a tribe of ancient Germany, had a priest dressed as a woman. Men of the Vallabha sect win the favour of Kṛṣṇa by wearing their hair long and generally assimilating themselves to women. The practice is even followed by rajas.[2] Candidates for the *areoi* society of Tahiti were invested with the dress of women.[3]

There is no doubt that these phenomena are cases of sexual inversion, congenital or acquired, partial or complete. Any idea of inspiration by female deities or the reverse is secondary, as also the notions of assimilation of priest to goddess, or of marriage of a priest to a god. The significant fact is that throughout history the priesthood has had a tendency towards effemination. The discussion of this belongs elsewhere.

Sexual inversion has especially obtained among the connected races of North Asia and America. It is marked by inversion of dress.

'In nearly every part of the continent [of America] there seem to have been, since ancient times, men dressing themselves in the clothes and performing the functions of women.'[4] Thus in Kadiak 'it was the custom for parents who had a girl-like son to dress and rear him as a girl, teaching him only domestic duties, keeping him at woman's work, and letting him associate only with women and girls.'[5] A Chukchi boy at the age of sixteen will often relinquish his sex. He adopts a woman's dress, and lets his hair grow. It frequently happens that in such cases the husband is a woman and the wife a man. 'These abnormal changes of sex . . . appear to be strongly encouraged by the shamans, who interpret such cases as an injunction of their individual deity.'[6] A similar practice is found among the Koryaks.[7]

Among the Sacs there were men dressed as women.[8] So among the Lushais and Caucasians.[9] Among the former, women sometimes become men. When asked the reason, a woman so changed said 'her *khuavang* was not good, and so she became a man.'[10] In Tahiti there were men, called *mahoos*, who assumed 'the dress, attitude, and manners of women.'[11] So among the Malagasy (the men called *tsecats*), the Ondonga in South-West (German) Africa, and the Diakité-Sarracolese in the French Sūdan.[12] Of the Aleut *schupans* Langsdorff wrote: 'Boys, if they happen to be very handsome, are often brought up entirely in the manner of girls, and instructed in the arts women use to please men; their beards are carefully plucked out as soon as they begin to appear, and their chins tattooed like those of women; they wear ornaments of glass beads upon their legs and arms, bind and cut their hair in the same manner as the women.'[13] Lisiansky described them also and those of the Koniagas: 'They even assume the manner and dress of the women so nearly that a stranger would naturally take them for what they are not. . . . The residence of one of these in a house was considered as fortunate.' Apparently the effemination is developed chiefly by suggestion beginning in childhood.[14] In Mexico and Brazil there was the same custom. In the latter these men not only dressed as women, but devoted themselves solely to feminine occupations, and were despised. They were called *cudinas*, which means 'circumcised.'[15] Holder has studied the *boté* ('not man, not woman') or *burdash* ('half man, half woman') of the N.W. American tribes. The woman's dress and manners are assumed in childhood. Some of his evidence suggests that the greater number are cases of congenital sexual inversion. 'One little fellow, while in the Agency boarding-school, was found frequently surreptitiously wearing female attire. He was punished, but finally escaped from school and became a *boté*, which vocation he has since followed.'[16] The *i-wa-musp*, man-woman, of the Indians of California formed a regular social grade. Dressed as women, they performed women's tasks. 'When an Indian shows a desire to shirk his manly duties, they make him take his position in a circle of fire; then a bow and a "woman-stick" are offered to him, and he is solemnly enjoined . . . to choose which he will, and ever afterward to abide by his choice.'[17] Something analogous is recorded of the ancient Scythians and the occurrence of a θήλεια νοῦσος among them.[18]

Some of the above cases, difficult to disentangle accurately, are not so much cases of congenital inversion as of general physical weakness. It is a

remarkable aspect of certain types of barbarous society that the weak males are forced into the grade of women, and made to assume female dress and duties. Such a practice may, of course, induce some amount of acquired inversion. Payne[1] has suggested that their survival was due to advancement in civilization, and that later they formed a nucleus for the slave-class.

The occurrence of a masculine temperament in women is not uncommon in early culture. In some tribes of Brazil there were women who dressed and lived as men, hunting and going to war.[2] The same practice is found in Zanzibar and among the Eastern Eskimo.[3] Shinga, who became queen of Congo in 1640, kept 50 or 60 male concubines. She always dressed as a man, and compelled them to take the names and dress of women.[4] Classical antiquity has many similar cases of queens wearing men's armour in war, and of women fighting in the ranks, either temporarily, or permanently, as the Amazons. The last case, on the analogy of the West African cases of women's regiments, may be based on fact.[5]

In modern civilization the practice of women dressing as men and following masculine vocations is no less frequent than was in barbarism the custom of effemination of men.[6] Women of masculine temperament are by no means a rare phenomenon to-day, and the balance of sexual reversal has thus changed.

There remain to be considered two classes who form more or less definite social grades, and in some cases are distinguished by dress. These are old men and women.[7] After the menopause, women, as the Zulus say, 'become men,' and the customs of *hlonipa*, or sexual tabu, do not apply to them any longer.[8] Often, instead of the dress of matrons, savage and barbarous women after the menopause dress as men. For instance, in Uripiv (New Hebrides) an old widow of a chief lived independently, and 'at the dances painted her face like a man and danced with the best of them.'[9] Often they engage in war, consult with the old men, as well as having great influence over their own sex.

Various enactments both in semi-civilized custom and in civilized law have been made against inversion of dress. A typical decision is that of the Council of Gangra (A.D. 370): 'If any woman, under pretence of leading an ascetic life, change her apparel, and instead of the accustomed habit of women take that of men, let her be anathema.'[10] The point is noticeable that asceticism here, in the absence of a neutral garb, has recourse to the male dress. Such enactments and the modern laws on the subject are based on the Heb. law of Dt 22^5, and the Christian of 1 Co 11^6, but they embody a scientifically sound principle.

12. Exchange of dress.—This custom is frequent between friends, lovers, betrothed, and as a marriage rite. It is analogous to an exchange of any objects serving as mutual gifts, and its ultimate origin is to be found in this natural and obvious practice. Originally, therefore, it is outside the sphere of the psychology of dress proper; but it at once assumes various ideas of dress, often in an intensified form.

In Homer's story Glaucus and Diomed exchanged armour and became brothers-in-arms.[11] Among the Khamptis an exchange of clothes 'gives birth to or is a sign of amity.'[1] In Amboyna and Wetar and other islands, lovers exchange clothes in order, as it is reported, to have the odour of the beloved person with them.[2] In European folklore it is a very frequent custom that bride and bridegroom exchange head-dress.[3] The Ainu youth and girl after betrothal wear each other's clothes.[4] In South Celebes the bridegroom at a certain stage of the ceremonies puts on the garments which the bride has put off.[5] Among the mediæval Jews of Egypt a custom is recorded of the bride wearing helmet and sword, and the groom a female dress.[6] At a Brāhman marriage in South India the bride is dressed as a boy, and another girl is dressed to represent the bride.[7]

The secondary idea which is prominent in these customs is that of union by means of mutual assimilation. This is shown by such cases as the following:

In Buru a family quarrel is terminated by a feast. The father of the injured woman puts on the shoulders of her husband some of his own family's clothes; the husband puts on him a cloth he has brought for the purpose.[8] Among the Masai murder may be 'arranged' and peace made between the two families by the offices of the elders. 'The family of the murdered man takes the murderer's garment, and the latter [the family of the murderer] takes the garment of one of the dead man's brothers.'[9]

A later stage of development is marked by ideas of contagion of ill-will, or of the conditional curse.

By way of making a guarantee of peace, Tahitian tribes wove a wreath of green boughs furnished by both parties, and a band of cloth manufactured in common, and offered both to the gods, with curses on the violator of the treaty.[10] To establish that contact with a person which serves as a 'conductor' of conditional curses, in the Moorish institution of *l-'ar*, it is enough to touch him with the turban or the dress.[11] The Biblical story is not a case of indignity by mutilation of garments, but a magical act of guarantee. When Hanun, king of Ammon, cut off half the beard and half the clothes of David's ambassadors when he sent them back, he wanted a guarantee of friendly relations. His wise men, Frazer observes, would be muttering spells over these personal guarantees while David was on his way.[12]

Similarly, possession or contact ensures sympathy, whether by mere union or by the threat of injury.

In the Mentawey Islands, 'if a stranger enters a house where children are, the father or some member of the family present takes the ornament with which the children decorate their hair, and hands it to the stranger, who holds it in his hands for a while and then returns it.' The procedure protects the children from the possibly evil eye of the visitor.[13]

Union in marriage and other rites is commonly effected by enveloping the pair in one robe, or by joining their garments together.

In South Celebes the ceremony of *ridjala sampú* consists in enveloping them in one *sarong*, which the priest casts over them like a net.[14] The Tahitians and the Hovas of Madagascar have the same custom.[15] The Dayak *balian* throws one cloth over the pair. Among the Toba-Bataks the mother places a garment over them. A similar ceremony among the Nufoors of Doreh is explained as a symbol of the marriage 'tie.'[16] In north Nias the pair are enveloped in one garment.[17]

Among the Todas, the man who ceremonially sleeps with a girl before puberty covers her and himself with one mantle.[18] The Hindu bride and groom are tied together by their clothes, in the 'Brahma knot.' It is the same knot as is used in the sacred thread. The tying is repeated at various points in the ceremonies. The *mangalasūtra*, or *tāli*, is a cord with a gold ornament, worn round the married woman's neck, as a European wears a wedding-ring; and its tying is a binding rite. The bride and groom both don wedding clothes during the ceremonies.[19] The Bhillalas tie the garments of the bride and groom together.[20] Previously to the ceremony of *ridjala sampu* the clothes of the Celebes pair are sewn together—the rite of *ridjai-kamma parukusenna*.[21]

In connexion with marriage the custom is hardly intended to unite the woman to the man's family and the man to the woman's.[1] More probably it merely assimilates the two individuals; while, from the social point of view, it unites their respective sexual grades.

It is remarkable that many ceremonies of initiation, particularly those in which a spiritual fatherhood and sonship is established, are analogous in method to a marriage rite. Thus the *guru* of the Deccan Mhārs, when initiating a child, covers the child and himself with one blanket.[2]

Cases where the rite has one side only are natural, but are apt to take on the character of an act of acquisition and possession. In the Sandwich Islands the bridegroom casts a piece of *tapa* over the bride, this constituting marriage.[3] It is analogous to the Hindu 'giving cloth.' In Arabian times to cast a garment over a woman was to claim her. This explains the words of Ruth (Ru 3[9]). In Mal 2[16] 'garment' is equivalent to 'wife.'[4] A similar idea obtains in other circumstances, the dress having the force of a personal representative. The Southern Massim have a custom that a woman may save a man's life when struck down if she throws her *diripa*, grass-petticoat, over him.[5]

LITERATURE.—This is fully given in the footnotes.

A. E. CRAWLEY.

DRINKS, DRINKING.—The sensation of thirst is the psychological correlate of the metabolic functions of water. In direct importance drink comes next to air and before food. Thus in social psychology drink has played a more important part than food, especially since the primitive discoveries of fermentation and distillation made alcohol a constituent of drinkables. After being weaned from his mother's milk—a drink which is also a complete food—man finds a 'natural' drink in water. But, as experimentation in food-material proceeded, the sensation of thirst was supplemented by the sense of taste. The resulting complex 'sense of drink' was satisfied by a series of discoveries which gave to drinkables certain properties both of food and of drugs.

Before they were corrupted by European spirit, the Eskimo drank chiefly iced water, which they kept in wooden tubs outside their houses.[6] But on occasion they drank hot blood, and melted fat. An observer states of the New Hebrideans: 'I have never seen a native drink water (or indeed use it for any purpose). When thirsty, a young coco-nut is split, and then with the head thrown back the whole of the milk is literally poured down the throat without so much as one gulp. . . . The avoidance of the most obvious [drink], fresh running water, which is in great abundance, and generally excellent, is very curious.'[7]

I. Fermented drinks.—(*a*) *Beers.*—It is impossible to trace with precision the order of discovery and invention. Probably one of the earliest steps was the use and storage of fruit-juices. In time the practice of storage would lead to the discovery of fermentation. The use of corn for the preparation of fermented liquor is perhaps almost as early as its use for food. Cereal agriculture itself

'received a powerful stimulus from the discovery that infusions of corn, like drinks made from the juices of fruits and the sap of trees, acquire an intoxicating quality by fermentation. . . . In most parts of the Old and the New World the produce of cereal agriculture was from an early period largely consumed in the manufacture of some species of beer . . . the early cultivators drank it to excess.'[8]

The use of malted grain is probably later than the simpler principle of infusion. The term 'beer' is generally employed to include the products of both. In the majority of early beers, such as the Mexican and Peruvian *chicha*, infusion only is used.

In Eastern Asia an intoxicant made from rice is very general. *Oryza glutinosa* is frequently used for it. The manufacture among the Dayaks is as follows:

The rice is boiled, placed in pots with yeast, *ragi*. This stands for some days exposed to the sun. Then water is added, and the mixture is allowed to ferment for two days. It is then strained through a cloth. This drink is the *tuwak* of the Dayaks, the *tapai* of the Malays, the *badag* of Java. A similar drink is made by the Buginese and Makassars, called *brom*. These drinks are extremely intoxicating.[1] The rice-beer, *zu*, of the Nāgas is said to be soporific rather than intoxicating.[2] This is also largely the case with barley-beers in all their varieties. 'The liquor which plays so important a part in the daily life of the Garo is always brewed and never distilled. It may be prepared from rice, millet, maize, or Job's tears.'[3] Many aboriginal tribes of India drink rice-beer.[4] The term *samshoo*, or *samshee*, in China includes rice-beer. *Saké* or *saki*, the national drink of the Japanese, is made from the best rice-grain by fermentation. It has a slightly acid taste, and is of the colour of pale sherry. Inferior varieties are *shiro-zaké* (white *saké*), and a muddy sort, *nigori-zaké*. There is a sweet variety, *mirin*.

Beer made from varieties of millet (*Andropogon sorghum vulgaris*) is the chief African drink. Its use extends from the Kaffirs to the Egyptians. Under the name of *pombe* it is familiar throughout Central Africa.[5] In Egypt it is known as *durra*-beer. Besides *durra*-beer, the Nubians and Abyssinians make a sour beer from oats.[6]

Where barley is the staple grain for beer manufacture, rye is sometimes used to make a coarser variety. Wheat is occasionally used. In Germany it was once largely employed in what was known as *Weissbier*.

A grain as important regionally as rice and millet for the manufacture of beer is maize (*Zea mais*). Occasionally used in the Old World, as in parts of Africa, it is the staple grain for beer in America, its use extending from the Chaco Indians to the Apaches in the North. The latter made much use of it in their ceremonial life. They called it *tizwin*, and flavoured it with various spices.[7] The Southern and Central America maize-beer is known as *chicha*—a name as familiar as is *pombe* in Africa.

The fermented liquor, *chicha*, is an infusion of cooked maize in water. This is allowed to ferment. Its use was universal throughout ancient Mexico and Peru.[8] *Chicha* boiled down with other ingredients was a particularly strong intoxicant, used only at the *huacas*. To-day the Iquitos of the Amazons brew very excellent *chicha*, flavouring it with the young shoots of a plant which has the effects of an opiate.[9]

In Mediterranean and north European culture, barley has been the staple of beer.

The ancient Egyptians made a beer, *zythum*, from barley. Dioscorides mentions ζύθος, κοῦρμι, and βρῦτον as being used in the Greek world. The Hebrews seem to have included beer in the term *shēkhār* (EV 'strong drink'). Spanish beer (*celia* or *ceria*), Gallic beer (*cerevisia*), and an Illyrian beer were known to the Romans.[10] Germany and England have always been famous for their beers, and in modern times their output is the most important. There was an old distinction between ale (beer without hops) and beer (the hopped liquor). Climate and water, as in the case of wine, have much to do with the production of varieties. English beer is quite a distinct variety from either the light or the dark beer of Germany. The Russian *kvass* is a beer of barley and rye, or of rye alone.

The geographical range of beer, including rice, maize, and millet, as well as barley and rye-beer,

under the term, is precisely that of the respective cereals, covering the globe, except the Arctic and Antarctic parallels, and a narrow belt where the vine grows. In this belt, wine has always had precedence over beer and spirits, and it is not a luxury. In northern Europe, beer is more or less a 'national' drink, and everywhere it is a comparatively cheap beverage. Its general characteristic as opposed to wine that it has greater power of refreshment. Improved methods of storage have increased this since the time when beer had to be drunk as soon as it fermented.

(*b*) *Wines*.—There is no reason why the term 'wine' should not be retained to include the many varieties of liquor made by savage and semi-civilized races from the sap of trees. The *latex* of vegetable stems is sufficiently homologous with the juice of fruits, as that of the grape, to be classified with it in a genus distinct from fermented grain. It should be noted, however, that observers sometimes use the terms 'beer' and 'wine' indiscriminately, and do not always distinguish between fermented and distilled liquors.

As soon as vegetable juices, as distinguished from decoctions of grain on the one hand and infusions of leaves and berries on the other, are in question, the difference between the taste of grape-sugar, maltose, and thein is conspicuous. The character of wines may be described as sweet, that of teas as bitter, and that of beers as bitter-sweet. This permanent character is, as will be noted below, generally modified by art.

The discovery of the drink-value of the sap of certain trees was not difficult. Those chiefly used are palms, sugar-canes, and agaves.

In West Africa, palm-wine is the universal drink,[1] and it is commonly used all over the continent. The tree used is the *Raphia vinifera*, a bamboo-palm. The same tree is used for the purpose in Madagascar.[2] Palm-wine is the chief drink in most of the East Indian islands, Celebes, and especially the Moluccas; it is used to some extent in Java, Sumatra, Malaysia, and India. In the Moluccas the chief tree used is the *Arenga saccharifera*. The flower-stalk is tapped and the juice is fermented. Sweetness is sometimes corrected by adding bark. This drink, a typical form of palm-wine, is known as *sagero* in the Moluccas, *tuwak* in Malaysia and among the Bataks and Dayaks, and *legen* in Java.[3] It is the *toddy* of India, which is also made from the coco-palm and date-palm.[4] The *Borassus flabelliformis* is used in Leti, Moa, and Lakor.[5] This palm is the *Palmyra* of India and Africa. In view of the principle that adaptation to climatic conditions is partly effected by diet, it is noteworthy that the people of Tenimber and Timorlaut say that it is impossible to live in these islands without drinking a sufficiency of palm-wine.[6] The Guarannos of the Orinoco made a fermented drink from the Mauritia palm.[7] The *guy* of British Guiana is from the *œta* palm.[8] The not distant relative of these palms, the sugar-cane (*Saccharum officinarum*), is an obvious source of drinkables. In Burma, Assam, and Tongking, a fermented drink is made from it together with pineapple juice.[9] The A-kamba make a fermented liquor from the sugar-cane and dried fruits.[10] The A-kikuyu ferment the juice of the sugar-cane.[11]

The ancient Mexicans were very skilful in the preparation of fermented liquors. The chief source of material was the *maguey*, the false or American aloe (*Agave Americana*), the fermented sap of which forms *pulque*. Like palm-wine, *pulque* is obtained by tapping the flowering stalk of the aloe. The sap can be drawn off three times a day for several months, one plant yielding perhaps several hogsheads. To increase its intoxicating qualities, various roots are added. In appearance it resembles milk and water, or soapsuds, and it tastes and smells like rotten eggs. In 1890, 75,000 tons of *pulque* were carried on the main line of the Mexican railway—twice as much as the weight of any other commodity.[12]

The North American Indians made a fermented liquor from maple- and birch-sugar.[13] In England the sap of these trees, as also of the ash and spruce, has been used for the same purpose. Spruce-'beer' is common in northern Europe[1]—a decoction of the young leaves of the spruce-fir. Cider is a fermented liquor made from apples.

The geographical range of the grape-vine makes two narrow belts round the world, extending, roughly, from parallel 30° to 50° N. and S. But various conditions have limited its successful exploitation even here, and its most effective range is confined to southern and central Europe and parts of western Asia. In Italy, Spain, Portugal, Greece, and southern Europe generally the vine grows easily. In northern France and Germany it needs very careful culture. The southern wines, it has been noted, possess a larger proportion of sugar, but often are inferior in bouquet to those of the north. France, the Rhine districts of Germany, Spain, Portugal, Italy, Sicily, parts of Austria-Hungary, and Madeira produce the best wines of the world. Xeres and Oporto have given their names to famous wines of Spain and Portugal. The sack drunk in old England was a sherry. The Johannisberg vintages of Germany and the Tokay vintages of Hungary are particularly famous. The once famous Canary is still produced in the Canary Islands. Greece, Algeria, and Russia make fair wines, and wine is now increasingly grown in Australia, South Africa, and America. In Persia the wines of Shirāz, the produce of an excellent variety of vine, are still famous.[2] In the Græco-Roman world the vines of the Greek Islands, such as Chios, Lesbos, and Cos, produced the most valued wines. The Italian wines never attained their standard of excellence. A good deal of must was used by peasants, and wine turned sour was a favourite drink, and formed part of the rations of troops. The various Græco-Roman drinks were used in Palestine.

2. Distilled drinks.—Distillation, the process of evaporating a fermented liquor, and thus separating alcohol, has been known in the East, especially in China, from the remotest antiquity.[3] It is an invention difficult to trace to its source, but it seems to be attested for a few peoples at the stage of the lower barbarism, and in the higher stages of barbarism it is very generally known. Some of the more primitive American Indians seem to have been acquainted with the process.[4] A primitive form of distillation was found by Cook in the Pacific Islands. It was known to, but little used in, the ancient Mediterranean civilization.

It is recorded that in the 12th cent. the Irish distilled whisky, *uisge-beatha=aqua vitæ*, 'the water of life.'[5] In British Central Africa 'spirits used to be made by distilling from beer and banana- and palm-juice by means of a pot and a gun-barrel.'[6] But the process is rare in Africa. In the East it is very common. The Korean native spirits are distilled from rice or millet, and vary in colour, from that of beer to that of pale sherry.[7] The Chinese distil spirits from millet and maize,[8] but chiefly from rice. Rice-spirit and distilled palm-wine are largely drunk in the East. In Sumatra rice-beer is distilled into a spirit.[9] In South India this is also used. *Arrack* proper is a spirit distilled from palm-wine. In the Moluccas it is termed *koli*-water. *Sagero* from the *Arenga saccharifera*, or *Borassus flabelliformis*, is distilled in a primitive fashion.[10] *Arrack*, distilled from *toddy*, or from rice, is largely drunk in India by the lower classes. It is the *surā* of the ancient Hindus. Various peoples, such as the Malagasy, distil spirits from the juice of the sugar-cane,[11] a primitive form of rum.

In modern European civilization the use of spirits has increased, relatively, more than that of beers and wines. The Russian *vodka* is distilled from rye, an inferior sort from potatoes. Scotland and Ireland are famous for their whiskies, France for its brandy of Cognac, Holland for its schnapps, or hollands, a form of gin.

Portugal and Spain produce a true brandy, known as *aguardiente*. Brandy proper is chiefly made in France. It is distilled from grape-juice alone. Factitious or 'British' brandy is, like gin, made from 'silent,' or unflavoured, whisky. Whisky is made from a fermented infusion of grain, chiefly barley, sometimes rye, malted or unmalted. Rum in its varieties is made from molasses, and can be produced wherever sugar-cane grows. Its chief seat of manufacture is the West Indies. Germany and Russia produce potato brandy from the *fecula* of potatoes.[1]

Mediæval Europe was rich in the lore of making cordials and essences. To the earliest period of the Middle Ages belong the terms *aqua vitæ* and *elixir vitæ*. The search of alchemy for elixirs of life and youth probably gave some impetus to industrial invention.

Civilized taste has declared against the fermented drinks included in the term 'mead.' Fermented liquors made from honey have been largely used from the earliest barbarism. The Bogos and Abyssinians make a variety of mead.[2] What is commonly styled honey-'beer' often is merely a sweet fermented liquor ; but true honey-wine is reported for the Hottentots, Feloops, and A-kamba.[3] Certain peoples have made fermented liquors from saccharine substances produced from plant juices by evaporation.

Such are recorded for ancient Syria, made from wine and palm-wine. In Yucatan a fermented liquor was made from *metl*, 'honey,' and in Peru from that obtained by boiling the berries of *Schinus molle*. Honey-mead, *madhu* (=Gr. μέθυ), whatever its nature, is recorded for ancient India. It is said to have been superseded by *soma*.[4]

3. Infusions.—Tea, coffee, and cocoa are stimulants, without the specific effects of alcoholic drinks. Their properties are due respectively to the alkaloids thein, caffein, and theobromin. The use of these infusions and decoctions has increased enormously in modern times. It is significant that China has never been addicted to the use of alcoholic liquor, and that coffee is chiefly grown in Muhammadan countries. Ancient Mexico seems to have had a hard struggle against the national abuse of intoxicants, and its successful crusade was largely due to the presence of cocoa.

The tea-plant (*Thea chinensis*) is a native of China and Assam. Its cultivation in India and Ceylon is only very recent, but has assumed enormous proportions, chiefly in N.E. India and Assam, and S. India, as in Travancore.

Used for centuries in Russia, which derived good tea from China since its connexion with the East, tea is now drunk practically all over the world. Even a people like the savages of the New Hebrides are fond of tea, coffee, and cocoa, provided there is plenty of sugar. But the wilder natives still prefer the milk of the coco-nut.[5] The distinction between black and green tea is due to different methods of drying the leaf. The use of tea among European peoples is relatively recent, while for China it has been traced back to the beginning of the third millennium B.C.

Tradition assigns the discovery of coffee to Abyssinia. It was introduced into Arabia in the 15th cent., and into Turkey in the 16th. In the 17th cent. its use gained a footing in England and France. The coffee of the New World, deriving from one plant sent to Surinam from Amsterdam in 1718, is now the largest production, Brazil supplying the greater part. Arabia, North Africa, and the East Indies are the other great coffee-regions. It is grown also in Southern India.

The best Arabian coffee is grown in Yemen. Besides the infusion of the roasted berry, there is a coffee prepared from the leaves. The green shoots are dried in the sun, and then roasted and powdered. The resulting beverage is the *kishr* of Yemen, the *wedang kopie* of Java, and the *kawah* of Sumatra. The aroma is regarded as being superior to that of ordinary coffee from the berry.[6]

The tree from which cocoa and chocolate are made is indigenous to Central and South America. It was cultivated by the Mexicans, and from them the beverage was introduced to Europe by the Spaniards.

The Mexican cocoa was prepared by mixing the cacao-seed into a paste with maize. Diluted with hot water, and churned into a thick froth, which was the actual beverage, it was drunk when cold only. The Spaniards introduced the practice of drinking it hot. Vanilla was usually added as a flavouring. Chocolate, as thus drunk by the ancient Mexicans, was successful owing both to its aroma and to its fatty constituents. It was known to be a nerve stimulant.[1] In modern times the fat is removed by the screw-press ; this and the addition of sugar render it more palatable. Benzoni (1519–1566) describes it as a drink more fit for pigs than for human beings ; Linnæus named it *Theobroma* ('food of the gods'), *Theobroma cacao*. It contains the same powerful alkaloid as the kola-nut. As a beverage in Western civilization it is only less important than coffee and tea.

4. Other drinks.—Drinks prepared from roots are not numerous. Some have been incidentally referred to ; others are the *kava* of Polynesia, the *paiwari* of Guiana, and the *mishla* of the Mosquitos. The root of the sweet potato (*Batatas edulis*) is occasionally used.[2] *Paiwari* and *mishla* are made from *cassava* (manioc), the root, or bread made therefrom, of the *Manihot utilissima*, which in another form is the tapioca of commerce.

With *mishla* we approach a class of drinks which become pre-eminently social both in preparation and in use. One noteworthy detail reflects the characteristics of communal life, and also illustrates the stage of culture in which the preparation of commodities is *ad hoc*, and storage and artificial production are at a minimum. This is the fact that the communal drink is prepared only for special feasts, which are, however, frequent, and is all consumed.

The *mishla* of the Mosquito region includes all kinds of strong drink, but particularly that prepared from cassava or manioc.[3] The famous *kava* of Polynesia and Melanesia is in many regions becoming obsolete, owing to the introduction of European drinks. The *soma* of the ancient Indians, and the identical *haoma* of the ancient Parsis, are the most conspicuous examples of the communal drink becoming religious, and being apotheosized.[4] *Amṛta*, the nectar conferring immortality, was produced, along with thirteen other valuable entities, from the churning of the milky ocean. It was, however, an unguent rather than a drink (see ANOINTING [Hindu]).[5] The Homeric *ambrosia* was the food of immortality ; the *nectar* was the drink of the gods. Sappho and Anaxandrides speak of ambrosia as a drink ; it is also employed as an unguent like the Vedic *amṛta*. Alcman speaks of nectar as a food. Later, it was a synonym for wine, and acquired the special connotation of fragrance. The Homeric nectar conferred immortality ; hence it was forbidden to men. It was described as ἐρυθρόν, and, like Greek wine, was mixed with water. Apparently by etymology (νή and root of κτείνω) its meaning is the same as that of ambrosia.[6]

5. Tendencies of evolution.—The evolution of taste is perhaps not altogether a sociological, but partly an ontogenic process. It is correlated with the evolution of manufacture. One or two tendencies may be observed. For example, man's drinks tend to the condition of water. Thus, many beverages of primitive peoples are prepared in a thick soup-like form. Chocolate, for example, was drunk very thick.[7] In Tibet and many Mongol districts tea is prepared with butter. Turkish coffee is characterized by the inclusion of grounds. English beer has passed from a muddy consistency to a sparkling clearness. The thick sweet character of *pulque* resembles the inspissated must of Græco-Roman wine production. The ancient wine itself in its ordinary form was very thick, almost of the consistency of treacle, and probably for that reason it was generally drunk diluted with water. The sparkling nature of the best water has during the last century been suggested both in wines and in water by the method of effervescence. First applied to the wines of Champagne, it was adopted for certain of the Rhine

vintages. The production of artificial mineral waters, in which an access of carbonic acid gas causes sparkling, is characteristic of the last half-century. One result of fermentation is thus obtained, without, in the case of mineral waters, any fermentation at all.

Another tendency is towards the reduction of sweetness. Old wines in which no sugar is left have been preferred in recent centuries. Such, however, have a corresponding excess of alcohol. Dryness in modern wines is increasingly sought after. Thick, sweet drinks, like mead and malmsey, are typical in barbarism, and in ancient and mediæval culture. Malmsey, the French *malvoisie*, was originally a Greek wine, and carried on the tradition of the thick wines of ancient Greece. The Greeks themselves corrected sweetness by various methods, among them being the use of salt water. Savagery and barbarism had no lack of experiments in the production of varied flavours, if not of the correction of sweetness.

The rice-beer of the Nāgas is flavoured with jungle herbs, such as *Datura*,[1] while the neighbouring Garos dilute theirs with water.[2] The natives of the Moluccas correct the sweetness of their *sagero* by adding barks of a bitter flavour. The addition of hops to barley-beer gives it a tonic and more refreshing character. In old English life spices were largely used in both ale and wine. Mulled drinks were taken hot.

A similar tendency, found very early in culture, is to be noted in the preference for sour milk.

6. Animal drinks.—Drinks, other than milk and blood, produced from animal substance, are in the lower cultures not merely soups or broths, but actual beverages. The credit of the invention and use of the only animal spirit known to the world belongs to the Tatar tribes of Asia. Their *koumiss*, distilled from the milk of their mares, has been known since Greek times.

Human milk is the natural food of the human infant. Though differing in some important respects, the milk yielded by various animals is a satisfactory diet for children, and, especially in its products, a valuable food for adults. The use of milch-animals was a great step towards civilization.[3]

When Dayaks kill a pig or an ox, which is done to music and singing, they scramble for the blood. Men, women, and children drink of it; they smear themselves all over with it, and behave like maddened animals, burying their faces in the bleeding carcasses.[4] Blood, in fact, is to the savage 'a perfectly natural food; scarcely less so, perhaps, than milk, which is nothing but blood filtered through a gland.'[5]

7. Drinking customs and ideas.—The natural care bestowed upon the preparation of drinkables is guided and developed by growing intelligence, and inspired at certain stages of culture by religious emotion.

'The Hindu is very particular as to the water he drinks. It must be ceremonially pure, though not necessarily chemically pure.' It has to be very carefully fetched. If the carrier touches or comes near an out-caste or anything impure, the water is thrown away, and the vessel broken, or scoured with sand and water.[6] The kings of ancient Persia had their drinking-water brought from particular rivers, especially the Zab.[7]

Water, in Zoroastrianism, is sacred. It is a 'dress for breath,' physiologically and physically. It is a sin to drink water in the dark, or to pour it away.[8] Water is the 'dark spirit'; for sacrifice it is more valuable than spirituous liquors.[9]

A good deal of myth has gathered about the palm-wine tree (*Arenga saccharifera*) in the East Indies.

Many stories are told of how the juice of the nut has brought the dead to life again.[10] The Dayaks of South-East Borneo figure palm-wine as milk, flowing from the tree as if from a woman.[1] The Niasers hold that a palm-tree planted by a woman yields more sap than one planted by a man. A folk-tale runs that a woman after delivery, feeling she was about to die and not wishing her babe to starve, cut off one of her breasts. Out of this grew the palm-wine tree.[2] In Angkola a woman prayed to be turned into a tree. When she died, the *Arenga* tree came from her navel, the opium plant from her forehead, the *pisang* from her feet, milk from her breasts.[3]

Besides the stimulating and expansive properties of wine and spirits, the process of fermentation has naturally engaged the popular mind. A good deal of superstition is, no doubt, to be referred to speculation upon this mysterious change.

Among the Masai, 'when honey-wine is to be brewed, a man and a woman are selected for the purpose, neither of whom has had sexual intercourse for two days. A tent is set apart for them to live in until the honey-wine is ready for drinking (six days), during which time they may not sleep together. As soon as the honey-wine is nearly ready they receive payment, and go to their respective homes. Were they to have sexual intercourse during the six days that the honey-wine is brewing, it is believed that the wine would be undrinkable, and the bees that made the honey would fly away.'[4]

The ultimate reason for such a rule is probably merely an unconscious impulse towards concentration of purpose and avoidance of anything that might divert attention. The prohibition is particularly enforced in delicate operations. From the original impulse would develop ideas about the danger of mixing interests, no less than material; and, later on, ideas of sympathetic influence, among which may be some comparison of the sexual function with the process of fermentation.

In old Mexico the men who prepared *pulque* might not touch women for four days previously; otherwise the 'wine' would go sour and putrid.[5] The brewing of beer (*sheroo*) is regarded by the Kachins 'as a serious, almost sacred, task; the women while engaged in it having to live in almost vestal seclusion.'[6]

In the Mexican example may be seen a possible explanation of the way in which a comparison of the processes of fermentation and of sex was applied. Mixing of personality has attached to itself various terms and ideas of 'impurity.' Similarly the ingestion of leaven has been regarded as resulting in an impure condition of the material acted upon. Leaven itself is a symbol of corruption. Thus, an impure state in the persons engaged may induce a similar impurity in the object of their labours. Conversely, in other circumstances, it may expedite a desired change, as from barrenness to fertility.

A similar objection to mixture may be seen in an Australian custom. If we compare with it the rule of the Timorese priest[7] which forbids him in war-time to drink cold water, and orders him to drink hot water only, so as not to cool the ardour of the warriors, we may see how a rule arising naturally from an aversion to anything exciting or disturbing, when important operations are in progress, may be sophisticated subsequently. The Australian case shows an earlier stratum of psychosis.

The Euahlayi people believe that, if a medicine-man have many spirits in him, he must not drink hot or heating drinks. These would drive them away. Also, spirits would never enter a person defiled by the white man's 'grog.'[8] The Zambesi rain-maker, in order to keep his spirits with him, never touches alcohol.[9]

When the savage has reached the idea of a spirit informing his own organism, he has usually also reached the idea that heating or spirituous liquor is itself possessed of a spirit. Thus, if he wishes to concentrate the attention of his own spirit, he must, in sober earnest, refrain from mixing it with others.

The care bestowed on the preparation of liquors

is also evidenced in the ceremonial handselling of the new wine.

Thus, among the Mexicans, the priest of the god Ixtlilton, a healer of children, invested with the god's robes, opened the new wine annually in the houses of the people, and ceremonially tasted it.[1] New liquor is made by the Nāgas at the feast of *Reengnui* in January. This is a *genna*, or occasion of tabu, and men carry their own water for the rice-beer, and during the manufacture men and women eat separately.[2]

From this 'tasting' develops the sacrifice of the first-fruits of the vine. The Romans sacrificed the first of the new wine to Liber; until this was done, the new wine might not be generally drunk.[3]

The mechanism of drinking as practised by Europeans is more or less identical with that of eating. The liquid does not fall down the pharynx and œsophagus, but each gulp is grasped by the tongue and passed down. Thus a man is able to drink while standing on his head. Many peoples, however, either have not reached this method or have modified it.[4]

The wild men of Malaysia drink by throwing the water from the hand into the mouth. The Orang Laut do this with unerring aim, at a distance of more than a foot, without splashing. Even children are expert. A mother gives her infant water by dripping it from her hand. A New Hebrides native throws his head back, and literally pours the liquid down his throat without gulping. The ordinary drink in Oceania is the juice of the half-ripe coco-nut. The nut is held up and the juice allowed to fall into the mouth. It is unmannerly to touch the shell with the lips. The Lake Victoria tribes drink their beer through a tube.[5] In the Hindu ritual of meals, food is eaten with the right hand, but water is drunk with the left; the vessel is taken up with the left hand. The vessel must not touch the lips. It is held a little way above the upturned mouth, and the water is poured from it into the mouth. To allow the vessel to touch the lips would be indecent. The Fijians never put a vessel to the lips when drinking. They regard it also as objectionable for several persons to drink out of the same vessel. A Maori chief would not touch a calabash with his hands when drinking; he held his hands close to his mouth, and another man, a slave, poured the water into them. It was a grave crime to let any one use a cup rendered sacred by having touched his lips.[6]

Muhammad forbade drinking water in a standing posture. Three breaths are to be taken before a draught, for the reason that thus the stomach is cooled, thirst is quenched, and health and vigour are imparted. Drinking from the mouth of a leather bag was forbidden. 'He who drinks out of a silver cup drinks of hell-fire.' The faithful may not drink out of green vessels, large gourds, or vessels covered with pitch, the last being used for wine. During the fast of Ramaḍān it is held that even to swallow saliva between sunrise and sunset is a sin.[7]

The natural tendency against mixing re-appears in the custom of not eating and drinking at the same time. This is only partially identical with physiological law, since certain foods require a liquid vehicle, and certain drinks stimulate digestion.

When eating rice the Malagasy drink water. But otherwise they rarely drink at meals.[8] The Hindu does not drink until the meal is finished.[9] The natives of Borneo usually drink only after they have finished eating. 'They contend that by abstaining from taking liquid with their food they prevent indigestion.'[10] In British Central Africa the native drinks between meals, but chiefly water.[11] The A-kikuyu never drink at meals, but drink at any time when thirsty.[12] The Abyssinians drink nothing at meals.[13]

Eating, especially in the somewhat rapid method used by early peoples, is hardly compatible with conversation; hence many rules against eating and talking at the same time. Drinking does not labour under this disability. When drink is alcoholic, there is still less restraint of the tongue. In 15th cent. England 'people did not hold conversation while eating, but the talk and mirth began with the liquor.'[1]

When existence, as in the middle stages of social evolution, is threaded with superstition, methods of drinking and habits associated with drinking are either emphasized or inverted on special occasions which call for peculiar regard. As already suggested, it is probable that the ultimate psychological reason for these tabus is merely the instinct for concentration and the exclusion of foreign and disturbing interests. Ideas of supernatural danger are developed later, in order to give an explanation of the instinctive rule. Possibly the arbitrary prohibitions of 'individual' tabus are due to the same instinct; at any rate, the observance of such prohibitions helps to form the sense of responsibility.

On the Gold Coast, among individual tabus is the prohibition against drinking palm-wine on certain days of the week.[2] During a *genna* in January the Kabuis forbid young men to drink anything outside the house. On the occasion of the erection of a village monument the villagers may not use drinking-cups, but have to drink from leaves.[3] Among individual tabus of the Bangala are, 'You must not drink native wine except through a reed, and never straight out of a vessel of any kind.'[4] The cook of the party on the *hiri*, or trading expedition of the Massim, may not drink water, but only coco-nut milk.[5] A Massim sorceress drinks no water, but coco-nut milk only for eight days, by which time she is sacred and able to heal the sick.[6] In Celebes the priest who is responsible for the growth of the rice may not drink with any one or out of any person's cup.[7] In S.E. Australia a visitor to another tribe was under certain restrictions for a time. He was allowed to drink muddy water, three mouthfuls on each occasion. He had to drink these very slowly, or his throat would swell up.[8] The Thompson Indian girl, during the first four days of her seclusion at puberty, drank water, while otherwise fasting, from a birch-bark cup painted red. She sucked up the liquid through a tube made of the leg of a crane or swan; her lips were not allowed to touch the surface of the water. Subsequently she was permitted to drink from streams and springs, but even here she had still to use her tube, otherwise the spring or stream would dry up.[9] The Tlingit girl in the same condition had to drink through the bone of a white-headed eagle.[10]

On his first campaign the North American brave was very sacred. Especially was it essential that no one should touch his eating and drinking vessels. When on the outward journey warriors drank from one side only of the bowl; on the return, from the other. When within a day's march of home they hung their vessels on trees or threw them away.[11] In another account a functionary named *alissu* is mentioned. His duty was to hand to the warriors everything that they ate or drank; they were not allowed to touch these themselves.[12]

Among the Tring Dayaks mourners may not drink ordinary water, but only water collected in the leaves of creepers. This is called 'soui-water.'[13] Before setting out on a trapping expedition, the Carrier Indian abstains from drinking out of the same vessel as his wife.[14] In Chotā Nāgpur and the Central Provinces of India men abstain from alcohol and women when rearing silkworms.[15]

The last case may be compared with the Masai tabu during the making of wine. There chastity is observed in order that the wine may not be spoiled. If the reason be that by magical 'sympathy' a sexual process may taint the wine, that reason and any idea of the sympathetic action of

alcohol on the larvæ can hardly apply to the Chotā Nāgpur tabu. Some explanation more in accordance with the evolution of mind seems to be required.

In the following, ideas of sympathetic adaptation appear:

During the preliminary ceremonies for making rain among the Arunta no water may be drunk, else the magic would fail[1]—no doubt because of the premature use of liquid. So in Java, when proceedings are taken to prevent the fall of rain, the person interested may not drink anything while the ceremonies are in progress,[2] otherwise the rain would at once commence. Conversely, medicine-men sometimes drink, and generally cultivate wetness, when making rain.

Permanent caution in the act of drinking is often found in the case of important persons, and sometimes it is a social habit. Africa is remarkable for such observances.

In the Congo State 'there is hardly a native who would dare to swallow a liquid without first conjuring the spirits. One of them rings a bell all the time he is drinking; another crouches down and places his left hand on the earth; another veils his head; another puts a stalk of grass or a leaf in his hair, or marks his forehead with a line of clay. This fetish custom assumes very varied forms. To explain them, the black is satisfied to say that they are an energetic mode of conjuring spirits.' When a chief drinks he rings a bell at each draught: and at the same moment a boy brandishes a spear in front of him, 'to keep at bay the spirits which might try to sneak into the old chief's body by the same road as the *massanga* (beer).'[3]

When the king of Loango 'has a mind to drink, he has a cup of wine brought; he that brings it has a bell in his hand, and, as soon as he has delivered the cup to the king, he turns his face from him and rings the bell, on which all present fall down with their faces to the ground, and continue so till the king has drunk.' The king would die if he were seen in the act of drinking.[4] When Winwood Reade offered the king of Canna a glass of rum, the monarch hid his face and the glass under a towel.[5] When the king of Dahomey drinks in public, a curtain is held up to conceal him. Bowdich describes the scene when the king of Ashanti drank wine; music played, and the soldiers, brandishing their swords with the right hand, covered their noses with the left, singing meanwhile the monarch's victories and titles, as he drank behind an extemporized curtain. A man of consequence never drinks before his inferiors without hiding his face. It is said in Ashanti that an enemy can most easily impose a spell on the faculties of his victim when drinking. A son of the king of Congo was put to death for having accidentally seen his father drink. A Pongo chief never drinks in the presence of others except behind a screen.[6] When the king of Unyoro in Central Africa went to the royal dairy to drink milk, the men dispersed and the women covered their heads. No one might see him drink. A wife handed him the milk-bowl, but turned her face away.[7] The Thompson Indians believe that enemies can injure a man by magic when he drinks.[8] A Warua when drinking holds a cloth before his face. The habit is particularly strong in the presence of a woman. 'I had,' says Cameron, 'to pay a man to let me see him drink; I could not make a man let a woman see him drink.'[9]

In these cases the development takes the form of a real, though secondary, sense of modesty. Von den Steinen found in Central Brazilian tribes a sense of modesty, attended by shyness and blushing, exhibited when alimentary functions were in progress, a sense as keen as that shown by the majority of the human race in the matter of sexual functions.[10] In similar rules cited below there may be seen not merely habits of etiquette, but a sense of modesty and a law of decency, involving the fear of exciting disgust. The idea that such practices hinder the entrance of evil influences, or prevent the soul from escaping,[11] is a later sophistication, and cannot explain their origin.

When the Indian of Cape Flattery falls ill, he often ascribes it to a demon which entered his body when he was drinking at a stream.[1] Bulgarians before drinking make the sign of the Cross, to prevent the devil entering the body with the drink.[2] Devout Russians used to blow on the glass to drive Satan from the liquor.[3] Conversely, the soul may be tempted to remain, though the mouth is dangerously open, by offering it a share in the beverage. When the hair of the Siamese boy is cut, there is a danger lest the *kwun*, the guardian spirit of the head, may depart. It is enticed and captured; then coco-nut milk is presented to it. This is drunk by the boy, and thus by absorbing the drink of the *kwun* he retains the *kwun* itself.[4]

Rules of drinking, more or less impregnated with superstition, occur all over the world.

In Wetar it is a serious offence to use a chief's drinking-cup.[5] A Maori who drank from the cup of a man who wished him ill became bewitched.[6] The Niam-niam, who are said to be 'particular at their meals,' that is, to observe alimentary decency, wipe the rim of a cup before passing it on.[7] Great care was taken by the Fijians that no one should touch the king's cupbearer. They regarded it as objectionable for several persons to drink out of the same vessel, and held that pollution was carried by saliva.[8] The civilized man has the same instinct of isolation and of excluding foreign elements from his drinks.

Contact with particular persons is avoided.

According to the rules of Kaffir *hlonipa*, relatives of a husband will not drink milk at any kraal connected with the wife, nor will the wife's relatives at a kraal connected with the husband. For some time after marriage the wife will not use milk. The principle is that she was paid for with cattle, and would be *insila* ('defiled') if she consumed her own purchase. After a visit to her father, from whom she brings a goat or an ox, the tabu is removed. The animal is slain, and the 'defilement' passes from the milk into the animal. She has 'cleaned her spoon.'[9]

In the above case we have probably little more than a phase of etiquette. In others there is a distinct fear of contamination resulting in various conceptions of real or imaginary injury.

In Tonga, inferior persons might not drink in the presence of superiors,[10] and the various 'ranks' could not drink together.[11] In India, water cannot be accepted by high-caste from low-caste persons.[12] Even Pahariahs will not drink with Koriahs.[13] Among the Nāgas, with whom village feuds are frequent, one village may often be found refusing to drink from a running stream which supplies another.[14] New Guinea natives refused to drink water offered to them by Europeans.[15]

In cases like the last there is perhaps no definite conception, merely a vague uneasiness about the unfamiliar. A similar sensitiveness occurs in the case of unfamiliar or untested drinks.

When the Eskimo find a new spring, an *angekok*, or the oldest man present, drinks of it first to rid the water of any *torngarsuk*, or malignant quality which might make them ill.[16] Similar ideas are connected with the hospitable practice of 'tasting,' though it is not clear that they are the primary reason of the custom.[17] At palm-wine drinkings the Kruman hostess takes the first and last drink herself, in order to 'take off the fetish.'[18] The same notion may be involved in the ceremonial tasting by an official of the new wine and the new fruits.[19] In Eastern Central Africa, at beer-drinkings given by the chief, the priest or 'captain' of the chief tastes the liquor, to show the guests that it is not poisoned.[20] New Guinea natives taste the water they offer to a stranger, to prove that it is free from poison.[21] Among the Zulus it is not etiquette to offer beer to any one without first tasting it.[22]

Drinking with a woman is avoided by many peoples in various stages of evolution. The Beni-Harith would not take drink from the hands of a

woman on any consideration.[1] An artificial horror is generated in such cases. The Muskhogeans held it equivalent to adultery that a man should take a pitcher of water from the head of a married woman. It was permissible for him to drink if the woman removed the pitcher herself, and retired after setting it on the ground.[2] Following another line of thought, the Arunta hold that a draught of woman's blood will kill the strongest man.[3]

Among the Kaffirs and the Bahima a menstruating woman may not drink milk; if she does, the cows will be injured. She is restricted to beer.[4] At his daughter's first period, however, a Kaffir father sets apart an old cow for her exclusive use, and its milk constitutes her only food.[5] After being delivered, the Greenland mother observes tabus. She has a water-pail for her own use; if any one else drinks from this, the rest must be thrown away.[6] Pliny mentions the belief that, if a menstruous woman touches wine, it turns to vinegar.[7] 'In various parts of Europe it is still believed that if a woman in her courses enters a brewery the beer will turn sour; if she touches beer, wine, vinegar, or milk, it will go bad.' In Calymnos a menstruous woman 'may not go to the well to draw water, nor cross a running stream, nor enter the sea. Her presence in a boat is said to raise storms.'[8]

On the face of these customs and ideas there is a regard both for the woman's own safety and for that of others. She is rendered harmless by being insulated, and at the same time is removed from danger.[9] It has been further suggested, for the explanation of similar cases, that any taint of sexual functions may injure the milk of cows, and that the sympathetic link between the milk and the cow may be snapped by any process which converts the milk into another substance, such as curds. Members of the 'sacred world' may therefore use these substances without injuring their source.[10] On this principle the Wanyamwesi practice of mixing vaccine or human urine with milk has for its object the safeguarding of the source.[11]

The Jbāla of Northern Morocco believe that a murderer is permanently unclean. 'Poison oozes out from underneath his nails; hence anybody who drinks the water in which he has washed his hands will fall dangerously ill.'[12] Among the Zulus a wounded man may not touch milk till a ceremony has been performed.[13]

The sources of contamination dangerous to drinkables are almost universally the same. There are some variations, as perhaps the law of Muhammad that a vessel from which a dog has drunk is to be washed seven times before it is used by human beings.[14]

A universal source of contamination is death.

After a death the Zulus drink no milk for a day; the mourners not for some time. Widows and widowers apparently are permanently forbidden its use.[15] A Nandi who has handled a corpse may not drink milk until he has been purified.[16] The Déné who has touched a corpse has to drink out of a special gourd.[17] In the same circumstances the Thompson Indian has to spit out the first four mouthfuls whenever he drinks.[18]

For the classification of the various magical properties of drinks the Zulu theory is instructive. But neither here nor elsewhere can a line be drawn between inherent and acquired characteristics. The Zulus logically distinguish between two complementary species of magical drinks. These are 'black' and 'white,' negative and positive. The former removes, for instance, everything that

causes a man to be disliked; the latter gives him 'brightness,' and produces liking and admiration in others. The former is emetic in its operation. The ejected matter is placed in the fire; thus the 'badness' is consumed. The white drink, when used, for instance, to command the affections of a girl, or to conciliate a great man, should contain some object that the person referred to has worn next the skin.[1]

Drinks of the first class have the properties of liquids when used for washing; those of the second have the positive qualities, stimulant or nutritive, which drinks share with food and drugs. A distinction is clearly to be drawn between the latter class and drinks which have been contaminated by alien or dangerous substances.

Just as mythology developed the generic idea of drink into a water of life or of immortality, so it has developed the idea of cleansing into a water of oblivion. The 'Drink of Forgetfulness' is found in Greek, Hindu, Norse, and other mythologies.[2]

In Fijian mythology the spirit of the dead man on his way to the other world drinks of a spring. As soon as he tastes the water, he ceases weeping, and his friends at home cease weeping, forgetting their sorrows. This savage Water of Lethe is called the *Wai-ni-dula*, the 'Water of Solace.'[3] The Fijian idea is significant when compared with certain ceremonial drinking which terminates mourning. Among the Kacharis of Assam an elder distributes to the mourners 'the water of peace,' *santi jal*; the drinking of this terminates the mourning.[4] The Kathkars effect 'purification' after birth or death by means of water touched by a Brāhman.[5] In South India holy water is drunk to terminate mourning. In Roman Catholic ritual a sick man drinks water in which the priest has washed his hands.[6] At the end of mourning the Kaffir widow rinses her mouth with fresh milk.[7] Chaco Indians 'purify' themselves after a funeral by drinking hot water and washing themselves,[8] cleansing thus both the outer and the inner man. In Central Africa the possessing spirit is driven out of a man by drinking an intoxicant. The Goṇḍs believe they purify themselves by drinking spirits.[9] Among the Grāons a man is re-admitted to caste after he has drunk the blood of a goat to wash away his sin.[10] When the Bijāpur Bedars re-admit an adulteress, they touch her lips with a red-hot twig of *Asclepias gigantea*, and give her liquor to drink.[11] In Mexico during the 'bad days,' which recurred every four years, children were made to drink spirits.[12]

In these and similar cases there is a preference for 'strong' water, whether it be hot or spirituous, or blood, or containing some added virtue. It is difficult, therefore, always to distinguish 'purification' from the ingestion of virtue or *mana*. Many magical drinks certainly have both negative and positive properties. This is the case, whether literally by acquisition or metaphorically by imagination, with water itself.

The Musalmān Nawab of Savanur drank Ganges water only, not from piety, but because of its medicinal properties. The water of which a Brāhman sips thrice before a meal is 'Vishnu's feet-water.' The Kenaras drink water in which the priest has washed his feet.[13] In early England a cure for demoniac possession was water drunk out of a church-bell.[14]

From this aspect drinks are suitable for purposes of consecration and institution. Their virtue gives a vigorous set-off in the new state.

In old Scandinavia the new king drank a horn of liquor before taking his seat on the throne.[15] European monarchs after coronation take the Sacrament. So in Catholicism do married couples. Interesting variants are the following. In Avestan times the first food given to the new-born child was the *haoma*-juice.[16] Among the Tshi peoples the father gives his son a name by squirting rum from his mouth upon him. Rum is poured out on the ground for the ancestors on the same occasion.[17]

When a child is received into the Kok-ko of the Zuñi, his 'godfather' drinks 'holy water' and gives it to the child to drink. This godfather acts as a sponsor, and takes the vows in place of the child.[1] These customs explain themselves.

As part of his initiation the Southern Massim boy drinks salt water mixed with unripe mango-flesh. He bathes in the sea, and drinks some sea-water. Then he drinks some coco-nut milk. Whatever the meaning of these drinks, they play a considerable part in the process of man-making.[2] In savage pubertal ceremonies milk is sometimes drunk in connexion with a pretended new birth. Ancient religion had this fiction. After the new birth of the *taurobolium* (*q.v.*) the initiate was fed on milk, like a new-born babe.[3]

Ideas of invigoration are one of the most obvious reactions to the effect of strong drinks. 'Dutch courage' has been an important factor in history. At a ceremony previous to war the Tobelorese give their headmen palm-wine outside the temple. After drinking the wine the generals run seven times round the temple.[4] This custom is possibly a naive way of inspiring the leaders of the people. Ancient classical authors give several accounts of races whose practice it was to go into battle drunk.

'It is extremely probable that the funeral sacrifice of men and animals in many cases involves an intention to vivify the spirits of the deceased with the warm, red sap of life.'[5] The shades in Hades renew their life by drinking blood.[6] The offering of a drink is a frequent method of animating a fetish, and is thus analogous to the use of drink as an institutional rite. The Tshi negro squeezes rum upon his new-made *suhman*, saying 'Eat this and speak.'[7]

In metaphor and mythology drink plays a more considerable part than food. From similes like 'as cold water to a thirsty soul'[8] to the metaphorical description of Spinoza as 'a God-intoxicated man,' all the psychical reactions of drinks are expressed in language.

In religion the story of wine constitutes a distinctly ideal element, and it is here that the function of drink receives not only a sort of apotheosis, but perhaps a sound physiological explanation.

The Vedic gods were originally mortal; immortality was acquired by, among other methods, the drinking of *soma*.[9] Similarly the Homeric gods attained immortality by drinking nectar and eating ambrosia.[10] In the mythology of ancient Babylonia, Hasisadra brought into the ark a supply both of beer and of wine.[11] According to the Mexicans, the first human beings created by the gods fed on *pulque*.[12]

The sociological significance of orgiasticism has not yet been studied.

'Wine or spirituous liquor inspires mysterious fear. The abnormal mental state which it produces suggests the idea that there is something supernatural in it, that it contains a spirit, or is perhaps itself a spirit.'[13] The Siamese, intoxicated by the spirit arrack, says he is possessed by the 'spirit,' in the Animistic sense, of the liquor.[14] Thus the juice of the grape is the blood of the vine, its soul or life. 'The drinking of wine in the rites of a vine-god like Dionysus is not an act of revelry, it is a solemn sacrament.'[15]

Some typical cases of the religious and social uses of strong drink remain to be mentioned. No attempt is made to define stages of evolution. The earliest Brāhmanism used spirituous liquors in acts of worship. Arrack was offered to the gods. The *Sautrāmaṇī* and *Vājapeya* rites were typical for the drinking of *surā*, and the *soma* rite was in celebration of the *soma* itself. The later Vedas prohibited the worshipper from drinking the ceremonial liquor for a sensual purpose. The Śāktas to-day have actually the same principle, and purify the liquors before worship.[16] The followers of Zarathushtra have clung to the old

way more consistently than the Hindus. Liquor-drinking forms part of almost all Parsi ceremonies to-day. Liquor is specially consecrated on New Year's Day.[1]

The Eucharist in its early form has the mark of a periodic wine-drinking, breaking up the 'fast' of work-a-day life. It was necessary for organizers like St. Paul to prohibit excess[2]—a fact which shows that wine was freely taken. The wine represented the blood of Christ and conferred immortality. In the course of history the use of wine has been denied to others than the celebrant, and in Churches which allow all worshippers to partake of the chalice the wine is not drunk but tasted. The Hebrew Cup of Blessing is an analogue of the Christian wine of the Eucharist. The early Christians made a free communal use of the sacred drink; it was given to the dead; vials of it were placed in the grave, with cups inscribed with toasts, such as 'Drink and long life!'[3]

For very special offerings to a god the Bhīls make *kuvari*, 'virgin liquor.' The distillers in this case must bathe and wear newly washed clothes before commencing operations.[4]

For special purposes, other than inspiration, a priest may become intoxicated. On certain days the high priest of the Zapotecs was obliged to be drunk. On one of these he cohabited with a Virgin of the Sun.[5]

Gods reflect in an intensified form the ideals and habits of their worshippers. If a god is housed, clothed, and fed, he is also supplied with drinks.

A difficult problem is presented by various customs of eating the dead. Their discussion belongs elsewhere; but they show variation even in the case of drinking.

The Cocomas of the Amazons ground the bones of their dead to powder and drank this in their beer. They said 'it was better to be inside a friend than to be swallowed up by the cold earth.'[6] The Ximanas mingled the ashes of the dead with their drink.[7] Here there can be no survival of cannibalism. The Angoni make the ashes of the dead into a broth. This must be lapped up with the hand, and not drunk in the ordinary way.[8] The native practice, generally confined to the women, of drinking some of the fluids drawn from the decaying body of a dead relative is a commonplace of Australian anthropology.

As a preliminary to the problem may be mentioned the frequent occurrence of morbid perversions of appetite in cases of strong emotion. If such perversion be applied to a psychosis of affection or respect, the Australian and similar practices are more easy to understand.

The Irish wake is a familiar example of the practice of drinking to celebrate death. In West Africa the Tshi people drink heavily during the fast which follows a death, and the mourners are generally intoxicated.[9] The same is the case among the Yorubas.[10] But it is chiefly after the funeral that drinking is the rule of the feast.

At funerals among the Woolwa Indians there is much drinking of *mishla*. A long line of cotton is stretched, like a telegraph wire, from the house of the dead, where the drinking takes place, to the burial-ground where the body has been deposited. 'I have seen the white thread following the course of the river for many miles, crossing and re-crossing the stream several times.'[11] As soon as a Bangala man dies, the family gets in large supplies of sugar-cane wine. Dancing and drinking are carried on for three or four days and nights, or until the wine is finished.[12] The Guiana Indians drink and dance at the funeral feast.[13]

Among the Tshinyaï of the Zambesi the native beer, *pombe*, plays a considerable part in post-funeral rites. For the ceremony of *Bona*, a large quantity is prepared. Holes are bored above the grave and *pombe* is poured in. In one hole, in front of the house where the grave is, the mourners wash their hands with *pombe*. As the procession retires, a widow of the deceased (she is called *musimo*, the spirit), her head covered with calico, constantly calls out for *pombe*, which she drinks beneath the

covering. At the house of the head widow a large hole is dug and well cemented. This is filled with *pombe*, and every one lies down and drinks it without help of spoon or vessel. A feast follows, consisting of *pombe* and meat.[1]

Various considerations, some of which are supplied in the above-cited cases, suggest that drinking at funerals and their anniversaries is motivated by a double impulse, or rather by two complementary impulses, namely, the desire to stifle sorrow, and the desire to give the dead a share in the good things of the world to which they still belong, though absent in the body. These two expressions of feeling, coupled with the 'sympathy' shown by the community, render funeral drinking a typical case of social instinct. Secondary ideas necessarily supervene.

The universal employment of a drink of fellowship to institute and also to terminate a social process is found in the case of pubertal ceremonies, though rarely. The reason is that, in this case, the process does not include a pair of persons. In the case of marriage and covenants this essential condition of a social act is patent. It may be said that the reciprocal process in the former class is between the novice and the members of the social state to which he is admitted. And in many analogous cases this is recognized, though the mind in its more primitive stages is slow to recognize by concrete expression such abstract ideas as that of community. But in these stages the other member of the couple may be found in the 'godfather' or sponsor, on the one hand, and individual members either of the same or of the other sex, the latter being the indirect objective of the initiation. Thus among many early peoples the boys after initiation drink with the girls. Similar ceremonies are performed in connexion with the sponsor. After initiation the A-kamba youth makes honey-beer, and gives it to the elder who looked after him during the ceremonies.[2] At the end of the *ntonjane*, the Kaffir ceremony performed to celebrate a girl's arrival at puberty, the girl's nearest female relative drinks milk, and then hands the bowl to the girl to drink.[3] From such practices there may easily develop ideas of tabu, which is to be ended by drinking or other rite of passage. Thus, in Central Australia the man whose blood has been taken to supply another with health or strength is tabu to him until he releases him from the 'ban of silence' by 'singing over his mouth.'[4]

Marriage is universally the occasion of a social feast, and the rite in which the bridal pair drink together is one of the most prevalent methods of tying the knot. There is thus both individual and social drinking at weddings. Sometimes the latter is not shared by the marrying parties; sometimes the individual drinking rite is extended to relatives; and sometimes it is carried out by them as sponsors for the bride and bridegroom. Naturally there is considerable variation in the ritual of the act of union.

At Tipperah weddings the bride receives a glass of liquor from her mother. She takes this to the bridegroom, sits on his knee, and, after drinking some of the liquor, gives the rest to him.[5] Among the Kaffirs, milk from the bridegroom's cows is presented to the bride. Her drinking of this milk renders the marriage complete, and the tie indissoluble. The guests exclaim, 'She drinks the milk! She has drunk the milk!'[6] Among the Nakri Kunbis of Thana, liquor is given to the pair when the wedding ceremony is completed.[7] The girl relatives of the Khyoungtha bride bar the entrance to the village against the

bridegroom with a bamboo. Across this he has to drink with them a 'loving-cup of fraternity' before he is allowed to enter.[1] At weddings in Morocco the priest hands to the pair a cup of wine which he has blessed. When both have drunk of it, the glass is dashed to the ground by the bridegroom, with a 'covert meaning that he wishes they may never be parted until the glass again becomes perfect.'[2] In the Manuahiki Islands the priest gives the man a coco-nut containing its milk. The man drinks, and the woman after him.[3] Among the Larkas, a cup of beer is given to each of the two parties; they mix the beer, and then drink it. This completes the marriage.[4] In the Moluccas, Japan, Bengal, Brazil, Russia, Scandinavia, and many districts of Europe, the bridal pair drink, as the marriage ceremony or part of it, wine or beer from one vessel.[5] At Beni-Israil weddings the bridegroom pours wine into the bride's mouth.[6] In Korea and China the pair drink wine from two cups, which are tied together by a red thread.[7] In Christian countries the rite is separated from the marriage ceremonial proper, but is carried out indirectly when the pair receive together the wine of the Communion, which is to be partaken of immediately or soon after the marriage itself. Among the Gonds, the respective fathers of the bridal pair drink together.[8]

Drinking together at marriage is a rite which applies to two parties the principles of social drinking. Sharing in an act is a sort of reciprocity, and together with interchange of gifts constitutes the fundamental principle of society. The more abstract ideas of similarity, union, and identity follow, and the simple ritual of sharing has a corresponding development. From the beginning there are also involved in the process, but unconsciously, the reactions to the physiological feelings of refreshment, and in particular to the effects of alcohol, which increase both self-feeling and altruism.

Pure altruism is the primary motive of many a custom which involves a simple sharing of drink. Here is the virtue of the man who gives a cup of cold water to a little one (Mt 10[42]). The natives of India have the custom of erecting sheds for the giving of water or butter-milk to poor wayfarers.[9]

Secondary motives, such as a general desire to conciliate or a wish to avoid the injury of a curse or an evil eye, come to obscure the primary. In the procession preceding the circumcision of an Egyptian boy is a servant carrying a skin of water and brass cups. Now and then he fills a cup and offers it to a passer-by. Another servant carries a tray with materials for coffee. It is his business, when they pass a well-dressed person, to fill and present him with a cup; the person gives him something, perhaps a half-piastre.[10] The analogy of other Egyptian customs suggests here the avoidance of the evil eye.

Even towards slain animals and the human objects of social resentment pure altruism is shown. Indians of the Orinoco, after killing an animal, pour into its mouth some liquor, 'in order that the soul of the dead beast may inform its fellows of the welcome it has met with, and that they, too, cheered by the prospect of the same kind reception, may come with alacrity to be killed.'[11] One may take leave to assign a worthier motive as the origin of this custom. Similarly, though primitive peoples share their drink with the dead, some have learnt to explain the custom of placing such things in the grave as a method of inducing the dead to be quiet, and not to come and pester the living for anything they want.

The co-operative totems of Australia are perhaps the earliest instance known of the principle of co-

operative industry elevated into a system. Among the totems of the Central Australians is a water-totem. A member of this may drink water when alone; but, if he is in company, it is necessary for him to receive it, or the permission to take it, from an individual who belongs not to that totem, but to a moiety of the tribe of which the water-man is not a member—a complementary moiety. The principle, according to Spencer-Gillen, is that of mutual obligation between complementary food-totems, regulating the supply of food and drink.[1]

But the principle of reciprocal service is at the root of all social phenomena. Some of its forms are curious; others seem totally unlike the original type. Secondary ideas, once more, are responsible for these fluctuations. An African wife drank the medicine intended for her husband, in the belief that he would be cured.[2] A similar notion is seen in the belief that what a man drinks may affect the child whose birth is expected. A further development is reached in such customs as that of the Kwakiutl Indian, who, after biting a piece of flesh from the arm of a foe, drinks hot water in order to inflame the wound.[3] At this stage of sophistication there is often a choice of absurdities. The Indian might be supposed anxious for his own digestion rather than for the increase of suffering on the part of his foe.

Another case of the intrusion of a secondary idea is to be seen in the Australian custom of drinking human blood before starting on an *atninga* (avenging expedition).

'Every man of the party drinks some blood, and also has some spurted over his body, so as to make him what is called *uchuilima*, that is, lithe and active. The elder men indicate from whom the blood is to be drawn; and the men so selected must not decline, though the amount drawn from a single individual is often very great; indeed, we have known of a case in which blood was taken from a young and strong man until he dropped from sheer exhaustion.'[4]

The beginning of a venture or expedition is universally celebrated by drinking, on the principle of invigoration, as in the old English 'stirrup-cup.' But in the Australian example a further notion has come in. If on such an occasion a man joined who had some connexion with the tribe to be visited, he was forced to drink blood with the party, and, 'having partaken of it, would be bound not to aid his friends by giving them warning of their danger.'[5]

The Indians of the Cordilleras drink of the water of a river, and pray the god to let them pass over. So did the old Peruvians.[6] Dingan's army at the banks of the Ubulinganto strewed charcoal on the water, and then drank of it, 'the object perhaps being to deprecate some evil power possessed by the river.'[7] More probably the aim is to adapt one's self to the object by contact, to produce fellow-feeling and sympathy by communion.

Ideas of union similar to those concerned in marriage ceremonies of drinking, but involving from the outset, or at least producing, *ipso facto*, the secondary ideas of mutual responsibility by means of inoculation, or ingestion of the other's substance, or a conditional curse, have built up what may be described as the legal forms of social drinking. 'The drinking of human blood, or of wine mixed with such blood, has been a form of covenant among various ancient and mediæval peoples, as well as among certain savages.'[8] 'He who has drunk a clansman's blood is no longer a stranger but a brother, and included in the mystic circle of those who have a share in the life-blood that is common to all the clan.'[9] Robertson Smith's induction is actually a tertiary stage of thought

on the subject, but present and powerful in the social consciousness of Arabs and other peoples. Among other details in point is the fact that blood-brotherhood itself is often produced by drinking any substance other than blood. See BROTHERHOOD (artificial).

The ordeal, often termed 'drinking the oath,' is a legal application of a secondary idea.

To extract the truth from a man, the Negro dips a *bohsum* in rum. This rum is then offered to the man, and, if he lies, makes his belly swell. A man claiming a debt due to a deceased person drinks the water in which he has washed the corpse. In legal actions before the chief, the *odum* drink is drunk as an oath and ordeal. It is a poisonous emetic.[1] A Masai accused of a crime drinks blood, and repeats these words: 'If I have done this deed, may God kill me.'[2]

Hospitality, a virtue of universal occurrence, is often complicated by superstitious accretions due to fear of the stranger within the gates.

As soon as a stranger enters the house of a Jivaro or Canelo Indian, each of the women offers him a calabash of *chicha*. A guest is welcomed by the Herero with a cup of milk.[3] These are simple acts of fellow-feeling. It is particularly among Arab races that the custom attains complexity.

Among the nomadic Arabs of Morocco, 'as soon as a stranger appears in the village, some water, or, if he be a person of distinction, some milk, is presented to him. Should he refuse to partake of it, he is not allowed to go freely about, but has to stay in the village mosque. On asking for an explanation of this custom, I was told that it was a precaution against the stranger; should he steal or otherwise misbehave himself, the drink would cause his knees to swell so that he could not escape. In other words, he has drunk a conditional curse.'[4] Zaid-al-Khail refused to slay a thief who had surreptitiously drunk from his father's milk-bowl.[5]

Health-drinking, the *propinatio* of the Latins, has some variations. One form is the sharing of a drink; the person doing honour drinks first, and hands the cup (in Greek life this became the property of the person honoured) to the other. Another is drinking alone, with a look or a sentiment of goodwill towards the person honoured. The projection outwards of the drinker's will is typified in many languages, as in most of the customs, by emphasizing the fact that he drinks first.

Among the Ba-Yaka and Ba-Huana, the host drinks first, and the guest after him.[6] At Abyssinian mead-drinkings the host drinks first, by way of showing that the liquor is not poisoned. He notifies a servant which guests need their cups replenished. On receiving the drink, the guest rises and bows.[7] Among the Kaffirs, it is not etiquette to give beer to a guest without first tasting it. This, according to the account given, is intended to safeguard the guest against poison.[8]

Terms like 'pledge' connote the idea of guaranteeing goodwill. The poison-test is obviously not the origin of the custom of the host or pledger drinking first. When that custom took on secondary ideas, one of these would be the affirmation that what the host offers is his own, and that it is of his best.

In barbarism the drinking-bout so called is often the form of political discussion. The chief of the A-kikuyu gives his people the news at beer-drinkings, to which he invites them.[9]

With agricultural drinking-feasts we return to man's immediate relations to intoxicating or refreshing drink. Drinking is a social rite in connexion with the ceremonial eating of the new crops.

Lithuanian peasants observe a festival called *Sabarios*, 'the mixing or throwing together,' when the sowing of the new corn has taken place. The Cheremiss celebrate the baking of the first bread from the new corn by a ceremonial drinking of beer. 'The whole ceremony looks almost like a caricature of the Eucharist.' At the cutting of the rice the Coorgs of South India drink a liquor of milk, honey, and sugar.[10]

In such rites there is the social consecration, implicit or explicit, of wine itself and its sources.

It is perhaps merely an abnormality that fasting among many peoples does not exclude drinking strong liquor. This is notably the case in West Africa. Spirits are largely drunk during the fast after a death, and mourners are generally intoxicated. During the fast-days of the yam harvest the people drink hard, and the king and chief distribute brandy and rum.[1]

For various obscure reasons, great personages of the sacred world are often restricted to pure water. The ancient kings of Egypt were restricted to a prescribed quantity of wine *per diem*. Plutarch says they never drank it at all, because it is the blood of beings who fought against the gods.[2] The chief of the Karennis of Burma 'attains his position not by hereditary right, but on account of his habit of abstaining from rice and liquor. The mother, too, of a candidate for the chieftainship must have eschewed these things . . . so long as she was with child. During that time she might not . . . drink water from a common well.'[3] The Bodia, or Bodio, the pontiff of the Grebo people of West Africa, may not drink water on the highway.[4] Here there is clearly a reference to 'purity.' Priests in Abyssinia drink neither wine nor mead.[5] Wine might not be taken into the temple at Heliopolis, and no one might enter the temple at Delos unless his system were free from wine.[6]

Asceticism naturally would interdict stimulating drinks, as it interdicts all tendency to expansion. 'Water was the pure and innocent beverage of the primitive monks; and the founder of the Benedictines regrets the daily portion of half a pint of wine, which had been extorted from him by the intemperance of the age.'[7]

Many peoples low in the scale of culture emphasize by law the natural aversion of childhood, not to speak of womanhood, to intoxicants. The A-kikuyu, for instance, allow no one to drink beer until he has reached the status of 'elder.'[8] The Chaco Indians forbid women and children, even youths, the use of intoxicants.[9]

LITERATURE.—This is fully given in the footnotes.

A. E. CRAWLEY.

DRUIDS.—The elaborate system of theology and philosophy ascribed to the Druids by the older school of writers, and the esoteric doctrines supposed to have been handed down from pagan times in the bardic schools of Wales, have no foundation in fact, though they still have a hold upon the popular fancy, which loves to think of the Druids as a mysterious Celtic priesthood, guardians of pure doctrines—the relics of a primitive revelation. Much of this is due to the classical writers themselves, who had strange notions about the Druids. A strictly scientific examination of the evidence proves that there was little that was mysterious or esoteric about them; nor, though we may regret the paucity of the evidence, is it likely that, had it been fuller, it would have given any support to those unscientific opinions. Our knowledge of the Druids rests mainly upon what Cæsar, in a passage of some length (*de Bell. Gall.* vi. 13 f.), and Pliny and other writers in shorter notices, have handed down, and upon occasional references in the Irish texts. The monumental and epigraphic evidence is practically *nil*, although Dom Martin (*Rel. des Gaulois*, Paris, 1727) and others insisted that the figures on various bas-reliefs in Gaul were Druids engaged in ritual acts.

1. Origin of the Druids.—Opinion is still divided regarding the origin of the Druids, whether they arose in Gaul or in Britain, and whether they formed a pre-Celtic or simply a Celtic priesthood. Nothing was known definitely by the classical observers. While Pliny (*HN* xxx. 1) seems to think that Druidism passed from Gaul to Britain, Cæsar (vi. 13) says: 'The system is thought to have been devised in Britain and brought thence into Gaul; and at the present time they who desire to know it more accurately generally go thither for the purpose of studying it.' Possibly, however, Cæsar is relating what was a current opinion rather than an actual fact, since he says 'is thought' (*existimatur*). This opinion may have been based on the fact that the system was held to be purer in Britain than in Gaul, where, in the south at least, it had perhaps come in contact with other influences, *e.g.* Greek philosophy, through the colonies at Marseilles. Taking Cæsar's words as a statement of fact, D'Arbois de Jubainville (*Les Druides*, Paris, 1906, p. 23 f.) and others (Desjardins, *Géog. de la Gaule rom.*, Paris, 1876–85, ii. 518; Deloche, *RDM* xxxiv. 446) held that Druidism originated in Britain. The former maintains that the Druids were the priests of the Goidels, who, when conquered by the Celts from Gaul, in turn imposed their priesthood upon their conquerors. The Druidic system then passed over into Gaul about 200 B.C., where it was equally triumphant. All this is based upon no other evidence than Cæsar's statement. Valroger (*Les Celtes*, Paris, 1879, p. 158) further derives British Druidism from the Phœnicians, for reasons which are purely fantastic; and equally fantastic is its derivation from Buddhistic sources (Wise, *Hist. of Paganism in Caledonia*, London, 1884).

A growing school of writers has on various grounds adopted the theory that Druidism was pre-Celtic in origin, and imposed itself upon the Celtic conquerors in Gaul and Britain. The Druids are not found in the Danube area, in Cisalpine regions, or in Transalpine Gaul outside the region occupied by the 'Celtæ,' *i.e.* the short, brachycephalic race of the anthropologists (Holmes, *Cæsar's Conquest of Gaul*, London, 1899, p. 15). But the references to the Druids are so casual, especially as no classical writer professed to write a complete account of this priesthood, that this negative evidence cannot be taken as conclusive. Moreover, it cuts both ways, since there is no reference to Druids in Aquitania—a non-Celtic region (Desjardins, ii. 519). On the other hand, the earliest reference to the Druids in two Greek writers *c.* 200 B.C., cited by Diogenes Laertius (i. 1), seems to testify to their existence outside Gaul; while Celtic priests, though not formally called Druids, were known in Cisalpine Gaul (Livy, xxiii. 24). Professor Rhŷs postulates Druidism as 'the common religion of the aboriginal inhabitants from the Baltic to Gibraltar,' from whom the incoming Celts adopted it (*Celt. Brit.*[2], London, 1884, p. 72); and in this he is followed by Gomme, who finds many of the Druidic beliefs and practices—the redemption of one life by another, magical spells, shape-shifting, the customs of the Druids in settling property succession, boundaries, and controversies, and in adjudging crimes—opposed to Aryan sentiment (*Ethnology in Folk-lore*, London, 1892, p. 58, *Village Community*, London, 1890, p. 104). This begs the whole question of what was Aryan and what was non-Aryan; and, indeed, there is every reason to believe that Aryan sentiment was as backward, if not more so, in such matters as that of the pre-Aryan folk. Nor is it easy to understand why the Aryan Celts were conquered by the Druidic priesthood, if their 'sentiment' was so opposed to the beliefs and practices of the Druids. On the other hand, the arguments used by Reinach (*RCel* xiii. 189, 'L'Art plastique en Gaule et le druidisme') in support of the pre-Celtic origin of the Druids suggest a higher religious outlook on the part of the pre-Celtic people. The Celts, he says, had no images, and this argues that images were forbidden, and only a powerful

priesthood could have forbidden them. But the pre-Celtic peoples in Gaul had equally no images, while, on the other hand, they had vast megalithic structures. Therefore, again, only a powerful priesthood could have forbidden the one and forced the people to erect the other. The same priesthood, the Druids, continued to exercise that power over the Celts which they had exercised over the aboriginal race. The Celts adopted the Druidic religion *en bloc*; but, when the Celts appear in history, Druidism is in its decline, the military caste rebelling against the foreign priesthood and taking its place. In answer to these arguments it may be pointed out that the Celts do not appear to have had a religious prejudice against images (see CELTS, § XIV.); again, the adoption of the aboriginal religion *en bloc* would be credible only if the Celts had no religion and no priests of their own, while it leaves unexplained the fact that they did not adopt the custom of erecting megalithic structures; finally, the opposition of the military to the priestly caste is no argument for the foreign origin of the latter, since such an opposition has been found wherever these two castes, existing side by side, have each desired supremacy.

2. **The 'gutuatri.'**—Besides the Druids, the Celts had certain priests, called *gutuatri*, attached to certain cults like the Roman *flamens*. D'Arbois (p. 2 ff.) argues that the *gutuatri* were the only native Celtic priesthood, and that, when the Druids, whose functions were more general, were adopted by the Celts, the *gutuatri* assumed a lower place. It is much more likely that they were a special branch of the Druidic priesthood, attached to the cult of some particular god. Ausonius calls Phœbitius *Belcni æditwus* (perhaps the Latin equivalent of *gutuatros*), while he was of a Druidic stock like another servant of Belenus mentioned elsewhere (*Prof.* v. 7, xi. 24); and this suggests a connexion between the two. Livy distinguishes the *sacerdotes* from the *antistites* of the temple of the Boii (xxiii. 24), and this may refer to Druids and *gutuatri*. Classical evidence tends to show that the Druids were a great inclusive priesthood, with priestly, prophetic, magical, medical, legal, and poetical functions. Most of these functions are ascribed to the Druids by Cæsar. Elsewhere we hear of different classes—Druids (philosophers and theologians), diviners, and bards (Diod. Sic. v. 31; Strabo, IV. iv. 4 [p. 197]; Amm. Marc. xv. 9). Strabo gives in Greek form the native name of the diviners as οὐάτεις, which was probably in Celtic *vâtis* (Irish *fáith*). The bards in all three writers are a class by themselves, who sing the deeds of renowned warriors; but since *vâtis* means both 'prophet' and 'poet,' the diviners may not have been quite distinct from the bards. The connexion between Druids and diviners is still closer. No sacrifice was complete without a philosopher or Druid, according to Diodorus and Strabo, yet both speak of the sacrificial functions of the diviners; while, though the Druids were of a higher intellectual grade and studied moral philosophy as well as Nature (Timagenes), according to the same writer and Strabo, the diviners also studied Nature. Augury was a specialty of the diviners, yet the Druids also made use of this art (Cic. *de Divin.* i. 41, 90; Tac. *Hist.* iv. 54), while Pliny refers to 'Druids and this race of prophets and physicians' (*vatum medicorumque*, xxx. 1). Thus the diviners seem to have been a Druidic class, drawing auguries from the sacrifices performed by Druids, while standing in relation to the bards, whom we may regard as another Druidic class. In Ireland we trace the same three classes. There are the Druids who appear in the texts mainly as magicians, though their former priestly functions can here and there be traced. There were the *filid* (from *velo*, 'I see' [Stokes, *Urkelt. Sprachschatz*, Göttingen, 1894, p. 277]), learned poets who occupied a higher rank than the third class, the bards. The *filid* were also diviners and prophets, while some of their methods of divination implied a sacrifice. The Druids, who likewise were certainly sacrificial priests, were also diviners and prophets in Ireland. Hence the two classes stood in close relation, like the Druid and *vâtis* of Gaul. With the overthrow of the Druids as a priestly class, the *filid* remained as the learned class. D'Arbois (p. 108) assumes that there had been a rivalry between the two classes, and that the *filid*, making common cause with the Christian missionaries, gained their support. But this is unlikely. The *filid*, less markedly associated with pagan priestly functions, were less obnoxious, and may willingly have renounced purely pagan practices. At an earlier time they may have been known as *fáthi* (=*vates*), or prophets—a name applied later to the OT prophets and sages (Windisch, *Táin bó Cúalnge*, Leipzig, 1905, Introd. p. xliv); but, as they now applied themselves mainly to poetic science, thus apparently reducing the bards to a lower position, the name *filid* designated them more aptly.

The connexion of the *filid* with the Druids is further witnessed to by the fact that the former had an *Ard-file*, or chief-poet, and that, when the office was vacant, election was made to it, and rival candidates strove for it (Stokes, *Trip. Life*, London, 1887, i. 52, ii. 402; Windisch and Stokes, *Ir. Texte*, Leipzig, 1880 ff., i. 373; 'Colloquy of the Two Sages,' *Book of Leinster*, 187). This resembles what Cæsar tells of election to the office of chief-Druid (vi. 13), while there was probably a chief-Druid in Ireland (§ 8). The *filid* acted as judges, as did also the Druids, while both had a long novitiate to serve, lasting over several years, before they were admitted to either class.

The *gutuatri* are known mainly from inscriptions, but Hirtius (*de Bell. Gall.* viii. 38) speaks of one put to death by Cæsar. An inscription at Mâcon speaks of a *gutuater Martis*, i.e. of some Celtic god identified with Mars (*Rev. Epig.*, 1900, p. 230); two *gutuatri* of the god Anualos occur in inscriptions from Autun, and another in one from Puy-en-Valay (see Holder, *Altcelt. Sprachschatz*, Leipzig, 1891 ff., i. 2046). The *antistites templi* mentioned by Livy, xxiii. 24, as found among the Boii, may have been *gutuatri*, like Ausonius' *æditwus*. *Gutuatri* may mean 'the speakers,' *i.e.* they who invoked the gods (D'Arbois, p. 3), and it is derived from *gutu*, 'voice' (Zeuss, followed by Holder, i. 2046; for another explanation, see Loth, *RCel* xxviii. 120), the Gaulish *gutuatros* being Latinized as *gutuater*.

3. **The Druids a native Celtic priesthood.**—There is, therefore, little ground for the theory that the Druids were a pre-Celtic priesthood imposed upon or adopted by the Celtic conquerors. With it is connected the theory that the Druids had a definite theological system and worshipped only a few gods, while they merely gave their sanction to the Celtic cults of many gods or of various natural objects—wells, trees, etc. (Bertrand, *Rel. des Gaul.*, Paris, 1897, pp. 192 f., 268 f.; Holmes, *op. cit.* p. 17). All this is purely hypothetical, and we conclude that the Druids were a native priesthood common to both branches of the Celtic people, and that they had grown up side by side with the growth of the native religion. On the other hand, it is far from unlikely that many of the pre-Celtic cults were adopted by the Celts because they resembled their own native cults, and that the aboriginal priesthood may, in time, have been incorporated with the Druidic priesthood, just as the pre-Celtic people themselves were Celticized. A detailed examination of the functions of the Druids leaves little doubt that they took part in the cult of natural objects, and that they were much addicted to magical practices. Possibly in the south of Gaul, where they felt the influence of Greek civilization, and employed Greek characters in writing (Cæsar, vi. 14), some of these cults and

practices may have been abandoned, and the Druids may have become more definitely a learned class. But as a class the Druids were not a philosophic priesthood, possessed of secret knowledge, while the people were given over to superstition and magic. Some of the cults of Celtic religion and much of its magic may have been unofficial, in the sense that any one could perform them, just as a Christian can pray without the intervention of priestly help. But the Druids themselves probably practised those cults and used that magic, and doubtless the people themselves knew that greater success was likely to be obtained if a Druid were called in to help on these unofficial occasions. The Druids never lost the magical character which is found in all primitive priesthoods. Hence it is a mistake to regard 'Druidism' as an entity outside of Celtic religion in general, and, on the whole, opposed to it. The Celtic religion, in effect, was Druidism.

The native Celtic name for Druid was probably *drúis*, gen. *drúidos*. In Irish it is *drúi*, *drái*, or *draoi* (cf. Gaelic *draoi*, 'sorcerer'). The etymology is obscure. Pliny, connecting it with the Celtic oak-cults, derived it from Gr. δρῦς, 'oak,' an impossible derivation. Thurneysen (*Keltoromanisches*, Halle, 1884, *s.v.*) analyzes 'Druid' into *dru-uids*, regarding the first part of the word, *dru-*, as an intensive, and connecting *uids* with *uid*, 'to see *or* know.' The resulting meaning would be 'greatly *or* highly knowing,' a meaning consonant with the position of the medicine-man or priest everywhere as one who knowe more than his fellows (see also Osthoff, *Etymol. Parerga*, Leipzig, 1901, i. 133 ff., 153). Stokes (*Urkelt. Sprachschatz*, p. 157) regards the etymology as uncertain, but compares θρέομαι, 'to cry aloud,' ἀθρέειν, 'to look,' although the etymology of the latter Gr. word is still very nncertain (cf. Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 18 f.). For ogham inscriptions in which the name Druid occurs, see Holder, *s.v.* 'Druida,' i. 1330.

4. Were the Druids a philosophic priesthood?—The earliest reference to the Druids by name is found in a passage of Diogenes Laertius (i. 1), who, when referring to the philosophic character of barbaric priesthoods, cites Sotion and pseudo-Aristotle (*c.* 2nd cent. B.C.) as saying, 'There are among the Celtæ and Galatæ those who are called Druids and Semnotheoi.' Cæsar, Strabo, Diodorus Siculus, Timagenes, Lucan, Pomponius Mela, and many other later writers speak of the philosophic science of the Druids, their schools of learning, and their political power; but, on the other hand, most of these writers refer to the cruel human sacrifices of the Druids, Mela characterizing these as savagery (iii. 18), while Suetonius also describes their religion as cruel and savage (*Claud.* 25). Pliny does not regard them as philosophers, but his description of the mistletoe rite suggests their priestly functions, though here and in other passages he associates them with magico-medical rites (*HN* xxiv. 63, xxix. 12, xxx. 1). The difference in these opinions shows that a closer practical acquaintance with the Druids revealed their true nature to the Roman Government, which found them more cruel and bloodthirsty and superstitious than philosophical. For these reasons, and on account of their hostility to Rome, the latter broke their power systematically (see below, § 12). Thus, it is unlikely that the Druids were reduced to a kind of medicine-men to gain a livelihood (D'Arbois, 77). Pliny's phrase, *Druidas . . . et hoc genus vatum medicorumque*, appears to refer rather to their position before the Roman edicts and to the fact that there were different grades among them—some priests, some diviners, and some practising a primitive medical science. Pliny's acquaintance with the Druids seems to have been superficial, but he evidently realized that their magical practices belonged to them from the first, and were not the result of Roman suppression. On the other hand, it is probable that the Druids were not all at the same level over the whole Celtic area. But the opinion that they were lofty philosophers seems to have been repeated by a series of writers, without any inquiry whether there was any real ground in fact for their opinion.

The facts upon which what may be called 'the Druidic legend,' as it appealed to the classical world, was based were these: the Druids were teachers, unlike the Greek and Roman priests (*e.g.* they taught the doctrine of immortality), they were highly organized, they were skilled magicians, and their knowledge was supposed to be Divinely conveyed (they 'speak the language of the gods,' Diod. Sic. v. xxxi. 4). On the other hand, we must beware of exaggerating the descriptions, themselves probably exaggerated, in classical writers. Cæsar (vi. 14) and Mela (iii. 19) say, 'They profess to know the motions of the heavens and the stars'—a knowledge which need not imply more than the primitive astronomy of barbaric races everywhere. Thus Cicero's Druid, Divitiacus (*de Div.* i. 41, 90), though professing a knowledge of Nature, used it to divine the future. Strabo (IV. iv. 4 [p. 197]) and Mela (iii. 19) tell of their knowledge of 'the magnitude and form of the earth and the world,' of their belief in successive transformations of an eternal matter, and in the alternate triumph of two elements, fire and water. This need have been no more than a series of cosmogonic myths, the crude science of speculative minds wherever found. Similarly, the Druidic doctrine of metempsychosis had certainly no ethical bearing, and, from what may be gathered of it from Irish texts, did not differ from similar beliefs found, *e.g.*, among American Indians and Negroes. The philosophy of the Druids, if it existed, was elusive: no classical writer ever discovered it fully; it exerted no influence upon classical thought. For the same reason the theory of a connexion between Druidism and the Pythagorean system must be rejected, though again we must not overlook the fact that Greek philosophic teachings may have penetrated to some of the Druids *via* the Massilian colonies. Probably the origin of this fabled connexion is to be found in the fact that the Druids taught a future existence in the body, and that they had myths, such as are found in the Irish texts (see CELTS, § XVI.), regarding transmigration. It was at once assumed that there must be a link between these Celtic beliefs and the Pythagorean doctrine of metempsychosis. There are, however, very real differences. The Druidic doctrine of immortality was not necessarily one of metempsychosis properly so called, for the myths of transmigration mainly concerned gods and not men; and in neither case was there any ethical content such as the Pythagorean doctrine insists on. But, the belief in this connexion once started, other apparent resemblances were exaggerated and made much of. Hence such statements as those of Timagenes, that the Druids 'conformed to the doctrines and rules of the discipline instituted by Pythagoras' (*ap.* Amm. Marc. xv. 9; cf. Diod. Sic. v. 28); or of Ammianus, that they lived in communities, their minds always directed to the search after lofty things; or of Hippolytus, long after Druidism had disappeared in Gaul, that Zamolxis, a disciple of Pythagoras, had taught his doctrines to the Celts soon after his death (*Philos.* ii. 17). There is no evidence that the Druids lived in communities; they certainly did not do so in Ireland, and probably the fact that they were a more or less organized priesthood with different grades and functions (see above, § 2) gave rise to this opinion. We have seen how far their philosophic researches probably extended, and Hippolytus' statement is obviously fabulous, especially as it stands alone and refers to a period eight centuries before his time. On the other hand, there is no reason to doubt that the Druids sought after knowledge, but it was of an entirely empiric kind, and must have been closely

connected with their practice of divination and magic, their human sacrifices, and their belief in the power of ritual.

5. The Druids as teachers.—To the Druids, says Cæsar (vi. 13), 'a great number of the young men flock for the sake of instruction'; but the next paragraph (14) suggests that it was the privilege of exemption from military service and from tribute that encouraged many to go to them of their own accord for instruction, or to be sent to them by parents and relatives. Whatever the reason, the fact that the Druids were teachers cannot be doubted; but, since their course of instruction lasted 20 years, some of their pupils were probably under training for the priestly life rather than for general instruction. The Irish texts show that the insular Druids were also teachers, imparting 'the science of Druidism' (*druidecht*) to as many as 100 pupils at one time, while they also taught the daughters of kings, as well as the fabulous heroes of the past like Cúchulainn (*Leabhar na hUidhre*, 61; *Trip. Life*, 99). Cæsar writes that the subjects of knowledge were the doctrine of immortality, 'many things regarding the stars and their motions, the extent of the universe and the earth, the nature of things, and the power and might of the immortal gods' (vi. 14); and verses, never committed to writing, were also learned. Strabo (*loc. cit.*) also speaks of their teachings in 'moral science.' The teaching of immortality had a practical end, for it was intended to rouse men to valour and make them fearless of death. Their scientific teaching was probably connected with magic and divination, and doubtless included many cosmogonic myths and speculations; their theology was no doubt mythological—stories about the gods such as are found in the Irish texts; their moral teaching was such as is found in most barbaric communities. An example of it is handed down by Diogenes Laertius (*proem.* 5): 'The Druids philosophize sententiously and obscurely—to worship the gods, to do no evil, to exercise courage.' Ritual formulæ, incantations, and runes would also be imparted. These last may be the verses to which Cæsar refers, but they probably also included many myths in poetic form. They were taught orally, in order to keep them from the common people (a curious reason, as the common people could not read), and in order to exercise the memory. The oral transmission of the Vedas is a parallel with this. Writing, however, was known, and the Greek characters were used; but this can hardly apply to a wide region. Perhaps there was also a native script, and the ogham system may have been known in Gaul as well as in Ireland, if we may judge by the existence of the god called Ogmios (see CELTS, § V.). The Irish Druids appear to have had written books, to judge from an incident in the life of St. Patrick (*Trip. Life*, 284). Beyond what Cæsar says of the verses kept secret from the common people, and consisting of incantations and myths, there is no evidence that the Druids taught some lofty esoteric knowledge, some noble philosophy, or some monotheistic or pantheistic doctrine. The secret formulæ were kept secret save to the initiated, lest they should lose their magical power by becoming too common, as in the parallel cases of savage and barbaric mysteries elsewhere.

6. Religious functions of the Druids.—The Druids 'take part in sacred matters, attend to public and private sacrifices, and expound the principles of religion' (Cæsar, vi. 13). Their priestly power being so great, the Druids would let no important part of the cult pass out of their hands. All details of ritual—the chanting of runes, the formulæ of prayers, and the offering of sacrifices—were in their hands; in a word, they were mediators between the gods and men. Every known kind of divination was observed by them, and before all matters of importance their help in scanning the future was sought (see CELTS, § XIII.). As to sacrifices, none was complete 'without the intervention of a Druid' (Diod. Sic. V. xxxi. 4; cf. Cæsar, vi. 16). This was probably also the case in Ireland, though little is said of sacrifices in the texts; we do, however, find Druids taking part in the sacrifices at Tara (D'Arbois, *Cours de litt. celt.*, Paris, 1883, i. 155) and at the Beltane festival (Cormac, *Gloss.*, ed. Stokes, in *Three Irish Glossaries*, London, 1862, *s.v.*). The cruel sacrifices of the Druids horrified the Romans, and this largely discounts the statements about their philosophic doctrines. An instance of their power is seen in the fact that those who refused to obey their decrees were interdicted from all sacrifices—a severe punishment in the case of so religious a people as the Gauls (Cæsar, vi. 13 and 16). The Druids played an important part in the native baptismal and name-giving rites (see BAPTISM [Ethnic], § 7), and also in all funeral ceremonies. At burial, runes were chanted, and sacrifices were offered by the Druid, who also arranged all the rites and pronounced a discourse over the dead. The Druids would also regulate all myths regarding the gods. Many of these would be composed or arranged by them, but, save on Irish ground, all trace of them is lost. They also composed and arranged the various magic formulæ, incantations, and prayers. Besides this, they who knew the language of the gods (Diod. Sic. V. xxxi. 4) probably claimed to be incarnations of these gods, in this occupying the place of those earlier priest-kings upon whom the order of the universe depended. With the differentiation of king and priest some of the Druids may have been invested with such divinity, although in Ireland it was still apparently attributed to kings (see CELTS, § VIII.); but this may not have debarred the Druids from claiming similar powers. Such divine pretensions would accord with the claim of the Druids to have created heaven, earth, sea, and sun (*Antient Laws of Ireland*, Dublin, 1865–1901, i. 22), while it would also explain the superiority of their rank over that of kings as alleged by Dio Chrysostom and discovered in Irish instances (see § 9).

7. Medical and magical practices. — Pliny's words, *Druidas et hoc genus vatum medicorumque*, may suggest that the Druids practised the healing art, or that a special class attached to them did so. In Ireland, Druids had also medical skill, and some who are not called Druids, but may have been associated with them, practised this profession (O'Curry, *MS Mat.*, Dublin, 1861, pp. 221, 641; Windisch, *Ir. Texte*, i. 215). And, as there were gods of healing in Gaul, so in Ireland the god Diancecht was supreme in this art. But, in so far as the Druids were doctors, it was probably the magical aspect of medicine with which they dealt. Thus the plants which Pliny mentions as in use by the Druids, or the use of which they recommended (*HN* xxiv. 11, xxv. 9), may have had healing properties, but it was apparently the magical ritual with which they were gathered, quite as much as their own powers, that counted, while the use of them was in some cases magical. The gatherer must be clothed in white, he must have his feet naked, must make a sacrifice, and must cull the plant in a particular way and at a certain time. The mistletoe was also used for healing, but it is evident that the plucking of it had a much wider importance (for the ritual, see CELTS, § X.). The classical observers were so dominated by their preconceptions of the Gaulish Druids that we hear little from them regarding their magical practices. The Irish Druids, however, were quite evidently

magicians, and their practices included shape-shifting and invisibility, control of the elements and the weather, the producing of fertility, the use of all kinds of spells, and the causing of sleep, illness, or death by magical means (see CELTS, § XV.). Though it is possible that the Druids of Gaul may have been more advanced than those of the islands, it is most unlikely that they did not also pose as magicians, and it is more than likely that it is this side of their functions to which Suetonius refers when he speaks of the 'savage' nature of the Druidic religion; or Pliny, when he calls the Druids *magi* (xvi. 44, xxiv. 11) or *genus vatum medicorumque* (xxx. 1); or Posidonius, when he says (in Diod. Sic. v. xxxi. 5) that 'they tamed the people as wild beasts are tamed.' How far is this from the attributing of a lofty philosophy to the Druids! Moreover, the wide-spread use of human sacrifices among the Druids of Gaul makes it extremely probable *a priori* that they were also wielders of magic, while, as we have seen, they certainly used the art of divination.

8. **Druidic organization.**—The enormous power wielded by the Druids both in religion and in politics, as well as the privileges which they claimed, makes it evident that they were a more or less closely organized priestly corporation; and this conclusion receives support from the fact that they had fixed annual meetings in Gaul (see below, § 9), and that, as Cæsar says (vi. 13), there was one chief-Druid wielding authority over all the others. On the death of the chief-Druid, he who had pre-eminent dignity among the others succeeded to the office; but, if there were several of equal rank, the selection was made by vote, while sometimes they even contended in arms for the presidency. Though there were Druidic families, the priesthood was not necessarily hereditary, since, as has been seen, entrance to it was permitted after a long novitiate. There is no direct evidence that the insular Druids were similarly organized; but, in spite of the denials of some recent writers, the fact that there were chief-Druids in Ireland is seen from the texts, and such a chief-Druid, *primus magus*, summoned the others together when necessary, *e.g.* against St. Patrick (*Trip. Life*, ii. 325). A passage of Timagenes, cited by Ammianus Marcellinus (xv. ix. 8), and connecting the Druidic organization with the authority of Pythagoras, speaks of the Druids as *sodaliciis adstricti consortiis.* This points to them as a religious corporation (*sodalicium*), and perhaps as dwelling in cœnobitic communities, if *consortium* is to be taken in that sense, which is not certain. Cæsar, on the other hand, who gives the fullest account of them, says nothing of communities of Druids, and the passage of Timagenes may simply be an exaggeration due to the fact that they had some kind of organization or that there were Druidic families, and to a supposed following of the Pythagorean associations by them. The theory has, however, been revived by Bertrand (*Rel. des Gaul.*, p. 280), who maintains that the Druids lived in communities like the Tibetan or Christian monks, devoted to abstruse studies, and that the Irish monastic system was simply a Christian transformation of this Druidic community life. The Irish texts give no support to this view; on the contrary, there are numerous references to the wife and children of the Druid; nor is it likely that the Druids, in all cases hostile to the Christian faith, would be transformed into Christian monks. The Irish monastic system was formed on Continental models, and owed nothing to paganism.

9. **Political and judicial functions of the Druids.**—The political power of the Druids would certainly be augmented by their position as teachers; and, though in individual cases it may have owed much to a commanding personality, the evidence leaves little doubt that it was exercised officially. Rulers and chiefs were apparently elected by their choice, and Cæsar (vii. 33) speaks of the magistrate Convictolitanis who, on a vacancy occurring in the office, had been elected by the priests 'according to the custom of the State.' It was evidently a customary power which was thus exercised. In Ireland the Druids also intervened in the choice of a king. They sang runes over a sleeping man who had been fed with the flesh of a white bull slain perhaps as a sacrifice, the runes being 'to render his witness truthful.' The man then dreamt of the person who was to be king, and saw where he was and what he was doing at the time. When the man awoke, the subject of his vision was elected king (Windisch, *Ir. Texte*, i. 213). Perhaps the Druids hypnotized the man and suggested to him the person whom they desired to be elected. We have no evidence as to the method of election in Gaul. Dio Chrysostom (*Orat.* xlix.) says of the Druids that kings were their ministers and servants of their thought, and could do nothing apart from them; and, although his witness is late and may be exaggerated, it receives corroboration from the Irish texts, in which the king is always accompanied by his Druid, and is influenced by him. Moreover, a singular passage in the *Táin bó Cúalnge* (Windisch's ed. p. 672 f.) shows King Conchobar giving no response to the bringer of important tidings until the Druid Cathbad had spoken to him. 'For such was the rule in Ulster. The men of Ulster must not speak before the king, and the king must not speak before his Druids' (*Antient Laws of Ireland*, i. 22). The political power of the Druids, though great, is exactly paralleled by that of other priesthoods, and may have served to keep in check the position of the warrior class. They frequently intervened in combats, and by their exhortations made peace (Diod. Sic. v. 31. 5), even when two armies were about to join battle. This probably refers to inter-tribal warfare. As to their judicial functions, Cæsar writes (vi. 13): 'They are held in great honour, for they decide generally regarding all disputes, public and private; and, if any crime has been perpetrated, or a murder committed, or if there be a dispute about property or about a boundary, they decide it. If any one, whether a public or private individual, has not submitted to their decrees, they interdict him from the sacrifices.' Such interdicted persons were regarded as criminals, and all shunned contact with them; in effect they were tabu. Cæsar also adds that they met together yearly in a consecrated spot in the territory of the Carnutes, the central district of all Gaul, and thither came all who had disputes and submitted to their judgments. Cæsar may be referring to a bygone past rather than to existing practice, since he himself mentions disputes not settled by Druids, while nothing is said regarding any obligation to refer to Druidic judicature. That judicature was, however, far-reaching, and its judgments were upheld on magico-religious grounds. It is possible that the immolation of criminals taken in theft and other crimes was a punishment ordered by the Druids (Cæsar, vi. 16), who would thus obtain a supply of sacrificial victims. If, as is here contended, the Druids were a purely Celtic priesthood, the existence among the Galatian Celts of a council of 300 men who met in a place called *drunemeton*, and judged crimes of murder, may mean that this was a council of Druids (Strabo, XII. v. i. [p. 567]). *Nemeton* means 'a sacred place' like that in which the Gaulish Druids sat as judges, whether *dru* is connected with the first term of *dru-uidos* or not. It should here be observed that Diogenes Laertius quotes a fragment of Aristotle in which the ex-

istence of Druids among the Galatians is asserted; and there is also a later reference to this by Clement of Alexandria, who may, however, be simply echoing this passage. The Irish texts assign judicial functions to the *filid*, not to the Druids; and, unless this is due to Christian influence desirous of slighting the importance of the Druids, they may not have acted there as judges. If this be so, it is not easy to understand why, if Druidism came to Gaul from Britain, the Druids were able to assume judicial functions there. D'Arbois (p. 103) thinks, however, that the exercise of such functions by early Christian clergy in Ireland may be due to the fact that the pagan priests had a judicial position, and, if the *filid* were a Druidic class, they would then be carrying on the judicial functions of the Irish Druids.

10. Supposed differences between Irish and Gaulish Druids.—The often-quoted differences between the Druids of Gaul and those of Ireland are perhaps more apparent than real. We know the former only from pagan observers; the latter only from Christian observers, or from documents which have passed through Christian hands; and it is probable that Christian influences may have endeavoured to reduce the Druids to the lowest possible level.

Stress is sometimes laid upon the supposed lack of judicial functions and of organization among the Irish Druids, but it has been seen that it is possible to account for this discrepancy. More vital still is the assertion that the Irish Druids were only magicians and not priests (Hyde, *Lit. Hist. of Ireland*, London, 1899, p. 88; Joyce, *Soc. Hist. of Anc. Ireland*, London, 1903, i. 239). It is true that in the Irish texts they have the appearance of mere wizards, but they are also teachers and possess political influence like the Druids of Gaul. The probability is, therefore, that they were also priests, as the Druids of Britain certainly were (Tac. *Ann.* xiv. 30, where the sacred grove, the human sacrifices, the altars, and the rites of divination of the Druids of Mona are mentioned). Why, then, are they not more frequently represented in that aspect? Probably for the same reason that there are such scanty references to ritual and religion in the texts, and where these do exist they have evidently been tampered with. That reason appears to be that there was a deliberate suppression of all that related to religion or to the exercise of priestly functions. Thus, where in connexion with some rite there is recorded the slaughter of animals, it is most probable that the slaughter implies a sacrifice, though nothing is said of it. In such cases (*e.g.* that of the election of a king, above, § 9) the Druids take a considerable part; hence, if there was a sacrifice, we can hardly doubt that they were the sacrificers, and were, therefore, priests. In other notices of ritual which may have escaped being tampered with, the Druids at least take part in sacrifice and in other ritual acts. Finally, if the Druids were not priests, what other body of men exercised that function (for it is incredible that the Irish Celts were priestless)? The opposition of the Christian missionaries to the Druids shows that they were opposing not mere magicians, but men who were the determined upholders of the old religion, viz. its priests.

Possibly the insistence on the magical powers of the Druids may account for the somewhat loose way in which the word 'Druid' is used in the texts. It is applied to kings and heroes, not merely to the strictly Druidic class, because they had learned and practised Druidic magic, while it is also applied to the priests or medicine-men of the successive colonists of Ireland. It is also said that the Tuatha Dé Danann, the euhemerized gods, were masters of Druidism; in other words, those gods possessed in a full degree one of the functions of the priests who served them, viz. magic. Priests and gods were confounded together. Another difference between the Druids of Gaul and those of Ireland is that the former absented themselves from war (Cæsar, vi. 14), while the latter certainly took part in it; yet we find the Gaulish Druids on the battle-field exercising priestly or magical functions, while Cæsar refers to the warlike prowess of the Druid Divitiacus.

11. Druidesses.—Towards the beginning of the 4th cent. A.D., Lampridius (*Alex. Sev.* 60) and Vopiscus (*Aur.* 44, *Numer.* 14) speak of certain women called *Druis*, usually translated 'Druidess,' who, as prophetesses or wise women, foretold events in the lives of the emperors or were consulted by them. As this is the first occurrence of the name, it is likely that such wise women assumed the Druidic name when the Druids as a class had died out. There is no evidence in earlier classical texts of the existence of a class of women called Druidesses with functions corresponding to those of the Druids, and such women as are here referred to were apparently divineresses, those Celtic women whom Hannibal desired to arbitrate in certain matters being probably an earlier example of this class (Plutarch, *Mul. Virt.* 246). In Ireland divineresses seem to have been associated with the *fáthi* or *filid*, and were called *ban-filid* or *ban-fáthi*, while they were consulted on important occasions (Windisch, *Táin*, 31; Meyer, *Contributions to Irish Lexicog.*, Halle, 1906, p. 176). They are probably the 'pythonesses' against whom the Patrician canons utter a warning (Joyce, *Soc. Hist. of Anc. Ireland*, i. 238), and whose spells the saint prays against in his hymn (Windisch, *Ir. Texte*, i. 56). Solinus (xxxv.) says women as well as men in Ireland had a knowledge of futurity; and the women whose fury, along with the prayers of Druids, was directed against the Romans in Mona may have been of the same class. Others, called *ban-tuathaig* in the tale of the battle of Magtured, had magical powers of transformation (*RCel* xii. 93). Possibly all such women may later have been called 'Druidesses,' since this name is occasionally met with in the texts, usually where the woman (in one case the goddess Brigit) is also called *ban-fili*, or 'poetess,' unless they were wives of Druids (Windisch, *Táin*, p. 331; *Book of Leinster*, 75*b*; *RCel* xv. 326, xvi. 34, 277). But in Ireland women also seem to have had certain priestly functions, since the nuns who guarded the sacred fire at Kildare had evidently succeeded to virgin guardians of a sacred fire, the priestesses of a cult which was tabu to men (Gir. Camb. *Top. Hib.* ii. 34 ff.; Stokes, *Three Irish Glossaries*, p. 33), while other guardians of sacred fires existed elsewhere in Ireland (G. Keating, *Hist. of Ireland*, ed. Ir. Texts Soc., 1908, p. 331). In Britain, Boudicca performed priestly functions, invoking the gods and divining (Dio Cass. lxii. 6). Inscriptions in Gaul show the existence of priestesses called *antistes* or *antistita* and *flaminica sacerdos* (at Arles and Le Prugnon [Jullian, *Recherches sur la rel. gaul.*, Bordeaux, 1903, p. 100; Holder, *s.v.* 'Thucolis']), who, like the priestess of Artemis among the Galatian Celts, whose priesthood was hereditary (Plutarch, *Mul. Virt.* 20), were attendants on a goddess. On the other hand, the Metz inscription referring to a *Druis antistita* is spurious (Orelli, 2200; Robert, *Epig. de la Moselle*, Paris, 1883, i. 89). The nine virgin priestesses of a Gaulish god on the Isle of Sena foretold the future, raised storms, and healed diseases, while they were said to transform themselves into animals (Mela, iii. 48). Other women, who practised an orgiastic cult on an island in the Loire, probably had priestesses among their number who directed the cult, as perhaps did also the virgins of Sena (Strabo, IV. iv. 6 [p. 198]). Though perhaps pre-Celtic in origin, these cults were acceptable to Celtic women, who must have had similar rites of their own. Reinach regards the references to these island cults as based on the myth of Circe's isle (*RCel* xviii. 1 ff.); but there is no reason to believe that they had not been actually observed, even though the accounts are somewhat vague. If, as is likely, Celtic divinities were at first female, and agricultural rites were first in the hands of women, even when a strong priesthood had arisen, conservatism would here and there leave the ritual and its priestesses intact, while goddesses with a more or less strong personality may still have been served at local shrines by women. In the magical powers of witches we may further see the survival both of Druidic magic and of the priestly, prophetic, and magical powers of such priestesses.

The fact that Cæsar speaks of priestesses among the Germans but not among the Celts is sometimes regarded as proving that there were no Celtic priestesses. But we cannot suppose that Cæsar gave a full account of Celtic religion, while the notices above referred to and the improbability that women had no

religious functions among the Celts must be set against his silence. Though the Druids may have been an organization of priests, and, though there were no 'Druidesses,' there may yet have been priestesses for some particular purposes, just as there certainly were divineresses.

12. Disappearance of the Druids.—The extinction of the Druids was due to two causes: (1) in Gaul and S. Britain, to Roman opposition and the Romanizing of the native religion, and perhaps in some degree to Christian influences; (2) in Britain beyond the Roman pale and in Ireland, entirely to the introduction of Christianity and the opposition of the Christian priesthood. Rome did not attack the Druids on religious grounds, strictly speaking, but (*a*) on political grounds, because the Druids had such power in politics and in the administration of justice, and opposed the majesty of Rome; (*b*) on grounds of humanity, because the Druids offered human sacrifices; and, finally, (*c*) because of their magical superstitions. But this opposition implied little more at first than the application of existing laws against these things. Augustus prohibited Roman citizens from taking part in the *religio Druidarum* (Suet. *Claud.* 25); and Pliny (xxx. 1) asserts that Tiberius interdicted 'the Druids and that race of prophets and doctors,' though it is probable that this was no more than putting into force the existing law against human sacrifices. If it meant a suppression of the Druids as such, it entirely failed of its object; for they were still active in the reign of Claudius, who completely abolished the cruel religion of the Druids ('Druidarum religionem apud Gallos dirae immanitatis, et tantum civibus sub Augusto interdictam, penitus abolevit,' Suet. *Claud.* 25). Here it is doubtful whether more than an abolition of human sacrifices and magical practices was intended, for Claudius put to death a Roman citizen of Gaul for appearing in court with a Druidic amulet, the so-called serpent's egg (Pliny, xxix. 3), and Aurelius Victor says that Claudius merely abolished the 'notorious superstitions' of the Druids (*de Cæsar.* 4). The Druids were still in existence at a later time, the native religion still went on, and Mela (iii. 18) expressly says that human sacrifice was commuted to a little harmless blood-letting. The actual disappearance of the Druids was undoubtedly due less to such laws than to the Romanizing of Gaulish religion begun under Augustus, and to the institution of the State religion, with its own priesthood. Whether the Druids were still allowed to assemble yearly at the consecrated place in the territory of the Carnutes (Cæs. vi. 13) is doubtful, but they would certainly not be allowed to act as judges; and the annual assembly of deputies from the towns of the three Gauls at Lugdunum (Lyons) round the altar of Augustus, with its obviously religious character, was probably intended to take the place of that assembly. A *flamen* of the province was elected by the deputies, and there were *flamens* for each town. If the Druids wished to be recognized as priests, they would have to become priests of the new Gallo-Roman religion.

Their position as teachers was also attacked by the establishment of schools, as at Autun, where sons of noble Gauls are found receiving instruction as early as A.D. 21 (Tac. *Ann.* iii. 43). Thus, by an adroit ignoring of the Druids, as well as by the direct attack upon certain of their functions, the Roman power gradually took away from them their occupation as native priests. D'Arbois (p. 73), however, maintains that there was a steady persecution of the Druids, and, citing passages of Lucan and Mela, says that this caused them to retreat to caverns and forests, where they hid themselves, and still continued to teach the sons of noble Gaulish patriots. Lucan (*Phar.* i. 453), however, makes no reference to such a flight, and refers merely to the resumption by the Druids of their rites and teaching in forest glades where they dwelt, not where they hid themselves, after Cæsar's war, and he makes no reference to what took place after the laws against the Druids had been passed. Mela (iii. 19), though writing in Claudius' reign, does not appear to refer to secret teaching as a result of the laws, but, either amplifying Cæsar's words or citing Posidonius, says that the Druids taught the sons of noble Gauls during a period of twenty years secretly in caverns or forest depths. He has obviously confused the twenty years' novitiate of those who intended to become Druids with the teaching given to others. The secret forest recesses were simply the consecrated groves where Druidic rites were carried on. There the Druids may have continued to teach, but probably the sons of noble Gauls took advantage of the Roman schools. This teaching would be permitted by Rome, so long as the Druids did not interfere in politics or practise human sacrifices. Moreover, Mela does not appear to hint that the commutation of human sacrifice was a secret rite; it was rather part of the still permissible Druidic religion. Those who practised the forbidden rites would certainly be liable to punishment, but probably the bulk of the Druids succumbed to the new order of things. But Druids were still active after Nero's death, and took a prominent part in the revolt against Rome, while some prophesied a world dominion for the Celts at the time of the burning of the Capitol at Rome in A.D. 70 (Tac. *Hist.* iv. 54). The mistletoe and herb rites of the Druids described by Pliny may have still existed in his day; but he may be referring, like Lucan, to a former state of things. After this date the Druids seem gradually to have disappeared in Gaul and S. Britain, and were remembered only as philosophers. But even in the 4th cent., as the verses of Ausonius show (*Prof.* v. 12, xi. 17), men counted it an honour to have a Druid for an ancestor.

In independent Britain, Druidism remained as it had been (cf. Pliny, xxx. 1), and after the evacuation of Britain by the Romans the Druids seem to have re-appeared south of the Roman wall. Nennius (*Hist. Brit.* 40) describes how Vortigern, after being excommunicated for incest, called together his 'wise men' (*magi*, tr. 'Druids' in the Irish Nennius), who advised him to offer a human sacrifice at the building of a fortress. But neither in Christian nor in pagan Britain could the Druids withstand the growing powers of the Christian clergy. The lives of Celtic saints show how the Druidic magic arts were equalled and surpassed by the miracles of the saints, and how they were inevitably overcome, as is vividly seen in the encounters of Columba with the Druids in the north of Scotland, described by Adamnan. Similarly in Ireland, Christianity also destroyed the Druids; and the Lives of St. Patrick, who combated 'the hard-hearted Druids' (Windisch, *Ir. Texte*, i. 23), and other Lives of saints, are full of the magical or miraculous deeds by which the heathen priests were discomfited. The victory of Christianity over the Druids was, in popular belief, accomplished by a more powerful magic; but, at the same time, though the Druids passed away, many of their beliefs remained among the people as superstitions to which, perhaps, they attached as great importance as to Christianity (cf. Reeves' ed. of Adamnan, *Vita S. Columbæ*, Dublin, 1857; Stokes, *Three Middle-Irish Homilies*, Calcutta, 1877, p. 24 f.; *Antient Laws of Ireland*, i. 15).

LITERATURE.—The older writers, J. Toland, *Hist. of the Druids*, London, 1726; J. Martin, *Rel. des Gaulois*, Paris, 1727; E. Davies, *Myth. and Rites of the British Druids*, London, 1809; G. Higgins, *The Celtic Druids*, London, 1829, must be used with caution. More useful are D'Arbois de Jubainville, *Cours de litt. celtique*, i., Paris, 1883, *Les Druides*, Paris, 1906; T. Mommsen, *Röm. Gesch.*⁸, Leipzig, 1889, iii. 237, v. 94 ff.; A.

Bertrand, *Nos Origines*, iv. 'La Religion des Gaulois,' Paris, 1897; E. Lavisse and M. G. Bloch, *Hist. de France*, I. ii. 'Les Origines,' Paris, 1900; A. Lefèvre, *Les Gaulois*, Paris, 1900; G. Dottin, *Manuel pour servir à l'étude de l'antiquité celt.*, Paris, 1906; C. Renel, *Les Religions de la Gaule avant le christianisme*, Paris, 1906; C. Jullian, *Recherches sur la relig. gaul.*, Bordeaux, 1903; P. W. Joyce, *Soc. Hist. of Anc. Ireland*, London, 1903; J. Rhŷs, *Celtic Heathendom*, London, 1888, *Celtic Britain*[2], London, 1884; Duruy, 'Comment périt l'institution druidique,' *RA* xv. 347; De Coulanges, 'Comment le druidisme a disparu,' *RCel* iv. 44; J. A. MacCulloch, *Religion of the Ancient Celts*, Edinburgh, 1911.

J. A. MacCulloch.

DRUMS AND CYMBALS.—The drum is 'a musical instrument of the percussive class, consisting of a hollow cylindrical or hemispherical frame of wood or metal, with a "head" of tightly stretched membrane at one or both ends, by the striking of which and the resonance of the cavity the sound is produced.'[1] This definition hardly includes two types of drum which have played a more important part in social and religious evolution than any other—the incision-drum and the tambourine. The ordinary membrane-drum is composite in principle, combining in one structure the chief characteristics of both the tambourine and the homogeneous incision-drum. The actual genesis of the membrane-drum cannot be traced, though some speculations have been made on the suggestions supplied by various temporary drums and drum-substitutes. Clearly, like its two components, it has been independently invented by a fair proportion of the races of mankind.

Methods directly or indirectly suggestive of drumming are either obvious or recondite to civilized experience.

The Veddas have no musical instruments of any kind. In their dances they mark the rhythm by beating with the hands their chests, flanks, or bellies.[2] The Andamanese women beat time for the dancers by slapping the hollow between the thighs, as they sit squatting on the heels, with the palm of the right hand, which is held at the wrist by the left.[3] The same method is employed among the Australian aborigines, whose women invariably form the orchestra.[4] This method is analogous to that of cymbals, as the Vedda method of beating the belly or chest is to that of the membrane-drum. Another method is common to several races. Thus, for an extemporized drum, the Chaco Indians, who also employ a far more highly developed drum, sometimes use a bundle of skins tied into a package. This they beat with a stick.[5] In Australia the instrument, being the native rug or cloak of opossum-skin stretched across the hollow of the thighs, is analogous to the membrane of a drum. The women are said to keep faultless time.[6] At Australian corrobborees 'the women of the tribe, who take the part of musicians, are seated in a semicircle, a short distance from the large fire lit on these occasions, holding on their knees opossum rugs tightly rolled and stretched out. These are struck by the right hand, in time with the action of the master of the ceremonies, usually one of the old men. He carries in each hand a corrobboree stick, and these are struck together. . . . This use of the opossum cloak and clanking of the sticks appears to be the most primitive form of musical instrument, if it can be so termed, amongst our aborigines.'[7] Mitchell speaks of the rolled opossum-skin rug as 'the tympanum in its rudest form.'[8] In Western Victoria the rolled rug contained shells, producing a jingling sound.[9]

The Samoans at their dances used stretched mats, which were beaten with sticks, as well as the drum.[10] This method may or may not involve the ideas of a resounding cavity or vibrating membrane. For there may be no cavity, or the mat may be spread on a hard surface. But either cavity or membrane may be supplied by the accident of imitating the making of cloth. For beating bark into cloth the Polynesians used a beam of wood with a groove on the lower side. This rested on the ground, and a wooden mallet was used to strike the bark. Owing to the groove, made for the purpose of steadiness, 'every stroke produces a loud sound. . . . Heard at a distance, the sound of cloth-beating is not disagreeable.'[11] In Mangaia, of the Hervey Islands, the cloth-beating mallet was used for drums, and mimic cloth-boards were beaten as drums at certain feasts.[1] The Bechuanas, who are the finest leather-makers in Africa, use at initiation feasts the method of the free membrane An ox-hide is held and tightly stretched by several men. This is beaten with sticks.[2] The process is a repetition of one used in skin-preparation, here employed to produce ceremonial music. In old days the Chippewa made their war-drums by stretching a hide over stakes driven in the ground, and binding it in place by means of strong hoops.[3] Covering a pot or clay cylinder with a head of skin is a common method of making both permanent and temporary drums.[4]

Among historical peoples the drum is of very great antiquity. Its invention belongs to their pre-history; its forms are the membrane-drum, tambourine, and kettle-drum. It was known in Vedic India, and a hymn in the *Atharvaveda* celebrates its praises.[5] The earliest records of China are familiar with the drum.[6] The tambourine and double-headed drum were used by the Assyrians and Egyptians. The latter was supported against the drummer's body and played with both hands. Such an instrument is represented in a relief of Ashurbanipal (668–626 B.C.), in which women and children are clapping their hands.[7]

Certain peoples representing the lowest stages of culture known have failed to invent the drum, but in savagery generally, in all the stages of barbarism, and in civilizations like that of India, its use corresponds with its importance as the chief, and sometimes the only, instrument of music.[8] The structural variations presented by the instrument are endless, but the types are clearly marked. These are eight in number.

(1) The *incision-drum* is a hollow cylinder, varying in length from a few inches to twelve or more feet, and in diameter proportionally. Made from a bamboo internode or hollow tree, the ends are closed by the nodes or by the trunk sections. A narrow longitudinal slit, of varying length, but generally nearly as long as the cavity, is made on one side of the drum. Its width in the larger instruments is about three inches. The tapering of the lips is important, for the drumstick is applied to them, and the tones vary according to the thickness of the substance struck. This drum may be placed either in a vertical or in a horizontal position. The best results are produced from the latter.

(2) The *stamping-drum* is a long hollow cylinder, one end of which is closed and the other left open. The 'heading' of the closed end is either natural, as the node of a bamboo, or artificial, as a 'membrane' of skin. This instrument usually has a handle, by which the closed end is struck on the hard ground.

(3) The *single-headed membrane-drum* is a wooden cylinder, whose length is not much more than its diameter. The tightly stretched membrane of hide is beaten with the fingers, the hand, or a stick. The stick, usually knobbed, sometimes of a hammer-shape, becomes a heavy-headed club for the larger drums. The other end of the drum is closed.

(4) The *double-headed membrane-drum* is the single-headed with the closed end removed and converted into a 'head.' This drum is placed in a horizontal position and both heads are used.

(5) The *friction-drum* is (3) or (4) with a thong or cord stretched across the diameter of the head (one head in the case of the double-headed drum), or along its radius, being fixed in the centre. A

small piece or splinter of wood may be inserted beneath the thong.

(6) The *pot-drum* is an earthenware vessel headed with a membrane.

(7) The *kettle-drum* is a metal vessel headed with a membrane. Both (6) and (7) are single-headed closed drums. Type (6) tends towards the hemispherical shape of body; (7) in its developed form is quite hemispherical.

(8) The *tambourine* is a head of membrane attached to a cylindrical rim. On this are generally hung pieces of metal, according to the *sistrum* principle. The membrane is struck by a stick, more usually with the hand.

'The drum,' says Codrington, 'in many forms, may be said to be the characteristic instrument of Melanesia.' It is, however, absent from Florida and Santa Cruz. The incision-type is employed. A joint or internode of bamboo, or a tree-trunk of suitable size, for the largest, is selected, and a longitudinal slit of varying degrees of narrowness is made along one side. The lips of this slit are very carefully tapered; apparently the tone of the drum depends largely upon this detail. Small drums are held in the hands by dancers, but the large bamboo drums are held by an assistant. Most of these big drums have a special hut in which they are stored. They are valued very highly and certainly are in a sense sacred. They are described as 'very resonant and well toned, and can be heard at a great distance.'[1]

Big drums were made from hollowed trees throughout Polynesia. The lips being thick, and the whole instrument more or less a mere 'dug-out,' a heavy club was used by the drummer.[2]

The *canoe-drum* is a remarkable type, used in the Fiji Islands, Java, and Assam. A hollowed tree-trunk, often twenty-five or thirty feet in length, with closed ends tapering upwards, and an orifice along its upper length just wide enough to admit the body, is obviously both a canoe and an incision-drum of a large type. With two wooden mallets the operator beat on the lips of the incision, which were curved inwards. In Fiji these drum-canoes are the *lali*, and are kept in sacred houses.[3] The signal drums of New Pomerania and South Congo are identical. They are small, being not more than two feet in length.[4] The Malay peoples use a bamboo-stem with several internodes, each of which has the incision. As the diameter of the internodes increases, the scale, as with organ-pipes, descends.[6]

The Maori war-drum was of the incision type, but flat. It was hung from a cross-bar on a high scaffold, with the slit side underneath, and played from a platform half-way up the scaffold.[6] This *pahu*, hung in a sort of watch-tower, approximates in a fashion to the bell. In the Philippines the Jesuits have not only used old signal-drums of incised bamboo as church-bells, but have reproduced them in wood for the same purpose.[7] In the Tongan drums, from two to four feet in length, the chink ran nearly the whole length and was about three inches in breadth. The drum being made from a solid tree-trunk, all the hollowing-out was done through the incision—a long and difficult operation. In playing this drum, the drummer with his stick, a foot long and as thick as his wrist, varied the force and rate of his beats, and changed the tones by beating 'towards the end or middle of the instrument.' This drum was the *naffa*, the *kaara* of the Hervey Islands.

In Tahiti the drum used was the upright one-headed closed drum. A tree-trunk section was hollowed out, leaving a closed base. Shark's skin was stretched over the open top. This was the *pahu*; its sacred form was the *pahu ra*. One in Tahiti was eight feet high, and was beaten with two sticks. 'The thrilling sound of the large drum at midnight, indicating a human sacrifice, was most terrific. Every individual trembled with apprehension of being seized.'[8] The *kendang* or *gendang* of Indonesia, as used by Dayaks, Bataks, Macassars, Buginese, and Javanese, in Borneo, and throughout the countries east of India, is of the Hindu type, a single-headed closed wooden drum, played with the fingers.[9] The American drum was either the pot-drum or the wooden single-headed membrane-drum.[10]

There is more variety of drums in Africa than elsewhere. Practically every form is found, and variations occur which are in some cases unique or extremely rare.[11]

The Baganda drum was made from a section of tree-trunk, conical in form; the base of the cone alone was open. This was headed with a cow-hide, and this was the end kept uppermost. Some were ten inches high, others five feet, and four in greatest diameter. Some were beautifully decorated with cowries and beads. Except in the case of the very large drums, they were hung on posts, so as to get the full benefit of the sound. The skins were kept soft and elastic by being rubbed with butter.[1]

The essential character of the snare-drum and friction-drum is the presence of a string or thong of leather across the membrane or drum-head. A simple form is from British Guiana. A fine double thread, with a slip-knot in the centre, is stretched across the membrane. Before it is drawn tight, an exceedingly slender splinter of wood is secured in the slip-knot, so as to rest on the membrane at right angles to the line of the thread. The other head of the drum being unaltered, the instrument gives two different sounds. The friction-head produces, by the vibration of the splinter against the skin, a 'metallic sound.'[2] In another form the string extends along a radius only of the membrane.[3] Such drums, besides producing different tones from the two heads, can be muffled by placing a wad beneath the string.

Small hand-drums are commonly used by various peoples.[4]

The old English tabor is a type of these. The kettle-drum is not frequent. In the East the gong is preferred.[6]

The Greek and Roman drum (*τύμπανον*, *tympanum*) comprised two varieties of the tambourine type. The one was the flat tambourine; the circumference was hung with bells. The other resembled the Lapp form, the under side being closed by a convex hemispherical bottom. This variety was also played with the hand like a tambourine.[8]

The Heb. *tōph* (Gr. *τύμπανον*, EV 'tabret,' 'timbrel') was a simple tambourine, probably without bells or rattles.[7] The same Heb. word represents both the English, and probably there was only one form.

The tambourine, 'which was once among the chief instruments of the Lapland wizards, is now a great curiosity.' Two types were in use. One was a wooden hoop strengthened with two cross-pieces and covered on one side with reindeer-skin; the other was an oval box with a convex under side, hewn out of a tree-trunk, and with a reindeer-skin head. In some there was a slit serving as a handle. Each tambourine had an 'indicator' (*arpa*) consisting of a large iron ring, on which smaller rings were linked, for the purpose of divination by means of pointing to the symbols on the membrane. The hammer was made of reindeer-horn. The Lopars treated their tambourines with great respect, and kept them, with the indicator and hammer, wrapped up in fur. No woman dared to touch them.[8]

The cymbal varies in form, from a disk of metal to a shallow hemispherical or half-oval cup, with or without a flange. Cymbals were known in early India, and are still used by the Hindus in ordinary and temple orchestras.[9] The Garos use two sorts of cymbals: the *kakwa*, like the Euro-

pean, and the *nengilsi*, a smaller kind resembling in shape two small cups of brass.[1] The European type is derived from the Græco-Roman. These were quarter- or half-globes of metal with a flange. An older form is possibly indicated by the 'bronze vessels' used in the ceremonial dismissal of family *manes* by the Roman *paterfamilias*.[2] The Roman cymbals were either without handles or provided with a knob or ring or metal handle; others had a hole for the insertion of a cord. The unflanged, early Semitic type was also known.[3] The Khasias use cymbals in combination with drums.[4] The Chinese drummer usually employs one pair of cymbals.[5] The Abyssinians have tambourines, cymbals, and various drums.[6]

In modern European orchestras they hold a not unimportant place.

Only in the case of one people, the Hebrews, have cymbals attained independent importance. They were employed in dances and singing with the *tōph*, but in the Temple were used alone.

The cymbals of the Hebrews (*m'ṣiltayim*, *ṣelṣ'līm*, *κύμβαλα*) were used in the temple-worship to mark time for chants. They were bronze 'disks,' held, one in each hand, and clashed together. *Ṣelṣ'līm* is used only in 2 S 6^5 and Ps 150^5. In the latter passage the epithets 'loud' and 'high-sounding' are applied. It has been supposed, therefore, that the *ṣelṣ'līm* were the conical flangeless cymbals, as used by the Assyrians, giving a highly-pitched note. In 1 S 18^6 *shālishim*, *κύμβαλα*, cannot refer to cymbals. According to the Mishna and Josephus, one pair only was used in the Temple. It is not likely that *κρέμβαλα*, *sistra*, castanets, are ever connoted by the terms *m'ṣiltayim* and *ṣelṣ'līm*. It is possible that in the case of the Temple cymbals one disk was fixed, and was beaten by the other like a clapper. In later Mishnaic the noun used is in the singular number. The cymbalists were Levites. In the Second Temple a special officer had the charge of the cymbals, which are stated to have been of great antiquity. Their sound is described as high, loud, and far-carrying. It has been suggested that the 'tinkling cymbal' of St. Paul's simile implies the metallic spheres worn on bridles and by courtesans on their belts. This agrees better with the epithet *ἀλάλαζον*.[7]

The use of the drum as an instrument of society, and probably the art itself of drum-playing, have their highest development in Africa. The only national instrument that can approach the drum of the African is the pipes of the Scot. But the skill with the drum is more widely diffused among the Africans. Uganda in the old days supplies a typical example of a drum-conducted community.

The chief drums of the Baganda were the royal, called *mujaguzo*, ninety-three in number. Fifty-one of these were small. They were guarded by a chief, *kawuka*, and his assistant *wakimwomera*. Drummers took their turn of a month's residence each year in the royal court for beating the drums. A particular drum belonged to each chieftainship. The numerous totem-clans had each special drums; the leading members defrayed the expense. Every chief, besides his drum of office, had his private drum. This was beaten from time to time to ensure his permanent holding of office. Each clan had a special rhythm which was recognized.[8]

Drum-playing calls for considerable executive skill, particularly on account of the rebound of the membrane. It is in the utilization of this rebound that the essence of the drummer's art consists. Even with the heaviest drums no great force is required. The weight of the blow varies as the thickness of the membrane. In the case of large incision-drums, where the body serves as a membrane, the lips are finely tapered, and very resonant notes are produced by the use of a light stick. Various forms of drum-stick have been mentioned incidentally.

The Baganda drummer used two short but heavy sticks, club-shaped. 'The vibration from the large drums was so great that a man who did not understand how to beat them might have his shoulder dislocated by the rebound of the leather when struck. Music could be got from these drums, so much so that any one a mile away would scarcely believe that a drum, and not some other instrument, was being played.'[1] In the New Hebrides big wooden billets are used for beating the largest incision-drums. High notes, in concerted music, are supplied by small horizontal incision-drums. These are beaten 'in brisk syncopated time, to the loud boomings of the bigger drums.'[2]

For the psychological study of music by which the social and religious importance of the artistry of sound is destined to be explained, the music of drums and cymbals supplies unique data, and the drum-music of such races as the Central African, the American Indian, and his congener the Northern Asiatic (the Melanesians are, artistically, in a lower class) forms one of the most indispensable documents.[3]

The fact is that the music of the drum is more closely connected with the foundations of aurally generated emotion than that of any other instrument. It is complete enough in itself to cover the whole range of human feeling, which is not the case with its subordinate, the cymbals, while it is near enough to the origins of musical invention to appeal most strongly to the primitive side of man's nature. The investigator will need a long experience and adaptation to the atmosphere in which the vibrations of drum and tambourine produce their emotional waves. To compare, as an early explorer did, the orchestral drum-music of negroes to 'the raging of the elements let loose,'[4] is no longer an explanation of primitive music. To put it briefly—the emotional appeal of music is to a very large extent muscular. Rhythm is practically a neuro-muscular quality, and it is the fundamental form of musical sound. Most of our emotions tend to produce movement.[6] Harmonious rhythm in movement and action is the soul of society, as it is the soul of the dance.

'In all primitive music, rhythm is strongly developed. The pulsations of the drum and the sharp crash of the rattles are thrown against each other and against the voice, so that it would seem that the pleasure derived by the performers lay not so much in the tonality of the song as in the measured sounds arranged in contesting rhythm, and which by their clash start the nerves and spur the body to action, for the voice which alone carries the tone is often subordinated and treated as an additional instrument.'[6] Helmholtz observed: 'All melodies are motions. Graceful rapidity, grave procession, quiet advance, wild leaping, all these different characters of motion and a thousand others can be represented by successions of tones. And, as music expresses these motions, it gives an expression also to those mental conditions which naturally evoke similar motions, whether of the body and the voice, or of the thinking and feeling principle itself.'[7]

To increase muscular power the strongest stimulus is muscular movement; to produce emotional intoxication the combination of muscular movement that is rhythmical with rhythmical sound (or motion translated into music) is the most efficient. One great sphere of drum-music has been the social emotions. Not only military, religious, and sexual excitement, but every possible form of social orgiasticism has been fostered and developed by its influence. It is a significant coincidence that the boom of the modern cannon and the boom of a primitive drum mean war. In contrast to this large, impressive sound, which is so essentially organic in its nature and its production, may be placed the exclusively religious use of cymbals by the Hebrews, and the prominence of cymbal-music in the perverted sexualism

of the cult of Attis.[1] These two last cases are isolated phenomena. The music of the drum is more completely human.

Lastly, the muscular appeal of the drum is made powerful by the very limitations of the instrument. The player is practically confined to rhythm, and the influential manipulation of this depends on his personality. He is one with his drum. It is this translation of human meaning and will into sound that explains the so-called 'drum-language.' Further, the player's muscular skill and muscular life are at their highest efficiency; he is for his hearers an inspirer, a leader, and a prophet, the individual representative of the social body in movement and in emotion. It is on this principle that the drum in so many races gives the summons for all social functions. The blow of the drum-stick translates itself not merely into sound, but into a spiritual reverberation, an impulsive stroke upon the social consciousness.

The meaning of drum-sounds is thus of a universal, undifferentiated character; they appeal primarily to the muscular sense, and secondarily to all that is built up on that foundation. An instance of the simplest possible application may be contrasted with others more or less elaborate:

Explaining the route to Spirit-land to the soul of a dead chief, the Chippewa punctuates his words with sharp drum-taps.[2] 'To a European,' says Ellis, 'the rhythm of a drum expresses nothing beyond a repetition of the same note at different intervals of time; but to a native it expresses much more. To him the drum can and does speak, the sounds produced from it forming words, and the whole measure or rhythm a sense. In this way, when company drums are being played at an *ehsudu*, they are made to express and convey to the by-standers a variety of meanings. In one measure they abuse the men of another company, stigmatising them as fools and cowards; then the rhythm changes, and the gallant deeds of their own company are extolled. All this, and much more, is conveyed by the beating of drums, and the native ear and mind, trained to detect and interpret each beat, is never at fault. The language of the drum is as well understood as that which they use in their daily life. Each chief has his own call or motto sounded by a particular beat of his drums.'[3]

Klark declares that 'the sound of the tambourine, the convulsive antics of the shaman, his fierce screams, his wild stare in the dim light, all strike terror into the hearts of semi-savage people, and powerfully affect their nerves.'[4] The character of this tambourine-music has been thus described: After some preliminary sounds such as that of a falcon or a sea-mew, which concentrate attention, 'the tambourine begins to make a slight rolling noise, like the buzzing of mosquitoes: the shaman has begun his music. At first it is tender, soft, vague, then nervous and irregular like the noise of an approaching storm: it becomes louder and more decided. Now and then it is broken by wild cries; ravens croak, grebes laugh, sea-mews wail, snipes whistle, falcons and eagles scream. The music becomes louder, the strokes on the tambourine become confused in one continuous rumble; the bells, rattles, and small tabors sound ceaselessly. It is a deluge of sounds capable of driving away the wits of the audience. Suddenly everything stops; one or two powerful blows on the tambourine, and then it falls on the shaman's lap.'[5]

To peoples like the Central Africans, the drum, apart from its directly emotional use in social gatherings, as an instrument of social intoxication, plays the part of the church-bell, the clock, the town-crier, and the daily newspaper, besides being used for religious music and the exhortation of the sick.

In Africa (Lake Nyasa) the drum is used at dances, at feasts religious and secular, at wakes, by doctors at the sick-bed, by boatmen to time the paddles, and to send messages over the country.[6] Among the Woolwa Indians the drum is played when drink is offered to the guests at *mishla*-drinkings.[7] Of the Baganda drums, Roscoe writes: 'The drum was indeed put to a multitude of uses, quite apart from music: it was the instrument which announced both joy and sorrow; it was used to let people know of the happy event of the birth of children, and it announced the mourning for the dead. It gave the alarm for war, and announced the return of the triumphant warriors who had conquered in war. It had its place in the most solemn and in the most joyous ceremonies of the nation.' The royal drums were beaten to announce the coronation of a king, and his entry into a new house, and also at the new moon. Drums were carried on journeys and beaten to encourage the walkers. A young man would beat the drum with his hands and sing meanwhile. 'The people when carrying loads, or when on a march, loved to be accompanied by the drum, and, if they had no drum, they sang songs, and set the time for marching by the song.'[1]

Its co-operative and socializing importance is here well suggested. Its most spectacular use is that of a postal, telegraphic, and telephonic service.

The carrying power of these fine instruments renders communication very rapid. The big drum of the Anyanja can be heard at a distance of six miles.[2] The Chippewa drum, which is not two feet high, can be heard at a distance of ten miles.[3] As the drum-telephone is used to-day in Central Africa, it depends on an elaborate code, which to one reared in the atmosphere is perhaps more dependent on social understanding and mutual recognition of 'tone-variations' than on a colourless translation of sounds into letters. At any rate, throughout a very large tract of Central Africa, daily by means of the drum two or more villages exchange their news. Travellers, even Europeans, have obtained food and lodgings by its means. The notes used can be imitated by tapping the cheek when the mouth is open.[4] An apt method is here implied for native practice, since it is the aperture- or incision-drum that is used for the sound-messages. Dennett's account of actual messages sent by drum is all the more valuable because it is free from any attempt to heighten the effect.[5] He notes that this system gives the key to a perennial puzzle, revived during the Boer War, How does news travel among the natives in the speedy way it does? The drum-message system is found in New Guinea, and among the Jivaros of South America, the old Mexicans, and some Indians of the North-West. It is particularly developed in Oceania, the countries north-west and north-east of New Guinea, especially New Pomerania. Signalling by means of the incision-drum, but without any highly developed code, was used in Borneo, Java, the Philippines, New Zealand, the New Hebrides, Fiji, and the Hervey Islands.[6]

Throughout Melanesia, drums are part of a rich man's establishment. The top of these drums is fashioned into a grinning face. When the drum is an image of a venerated ancestor, the taps are made on the stomach.[7] In Melanesia, ancestor-worship is linked to the civil and military authority by these instruments, half-drum and half-image. It is natural also for rulers and important persons to collect round them as many sources of *mana* as possible, though they may leave the more recondite applications of supernatural power to the shamans. In the Upper Nile regions the 'sacred' official drums hang in front of the chief's house, or under the sacred tree of the village. They are regarded with awe.[8] The regalia of a chief are, as it were, his *sacra*. These may come to be identified with the mysterious power of his office. In other cases, the drum may be regarded as the mouthpiece of a god or spirit, as containing the voice of the god or the god himself. This voice, in the lower cultures, derives impressiveness not from stillness or smallness, but from loudness and resonant power.

Some miscellaneous examples are appended of

[1] The general use of cymbals in the worship of Dionysus and in the Eleusinian Mysteries belongs rather to the category of the impressiveness of noise, as such.

the beliefs and ritual connected with the sacredness of drums.

The regalia of Malay States includes the court and official drums, which are sacred. The royal drums of Jelebu are said to be 'headed' with the skins of lice, and to emit a chord of twelve different sounds; the royal trumpet and the royal gong also emit the chord of twelve notes. The Sultan of Minangkabau wakes daily to the sound of the royal drum (*gandang nobat*). These drums are regarded as having come into existence by their own will. 'Rain could not rot them nor sun blister them'; any person who even 'brushed past them' would be felled to the ground by their magic power. In the State drum of Selangor resided the *jin karaja'an*, or 'State demon'; and powerful *jinn* dwelt in the other royal drums.[1]

Each temple and house of a chief in West Africa has a tall drum (*gbedu*) covered with carvings. This drum had a protecting spirit, that, namely, of the slave who was sacrificed on it when it was made. It is beaten only at religious ceremonies. Before being struck, it receives an offering of blood and palm-wine, which is poured on the carvings.[2]

Tane, the Polynesian god, was more or less represented by his sacred drum. These drums were often surmounted by carved heads; and possibly the evolution here is from drum to idol. While the drum retained its membrane, a connexion would be traced between its sound and the voice of the god.[3] When the special royal drum, *kaula*, of the Baganda received a new skin, the blood of the cow whose skin was used was run into the drum. Also a man was beheaded, and his blood was run into it. The idea was that, when the drum was beaten, the life of the man added fresh life and vigour to the king. When any drum was fitted with a new skin, the ox killed for the purpose also supplied the blood for pouring into the drum.

Every drum contained its fetish. Renewing the fetish was as necessary as renewing the skin, and the two operations were simultaneous. These fetishes were concrete objects of the familiar African type. It was not every man who knew how to make a drum-fetish. A characteristic drum-fetish was that of the drum of Dungu, god of hunting. It was composed of portions of every kind of animal and bird hunted; all kinds of medicines used in making charms for hunting; miniature weapons, and pieces of cord used in making traps. This fetish was fixed upright in the drum.[4]

The clan Gomba of the Baganda had a drum, *nakanguzi*. A runaway slave, if he reached its shrine, became the servant of the drum, and could not be removed. Any animal straying thither became the property of the drum, a sacred animal, free to roam.[5] A criminal among the Marotse of Africa escapes punishment if he can reach and touch the drums of the king.[6]

In Vedic India the drum was not only beaten, but invoked, to drive away danger, demons, and enemies. It was used in sacrifices, and in battle; the warrior offered it worship. Before being played, a *mantra*, or charm, was spoken into it.[7] The analogy between thunder and the boom of the drum is obvious. Russian peasants used the drum to imitate thunder, by way of a charm for the production of rain.[8] The natives of Guiana prefer the skin of the baboon or 'howling monkey' for the heads of their drums, believing that a drum so fitted possesses 'the power of emitting the rolling, roaring sounds for which this monkey is celebrated.'[9] The Timorese regard cymbals as the home of spirits.[10] Such beliefs are found with all musical instruments.

The essential instrument of Christian temple-worship has been, from a very early period, the organ. No doubt an impulse of antagonism to pagan ritual prevented the early Christians from adopting pagan instruments. Only perhaps in Abyssinia, and in the modern Salvation Army, has the drum found a place. Drums do not appear to have been used by the Hebrews in temple-worship. The usual drum, *tōph*, of the tambourine type, was used in processions, at weddings, and feasts, and to accompany religious music of a joyous and popular character.[11] But in the great Oriental religions, particularly in Hinduism and Buddhism, the drum has an important place in

the temple-worship; nor is it unknown in the worship of Islām. In lower cults the drum serves as a church-bell, an organ, and a direct vehicle of supernatural power.[1]

The Baganda temple-drums were next in importance after the royal drums. Each had its particular rhythm and particular fetish. They were beaten at feasts and at the time of the new moon, warning the people of the monthly rest from work.[2] In New Guinea, drums are beaten to drive away the ghosts of men slain in battle; in New Britain, to stop earthquakes.[3] Demons are expelled by South African drummers.[4] In the Moluccas the drum is employed against evil spirits causing difficult child-birth.[5] In Central Africa demons are driven away with guns and drums at funerals and before death.[6] Dayak women and shamans alike use the drum to cure the sick.[7] In China, scapegoats are driven away to the music of drums.[8] Greek historians record the 'disinfecting' of ambassadors by Turkish shamans by means of the drum;[9] and the use of it to drown the cries of children offered to Molech.[10] The *ska-ga*, or shaman, of the Haidas undertakes to drive away the evil spirit which possesses the sick. His chief implements are the drum and the rattle.[11] The exorcism of an evil spirit causing disease is carried out by the Wanika medicine-man in the centre of a band, playing drums and shouting.[12] The Patagonian doctor beats a drum by the sick man's bed to drive out the spirit.[13] The Asiatic shamans use the drum to cause spirits both to appear and to disappear.[14]

There is always something very human about the use of drum-music, even when applied to spiritualities. At an Eskimo feast the drums are beaten softly when the traders' goods are brought in; loudly when the guns are brought, so that the shades of animals present may not be alarmed.[15] For induction of spirits, the principle may be that of a summons or of an invitation.[16]

An old Motu-motu man observed to Chalmers: 'No drums are beaten uselessly; there are no dances that are merely useless.' The young men, for instance, are bidden to beat the drum and dance that there may be a large harvest.[17] The Papuan's remark applies universally. Tshi priests work themselves into an inspired state by dancing to the music of the drums. Each god has a special hymn accompanied by a special beat of the drum.[18] In ancient Israel the priests prophesied to the music of harps, psalteries, and cymbals.[19] Among the Chaco Indians the boys during initiation are called 'drums,' from the fact that during this period the village drums are beaten incessantly day and night by relays of men.[20] Among the Port Moresby natives (New Guinea) the boys at initiation have only one serious duty, which is for each to make his drum. They are tabu, and live in the forest until the drums are completed; this may be a week or a month. Several boys go together. 'A straight branch is selected and cut to the requisite size; this is next scraped with shells till the orthodox shape is arrived at; finally, the cavity is carefully and laboriously burnt out.' During the whole period they observe minute rules: if they were seen by a woman 'the drum would have to be destroyed, otherwise it would be certain to split, and would sound like an old cracked pot.' If they eat fish the skin of the drum will burst; red bananas cause a dull tone. They may not touch fresh water, but only that found in the stems of bananas, or coco-nut milk. Should they touch water inadvertently before the drum is hollowed out, they break it, crying: 'I have touched water, my firebrand is extinguished, and I can never hollow out my drum.' The sorcerers instruct them that water extinguishes the 'fire' of the music; a fish-

bone tears the tympanum; and the sight of a woman destroys the tone.[1]

The basket-drum of some American tribes recalls not only primitive substitutes for the drum, but certain features of agricultural rituals.

In their sacred rites the Navahos use an inverted basket in lieu of a drum. It is finely made by the women from twigs of sumach, wound in helix form, and when inverted the basket is nearly hemispherical. During ceremonies it is beaten with the sacred drum-stick. This is made according to elaborate rules from the leaves of *Yucca baccata*. The Navahos say, 'We turn down the basket,' when they refer to the commencement of a song; 'We turn up the basket,' when a song is finished. As it is raised, hands are waved in the same direction, to drive out the evil influence which the sacred songs have collected and imprisoned under the basket.[2]

It is no sacrilege to serve food in this sacred drum. To do so is common enough, but without ceremonial meaning. In Græco-Roman cults, such as the mysteries of Attis, eating sacred food from the sacred drum and cymbal was probably a reversion to primitive times, when platter, drum, basket, and winnowing-fan were interchangeable.

The use of the tambourine by the shamans of Northern Europe and Asia is remarkable. This instrument and its shamanistic manipulation are found in a belt which almost completely surrounds the world in northern parallels, through Asiatic Russia, Greenland, Northern America, and Lapland, and among Amerindians, Mongols, Tatars, and Lapps.[3] The structure of this hand-drum has already been described. Those used by Americans, Tatars, and Mongols have pictorial designs on the drum-head. The designs are supposed to produce or modify the sounds, and each, being thus a sort of word or sentence accompanied by pure sound, has its particular influence on the spirits who are invoked by the music.[4] The Lapp shaman's drum has small brass rings fastened loosely on the head. These move and dance over the designs inscribed when the head is beaten with the hammer; and, according to their movements in relation to the magic signs of sun, moon, and planets, the shaman predicts the future.[5] The origin of this method, which, it is to be noted, is always secondary to the musical or 'suggestive' use of the instrument, may be from the following practice: the Yakut shaman places a ring or coin on the palm of the inquirer's hand, moving it about in various directions, and then foretells the future.[6] The Votyak *tuno* moved beans on a table for the same purpose.[7]

It is suggestive of hypnotism rather than of music to find that the drum is tuned up by holding it in front of the fire. A drumstick or the hand is used in playing. The tambourine plays the main part in the *kamlanie*, the invocation of spirits and subsequent prophesying. The Chukchi shaman in his *kamlanie* taps the tambourine with a piece of thin whalebone. The *kam* uses the tambourine in various ways, and produces the most varied sounds. The spectators recognize the various rhythms, such as the tramping of horses' feet, during which the *kam* is supposed to be riding with his guards. As he taps, he collects spirits in the tambourine. Sometimes during the collection of spirits the tambourine becomes so heavy that the *kam* bows under the weight.[8]

LITERATURE.—This is fully given in the footnotes.

A. E. CRAWLEY.

DRUNKENNESS.[9]—**1. Definition.**—Drunkenness has never been satisfactorily defined in a legal or ethical sense. In any attempt to define it legally, difficulties at once present themselves, and the judge has to reach his conclusions from the evidence. Drunkenness might in general, if not in scientific, terms be defined as that condition of mind and body produced by a sufficient quantity of alcohol (varying according to the susceptibility of the individual to the toxic agent) to bring about distinct changes in the intellect, the emotions, the will (volition), the motor mechanism, and the functions of the cerebellum, or small brain, indispensable to the accurate execution of any movement. On the various stages and symptoms of intoxication, and forms of alcoholism, see art. ALCOHOL (vol. i. p. 300). The definition of 'habitual drunkard' first appeared in the Habitual Drunkards Act of 1879. It runs as follows:

'a person who, not being amenable to any jurisdiction in lunacy, is, notwithstanding, by reason of habitual intemperate drinking of intoxicating liquors, at times dangerous to himself or herself, or to others, or is incapable of managing himself or herself, and his or her affairs.'

2. Racial degeneration: heredity.—Of as great moment as individual and family wreckage wrought by drunkenness is the degeneracy of the innocent offspring. About this degeneracy, until quite recently, there has never existed a doubt. The all but universal testimony of competent observers and of the medical profession all over the world, based upon extensive experiments, and the general impressions of the profession on the question remain to this hour unshaken. And it may be said at once that these impressions as to bodily, nervous, and mental degeneration are not to be lightly set aside by any conclusion or opinion based upon the very restricted investigation by one or two authorities, however eminent. In 1910 the Galton Eugenics Laboratory issued two papers by Professor Karl Pearson on the influence of parental alcoholism on the physical health and mentality of the offspring. These papers were supposed to set forth lax and subversive views on the subject of temperance—views which, if capable of proof and acceptance, would indisputably have given a decided set-back to the believed and accepted doctrines of clinicians, and of scientific men and of social reformers in every land, as to the undoubted racial degeneration of the alcoholic individual and his or her offspring. If the first dictum of these observers, to the effect that on the whole in regard to degeneration the balance turns as often in favour of the alcoholic as of the non-alcoholic parentage, could be upheld, the outlook for the nation could not be otherwise than ominous. These opinions, apart from their calamitous effect on the race, shocked orthodox believers in the classical view hitherto held, and Sir Victor Horsley and others entered the lists in its support. If Professor Pearson and his collaborateurs could have established their proposition to anything like the extent to which their opponents have established theirs, it would have to be seriously entertained, no matter what might be the consequences to society and the race. But they have not done so, and it is not much to the point for them to impugn the investigations of their opponents on the ground that no trouble was taken to ascertain whether the alcoholism or the parentage came first. Indeed, the same charge of laxity of methods of investigation must be brought against Professor Pearson's own inquiry, for the 'Preliminary Study of Extreme Alcoholism in Adults' is based on reports made in connexion with a very restricted investigation. In any study, whether for or against, some fixed and definite standards are needed by which all cases can be tested. Such would have averted the con-

[9] This art. deals almost exclusively with the ethical aspect of drunkenness. Full information as to its geographical distribution, the intoxicants used by different races, etc., will be found in the art. DRINKS, DRINKING. Cf. also the art. ALCOHOL.

flicting meanings attached to the terms 'drinking' and 'sober' applied to masses of the population. Many excessive drinkers are never 'drunk,' and many have a reputation for sobriety who consume in one debauch as much as the man called a 'drinker' would in months without apparent injury to themselves and others. Hence the need for rigid definitions and limitations applied to investigations which, to be of value, would require to be of a comprehensive character, and extended over a series of years. The effect of the 'Study,' however, is to demonstrate the close connexion between alcoholism and mental defectiveness, but the question is left unsolved whether this large proportion of mental and physical defectives, which is much greater than is found in the general population, is attributable to alcohol, or to the pre-existing mental defect.

In the second paper, the theory of the first—that there is no close relation between mental defect in the children and alcoholism in the parents—has been abandoned, and a close relationship is admitted, while segregation is called for on the ground of its hereditary character. Nothing specific, it will be observed, is said with reference to the undoubted physical stigmata of such degenerates.

Professor Pearson contends that mental defect is antecedent to alcoholism. But what, it may be asked, antecedes the mental defect? Unless this can be answered satisfactorily, one must come full circle to the original standpoint, and be confronted by the old problem. The Pearsonites have abandoned the position that 'the balance turns as often in favour of the alcoholic as of the non-alcoholic parentage,' and practically admit that alcoholism and mental defectiveness are associated; but whether the one precedes the other, and which precedes the other, they do not know. As far as the controversy has gone, there can be no doubt that the authorities who believe that alcoholism, not gross alcoholism—about that no doubt exists—but that fairly general kind of free indulgence which takes place daily, with frequent 'week-end' bouts, does lead to the physical and mental impairment of the offspring, are in the right, and can produce unquestioned evidence in support of their view. Than this no controversy of greater moment in regard to alcoholism has been started. To make the investigation referred to of the least value, a statistical and clinical research into the comparative physique and capacity of the descendants of alcoholic and non-alcoholic parents respectively in several carefully chosen districts would be required, and it is not too much to anticipate what the conclusion would be. It would finally determine whether there is any marked correlation between parental alcoholism and inferiority of offspring manifesting itself not only in childhood but in adolescence; and it would dissipate views calculated to do infinite harm to the race and to the commonwealth.

The degeneracy of alcoholic offspring is attested by such authorities as Magnan, Morel, Lancereaux, Crichton-Browne, Legrand du Saulle, John Macpherson, etc., and it comes about in many ways. The male parent who is a 'soaker'—we need not consider the physical state of the progenitor suffering from the effects of an occasional bout at the time of conception—undoubtedly begets a weak offspring, made surer if his habits worry and impoverish the sober mother during pregnancy and lactation. When both parents are 'swillers,' the bad effects are still more marked. It has been alleged, although little evidence has been adduced in support of it, that when fathers are addicted to drunkenness the female offspring are more likely to be the subjects of hereditary alcoholism, and when the mother is the offender the males perpetuate the parental failing (*hérédité croisée*). It is thought, and there are strong grounds for the presumption, that the female progenitor is the surer and more general transmitter of the hereditary alcoholic taint and of the neuroses which eventuate in insanity, imbecility, and nervous diseases. The prepotency of the alcoholic mother, in handing on to her offspring a constitution not only physically defective but mentally unstable, cannot be gainsaid. This view accords with common sense, even if exact statistical records are wanting, for not only is her condition at conception of moment, but so also is the fact that during utero-gestation and lactation the blood is charged with the toxic agent, specially so during pregnancy. The heredity may be 'immediate' from one or both parents, or 'mediate' from grandparents, the 'immediates' having been free from the taint. And the heredity may be homogeneous or heterogeneous: in the one group inebriety begets neurotic children; in the other the inebriety of members of a family springs from neurotic parentage, which may not, and frequently does not, owe its existence to alcoholic excess.

Four of the foremost advocates of the non-transmission of personally acquired characters are Galton, Weissman, J. A. Thomson, and Archdall Reid—recognized authorities on the principles and laws of heredity. In their view environmental influences play a secondary part; heredity is everything. One may ask the question in this connexion, Are the bad mental effects of vicious habits and alcoholic excess passed on to descendants, thus setting up racial degeneration? Dr. Ford Robertson, following Darwin, Maudsley, and Hartwig, traverses Dr. A. Reid's proposition that 'inborn characters are known to be transmissible from parent to offspring,' and postulates for himself the remarkable doctrine and dogma that 'offspring, as far as can at present be determined, inherit no character whatever from their parents. . . . The distinction between inborn and acquired characters has really no justification in modern scientific fact. . . .' Although there is no inheritance of parental characters, there is of environmental influences, to which all that is of any importance in human ontogenetic evolution (*i.e.* the development of the individual) is directly due. There is here evidence of acute dialectic diversity, as well as of uncertainty.

3. Statistics.—The following statistics, which have a profound significance, are submitted in order to give some idea of (1) the annual mortality, sickness, and unemployment consequent upon excessive indulgence; and (2) the prevalence and cost of pauperism, pauper lunacy, criminality, and delinquency due to the same cause.

(*a*) *Mortality.*—It was calculated twenty years ago (Dr. Norman Kerr) that 40,000 persons die annually in the United Kingdom from drunkenness and habitual drunkenness; and Dr. Wakley, Editor of the *Lancet* and Coroner for Middlesex, not only confirmed this estimate, but put it higher. Of 1500 inquests he attributed 900 at least to hard drinking, and he believed that from 10,000 to 15,000 persons died annually in the Metropolis from drink, upon whom no inquest was held. For the United Kingdom this calculation would easily justify a total of 50,000. Deaths from suicide, drowning, and exposure totalled 7372 in one year in Great Britain and Ireland, and of these one may safely reckon that alcohol was responsible for 50 per cent. Of deaths from accidents and negligence (13,386), 15 per cent may be attributed to the same cause.

Infant mortality.—For the declining birth-rate in this and other lands, to which of late attention is constantly drawn, many causes are assigned, but

in the present connexion we are concerned only with the great wastage occurring in the depleted birth-rates through overlaying by drunken parents, especially mothers, parental neglect arising from over-indulgence and improper feeding, no cognizance being here taken of premature births attributable to drunkenness, and to accidents arising therefrom. In regard to the suckling of infants, the milk of the alcoholic mother is both deficient in quantity and inferior in quality, in spite of the popular belief to the contrary in favour of stout and wines; and, further, there is defective ovulation and sterility.

Comparative mortality for various trades and occupations, including the Licensed Trade itself.—According to Dr. Newsholme, if the comparative mortality figure for all men equals 1000, an equal number of gardeners would yield only 568 deaths, teachers 571, grocers 664, doctors 957 (midway), while at the other end of the scale are brewers 1407, innkeepers and men-servants 1665, and file-makers 1682. Comparing employees in inns, etc., with all other occupied males, it is found that, out of a given number in each group, 8 times as many die from alcoholism, 5 times as many from gout, $1\frac{3}{10}$ times as many from nervous diseases, $1\frac{1}{4}$ times as many from suicide, and $2\frac{1}{2}$ times as many from consumption. Regarding the liability of drunkards to consumption, Prof. Brouardel (Paris) observes: 'Alcoholism is, in fact, the most powerful factor in the propagation of tuberculosis,' and Dr. R. W. Philip (Edinburgh) agrees: 'The most vigorous man who becomes alcoholic is without resistance before it.'

Actuarial calculations made with great care and exactitude by insurance offices are significant. The best offices increase the premium as much as 50 per cent, and a few absolutely decline proposals of persons in the drink trade. And, as regards abstainers and non-abstainers, the chances of life are no less than 2 to 1 in favour of the former. The ratio is much the same in regard to sickness, recovery being speedier among the former. The moral clearly is that he who desires to live long, wisely, and well should either be a total abstainer or exceedingly temperate. For many persons total abstinence is a necessity of their being if they are not to make early shipwreck of their lives.

(*b*) *Crimes and petty offences.*—In the United Kingdom there were 636,340 apprehensions in the year 1903. These figures do not represent so many individuals as is often concluded, the same individual figuring more than once in returns. A total of 318,000 persons who have been in the hands of the police for homicide, assaults, petty thefts, prostitution, drunkenness, disorderly conduct, etc., would be nearer the mark. The total admits of a further reduction to 273,000 as the number in which alcohol plays a chief part; but, as many persons commit petty offences without being officially listed, it would be safe to put the number requiring, although not receiving, the attention of the police at 80,000—in all 353,000, or 1 to 128 of the population. In Scotland it is reckoned that there are 4700 recidivists, both of the criminal and of the petty offender classes, waging (especially the former) an aggressive war against society, of whom 2500 are feeble-minded, debauched, parasitic, petty offenders, or 5 per 1000 of population—a ratio somewhat similar to that estimated by Mr. C. S. Loch, C.B., for England.

The sex-ratio of these parasitic offenders is remarkable as the frequency of convictions advances. Thus from 11 to 20 convictions, males are to females 100 : 70; 21 to 50 convictions, 100 : 90; 51 to 100 convictions, 100 : 180; 101 and upwards, 100 : 330.

In Scotland, 2500 have been convicted and sent to prison 20 times, and 1330 more than 50 times. Referring to the 1330, Dr. John Macpherson, Commissioner in Lunacy, makes the following trite observations as to the mental irresponsibility of such cases:

'It is only the shortness of human life which limits the number.' Chronic drunkenness, habitual or periodic, he says, is 'a neurosis closely allied in its symptomatology and heredity to the other neuroses and to insanity'; and the true cause is 'a defective heredity which (1) induces the subject to crave for a particular mental state—not for alcohol, but for the state which alcohol most conveniently produces; (2) which provides the subject with a constitution which is particularly susceptible to the influence of such poisons as alcohol; and (3) which is in many cases the cause of a mental unsoundness independent of alcohol.'

(*c*) *Cost of prisons.*—In the year 1909 the cost of prisons was: in England, £720,340; Scotland, £95,790; Ireland, £114,660 — being a total of £930,790. It is safe to assume that, but for alcohol, not one-third of the whole cost, or £310,000, would be required for this purpose. The daily prison population amounts to 26,000, of whom 17,000 are interned for crimes and offences directly connected with casual and habitual drunkenness.

(*d*) *Pauperism.*—The number of paupers in England, Scotland, and Ireland, and the cost to the country locally and imperially, may be roughly expressed as follows: paupers, 1,083,470; cost, £7,389,000. It is no exaggeration to say that 50 per cent of pauperism and its cost may be ascribed to drunkenness and habitual drunkenness—in other words, 541,700 paupers and dependents are maintained at a cost of £3,695,000.

(*e*) *Police.*—Maintenance of the police force in England, Wales, Scotland, and Ireland, numbering 62,400 picked men (England and Wales 46,000, Scotland 5670, Ireland 10,740), falls little short of £6,000,000 per annum. Of this enormous sum, drunkenness, and offences and crimes connected directly with drunkenness, may be credited at least with one-third, £2,000,000, met from local taxation and imperial subventions. But this is not all. From the Civil Service Estimates (Class iii., 'Law and Justice,' pp. 229–353), consideration must be given to another set of heavy imperial charges under this head, amounting in all to £1,600,000 for County Courts, Supreme Court of Judicature, Reformatories and Industrial Schools, Criminal Asylums, etc. If to this enormous imperial total under the head of 'Law and Justice' be added the burdens falling upon local authorities under the same head, the total would not fall short of £2,600,000, of which drunkenness and allied offences may be debited with 33 per cent, or £860,000.

(*f*) *Pauper lunatics.*—In the year 1910 these were: England 130,550, Scotland 18,340, Ireland 24,140—a total of 173,030. The annual (approximate) cost of maintenance, inclusive of interest on buildings and land, was £6,000,000. Assuming that alcohol directly and indirectly is responsible for 20 per cent of the insane poor, it follows that £1,200,000 per annum from rates and Government grants are required to meet the burden of providing for a daily population of 34,000 lunatics.

(*g*) *Excise and Customs Revenue for one year.*—On the other side of the ledger must be placed the revenue raised by the duties on spirits, beer, wines, brandy, rum, etc., which may be put down at £35,000,000. When over against this revenue is put the cost and loss to the nation of £27,200,000 (see Summary) in consequence of intemperance, the benefit of the enormous revenue sinks into insignificance. £170,000,000 is spent annually on drink by the nation. In the light of the facts and statistics submitted it is hardly possible to contemplate a graver ethical problem than this one of drunkenness, affecting as it does so prejudicially the individual, the family, the community, and the commonwealth.

SUMMARY OF THE FOREGOING STATISTICS.

	Numbers.	Cost and Loss.
1. Annual Mortality	‡ 50,000	£10,000,000
2. Sickness and Unemployment	..	£3,000,000
3. Law and Justice	..	£860,000
4. Police	⊙ 273,000 † 62,400	£2,000,000
5. Pauperism	* 541,700	£7,389,000
6. Pauper Lunacy	= 34,000	£1,200,000
7. Prisons	‖ 17,000	£620,790
8. Cost of collecting Excise and Customs Duties	..	£2,130,800
		£27,200,590

‡ Value of each life £200. ⊙ Apprehensions. † Police Force. * Paupers. = Pauper Lunatics in daily population. ‖ Daily population.

4. Responsibility in drunkenness: anomalies of the Civil and Criminal Law.—There would be no responsibility if intoxication following one bout were recognized as temporary insanity, or, after many bouts, with resultant organic disease of the brain, nervous system, and the bodily viscera (liver, lungs, kidneys, etc.), as something more than temporary insanity. The civil law is inclined to throw its shield over the drunkard; the criminal law, while not now in practice considering drunkenness an aggravation, does not consider it an excuse, in spite of the fact that the sale of drink is unfettered; it will step in to save the drunkard only when grave crimes are committed, and then (until quite recently) only to punish him with the view of reforming him and deterring others—the latter a vain delusion, as people do not drink to commit crimes. Crime is an accident of the intoxicated state. A crime of violence is not in the drunkard's thoughts at the start, and, after inhibition has gone and intoxication is established, the idea of deterrence for him is as absurd as the notion that he had any true conception of his conduct. In 1843 the Bench of Judges laid down the law for England in regard to all forms of insanity, to the effect that to establish a defence it must be proved that, at the time of committing the act, the accused was labouring under such a defect of reason of the mind as not to know the nature and quality of his act, or, in other words, as not to know that he was doing wrong. Accepting in relation to responsibility the test thus laid down, it must be apparent to the most ordinary observer that the intoxicated authors of crime (especially homicide, serious assaults, cruelty to children, etc.), and therefore of 80 per cent of all crimes (minor and petty offences due to drink are excluded in this connexion) implying violence and recklessness, would not be held responsible, and would either be dealt with as persons insane at the time of committal, or in the public interest would be detained in prison for long periods because of the drunkenness which led to the injury. In either case society would be protected against such potentially dangerous elements detected in its midst, and justice would be fully satisfied. But what of the drunkards *in posse*? Do they take warning from those *in esse*? Not at all. Later, in 1886, Justice Day said: 'Whatever the cause of the unconsciousness, a person not knowing the nature and quality of his act is irresponsible for it.' The existing law recognizes that, if the drunkenness has not been voluntarily induced, responsibility has not been incurred. But who is to decide when drunkenness is voluntary? A ruling which has been viewed with much satisfaction was that given by Lord Low at Glasgow in 1891. He expressed his willingness to give the accused the benefit of the belief that there was no malice and no deliberation, but that he committed the crime while maddened by strong drink. While that was sufficient to take the case out of the category of murder, it still left the charge of culpable homicide. There have been several recent rulings of quite another kind in the United Kingdom; and the 'wilful' nature of the crime, as well as the 'voluntarily' induced state of mind, has been much dwelt upon. The United States legal view is well put by an eminent New York jurist, Clark Bell, when he states that

'the better rule of law undoubtedly now is that if the person at the time of the commission of the act was unconscious and incapable of reflection or memory by intoxication, he could not be convicted. There must be motive and intention.'

Before leaving the 'wilful' nature of the crime and the 'voluntarily' induced state of mind, it may with reason be asked, Do such cases admit of other interpretations? Might it not be argued, both on its own merits and in the light of more enlightened judicial rulings, (1) whether a man drunk can legally do a wilful act; (2) whether at any stage of a habitual or periodic drunkard's bout the drinking was 'voluntary,' for that would imply the certainty of the absence of latent or patent physical and mental degeneration; and (3) whether, admitting, as in the case of the occasional drunkard, that the imbibing of a moderate quantity was 'voluntary,' the moment inhibition is sufficiently impaired—sooner in some than in others, by reason of temperament and habit, by a partial paralysis of the higher nerve centres by the toxic agents—further drinking, leading up to the paroxysmal and frenzied states revealed *ad nauseam* in our criminal courts, becomes 'involuntary.' And these seem cases where a plea of 'insane at the time' would be a good and valid one, or the resultant crime would be reduced from murder of the first degree.

The anomalies which emerge when the civil and criminal laws are examined in regard to drunkenness are remarkable. As the capacity to perform intelligently an important act is liable to be seriously impaired, the plea of intoxication is admissible to vitiate civil acts. Witnesses in civil as well as in criminal trials, when visibly under the influence of drink, have been asked by judges to stand down; or, if they are permitted to give evidence, it is properly discounted. In Scotland an intoxicated prisoner's declaration is considered invalid. In England, the Lord Chancellor acting in Lunacy may, if an inquiry in lunacy has established that any one has been unable to manage his affairs through confirmed intoxication, take the person and property into his custody. Wills are voidable if made when the testator is drunk, whether the bout indulged in be by a casual or a habitual drunkard. Property sold or disposed of under such conditions may be followed by restitution when sobriety is attained. Contracts are now also voidable when the law discovers that the drunkenness was connived at by the other party for purposes of fraud. They become valid if ratified when sober. Intoxication implies incapacity to consent, and a contract involves the mutual agreement of two minds, so that, if one party has no mind to agree, he cannot make a valid contract. It is not a question of two sober persons differing in bargaining astuteness. This will always be; but it is different when one of the two is drunk. In the United States it is held that, if the bargaining is fair and free from fraud and not over-reaching, it will stand, even although one of the parties was intoxicated. The Judicial Committee of the Privy Council, in a Canadian case, held that the present view taken of drunkenness rendered habitual drunkenness a sufficient ground for setting aside paternal rights. In British law it has been ruled that, if either party to a marriage had been so far under the influence of drink as not to understand the nature and consequences of the act, proof of this would render the act invalid. It is presumed in such a case that there was no consummation. Thus, to all intents and purposes, the civil law shields the drunkard from the consequences of civil acts, testamentary

dispositions, and contracts made in a state of intoxication—thus practically admitting the condition as one of *non compos mentis* for the time being.

5. **Legislation affecting drunkenness.**—(1) *Great Britain.*—In Great Britain, the Legislature, stimulated by Reports of Royal and Departmental Commissions on Licensing, Poor Law, the Feeble-minded, and Habitual Offenders and Inebriates, has in recent years done a good deal with the object of removing temptation in congested slum areas. For the casual drunkard, the laws provide slight penal treatment involving a few days in prison or a small fine, for the payment of which time may be allowed by the Stipendiary, Justice, or Magistrate before imprisonment takes effect; or the offender may be liberated after imprisonment by part payment of the fine equivalent to the time still to be served in prison, the partial fine being provided by friends or by his own labour. For the reformation and protection of habitual drunkards, many of whom are feeble-minded, mentally unstable, and degenerate, the punishment meted out to 'casuals' is, in the vast majority of cases, applied to them, and only in a very few cases after conviction are the habituals sent to Certified or State Reformatories. The latter, maintained solely by the State, receive the worst, although not necessarily less reformable (the refractory and intractable), cases; the former, with its semi-penal atmosphere, the quieter and more hopeful cases, who for misconduct and insubordination may be transferred to the latter. The inmates, on cause shown, may be transferred from one to the other by order of the Secretary of State. The State Reformatories are supported by Government grants, the Certified by local rates and Treasury subventions; but, down to the time of writing, neither has been the success anticipated, or anything like it, owing to the working of the Acts. Stipendiaries and Magistrates have taken little advantage of the Act of 1898 as to Certified Reformatories, and, when they have taken advantage of it, they have hitherto selected wholly unpromising material in many cases. As regards cases suitable for the State Reformatories, Sheriffs and County Court Judges have not availed themselves of the power conferred upon them. There is also a reluctance, on rating grounds, on the part of local authorities, singly or in combination, to build Certified Reformatories, or to contribute to the support of those in existence. To the Legislature the public must look for amendments of the Acts of 1879, 1888, and 1898, the serious defects of which experience has shown to exist. A change is clamantly urged, so that the law may become effective, and not, what it is, practically a dead letter. Further compulsion is also required in regard to well-to-do habitual and periodic drunkards (dipsomaniacs), under the Acts of 1879 and 1888, who do not come under the notice of the police, in order that they may enter licensed Retreats. The effect of compulsion would certainly be that many such habituals now fully qualified for segregation and treatment would enter these Retreats voluntarily in terms of the law as it is at present, and would thus be saved from themselves, while their families and substance would be protected against folly and prodigality of the worst kind, which a century ago could be promptly met by interdiction. The Act of 1898 makes voluntary entrance easier, in so far as the signature of the applicant need only be attested by one Justice instead of two, as formerly. The *institut* of the family council, known to French, Canadian, and Jersey laws, would be, for Great Britain, a step in the right direction.

(2) *America.*—The United States passed the first Inebriate Act in 1854, under which patients could enter a Retreat either voluntarily or by order of the Committee of the Habitual Drunkard. In 1867, King's County, N.Y., established a Home. Entrance was voluntary or by order of the Trustees of the Home, who were empowered to visit the County jail and select fit subjects. Further, on the report of a Commission of Inquiry to the effect that any person was a habitual drunkard, and incapable of managing his or her affairs, a Justice could commit to the Home such person for one year. The Home received 12 per cent of licence monies. In 1892 a Home for alcoholic and drug females was set up in Manhattan Island. The victims of either habit were admitted voluntarily or under compulsion. When compulsion was resorted to, two medical certificates were necessary and the order of a Judge, who could call for affidavits or take proof. In 1867 the Washington Home, Chicago, was erected. This Home received, till expiry of original sentence, any person convicted of drunkenness or any misdemeanour occasioned thereby. In the same year the Pennsylvania Sanitorium opened its doors. When there was no Committee of the Habitual Drunkard, the institution could receive him on presentation, by his guardian or friend, of the certificates of two doctors attested by a judicial officer. In Connecticut, in 1874, the Court of Probate, on the application of a majority of the Select men of the town, could order an inquiry as to the allegation of habitual drunkenness arising from drink or drugs. This is the first reference to the need for investigating judicially the pernicious drug habit—unfortunately a growing one in every civilized country. If habitual drunkenness was proved, the patient was conveyed to an inebriate asylum for a period of from 4 to 12 months; if dipsomania, for 3 years. The dipsomaniac was thus viewed in a worse light than the other. Superior courts had the right to interfere and discharge at any time. In New Jersey the application of a 'voluntary' requires to be attested by one Justice, or the applicant may present himself at the Home, and fill up a form, which is as binding as when attested by a Justice. A person drunk when received may, on becoming sober, sign a valid and binding application. The Massachusetts Home has accommodation for 200 patients. If one is unable to pay for maintenance, the Municipality may be called upon to meet the cost. Fort Hamilton Home, Brooklyn, is the principal institution receiving pauper inebriates. Although there is, on the whole, fairly good legislation in the United States in the interests of inebriates who are either well or comfortably off in the matter of resources, there is, as in Great Britain, practically no provision made for the impecunious, except for those falling into the hands of the police, and for them the provision is miserably inadequate.

(3) *British Colonies.*—(*a*) *Canada.*—Nearly all the Provincial Legislatures have enacted effective measures for habitual inebriety. Ontario in 1873 passed an Act to set up a Home for voluntary and involuntary inmates—the term of stay not to exceed 12 months. A petition is presented to the Judge by relatives or, in default, by friends, to the effect that the patient cannot control himself or his affairs; the Judge grants a hearing; a copy of the petition is served on the habitual drunkard; the Judge summons witnesses; he can interrogate the drunkard, who has the right to call as well as to examine witnesses; the Judge forwards his decision and a copy of the evidence to the Provincial Secretary, who directs removal to a Home. In Quebec, in 1870, an Act was passed to provide for the interdiction and cure of habitual drunkards. Any Judge of the Superior Court of Lower Canada can pronounce interdiction, and can appoint

a curator to manage the drunkard's affairs, and control his person as in interdiction for insanity. A family council is called by the Judge to investigate the truth of allegations, and a petition is served on the alleged 'habitual,' who may be relieved of interdiction after one year's sobriety and regain civil rights. Wilful and knowing sale of drink to the interdicted is finable and punishable. The curator, sometimes termed the guardian, may place his charge or ward in any licensed Home, and may remove him at any time. The Quebec Province law of interdiction closely resembles what obtained in Scotland 100 years ago, but fell into desuetude, although there are competent authorities who say it could, without statutory enactment, be revived again. In Manitoba the petition is presented by a public officer. There is much to be said for the creation of such an official, as relatives are often placed in an invidious position, and will not move. Relatives and neighbours are summoned and put on oath. The interdicted may be confined in any place the Judge may think proper, and be visited once a month by a County Sheriff. While interdiction lasts, bargains, sales, and contracts made are null and void. The interdicted may be discharged and re-vested after proof of 12 months' abstinence.

(*b*) *Australia.*—In 1874 the Legislature of South Australia set up a Home at Adelaide, and voted £3000. Voluntary admission could be obtained for 12 months on application of the 'habitual' to any Justice. For involuntary admission, application was made by relatives or friends. The inebriate could be summoned before a Judge or special Magistrate or two Justices, and requested to show cause why he should not be committed to a Retreat for 12 months. Whether present at, or absent from, the trial to which he has been invited, if it is proved that he is an inebriate, he can be sent to the Retreat. Two medical certificates are necessary. In Victoria, the legal machinery, like the provision made, is much the same, except that for voluntary entrants only one Justice is required. In New South Wales there are two kinds of Homes—one for those who can pay, the other a mixed penitentiary and inebriate asylum for quasi-criminal offenders.

(*c*) *New Zealand.*—Admission is either voluntary or involuntary. Residence is in a ward or division of a lunatic asylum, quite apart from the insane. Great difficulties, as might be looked for, have been experienced in complying with this part of statutory requirement, and special accommodation has long been considered urgent.

6. Prophylaxis and therapeutics.—One of the few hopeful features of the drink problem is the gradual diminution in the use of alcohol in society and in the treatment of disease in hospitals and in private practice, until now it is at the vanishing point as a drug, stimulant, or tissue-builder. In 7 of the principal London Hospitals from 1872 to 1902, although the daily resident population has varied little, the expenditure on alcohol has fallen *62 per cent.* No less striking and satisfactory are the figures for the Wandsworth Union, in which the number of inmates, inclusive of the sick, has increased 288 per cent, while the spirit bill has fallen from £371 to £2, 7s. Equally interesting are the figures for the Hospitals of the Metropolitan Asylum Board for 1894 to 1905. The total under treatment for 'fevers' rose from 19,900 to 27,160, or 36 per cent, while the cost of stimulants fell *63 per cent*, from £1388 to £515. The same tale could be told of every hospital in the land; and it is especially significant, since the fall is the outcome of the best clinical experience and scientific research. In surgical wards of hospitals and in maternities, patients operated upon rarely get alcohol, except for 'shock' and severe hæmorrhage, especially *post-partum* (Dr. W. L. Reid, Glasgow), and in these directions alcohol is being superseded by other and better substitutes.

During a drinking bout numerous untoward or fatal accidents may occur, viz. gastritis (inflammation of stomach, which is perhaps the least to be feared, as the poison may be rejected), retention of urine, suffocation resulting from the position of the body (head resting on the chest), coma (when death takes place from deep toxic narcosis), exposure, drowning, or bodily injuries. Apoplexy is frequently mistaken for drunken coma, the person with the apoplectic seizure, it may be, smelling of alcohol.

In regard to treatment, something requires to be said of what one might term orthodox medical treatment, and of the many puffed 'secret cures,' freely advertised, regardless of expense, of which only the rich can avail themselves. Before admittance into any of the Homes in which the 'secret' cure is practised, a bargain is struck, and a big sum of money is paid down. Benevolence or philanthropy does not enter into the matter. The nature of the remedy, so far as the vendor is concerned, is kept 'secret.' But there is no secret about it, as nearly all such remedies have been analyzed by competent chemists, and their contents are known. As a rule, the composition of the best of them in no way differs from the composition of those prescribed by physicians who act for the good of the drunkard, and have no interest in the profits from the sale of the remedies.

Strychnine, atropine, nux-vomica, hyoscine, bromides, quinine, digitalis, capsicum, and apomorphia for sleeplessness, in very minute doses, are the chief ingredients of the physician's prescription, as they are of many of the 'secret' remedies; and they are said to create a distaste for alcohol by restoring and bracing up the tissues to a healthy state. If by any of the remedies that are really 'quack' a cure is said to have been effected, the 'cure' is by 'suggestion,' which sometimes is of good effect when aided by long abstinence, by the tonics alluded to, and by healthy regimen, employment, and recreation.

DUALISM.

DUALISM.—The term 'dualism' appears for the first time in Thomas Hyde's *Hist. religionis veterum Persarum* (*e.g.* cap. 9, p. 164), published in 1700, and is there applied to a system of thought according to which there exists an Evil Being co-ordinate and co-eternal with the primal Good. The word was employed in the same sense by Bayle (cf. art. 'Zoroastre,' in his *Dict.*, ed. Paris, 1820) and Leibniz (in his *Théodicée*; cf. Erdmann's ed., Berlin, 1839–40, pp. 547*b*, 565*a*). It was then transferred from the sphere of ethics and religion to that of metaphysics by Christian Wolff (1679–1754). Wolff applies the term 'dualists' to those who regard body and soul as mutually independent substances,[1] and contrasts such thinkers with the monists, who would derive the totality of the real either from matter alone or from spirit alone. The Wolffian usage of the term is now by far the most generally recognized, although we still sometimes find the word applied to certain theories in ethics, epistemology, and the philosophy of religion.

In its application to the relation between soul and body, spirit and Nature, the term 'dualism' recalls a problem which goes back to a very early period, and which has received various solutions in the evolution of human thought. Among the ancient Greeks the tendency was to bring the physical and the psychical into very close relations with each other. Thus their philosophy begins with a naive monism—hylozoism; and, in particular, their artistic achievement reveals a marvellous harmony of the spiritual and the sensuous. But dualistic tendencies likewise began to manifest themselves at an early stage, as, *e.g.*, in the teaching of the Orphics and Pythagoreans regarding the transmigration of souls—a doctrine which implies that the soul is independent of the body. In philosophy, however, it was Anaxagoras (*q.v.*) who first explicitly disengaged spirit or mind (*νοῦς*) from matter, setting the former, as the simple, the pure, the unmixed, in opposition to the latter;[2] and we may, therefore, speak of Anaxagoras as the first philosophical dualist. But the dualistic mode of thought finds its most magnificent expression in the philosophy of Plato, with its rigid separation of the world of Ideas from the manifold of sense. Aristotle, on the other hand, inclines rather towards monism, as appears from his definition of the soul as the entelechy of the body.[3] But his conception of the spirit (*νοῦς*) as something added to the process of Nature from without, and separable from the body, bears an unmistakably dualistic character.[1] It is certainly true that in the later period of the ancient world the Stoics advocated a monistic hypothesis, bringing force and matter (*δραστικὸν καὶ ὑλικόν*) into close connexion with each other, and affirming the material nature of all reality; but when, in the further evolution of ancient social life, the old ideals began to lose their fervour, and the dark and painful aspects of experience more and more engaged the minds of men, and when, above all, dire moral perplexities began to be felt, matter gradually came to be regarded as something obstructive and evil—something from which the individual must try his best to deliver himself. Thus arose the ascetic ideal of life, and, hand in hand with it, a rigid dualism. Accordingly we find that the last great system of ancient thought, that of Plotinus, is pervaded by a vehement disparagement of sensuous matter, while the intelligible world and the world of sense are set in rigorous opposition to each other. See, further, the 'Greek' section of this article.

Christianity, in its essential principles, has no affinity with a dualism of this kind. Looking upon all that exists as the handiwork of God, it cannot regard matter as something unworthy. Its firm contention is that the source of evil lies, not in matter, but in voluntary action, in the apostasy of spiritual beings from God. Another element which militates against the dualistic tendency is the fact that in Christianity the body ranks as an essential constituent of human nature, as is shown, in particular, by the doctrine of a bodily resurrection. Notwithstanding these facts, however, Greek and Oriental dualism forced their way into the early Church on a wide scale, and, as appears from the prevalence of asceticism (see ASCETICISM [Christian]), gained a vast influence over the Christian mind. As we might expect, its grasp was still further strengthened by the Platonism which prevailed in the first half of the mediæval period. On the other hand, the ascendancy of the Aristotelian philosophy in the culminating stages of mediæval thought was, in the domain of natural science, rather favourable to monism, since it did not permit of any hard and fast antagonism between body and soul. But the Aristotelian view at length underwent a certain modification, in so far as the champions of mediæval Aristotelianism, Albertus Magnus and Thomas Aquinas, held that the vegetative and animal faculties of the soul, which Aristotle himself assigned wholly to the body, are conditioned by the bodily organs only in their *temporal* functions, and therefore also share in the immortality of the spirit. This view was officially recognized as the doctrine of the

[1] *Psychologia Rationalis*, Frankfort, 1732, § 39: 'Dualistae sunt, qui et substantiarum materialium et immaterialium existentiam admittunt.'

[2] Cf. *e.g.* Aristotle, *Metaph.* i. 8 (Bekker, p. 989*b*, 14): φησὶ δ' εἶναι μεμιγμένα πάντα πλὴν τοῦ νοῦ, τοῦτον δὲ ἀμιγῆ μόνον καὶ καθαρόν; *Phys.* viii. 5 (256*b*, 24): διὸ καὶ Ἀναξαγόρας ὀρθῶς λέγει, τὸν νοῦν ἀπαθῆ φάσκων καὶ ἀμιγῆ εἶναι, ἐπειδήπερ κινήσεως ἀρχὴν αὐτὸν ποιεῖ εἶναι· οὕτω γὰρ ἂν μόνως κινοίη ἀκίνητος ὢν καὶ κρατοίη ἀμιγὴς ὤν; *de Anima*, i. 2 (405*a*, 13): Ἀναξαγόρας δ' ἔοικε μὲν ἕτερον λέγειν ψυχήν τε καὶ νοῦν, χρῆται δ' ἀμφοῖν ὡς μιᾷ φύσει, πλὴν ἀρχήν γε τὸν νοῦν τίθεται μάλιστα πάντων μόνον γοῦν φησὶν αὐτὸν τῶν ὄντων ἁπλοῦν εἶναι καὶ ἀμιγῆ τε καὶ καθαρόν.

Gen.* ii. 3 (736*b*, 27): λείπεται δὲ τὸν νοῦν μόνον θύραθεν ἐπεισιέναι καὶ θεῖον εἶναι μόνον· οὐδὲν γὰρ αὐτοῦ τῇ ἐνεργείᾳ κοινωνεῖ σωματικὴ ἐνέργεια; *de Anima*, ii. 2 (413*b*, 25): ἔοικε (*scil.* ὁ νοῦς) ψυχῆς γένος ἕτερον εἶναι, καὶ τοῦτο μόνον ἐνδέχεται χωρίζεσθαι καθάπερ τὸ ἀΐδιον τοῦ φθαρτοῦ.

Catholic Church by the Council of Vienne (A.D. 1311).

Modern philosophy, as inaugurated by Descartes (*q.v.*), opened with an unqualified dualism. The conceptions of matter and mind were now for the first time precisely defined, and clearly distinguished from each other. Descartes' definition of body and soul respectively as *substantia extensa* and *substantia cogitans* obviously made it impossible to bring the two under a single concept, since the 'thinking substance' is stated to be absolutely indivisible, while the spatially extended substance is capable of infinite division. Body and soul have thus no internal principle of unity, but are simply joined together by the will of God. A distinction so absolute could not, of course, remain permanently unchallenged, but it sufficed at least to put an end to the hitherto prevailing confusion between the physical and the psychological interpretation of phenomena, and made it henceforth necessary to explain Nature by Nature, and the psychical by the psychical. The natural sciences, in particular, had suffered serious detriment from a theory which explained physical and physiological processes—more especially the formation, growth, and nutriment of organic bodies—as immediately due to the workings of the soul; for, of course, the practice of tracing natural phenomena to psychical causes stood in the way of all advance in exact science, and it was the dualism of Descartes, with its precise delimitation of concepts, that first brought such advance within the range of possibility.

This dualism maintained its ground as the dominant hypothesis of the period of Illumination, and Wolff himself claimed unequivocally to be a dualist. But Descartes' accentuation of the antithesis between mind and matter evoked an endeavour to bridge the gulf in some way, and to find some explanation of the connexion that actually obtains. Descartes himself manifests this striving in his doctrine that the physical and the psychical have their point of contact in the pineal gland; and further instances are found in occasionalism, with its belief that material and spiritual processes are maintained in mutual harmony by Divine agency; in the system of Spinoza, who regarded the two great divisions of phenomena as the attributes of a single substance; and in Leibniz's doctrine of monads, which derives all reality from spirit, and explains the body as simply a congeries of souls.

A defection from the prevailing belief in dualism, however, ensued only with the break-up of the Illumination and the emergence of new currents of thought. Various factors combined to make a stand against it. First of all, the movement towards an artistic interpretation of life and a more natural conception of reality, as found alike in the neo-humanism represented by Goethe and in romanticism—intensified the need of an inherent connexion between Nature and spirit, the sensuous and the non-sensuous. Then came the speculative philosophy of Germany, with its interpretation of all reality as but the evolution of spiritual life.[1] But the most potent factor of all was modern science, which demonstrated in countless ways the dependence of psychical life upon the body and bodily conditions, alike in the experience of the individual and throughout the entire range of organic being. This forms the starting-point of the theory which with special emphasis now claims the name of monism, and rejects everything in the nature of a self-sustained psychical life. Nevertheless, as has been well said by so eminent a contemporary thinker as Wundt, this monism is in essence simply a reversion to the hylozoism of the Ionic philosophers: and it is certainly open to doubt whether the question is quite as simple as monists make out, and whether the entire intellectual movement of centuries has, in so fundamental a problem, been barren of all result, as monists must perforce maintain. This point will be further dealt with, however, in the article MONISM; and it need only be said meanwhile that it is one thing to think of the world as in the last resort sundered into absolutely diverse provinces, and quite another to regard human experience as embracing different starting-points and different movements, which can be brought into closer relations only by degrees and in virtue of progressive intellectual effort. It is impossible that dualism should constitute the final phase of human thought; but, in view of such consummation, it has an important function to perform, viz. to put obstacles in the way of a premature synthesis, and to insist upon a full recognition of the antitheses actually present in human experience. Dualism, in virtue of its precise definition of concepts, acts as a corrective to that confusion into which monism so easily lapses; and, to realize the value of such a rôle, we need but recall the aphorism of Bacon: 'veritas potius emergit ex errore quam ex confusione.'

[1] Cf., *e.g.*, Fichte, *Werke*, iv. 373: 'One who in any wise admits the existence of a material world, though only along with and beside the spiritual—dualism as they call it—is no philosopher.'

DUALISM (American).—The view which has obtained in several quarters, that an ethical dualism exists in the religions of many of the American Indian tribes, is a wholly mistaken one. No ethical contrast existed in the native mind between those deities who assisted man and those who were actively hostile to him; and it has been made abundantly clear that such dualistic ideas as have been found connected with other religious conceptions of American Indian peoples owe their origin to contact with the whites. The view that dualism did exist arose from the misconceptions of early missionaries, assisted in many instances by the mistranslation of native words.

'The idea that the Creeks know anything of a devil is an invention of the missionaries' (Gatschet, *op. cit. infra*, i. 216). 'The Hidatsa believe neither in a hell nor a devil' (Matthews, *op. cit. infra*, p. xxii).

In some cases the same word which the missionaries have employed to translate 'devil' they have been compelled to use to render 'spirit.' The early missionaries regarded the gods of the Indians as devils, and taught their converts to look upon them as such, but in some cases the natives disagreed with their teachers, attempting to explain to them that their deities were the bringers of all good things, and by no means evil. This, of course, implied not that their gods were 'good' in the ethical sense, that they loved righteousness and hated iniquity, but that they conferred on man the merely material blessings necessary to savage existence. Winslow, in his *Good News from New England* (1622), says that the Indians worship a good power called Kiehtan, and another 'who, as farre as wee can conceive, is the Devill,' named Hobbamock, or Hobbamoqui. The former of those names is merely the word 'great' in the Algonquin language, and is probably an abbreviation of *Kittanitowit*, the 'Great Manitou'—a vague term mentioned by Williams and other early writers, and in all probability manufactured by them (see Duponceau, *Langues de l'Amérique du Nord*). On the other hand, the god whom Winslow likens to the power of evil was, in fact, a deity whose special function was the cure of diseases;

he was also a protector in dreams, and is explained by Jarvis as 'the *Oke*, or tutelary deity, which each Indian worships.'

In the religious conceptions of some tribes the same god is both 'good' and 'evil,' in the sense that he distributes equally joy and sorrow. Thus Jurupari, worshipped by the Uapes of Brazil, is the name for the supernatural in general, from which all things come, good and evil. In the majority of American religions, however, the supreme deity is 'good' in a purely material sense. Thus Aka-Kanet, sometimes mentioned as the father of evil in the mythology of the Araucans of Chile, is, in reality, a benign power throned in the Pleiades, who sends fruits and flowers to the earth. In the same way the Supay of the Peruvians and the Mictla of the Nahuatlacans were not embodiments of the evil principle, but simply gods of the dead, corresponding to the classical Pluto. The Jesuit missionaries rarely distinguish between good and evil deities, when speaking of the religions of the northern tribes; and the Moravian Brethren, writing of the Algonquins and Iroquois, state that 'the idea of a devil, a prince of darkness, they first received in later times through the Europeans.'

'I have never been able to discover from the Dakotas themselves,' writes the Rev. G. H. Pond, a missionary to them for eighteen years, 'the least degree of evidence that they divide the gods into classes of good and evil, and am persuaded that those persons who represent them as doing so do it inconsiderately, and because it is so natural to subscribe to a long-cherished popular opinion' (*ap.* Schoolcraft, *Indian Tribes*, p. 642).

Myths have arisen in several Indian mythologies since the tribes in whose religions they occur have come into contact with Europeans. In these myths the concepts of good and evil, as known to civilized nations, are introduced; and several myths have been altered to bring the older conceptions into line with the newly-introduced idea of dualism. The comparatively late introduction of such views finds remarkable confirmation in the myths of the Kiche (Quiché) of Guatemala, which are recorded in the *Popol Vuh*, a compilation of native myths made by a Christianized Kiche scribe of the 17th century. Dimly conscious, perhaps, that his version of these myths was coloured by the opinions of a lately-adopted Christianity, he says of the Lords of Xibalba, the rulers of the Kiche Hades: 'In the old times they did not have much power. They were but annoyers and opposers of men, and, in truth, they were not regarded as gods.' Speaking of the Mayas, Cogolludo says: 'The devil is called by them Xibilba,' the derivation of which name is from a root meaning 'to fear'; it relates to the fear inseparable from the idea of death, and has no connexion in any way with the idea of evil in the abstract. The gods of the American Indians, like those of other savages, are too anthropomorphic in their nature, too entirely savage themselves, to partake of higher ethical qualities. Personal spite or tribal feuds may render some more inimical than others, but always purely from self-interest, and not through a love of evil for evil's sake. Some, again, favour man, but always from similar motives, and not from any purely ethical sense of virtue.

LEWIS SPENCE.

DUALISM (Celtic).—Little or nothing is known to us of the religion of the ancient Celts as an ethical religion. The references to it in classical writers, the evidence of inscriptions, the Welsh and Irish texts, and the witness of folk-survivals reveal it almost wholly as a Nature-religion. To some extent the dualism which is more or less present in all Nature-religions characterized Celtic mythology, but how far it was also an ethical dualism is quite obscure. As the religion of a people who were largely engaged in agriculture, there was a cult of divinities and spirits of growth and fertility whose power and influence might be aided by magical ritual. Opposed to growth and fertility were blight, disease, and death, the evidence of which was seen in pestilence, in bad seasons, and in the desolation of winter. As growth and fertility were the work of beneficent deities, so those evils were probably regarded as brought about by personal agencies of a supernatural and evil character. The drama of Nature showed that the sun was sometimes vanquished by cloud and storm, though it soon renewed its vigour; that summer with all its exuberant life died at the coming of winter, but that it returned again full of vitality; that vegetation perished, but that it revived annually in ample plenitude. But what was true of Nature was true also, in mythology, of the personal and supernatural forces behind it. Beneficent and evil powers were in conflict. Year by year the struggle went on, year by year the gods of growth suffered deadly harm, but appeared again as triumphant conquerors to renew the struggle once more. Myth came to speak of this perennial conflict as having happened once for all, as if some gods had perished in spite of their immortality. But the struggle, nevertheless, went on year by year. The gods might perish, but only for a time. They were immortal; they only seemed to be wounded and to die.

Such a dualistic mythology as this seems to be represented by the euhemerized account of the battles between Fomorians and Tuatha Dé Danann in the Irish texts. Whatever the Fomorians were in origin, whether the gods of aboriginal tribes in Ireland, or of a group of Celtic tribes at war with another group, it is evident that they had come to be regarded as evil and malicious, and could thus be equated with the baneful personages already known to Celtic mythology as hostile to the gods of growth and fertility. It is evident that the Irish Celts possessed a somewhat elaborate mythical rendering of the dualism of Nature, and this seems to survive in the account of the battle or battles of Magtured. But, after the Christianizing of Ireland, the old gods had gradually come to be regarded as kings and warriors, and this euhemerizing process was completed by the annalists. Hence in the account of the battles, while it is evident that in some aspects the hostile forces are more than human, the gods are described as kings and great warriors or as craftsmen. The Fomorians appear as the baneful race, more or less demoniac, inhabiting Ireland before the arrival of the Tuatha Dé Danann. But we also hear of the Firbolgs and other peoples, who are clearly the aboriginal races of Ireland, and whose gods the Fomorians are sometimes said to be. The Tuatha Dé Danann are certainly the gods of the Irish Celts or of some large group of them.

Early Irish literature knew only one battle of Magtured, in which Firbolgs and Fomorians were overthrown together. But in later accounts the battle is duplicated, and the first fight takes place at Magtured in Mayo, and the second at Magtured in Sligo, twenty-seven years after the first. In the first battle the leader of the Tuatha Dé Danann, Nuada, loses his hand, and for this reason the kingdom is temporarily taken from him and given to Bres, the son of a Fomorian by a woman of the Tuatha Dé Danann. There is the usual inconsistency of myth here and elsewhere in these notices. The Tuatha Dé Danann have just landed in Ireland, but already some of them have united with the Fomorians in marriage. This inconsistency escaped the euhemerizing chroniclers, but it clearly points to the fact that Fomorians and Tuatha Dé Danann were supernatural and Divine, not human races successively arriving in

Ireland, and, though in conflict, yet, like conflicting barbarous tribes, occasionally uniting in marriage. The second battle took place on Samhain (Nov. 1st), the festival which began the Celtic winter (see FESTIVALS [Celtic]). Meanwhile the Tuatha Dé Danann had been forced to pay tribute to the Fomorians and to perform menial duties for them, in spite of their having been conquerors. This shows that the euhemerists probably misunderstood the old myths, which may have been known to them only in a garbled form. Myths must have told of the temporary defeat and subjection of the beneficent Nature-gods, followed by their final triumph, not of a subjection after a victory. Following the annalistic account, we find that the exactions demanded by Bres led to discontent. For his niggardliness he was satirized by a poet, and 'nought but decay was on him from that hour.' Meanwhile Nuada had recovered his hand, and Bres was forced to abandon the throne. In grief and anger he went to collect an army from his father, who sent him to Balor and to Indech. These assembled their forces and prepared to attack the Tuatha Dé Danann. In the course of the battle which followed, Indech wounded Ogma (probably a culture-god), and Balor (a personification of the evil eye) slew Nuada, but himself received a mortal wound from Lug (perhaps a sun-god). This put an end to the battle; the Fomorians were routed, and fled to their own part of the country.

Another inconsistency in the euhemerized account is that, while the first battle is fought on Beltane, the beginning of summer, the second is fought on Samhain. One would naturally expect that powers of blight would be represented as vanquished not on a winter but on a summer festival. Perhaps the old myths told of the defeat and subjection of the gods on Samhain, and of their victory over the powers of blight on Beltane.

It is clear that the Fomorians, in their opposition to the Tuatha Dé Danann, and from the sinister character assigned to them in folk-tradition, had come to be regarded in mythology as identical with beings who, to the Celts of Ireland, represented the powers of Nature which were hostile to man and to his gods. Blight, disease, fog, winter, the raging sea, and all influences of evil are personified in the Fomorians. Before them men trembled, yet they were not wholly cast down, for they knew that the bright immortal gods, who gave light and caused growth, were on their side and fought against their enemies.[1]

A similar euhemerized version of old dualistic myths, though presented in a more romantic form, is perhaps to be found in the Welsh story of *Llûdd and Llevelys*.

Llûdd is an old divinity (perhaps the equivalent of the Irish Nuada) who, in this story, figures as a king of Britain. His country is subjected to three plagues: that of the race of the Coranians, who hear every whisper wherever it is spoken; that of a shriek heard all over the island on May Eve, which scares every one, and leaves animals, trees, earth, and water barren; and that of the mysterious disappearance of a year's supply of food. From these three plagues Llevelys by his advice releases Llûdd and his people. He gives him insects which he must bruise in water. Then, having called together his people and the Coranians, he is to throw the water over them. It will poison the Coranians, but do no harm to the men of his own race. The second plague is caused by the attack made on the dragon of the land by a foreign dragon, and Llevelys instructs Llûdd how to capture both. This is done, and Llûdd buries them in a *kistvaen* at Dinas Emreis in Snowdon. The third plague is caused by a mighty magician who, while every one is lulled to sleep by his magic, carries off the store of provisions. Llûdd must, therefore, watch, and, whenever he feels a desire to sleep, must plunge into a cauldron of cold water. Following this advice, he captures and overpowers the magician, who becomes his vassal (Loth, *Mabinogion*, Paris, 1889, i. 173). The Coranians are described in the *Triads* as a hostile race of invaders, and, contrary to this story, they are said never to have left the island (Loth, ii. 256, 274). But the method of getting rid of them, as well as the incidents of the dragons and the magician, shows that we are not dealing with actual tribes. As Rhys has shown, they may be a race of dwarfs, their name probably being derived from *cörr*, 'dwarf.' They also survive in Welsh folk-belief as a kind of mischievous fairies (*Celtic Heathendom*, London, 1888, p. 606; cf. the Breton dwarf fairies, the *Corr* and *Corrigan*).

The question arises whether there is not here something analogous to the strife of Fomorians and Tuatha Dé Danann. In all three incidents we have a whole realm suffering from plagues; in the last two, fertility and plenty are destroyed, women lose their hope of offspring, animals and vegetation are blighted, and food is stolen away. The dragon plague occurs on May-day (Beltane), and in a *Triad* the plague of the Coranians has its place taken by that of March Malaen from beyond the sea, and is called 'the oppression of the 1st of May.' Rhys has pointed out the similarity of *March* to *Morc*, a Fomorian king who levied a tax of two-thirds of their children, corn, and milk on the Nemedians every Samhain eve, and has also shown that *Malaen* is perhaps connected with words denoting something demoniac (*op. cit.* 609).

The incidents of the Welsh story may be based on earlier myths or on ritual customs embodying the belief in powers hostile to growth and fertility and to their gods. Llûdd, like Nuada, is probably a god of growth, and this may be referred to in the tale, not only in the fact that he overcomes beings who cause dearth and barrenness, but in the fact that his generosity and liberality in giving meat and drink to all who sought them are particularly mentioned. It is not clear, however, why the hostility should have been most active on May-day, but this may be a misunderstanding, as in the Irish story, and it is said that the dragons are overcome on May-eve.

It is not unlikely that these dualistic myths were connected with ritual acts. Another romantic Welsh story, based upon an earlier myth, is strongly suggestive of this.

Llûdd had a daughter Creidylad, who was to wed Gwythur, but before the wedding Gwyn abducted her. A fight ensued, in which Gwyn was victorious, forcing one of his antagonists to eat his dead father's heart. On this, King Arthur interfered, and commanded that Creidylad should stay at her father's house, while Gwyn and Gwythur were to fight for her every year on the 1st of May until the Day of Judgment. Then the victor should gain her hand (Loth, i. 269 f.).

The myth on which this story is based may have arisen as explanatory of actual ritual combats in which the beneficent and hurtful powers were represented dramatically. Traces of these ritual combats survived in folk-custom.

Thus, in the Isle of Man on May-day a young girl was made Queen of the May, and was attended by a 'captain' and several other persons. There was also a Queen of Winter and her company. Both parties were symbolically arrayed, and met in mimic combat on the May festival. If the Queen of the May was captured, she was ransomed by her men for a sum of money, which was then spent on a feast in which all joined (Train, *Isle of Man*, Douglas, 1845, ii. 118).

Such mimic fights between human representatives of Summer and Winter are common in European folk-custom, and are survivals from primitive ritual, which was intended magically to assist the beneficent powers of growth in their combat with those of blight and death, while at the same time auguries of the probable fertility of the season were no doubt drawn from the course of the fight (for examples, see Grimm, *Teut. Myth.*, Eng. tr., London, 1880–8, ii. 764 f.; Frazer, *GB*², 1900, ii. 99 f.). The ritual was connected with the dualistic idea of

'a quarrel or war between the two powers of the year. . . . Summer and Winter are at war with one another, exactly like Day and Night; Day and Summer gladden, as Night and Winter vex the world.' In the ritual 'Summer comes off victorious, and Winter is defeated; the people supply, as it were, the chorus of spectators, and break out into praises of the conqueror' (Grimm, 762, 764).

But, as the true meaning and purpose of the ritual were gradually forgotten, the mythical ideas which they dramatized would be expressed differently—in some cases, perhaps, more elaborately. Both myth and ritual of a dualistic kind probably gave rise to the story of Creidylad, the daughter of a god of growth. Nor, indeed, is it impossible that the stories of the battle of Magtured may have owed something to the suggestiveness of those ritual combats. These took place at the beginning of summer, when the vigour of the powers of growth had increased, and that of the powers of blight had as clearly decreased. This, which was regarded as the result of a long combat, was so represented in the ritual and described in myth.

In general the ritual of the Celtic festivals was largely directed to aiding the sun and other powers by which fertility was increased. The bonfire which had so prominent a place on these occasions was a kind of sun-charm (see FESTIVALS [Celtic]). It is probable also that the human victims slain at an earlier time at these festivals, as representatives of the spirit or god of vegetation, were later regarded as sacrifices offered to propitiate the evil powers which arrayed themselves against man and his beneficent deities, unless they were simply regarded as propitiating the latter.

[1] For the account of the battles, see Harl. MS 5280, text and tr. in *RCel* xii. [1891] 59 ff. Cf. d'Arbois de Jubainville, *Cours de litt. celt.*, vol. ii. [Paris, 1884] *passim*; and for the probable original character of the Fomorians, see art. CELTS in vol. iii. p. 282ᵃ.

The activity of hostile powers of blight was naturally greater in winter, and this appears to be referred to both in tales in Irish texts which are the débris of old myths, and in popular traditional beliefs. In these, demoniac beings of all kinds are regarded as peculiarly active and malevolent at Samhain (the beginning of winter). 'Malignant bird-flocks' issue from the hell-gate of Ireland every Samhain-eve, to blight the crops and to kill animals. 'Demon women' always appear on that night, and they resemble the *Samhanach*, a November demon believed in the Highlands to steal children and work other mischief. The activity of witches and other evil beings, of fairies who abduct human beings, and of the dead at that time is also suggestive in this connexion (see Joyce, *Social Hist. of Anc. Ireland*, 1903, ii. 556; *RCel* x. [1889] 214, 225, xxiv. [1903] 172; *Celtic Magazine*, ix. [1883] 209). Nor is it unlikely that some of the demoniac beings of later Celtic superstition were not simply older beneficent gods or spirits to whom an evil character had been assigned as the result of the adoption of a new religion; it is probable that already in pagan times they represented the powers of Nature in its more hostile aspects.

Thus, though the evidence for Celtic dualism is not extensive, and is largely inferential, there is no reason to doubt that a certain belief in opposing powers, such as is a necessary part of all Nature-religions, did exist. How far that ever became a more ethical dualism is quite unknown.

LITERATURE.—This is sufficiently given in the article. See also MacCulloch, *Religion of the Ancient Celts*, Edin., 1911.

J. A. MACCULLOCH.

DUALISM (Egyptian).—**I. General.**—Egyptian religion exhibits, 'fossilized' in the different stratifications of its various religious periods, the whole series of dualistic notions that we find to-day in all the other religions. Thus, in a good many of the chapters of the different 'Books of the Dead,' we find traces of a pre-historic period when dualism, in the humblest sense of the term, may be seen in process of formation, and in a form analogous in many respects to what exists at present among numerous black tribes of the African continent. Every good or bad incident experienced or observed by the individual is the work of 'spirits,' visible or invisible (see DEMONS AND SPIRITS [Egyp.]); every occurrence of which man feels the counter-blow is the result of these encounters. In this Egyptian realm of primitive religion, as in every other part of creation, no single spirit is specifically good or bad (generally speaking, however, the tendency is towards the pessimistic side, as is the case with the majority of savage notions); all spirits are irritable, and hungry, and simply try to gratify their instincts, which are the same as those of all other beings of the visible world. But the personal experiences gathered from generations of Egyptians, and collected by sorcerer-priests, led to the notion that these spirits were under the command of stronger spirits, who were their masters. It is not even said that these masters are good; they are simply the controllers of beings whose attacks are feared by man.

Men's business is to try to steal from the most powerful spirits the knowledge of the means employed by them, to seize their arms, and, above all, to disguise themselves as these very spirits themselves. Men, therefore, always pretend to 'be' such and such spirits or gods, in order to have more power; but such substitution does not involve any conclusion as to a permanent character of good-will or even of protection so far as the spirit is concerned in whose name they act or claim to act. Fugitive traits of dualism appear. Alliance or identification with the most powerful spirits necessitates an attempt at classification and the attributing to a certain number of them of the permanent characteristics of beings useful, or even to a certain extent favourable, to man. They are not yet called beneficent. A tacit alliance is formed between certain spirits and certain men, with a tendency to mutual obligations, based on experimental utility. At the same time, the classification of 'spirits' (and of the good and bad forces controlled by them) ceases to be an individual appreciation. The knowledge acquired, by traditional teaching, of the means (formulæ, talismans, mimetic disguises, etc.) of working upon these spirits brings into existence, for the advantage of the initiated, a list of the powers that are generally hostile or sympathetic. The use of this seems to have been reserved at first to a social class or tribal group.

In certain chapters of the Book of the Dead, which are evidently of less remote composition, we see the properly so-called dualistic notion of a *permanent* conflict between the different kinds of important spirits very nearly taking definite separate shape, with an idea of an *earthly* opposition (giving, of course, the word 'earth,' or 'universe,' the very narrow sense of that patch of ground inhabited by the group in question). The observation of the actions of animate beings, and of natural incidents and phenomena, and the efforts to connect cause and effect, lead to a more or less laboured adjustment of this elementary co-ordination. Light and darkness, health and sickness, calm and storm, abundance and want, range themselves in two armies, into whose ranks step the various visible beings (fauna and flora), then the terrestrial invisible beings, then the beings of the 'regions,' and of the winds and the stars (these last three classes having a tendency to assume the characteristics of ordinary beings well- or ill-disposed to men; the Cat of the Ashdu-tree in Heliopolis, the Ibis, and the cow-goddesses, *e.g.*, opposing the reptiles and lizards, who are the constant enemies of man). Gods analogous to the *Mo-acha* and *Shi-acha* of the Ainu (gods of calm and of the tempest, and mutual enemies; see AINUS, § 16, vol. i. p. 242), or to the South-West Wind of Chaldæa, appear in the Nile Valley.

This dualism, crude as it is, may reach a rough grouping of opposed deities, with a relative hierarchy of spirits or secondary beings enrolled in the ranks of the two armies. The first attempts at cosmogonical explanations lead to the appearance in the texts of the same quasi-necessary grouping, on the side of the good army, of the beings who preside over the creation and the preservation of light, of the fertilizing waters, and the supply of nourishment and necessary things. The notion—still obscure, but in existence—presents itself of a state of things, an 'order,' over which these beings preside, which is their work; and, as life and the continuation of species depend upon this order, an alliance necessarily springs up between the Divine beings controlling it and the man of Egypt.[1]

Of course this dualism is exclusively naturalistic, and there can be no question of a moral element. All that we have as yet is certain permanent 'beneficent' functions associated with certain gods, and continuous hostile energies associated with certain others. The hierarchies are confused and badly organized, because of the widely dissimilar sources from which the different combatants come: a number of Divine beings were neutral, or only intermittently active; and, as a

[1] This curious process—necessarily a long one—may be seen fairly well in the efforts of the successive commentators on ch. 17 of the Book of the Dead, or in certain ancient parts of the Pyramid texts.

more general rule still, their character of good or bad arose from what they had accomplished by their energy (killing, stinging, devouring, tearing, etc.) in the service of a good or bad god—not by their free choice, but by the fact that they were slaves, or forcibly detained spirits, in the service of such and such a master. This is the condition of most of the 'spirits' bequeathed by pre-historic times to the Theban descriptions (paintings or writings) of the Other-world; and likewise of nearly all the genii and demons of animal aspect.

Poor as a dualistic classification based on such processes may appear to us, nevertheless, once this point is reached, the system already contains the fundamental element—the antagonism of the forces upon which the world's progress depends. Though it seems at first a difficult thing to admit, still it may be affirmed that the mastery of the idea of a *moral* dualism is much less difficult to attain from this point than was the original comprehension of the idea of the antagonism of purely material order and disorder.

2. **Conditions peculiar to Egypt.**—A system of cosmogonic dualism like the above, generally achieved through the creation of myths, has been formed nearly everywhere by different religions. But it has stopped, as a rule, among savage peoples, at the limits of ascertained knowledge, and has usually tended to end in pessimistic inaction. The future of a dualism which has reached this point in development lies in the idea of the possible, then necessary, co-operation of man—and that without assuming any idea of a moral element; it is the much simpler case of the conviction that man can help the superior beings to maintain order in the material world, and even, in a more humble way, that he can render material aid to the useful beings in their struggle against their enemies. This idea, though instinctive, cannot be crystallized without important preliminary indications supplied by Nature. These enable even elementary religions to abstract from the tumult and chaos of the innumerable phenomena of Nature a relatively clear vision of the great struggles of the elements, climatic and geographical. In this respect Egypt has been truly a privileged country (see § 3, and CALENDAR [Egyptian]).

3. **Principal elements.**—If we now turn to investigate the separate elements that united to form a dualistic system in Egypt, we find (leaving out of account the innumerable secondary formative elements) three chief groups: (1) the Nile and its valley as opposed to the desert; (2) the supposed strife of the stars in the vault of heaven or in the invisible sky of the 'lower world'; and (3) the struggle between the sun and the powers of darkness, taking the place of the struggle of the stars. The whole becomes gradually more closely bound together.

It is difficult to decide whether the first group is the most ancient. A negative evidence seems to follow from the positive fact that the antagonism of the desert and the verdant soil of the valley is not mentioned in the ritual texts, legends, or iconography down to a very late date. Even the assimilation, affirmed throughout Egyptology, of Osiris with the valley, and of his enemy Set with the lonely destructive desert, is found, on thorough examination, to be an assertion of very late date, due to naturalistic symbolism; and Plutarch is still the best authority to refer to in this matter.

Whatever its actual date, this 'naturalistic' division of dualism never came into the complete body of doctrine except in the form of a complementary explanation. A goodly proportion of the pre-historic texts preserved in the Pyramid versions is, on the other hand, devoted to the motions and supposed struggles in the firmament, and their direct influence upon the rest of the world can be clearly deduced from an examination of Egyptian beliefs. The positions of the planets and constellations, the sudden appearance of such bodies as meteors, shooting stars, and comets, are regarded as manifestations of opposing shocks, of struggles to maintain or to destroy the order of the universe. It is worth observing that, at this stage of development, the sun has very little importance in itself; its beneficent influence is hardly mentioned in the oldest beliefs, and there is, of course, no question of its filling any creative rôle whatever. This fact can be explained, partly at least, by the small importance, in a country like Egypt, of the gradual disappearance of the heating force, or of the period of its stay, light being as yet the sun's chief beneficent activity. The Egyptian had not yet connected its visible course with the succession of the various seasons of the year—these were the work of the stars, of Sothis, the Great Bear, etc. The moon seems early to have attained a more definite character; its name of *Ahi* ('the Combatant') is a relic of a time when this planet held an important place in the Egyptian's studies.

On a close examination of the dualistic organization based upon the orbits and influences of the heavenly bodies, two periods can be distinguished in these times at once so remote and yet so far in advance of the starting-point. In one of these periods, the principal rôle is still in the hands of groups of demons and spirits who control a certain part of the celestial world—a region, a constellation, etc. (see DEMONS [Egyp.])—and ensure the safe journey of the sun, moon, and planets, constantly guarding them from the various monsters lying in wait throughout the whole firmament. (About a fifth of the Pyramid texts relate to this subject.) Groups of secondary spirits or vassals, with no individual personality, are ranged around the combatants in each encounter, or are localized in a certain spot (bands of jackal spirits, monkey spirits, etc.); others, such as the *hunmamit*, form a bodyguard for the sun; and their importance decreases proportionately as the sun assumes a personality and importance for itself. These spirits gradually become groups of angels with no definite function, and in the end are practically confounded with the rays, or vital forces, of the sun.

In the second period, the antagonism of the world becomes accentuated, and the sun's beneficent protective rôle is defined over against a certain number of stars. These play a more active part, while the spirits of the regions fall into the background. These stars are early deified and regarded as figures or images of the gods rather than as the dwellings of groups of spirits. They are described in the texts as accompanying the sun, preparing the way for it, defending it, battling unceasingly. Several deities of the Nile Valley, who were not stellar deities originally, show a tendency to become confused with these gods of the sky, and take a position on board the sun's barque. They all employ their time guiding the barque, reciting incantations, and pointing out dangers. The paintings of the Theban period, though of very much later date, contain an exact picture of that period, and on the whole agree in essentials with the Pyramid texts. A steady succession of dangers (in which the pikes, harpoons, arrows, and lances of the gods play as important a part as the magic formulæ) is painfully surmounted by virtue of untiring efforts. The sun is guided, protected, and sustained, but never directs anything itself. It is not a chief; it simply submits passively to attacks and defences. The cosmogonic order and well-being always win the day, but never decisively. For, although the army of the good gods is steadily getting into better order, so also is that of the bad gods. The conception is not yet formed that the κόσμος is the *personal* work of the sun, but the fundamental idea is already there—that the κόσμος

(*maāit*) depends upon the maintenance of the sun's action. On the other hand, Apōpi, the single giant adversary of the sun, to begin with, gathers round him as his helpers all the isolated spirits who had been warring on their own account in the primitive struggle. These were the serpent gods of every kind, the boa (*e.g.*, Book of the Dead, ch. 40) or serpent *naja*, and all those serpents so vividly portrayed in the group of curious texts of the Pyramid of Unas against serpents; also a whole section of the crocodile gods of the marshes of the sky; and, finally, the earliest adversaries of the good stars: the ass who tried to destroy the sun in the heavenly deserts, the sow who tried to devour the moon, the giant tortoise, the fantastic monsters of the Theban frescoes, the gazelles with serpents' heads, etc. Thus narrowed down into a duel between light and darkness, the struggle between good and evil is imagined and described as taking place during the hours of the night, when the sun was invisible to the eyes of the Egyptians. The lower world is peopled with 'friends' and 'enemies,' under the form of thousands of spirits helping or attacking the groups of gods who protect the sun in its course. The upper and lower heavens are thus peopled, like the earth, by representatives of the two great opposing forces.

The evolution of this originally stellar dualism ends, after several thousands of years, in solar dualism. The sun Rā gradually ceases to be a protected god, and becomes a protector. The κόσμος is no longer merely the result of his existence; it is his work. He becomes the type of every beneficent energy; he becomes the creator; he is, therefore, the natural chief of everything that contributes to confirm his work. The magnificence of the hymns of the Theban period, when describing Rā (the classic sun) or Aten (the sun of Amarna religion), gives a good idea of the conception then formed of the rôle of the sun, the supreme god. The fresco of Siphtah and the paintings of Seti I. in the royal hypogees of Thebes, show very well, though with too much mysticism at times, the very strenuous struggle which the sun carries on without a break against the disturbers of his work; and in the world of darkness, where the 'enemies of Rā' are undergoing all sorts of punishments, the notion already appears that 'hostility to Rā' could consist not only in a struggle against material light and order, but also in the combat with everything that is in any way whatever a consequence or necessary complement of this light and order. This step, which was of the highest importance for the broadening of the nature of dualism, was due to the combination of solar dualism with the idea that the demiurgical work of the sun went on after the creation, through the descendants placed by the sun on this earth. If the Egyptian Rā, Lord of Order, was developed by means similar to those producing the earthly rôle of the Chaldæan Shamash, and if the disturbers of the Egyptian κόσμος are the same essentially as those of the Delta of the Euphrates, this new and final element would appear to be peculiar to the Nile Valley. It rests upon the fundamental legend of Osiris, son of Rā, a god with human shape, and the first king of the Egypt which Rā organized and civilized. Osiris, continued in Horus, left the carrying on of his task to the Divine continuations placed 'upon the throne of Horus'—the Pharaohs, 'sons of the sun.' See EGYPTIAN RELIGION.

Osiris, organizer of the Nile Valley, originator of the first institutions of civilization, inventor of the chief things that are good and useful for man (agriculture, trades, etc.), becomes the archetype of the good being (*uōnnofir*), round whom gradually gather all the elements and creatures who do any good and salutary work in the world. The necessity of a counterpart gives rise to the romance of his struggle against Set. The slaying of Osiris, his resurrection, and his departure to the Other-world at once connect this myth with that of the sun's journey into the lower world, and also make it possible to continue the rôle and reign of Osiris beyond the terrestrial life. At the same time, the legend of Horus succeeding his father Osiris on this earth, after avenging him, shows that the work once begun does not come to an end. In short, the fact that Set is not destroyed, but only conquered, is the solution of what is perhaps our most difficult problem—the present existence of evil in the world. A dualism which is confined to the origin of the world, with a struggle completed at the world's inception, cannot explain the persistence of evil. This becomes clear only when we admit that the struggle goes on indefinitely; and the conception of the battle of Osiris's successors against Set and his followers fits in with the parallel continuity of the ancient solar struggle in the celestial regions.

This parallelism gradually leads to a fusion of the characters of Osiris and Rā, which, we might almost say, was fated from the beginning. Osiris becomes one of the aspects of the struggling sun, apparently dying and coming to life again every day; and his work on the earth gets confused with the creative function of the sun. On the side of the evil forces there is even greater confusion between Set and Apōpi, chief of the powers of darkness. Rā-Osiris, chief of all good forces, becomes more and more clearly opposed, as the centuries pass, to Set-Typhon-Apōpi, chief of evil. The picture is completed in the last period by the assimilation of Osiris to the beneficent Nile and of Set to the hostile desert.

4. **Final aspect of Egyptian dualism.**—From this stage it is a comparatively easy step to the relative realization of a dualism with moral elements. The king of Egypt, grandson of Osiris and successor of Horus, in whom there lives, in virtue of his coronation, a portion of the soul of Rā, is strictly required to continue everything his ancestors have done on the earth and are still doing in the sky. The enemies of Rā and Osiris are his enemies, and, inversely, the enemies of the king are the enemies of Rā and Osiris. The gods and men of Egypt owe each other strict allegiance at every moment against the opposing forces. By force of circumstances the purely human enemies of the king of Egypt, one of whose titles is 'the Good God' (*Notir Nofir*), are assimilated to the evil and destructive gods and spirits, as adversaries, of the very same kind, of one and the same κόσμος—cosmogonic as much as political or administrative. The foreign enemy of the Egyptian becomes 'cursed,' a 'plague,' a 'son of rebellion,' a 'child of darkness,' whom gods and men must reduce to impotence along with the enemies of Rā and Osiris; and the pictures of the lower world show the former confounded with the latter. Two mighty armies of good and evil appear before Egyptian thought, which, however, never arrived at a clear determination of the separate characters of this vast picture. On one side we have Rā-Osiris, Horus, the king, and along with them—the product of all periods and of all the stages of formation—the ancient stellar spirits, the heavenly gods befriending light, the earthly gods proceeding from beings friendly to man, the followers of Horus, the initiated worshippers of the Osirian teaching, the faithful accompanying or representing the living king, all upright and trusty functionaries, and—down to the lowest peasant—every man who carries on the task assigned to him in the maintenance of a country organized (like the world) according to normal

order (*maāit*). On the other side are Apōpi and his followers, monsters and demons, Set with his Divine and human partisans, the spirits of evil, of disease, and of darkness, the troublesome dead, and the millions of hostile spirits of the other world, and, lastly, amalgamated with these (or sometimes even confused with them), there are the tribes of the desert and frontiers which prehistoric Egypt had to drive back at the beginning of her political organization. The Egyptian's enemies have naturally become the enemies of good, the natural allies of Set-Apōpi; and, in the Other-world, Rā continues to destroy them, delivering over their shades to heat, the sword, and the fire, commanding his spirits to 'proceed to their destruction.'

A less savage conception of the place of foreign races in the world appears later. In the famous sarcophagus of Seti I., *e.g.*, the sun discourses with a noble benignity to the four races of the world (Egyptians, Libyans, Asiatics, and Blacks), and the only condition necessary in order to have a claim upon his protection seems to be to acknowledge the uncontestable supremacy of Egypt. The classification of 'foreigners' in the army of evil forces seems now to become confined to the traditions of legendary wars, in which there is no longer any clear distinction between the human and demoniac character of the ancient 'enemies of Egypt' of legendary times.

The inclusion of the nation's human adversaries among the forces of evil has, as a symmetrically necessary counterpart, the notion that the internal enemies of Egyptian order are equally adherents of the evil forces. Just as the sun Rā cannot maintain the order he created without discipline, the hierarchy, and the submission and co-operation of all ranks of his collaborators, in the same way the king requires identical conditions before he can carry on in Egypt the work of Osiris, 'the Good Being,' and that of Horus; the duties expected of the Egyptian of every degree, proportioned according to his circumstances, are thus based upon the idea of this ever-present and necessary task. The imperative and more and more minute duties of the good chief or the good administrator presuppose a firm authority, prudence, and equity, then a love of justice and truth, pity for the weak, charity, and an ever-increasing number of social virtues. These obligations, confined at first to those in power, are soon extended to the more humble citizens. Any violation of these duties means a blemish upon the order (*maāit*), which is already partially an administrative order, then becomes a social, and finally a moral, order. In mimetic processions and dramas we undoubtedly see magic battles going on just as among primitive peoples; but symbolism attaches a more and more esoteric significance to these representations—the significance of a victory of good over evil which could not be attained by magic pure and simple; or the significance of a commemoration of the initial work accomplished by the gods in days gone by which it is man's duty to carry on (individually or in groups) by the struggle against everything evil. Figures as early as those of the 'Stelæ of Horus,' in which the god crushes, tramples upon, or destroys crocodiles, serpents, and monsters, are significant, to the thinker, of the beneficent rule of a god who abhors evil, and whom every man ought both to assist and to imitate. When Ptolemy Soter, at his coronation in a papyrus barque, captures the water-fowl in the marshes, he means by this to symbolize that, under his sway, he guarantees the destruction of all evil things, in the highest meaning of the words.

LITERATURE.—There is no monograph on the subject. The opposition of Osiris and Set, or of Rā and Apōpi, is, of course, mentioned in all works dealing with Egypt and Egyptian religion. A number of useful observations may be found in E. A. W. Budge, *Osiris and the Resurrection*, London, 1911. The question is briefly treated in G. Foucart, *Méthode comparative*[2], Paris, 1912, p. 310 ff.

GEORGE FOUCART.

DUALISM (Greek).—I. **The pre-Socratic pluralists.**—The view of the universe taken by the pre-Socratic philosophers was for the most part monistic, and materialistically monistic. This applies to the Ionian hylozoists (Milesian and Ephesian alike)—to Heraclitus as much as to Thales, Anaximander, and the others; for, though Heraclitus laid stress on *logos* as well as on primitive 'fire,' since the explanatory term *logos* was to him merely an aspect of fire, it was only one side of the primary stuff or material out of which the world was formed. It applies also, although with a difference, to the Eleatic School; for, although Parmenides and his followers emphasized Unity and denied Change, making the one Being and the other Non-being, the teaching is still materialistic and monistic (for the unity of Parmenides is 'corporeal'), but the monism rests on the intellectual apprehension of Unity, not on the manipulation of a primary substance. It is the result of the philosophical intellect exercised on the world of our experience, as distinguished both from the scientific intellect and from the poetic imagination, as well as from mere sense-perception. In 'the Many' the intellect perceives only the illusory and 'a path that none can learn of at all'; 'the One' alone is true, and it alone exists. Dualism emerges first with the early pluralists—Empedocles, Anaxagoras, and Democritus; and it indicates the fact that a more scientific view of the world was now being reached, and that the conception was clearly growing of the distinction between man as a thinking subject and the world as the object of thought. It has, therefore, both a cosmological and a psychological significance.

(1) *Empedocles.*—The first great principle on which Empedocles based his philosophy was that bodies in the universe, and the universe itself, consist of the four elements (he called them 'roots of things')—fire, air, water, earth; and that these are held together or kept in separation, as the case may be, by the two contrary forces Love and Hate. Regarded as a completed Sphere, this world is conceived as broken up by degrees, through the interference of Hate or Discord, till the moment comes when Discord is supreme and chaos reigns, out of which order is again produced by the gradual influence and alternate dominance of Love, to be again succeeded by the disintegrating agency of Strife; and this alternate process goes on time without end. Here explicit expression is given to the dualistic conception of existence; for, as the world is composed of elements, these need to be moved; but they have no power of movement in themselves; consequently, they must be moved from without—that is, Love and Hate are needed as movent forces. See, further, art. EMPEDOCLES.

(2) *Anaxagoras.*—The reputation of Anaxagoras in the history of philosophy rests mainly on two things: (1) his physical doctrine of *homoiomeria*; and (2) his enunciation of the seemingly spiritualistic position that νοῦς, or intellect, is the interpreting factor in the universe. In place of four elements, out of which everything was formed, as Empedocles had taught, Anaxagoras posits an infinite number of primitive substances, each composed of homogeneous particles, 'which neither come into being nor perish, but persist eternally.' These Aristotle designated ὁμοιομερῆ; whence the substantive ὁμοιομέρεια was formed (though not by him) to designate existence by ὁμοιομερῆ and the doctrine thereof as set forth by Anaxagoras. Each homœomery is unique and unlike every other; yet none can exist apart from the others—each is mixed with each. Consequently, if everything is mixed with everything (πᾶν ἐν παντί), a body is what it is simply because of the elements that are *predominant* in its structure.

But the world is not explained by these conceptions alone. We require also to take account of νοῦς, or intelligence. 'At the beginning,' Anaxagoras says, 'all things were together; then came mind (νοῦς ἐλθὼν) and set them in order (αὐτὰ διεκόσμησε).' It is evident that, if we interpret νοῦς spiritualistically, we have here the assertion of a non-materialistic principle in the universe ruling and guiding all, operative both in the whole and in the individual—a presentation of a teleological view of the world that anticipated Plato and Aristotle. It is the first clear statement in Greek thought that there is a plan and purpose in existence, that Nature has a meaning and is interpretable, and that physics is subordinate to metaphysics.

How far Anaxagoras himself realized the true import of his own doctrine is disputable. On the one hand, notwithstanding the fact that he himself designates νοῦς as absolutely pure and unmixed, and ascribes to it the function of imparting motion originally to things and of acting though itself incapable of being acted upon, it is doubtful whether νοῦς to him is really a spiritual substance. Many interpreters, supported by implications in his own phraseology, read it materialistically, though they allow that the noëtic matter is not gross, but subtle and refined: they say that, though it may be taken after the analogy of what we find in human consciousness, it was only, after all, a natural force—simply on the line of the spiritual conception, but not yet itself spiritual. On the other hand, there can be little question that Anaxagoras did not use his conception to the full, either in his cosmological or in his psychological teaching. It is the complaint both of Plato and of Aristotle that, in his philosophy, it simply occupies the place of a *deus ex machina*; or, otherwise, that he uses it as a kind of impressive badge or motto, and accords it a position of *otium cum dignitate*. At all events, the principle of mind (νοῦς) is present in the Anaxagorean philosophy as something distinct from matter, thereby bringing into view a dualistic interpretation of the universe that was to influence Western thought for all time.

Dualism is further apparent in Anaxagoras's doctrine of sense-perception. Accepting the principle that 'everything is mixed with everything,' he proceeds to explain perception by the additional principle that 'unlike is recognized by unlike' (the exact opposite of what Empedocles had laid down): *contraries* are the indispensable condition of sensuous cognition. Take sight, for example. This is effected, according to Anaxagoras, 'by reflexion of an image in the pupil of the eye, but this image is not reflected in a part of the pupil of like colour with the object, but in one of a different colour. . . . The colour which predominates in the object seen is, when reflected, made to fall on the part of the eye which is of the opposite colour' (Theophrastus, *de Sensu*, § 27). Cf. also art. ANAXAGORAS.

(3) *Democritus*.—The grandest attempt in early Greek thought to give a thoroughgoing account of the universe on the basis of purely materialistic and mechanical principles was the Atomic Theory, associated chiefly with the name of Democritus. It was essentially scientific, but it is also philosophical. It so far reproduced the teaching of Parmenides that it allowed that there can be no motion or becoming without Non-being; but, in order to conserve motion and becoming, it further maintained that Non-being (the Void) is equally real with Being (the Plenum). On the other hand, it owed much to Empedocles, whose doctrine of effluvia it adopted, though not without important modifications. For a full exposition of Democritus's theory, see art. DEMOCRITUS.

2. The Pythagoreans.—The kinds of dualism that we have been dealing with are distinctly philosophical and scientific. A different type confronts us when we turn to the Pythagoreans. We have now a dualism of an ethical and religious stamp, based on the contrast of soul and body, and of the principles of good and evil. The body was regarded by the Pythagoreans, not as the auxiliary and instrument of the soul, but as its sepulchre and prison-house, even as the seat and source of sin. 'Mortify the body then' became the great injunction; and a religious order was instituted, and a system of abstinence devised for the purification of the soul and the development of its higher life. This was conjoined with the doctrine of metempsychosis, which taught that life here in the body is a penance for sin committed in a previous state of existence, and that only by successive incarnations can the soul be restored to purity and bliss. This view of the body as essentially 'vile,' and a hindrance, not a help, to the soul, had great influence in Greek philosophy: it was in large measure accepted by Plato, and it was the basis of the teaching of the mystical Greek Schools of later times—especially the neo-Platonists. See, further, art. PYTHAGOREANS.

3. Plato.—The dualism of Plato centres in his Theory of Ideas, but assumes various aspects according to the context or the point of view from which that theory is regarded. Besides its distinctively epistemological significance, it has a well-marked psychological bearing, depending on Plato's sharp-cut distinction between the soul and the body, conjoined with his doctrine of the soul as pre-existent as well as immortal, and of the necessity of its gradual purification and ultimate return to its original home through re-incarnations or metempsychoses. It has also a cosmological reference, both in connexion with the creation of the world, where Necessity or Fate plays a part as well as design or purpose, and in connexion with the creation of the Soul of the World and the creation of Man, whose composite nature presents special difficulties.

(1) If, as Aristotle tells us, and as may very well be seen from a perusal of the Platonic *Dialogues* themselves, the three great influences that told on Plato in the formation of his philosophy were the Heraclitean doctrine of the perpetual flux of sensible things, the Parmenidean insistence on Unity as the key to truth, and the Socratic unyielding demand for definitions and clear concepts pursued on a dialectic method that almost inevitably gave permanence to the concepts attained, the Platonic Ideology naturally takes the following shape:

There are two worlds—the world of sense and the world of intelligence. The first is the sphere of change, of the fleeting and the fallacious; the second is the sphere of the permanent and the true. It is to the second of these worlds that Ideas belong; and they are not mere subjective representations, but transcendent self-subsistent entities, immutable and eternal—real independent objective existences, though the existence is timeless and spaceless, and so noumenal. Being the universal, they are not derived from experience, but are presupposed in it: they are the only true and knowable realities, all else being but show and appearance—objects of 'opinion,' but not of 'knowledge.'

Yet sense *is*, and the Ideas must have a relation to it. What is the relation? Speaking generally, the answer is that Ideas are the causes of what reality sense-objects possess; or, in other words, sense-objects 'participate' in Ideas. This is Plato's famous doctrine of 'participation' (μέθεξις or τὸ μετέχειν), which is intended to express the immanence of Ideas—known also as 'communion' (κοινωνία) and 'presence' (παρουσία). If, further, it be asked how sense-objects participate in the self-existent and eternal Ideas, the answer is given in the *Philebus*, that 'the One' is manifested in 'the Many' in a graded system of knowledge. This does not explain the *fact* of participation, but it throws light upon the *mode*. More suggestive still is the figure of 'the Line,' as representative of the cognitive process, in the sixth book of the *Republic*. Knowledge proper is thus shown to be absolutely distinct from opinion, which is the highest that sense in any of its forms can achieve. The Idea of the Good is all-pervasive; while transcendent, it is also immanent; although itself above intellect and above sense, it is the cause of both (like the sun in the heavens) and permeates both. But *how* this should be is not shown.

(2) The Platonic dualism is further seen when we raise the question with regard to Ideas, How do we come to know them? The answer to this is given in the *Phædo* and the *Phædrus*, and, again, in the *Meno*, viz. by reminiscence (ἀνάμνησις). In a previous state of existence, the mind viewed the eternal Ideas; and, after its descent to earth and its union with the body, it is able to revive them in part. Only thus, it appeared to Plato, could we explain the facts that truth is attainable by

man at all, that learning is possible, and that virtue can be taught. There is metempsychosis (so, too, Pythagoras had said); and the explanation of knowledge is here. But our birth into this world, the union of the soul with the body, is a descent; and the full ascent is made only when the union is dissolved. Although the body is not regarded by Plato, except in the *Timæus*, as essentially vile (sin, to Plato, was simply a disease, arising either from ignorance or from madness), yet it is the prison-house of the soul—a clog and hindrance to its complete development and highest perfection. It is mortal and, therefore, a restraint to the immortal, obstructing its clear vision and retarding its perfect acquisition of virtue. On the side of intellectual knowledge, it drags down the soul to the fleeting and transitory, for the body operates through the senses, and these deal with the fleeting and the changeful only. On the side of ethical achievement, it is apt to lower morality and to replace virtue by pleasure, and so to render the perception of ethical ideas faint.

That there is truth in this conception of the body is obvious, but it is clearly not the whole truth. There is another side to it, namely, that which Browning has so finely expressed in *Rabbi Ben Ezra*, where it is maintained that

'All good things
Are ours, nor soul helps flesh more, now, than flesh helps soul!'

Nor does the doctrine of metempsychosis meet the real difficulty. It does not explain how the mind that has had pre-natal sight of the eternal Ideas should come to be joined to a body at all—how the clear vision of the pre-existent state should come to be lost. As to how the soul of man came to fall from its pristine condition, Plato simply says, metaphorically, that some pre-existent souls are unable to keep up with the gods in the pursuit of reality, 'and through some ill-hap sink beneath the double load of forgetfulness and vice, and their wings fall from them, and they drop to the ground' (see the Myth of the Charioteer in the *Phædrus*). But what *rational* necessity there is in this, making a fundamental difference among pre-existent souls, is not obvious. Once metempsychosis gets a start, then the fact of a partially impure life here may explain the necessity of a return, for purposes of purification and of spiritual progress, to earthly life; but how metempsychosis should ever begin, or, in other words, how the state of matters necessitating metempsychosis originates, is not shown. Yet this should be shown, if Plato's theory is to be rational throughout.

(3) Into the details of the Platonic cosmology as elaborated in the *Timæus*, it is impossible here to enter. The problem is—Given the Platonic Forms or Ideas as eternal immutable existences, and given also the eternal existence of Matter (matter orderless, chaotic, ruled by necessity), how were the order and the beauty of the former to be imparted to the latter? The answer is that the Divine Reason, the Demiurge or Creator, produced the marvellous effect that we know as the world by working upon matter according to an eternal archetype or pattern existing in the Divine mind. According to this intelligible archetype the visible universe was formed, and it owes its existence simply to the goodness of the Creator. The result is that the Universe is an animated rational existence, a God; having a Body (*σῶμα*), a Soul (*ψυχή*), and a Mind (*νοῦς*). Yet, the cosmos is not perfect. This arose from the fact that the Deminrge, in working upon matter, met with the pre-cosmical and extra-cosmical resistance of Necessity (*'Ανάγκη*). Necessity ruled Matter (the *πρῶτον σῶμα*): how could it be vanquished? Not, according to Plato, by coercion, but by persuasion. In so far, then, as the Creator could gain Necessity by persuasion, to that extent could he freely execute his design on matter; but, at the point where Necessity resisted and refused to be persuaded, the Demiurge was powerless; hence the imperfection of the cosmos. However metaphorical this is, it is the acknowledgment of a radical dualism in Plato's thinking.

Similarly, the dualistic conception comes out in Plato's account of the creation of man. The mortal part of him is the workmanship of 'the gods,' but the rational and immortal part is supplied by the Demiurge himself. This division of functions was necessary because nothing mortal could be created by the Demiurge, and, had man been wholly his creation, it might have been possible to cast the blame of man's sin and folly upon the Creator. As formed by the gods, man is a miniature of the cosmos—a microcosmos; but, as his constructors had only mortal elements to work with, their handiwork had flaws and imperfections in it peculiar to the situation. It was theirs simply to create the body and the two mortal souls, the spirited and the appetitive (*τὸ θυμοειδές* and *τὸ ἐπιθυμητικόν*), and to effect the junction of these with the immortal soul, or *νοῦς*. As the mortal and immortal souls were antagonistic to each other, the best that the formative gods could do was to place them in such positions within the body (the skull, the breast, the belly) that the action of each upon the others should be as conducive as possible to good. This is pictorially attractive, but it does not remove the difficulty. The curious relation of the Demiurge to matter and to man, as represented in the *Timæus*, is practically an acknowledgment of inability to solve the riddle of the universe.

4. Aristotle.—The greatest critic of the Platonic Theory of Ideas in ancient times was Aristotle. His criticisms are many and various, but they all centre in the objection that the two worlds—the world of sense and the world of intellect—are left by Plato apart, and that no real explanation is given of change in the world of phenomena. Either the Ideas are an unnecessary duplicate of the facts of experience, or they are useless, inoperative. Nevertheless, Aristotle had been the pupil of Plato, and the doctrine of Ideas left its permanent mark upon him. Hence, a metaphysical dualism, no less real than, though not quite so obvious as, that of Plato, permeates the Aristotelian philosophy; it is the dualism of Form and Matter, of Actuality and Potentiality. To Plato and Aristotle alike, knowledge lay in the Universal; but, while the Universal was to Plato outside of and prior to experience, it was to Aristotle immanent in experience: universal there is, yet it is not transcendentally existent, but is realized in individuals, in the concrete particulars of sense—it is the Form (essence), which Matter (the sense element) embodies.

This dualism assumes various aspects as the different parts of Aristotle's philosophy are passed in review. It is specially prominent in his Psychology, in that part of it which deals with the metaphysics of the soul (for psychology was by no means all empirical to Aristotle), and in his Theology or First Philosophy—his treatment of the relation of God to the Universe.

(1) The psychological dualism appears in the very definition that Aristotle gives of the soul itself, and in the distinction that he makes between soul and body. Soul he defines as 'the first entelechy [the earlier or implicit realization] of a natural body possessing life potentially': *ἐντελέχεια ἡ πρώτη σώματος φυσικοῦ δυνάμει ζωὴν ἔχοντος* (*de An.* 412*a*, 27). The body here is regarded as matter, to which soul stands in the relation of

form: as Spenser puts it (*Hymn in Honour of Beauty*, line 132),

> 'For of the soul the body form doth take,
> For soul is form, and doth the body make.'

'Life' is the power of the body to nourish itself, to grow of itself, and to decay of itself; so that, if for 'matter' and 'form' we substitute 'potentiality' and 'actuality,' and distinguish the first stage of actuality from the second, as we distinguish *knowledge* from the *exercise* of knowledge, or the *visual power* of the eye from *actual seeing*—i.e. if we distinguish between *power* or *faculty* and *actual use*, of which the second must be preceded by the first—then we get the foregoing definition. As applied to the soul of man, the conception that underlies the definition is that the human body is the specific organ whereby the human soul or mind realizes itself. This clearly distinguishes Aristotle's view from Plato's. Plato opposed soul to body, regarding the latter as the prison-house of the former, and allowed only that the body could be trained by gymnastic and music to obey the soul. To Aristotle, on the other hand, the body is the natural instrument of the soul, and so is pre-adapted to it. The two are necessary to form the concrete particular which we know as the individual human being. Yet, Aristotle adds:

> 'It is, however, perfectly conceivable that there may be some parts of it [the soul] which are separable [from the body], and this because they are not the expression or realization of any particular body. And, indeed, it is further matter of doubt whether soul as the perfect realization of the body may not stand to it in the same separable relation as a sailor to his boat' (*de An.* 413*a*, 6).

Dualism comes out sharply when Aristotle reaches the handling of the highest function of the soul, viz. intellect or *νοῦς*, where he discriminates between the active and the passive *νοῦς*, and between *νοῦς* generally and the other psychic functions. His scheme of functions, beginning with the lowest, is: nutritive or vegetative soul (*τὸ θρεπτικόν*); sentient soul (*τὸ αἰσθητικόν*), including the conative soul (*τὸ ὀρεκτικόν*), which he sometimes makes a separate function; and intellectual or noëtic soul (*νοῦς* or *τὸ νοητικόν*), divided, as above, into passive *νοῦς* (*νοῦς παθητικός*) and active *νοῦς* (*νοῦς ποιητικός*). Each higher function presupposes the lower, though the lower does not presuppose the higher. Thus, the sentient soul presupposes the vegetative soul, and both sentient and vegetative souls are presupposed by the noëtic soul; but the vegetative does not presuppose the sentient soul, nor does the sentient presuppose the noëtic. It is characteristic of *νοῦς* that it is eternal and immortal—at any rate, this applies to the active or poietic *νοῦς*: it is introduced into the individual human being *ab extra*, and the difficulty is to find what connexion it has, on the one hand, with the passive *νοῦς* and with the other functions of the soul generally, and, on the other hand, with the body. As has been said above, it is distinctive of Aristotle that he recognizes the intimate and indissoluble relation of soul to body, and the necessity of taking account of the physiological as well as of the psychical aspect of mental facts and processes. His great objection to the Pythagorean doctrine of the transmigration of souls was that it assumes that any body is suitable to any soul, whereas the human body is specially fitted for the soul. To maintain the opposite, he says, is like maintaining that the carpenter's art 'clothes itself in flutes; the truth being that, just as art makes use of its appropriate instruments, so the soul must make use of its fitting body' (*de An.* 407*b*, 25). But, when he comes to treat of the active *νοῦς*, this intimate relationship is ignored; and the conclusion is reached that this higher soul can exist altogether [illegible] from the body—it is 'a different kind of soul' ([illegible]*ερον*) from the others, and 'it alone admits of separation, as the eternal from the perishable' (*καθάπερ τὸ ἀΐδιον τοῦ φθαρτοῦ*).

Still further, the dualism of form and matter enters into Aristotle's theory of sense-perception.

(2) The theological aspect of the Aristotelian dualism has been brought out in the art. DESIRE (Greek), and need only be referred to here. On the one side is God, who is the prime unmoved movent, to whom the universe evermore looks desiringly; and on the other side is the universe, which, though dependent on the Deity and derived from Him, is, nevertheless, regarded as not created at one particular time but as eternally existent. This might be interpreted as simply Aristotle's way of indicating his belief in impersonal reason as permeating the universe, and yet he at times has glimpses of a personal God, apart from the universe and ruling it, as a general does his army.

> 'We must consider also,' he says, 'in which of two ways the nature of the universe contains the good or the highest good, whether as something separate and by itself, or as the order of the parts. Probably in both ways, as an army does. For the good is found both in the order and in the leader, and more in the latter; for he does not depend on the order, but it depends on him' (*Met.* xii. 10. 1075*a*, 10).

Moreover, God is in Himself conceived by Aristotle as Thought, and God's Thought is defined as 'the thinking upon thought' (*καὶ ἔστιν ἡ νόησις νοήσεως νόησις* [*Met.* xii. 9. 1074*b*, 30]). Personality is involved in this.

5. In later Greek systems.—Besides the dualisms that have been now considered, it is to be observed that there is frequently a dualistic note in Greek monism, which need not, however, be more than adverted to here. This applies particularly to the post-Aristotelian schools. For example, the Stoics found a difficulty in adjusting their doctrine of the primitive material substance 'fire' to the requirements of man's rationality; and, in especial, the neo-Platonists disclosed a distinct dualism in their system of the Absolute when they came to evolve their famous Triad of Absolute Unity, Absolute Intelligence, and Absolute Soul, and therefrom matter and all that is finite (see the neo-Platonic section in art. DESIRE [Greek]). The problem of how to derive Matter from Mind on a mystical basis is a difficulty that is inherent in every doctrine of Emanation and seems to be insurmountable.

SUMMARY.—The foregoing are the leading types of dualism in Greek philosophy. The term 'dualism' is one, but it has diverse significations. (1) It has a cosmological application, as is seen in the attempts of the pre-Socratic Pluralists to explain existence dualistically. (2) It is applied (*a*) in connexion with empirical psychology in explanations of the relation of subject and object in sense-perception, such as we find in Empedocles on the one hand, and in Aristotle on the other; and (*b*) in connexion with rational psychology in such a doctrine as that of the *νοῦς* in Aristotle. (3) It has (*a*) a metaphysical application, as expressive of the doctrine which maintains the absolute disparity between Mind and Matter and the impossibility of reducing the one to the other, and designates the opposite of monism; and (*b*) an epistemological application, as in Plato's grand attempt to explain the possibility of knowledge in his Theory of Ideas and in Aristotle's doctrine of Form and Matter. (4) There is an application of the term that is ethical and religious, which has reference to the sharp-cut distinction between soul and body, and to the view that the body is a clog or hindrance to the development of the soul and may be the seat of sin and degradation. (5) Lastly, there is a theological application, when (as by Plato in the *Timæus*) the world is set forth as the product of opposing principles—God and necessity—and an explanation is offered of the seeming defects in creation which shall minimize the difficulty of a purely teleological rendering of

the universe. These various meanings, though not mutually exclusive, are distinct, and they should be kept distinct, if the positions of the Greek thinkers are to be understood.

LITERATURE.—Practically all the books specified under 'Literature' in the art. DESIRE (Greek), to the end of the list on Aristotle. In addition: Henry Jackson, *Texts to illustrate a Course of Elementary Lectures on the Hist. of Gr. Philos.*, London, 1901; W. E. Leonard, *The Fragments of Empedocles*, London, 1908; R. D. Archer-Hind, *The Timæus of Plato*, London, 1888; Walter Pater, *Plato and Platonism*[2], London, 1896; R. L. Nettleship, *Philosophical Lectures and Remains*, London, 1897; G. Croom Robertson, *Elements of General Philosophy*, London, 1896; Lewis Campbell, *Plato's Republic*, London, 1902; John I. Beare, *Greek Theories of Elementary Cognition from Alcmæon to Aristotle*, Oxford, 1906; Marie V. Williams, *Six Essays on the Platonic Theory of Knowledge*, Cambridge, 1908; E. Vernon Arnold, *Roman Stoicism*, Cambridge, 1911; James Adam, *The Vitality of Platonism*, Cambridge, 1911.

WILLIAM L. DAVIDSON.

DUALISM (Iranian).—A tendency towards dualistic conceptions, or, perhaps we may say, towards bilateral symmetry, seems to be an essential characteristic of the Iranian mind. This is to be seen in the constantly recurring distinction of the 'two worlds,' the world of Spirit and the world of Matter—a common concept in the Gāthās (*e.g. Yasna* xxix. 5); or, again, in the two lives, the present and the future (cf. 'uvaēibya . . . ahubya,' *ib.* lvii. 25; 'ubōyō aṅhvō,' *ib.* xli. 2). This symmetrical dualism, or 'polarity,' as S. Laing would probably style it, finds quaint expression in a curious diagram, attributed to the celebrated minister of Yazdagird I., Atrōpat, preserved in the *Dīnkarṭ* (iv. 137, ed. Peshotan, Bombay, 1883), which is represented thus:

material	wealth	sovereignty	honour	prosperity	body	BEING	soul	merit	beneficence	religion	knowledge	spiritual
stihīk	hūdahīshnīh	pātōkhshāyīh	ajarm	khvāstik	tanū	YEHEVUN	rūbāno	kerfak	frārūn tvakhshīha	dīno	danākīh	minōīk

It will be seen that this curious table divides the whole notion of Being into two correlative worlds of Spirit and Matter, with terms relatively corresponding to one another on opposite sides of the central notion. But it is particularly the *religious* dualism which is ordinarily considered to be the chief characteristic of the Zoroastrian religion. Yet there is no point in connexion with that faith which has given rise to so much controversy among both native and Western scholars. The modern Parsis stoutly deny that their faith is, or ever was, dualistic; and a similar view is held by more than one distinguished European authority. E. W. West attempted to defend Mazdæism from the accusation of dualism, 'made in good faith by Muhammadan writers, and echoed more incautiously by Christians,' though he blames the Parsis themselves for having admitted it, at least during the Middle Ages (see 'Pahlavi Texts,' pt. i. in *SBE*, vol. v. p. lxviii f., also pt. ii. *ib.* vol. xviii. p. xxiv). Quite recently J. H. Moulton, in a lecture on Mazdæism, asserted that,

'If we judged Parsiism by Zoroaster, there was nothing that could be called dualism. There were two powers, it was true. We were told that in the beginning one of them chose good and the other chose evil. They began a long, continuous struggle, which was to go on to the end of time, but the end was to be the final victory of the power of good and the final destruction of the power of evil. That was not dualism. If it was, Christianity would be about equally open to the charge.'

It appears to the present writer that the whole question is one of terms. It cannot, of course, be denied that the Supreme God of the Avesta is Ahura Mazda, conceived as essentially good, and the author and creator of all that is good, who is also repeatedly spoken of as Spenta Mainyu (the Holy Spirit), and that in opposition to him is Aṅra Mainyu (the Destroying Spirit). These two opposing principles are, of course, the Ormazd and Ahriman (*qq.v.*) respectively of later Persian literature. As is well known, the whole religious system of Mazdæism may be said to consist in the perennial warfare between these two powers. Certainly the mere fact of antagonism between a good and an evil spirit and their respective followers would not of itself constitute a real dualism in the Avestan, any more than in the Christian, system. But the real point of the matter is that, according to the Avestan system, (1) there exists a Being, evil by his own nature, and the author of evil, who does not owe his origin to the creator of good, but who exists independently of him; and (2) this Being is an actual creator, who calls into being creatures opposed to those of the Good Spirit and contrary to his will.

Here is seen the fundamental difference between the Avestan and the Christian (or Muhammadan) theology. In the latter the evil spirit, so far from having an origin independent of the God of good, is actually His creature, though fallen and rebellious, and certainly is never conceived as creating any beings whatsoever. The distinction seems to be decisive. So far is the idea of the creative power of the evil spirit carried in the Avesta, that not only is Aṅra Mainyu represented as creator of a vast host of demons (*daēva*), but even this physical world and its inhabitants are divided into creatures of the good and the evil spirits respectively—to the latter being attributed cold, sickness, and even noxious animals, such as wolves, poisonous snakes, etc. The very beginning of the *Vendīdād* is an enumeration of the various plagues created by Aṅra Mainyu in opposition to the various good lands and countries created by Ahura Mazda, a special verb (*fra-keret*, translated by Darmesteter as 'counter-create') being employed in opposition to the verb *dā*, attributed to the good spirit. This conception of a double creation was continued, and even enhanced, during the post-Avestan, or Patristic period, as it has been termed. Even among the heavenly bodies, the planets are considered as creatures of the evil spirit and opponents of the constellations and the stars created by the good spirit. Similarly in some of the Pahlavi treatises, such as the *Būndahish*, lists are given of the animals, arranged in two hostile armies, among those of the good creation being the falcon, magpie, crow, kite, mountain-ox and goat, wild ass, dog, fox, etc., whilst the serpent, locust, wolf, and intestinal worms are of the evil creation. There can, we think, be no doubt that all through the Zoroastrian system, from the Avesta down to the Pahlavi theologians, the evil spirit is considered as a real creator, and for this reason, even apart from the question of his origin, the system may justly be termed dualistic. It is quite true that, according to the general teaching, Aṅra Mainyu and his hosts are to be entirely and utterly destroyed at the last day; but it can scarcely be denied that, at least in the original system, his origin is quite distinct from that of Ahura Mazda, and that the two spirits are co-existent from eternity. We have thus a monotheism limited and modified by dualism, as well as a dualism modified by an ultimate monotheism. These theories may seem to us inconsistent. No doubt the origin of evil has been in all ages the principal difficulty which all religions have had to face, and the form given to this solution character-

izes the divergences which distinguish them from one another. The Mazdæism of every age has sought this solution in the doctrine of two independent hostile and diametrically opposite principles—the principle or spirit of Good, and the principle or spirit of Evil. The inconsistency which we readily see in such a solution did not fail to present itself to the Iranian mind, and from early times we find that theories were devised as a means of escaping from the difficulties of this dualistic solution. These may be grouped generally under two hypotheses: (1) that the two spirits have sprung from a single, indifferent, pre-existing source; (2) that the Evil Spirit proceeds from the Good Spirit, by generation or creation. The former is the doctrine of the Zervanists, the latter that of the Gayomarthians. The Zervanists, according to the descriptions preserved by the Armenian historians, went back to a primeval being, Zervan Akarana, lit. 'Unlimited Time,' sometimes apparently identified with Destiny; and this primordial being was supposed to have generated both Ormazd and Ahriman. The second school, the Gayomarthians, seem to have held that the Evil Spirit was produced by an evil thought in the mind of the Good Spirit. This is practically the solution of the modern Parsis, who make a sharp distinction between the names Ahura Mazda and Spenta Mainyu. They point out that, especially in the Gāthās, Aṅra Mainyu is constantly opposed, not to Ahura Mazda, but to Spenta Mainyu. Ahura Mazda, they hold, is the one supreme and primordial spirit and sole creator. He is, however, possessed of two 'faculties'—Spenta Mainyu, or the faculty whose function is beneficent, and Aṅra Mainyu, whose function is destructive. One cannot but suspect that this modern Parsi solution has been unconsciously suggested by the Hindu doctrine of the functions of Viṣṇu and Śiva in the Hindu triad. A quite recent Parsi theologian has advanced a new theory, holding that Spenta Mainyu and Aṅra Mainyu denote the good and evil spirits respectively of *man*, and not of the Divinity (Rastamji Edulji, *Zarathushtra and Zarathushtrianism in the Avesta*, Leipzig, 1906, pp. 140–159); but we are not aware that this is anything more than a peculiar view of the author. It is an approximation to the Christian doctrine of the origin of evil in the *free will* of the creature.

LITERATURE.—E. W. West, 'Pahlavi Texts,' pts. i. ii. in *SBE*, vols. v. [1880], xviii. [1882]; C. de Harlez, *Avesta*[2], Paris, 1881, Introd. pp. lxxxiv–lxxxvii; A. V. Williams Jackson, 'Die Iran. Religion,' in *GIrP* ii. [1900] 627–631 (Dualism is a characteristic trait of Zoroaster's faith, and in its widest sense—whatever its ultimate source—was doubtless the product of his own genius. This dualism is monotheistic and optimistic, in that it postulates the final triumph of Ormazd and the destruction of all evil); L. C. Casartelli, *Phil. of the Mazdayasnian Rel. under the Sassanids*, Eng. tr., Bombay, 1889, pp. 50–54; 'The Zoroastrian Theology of the Present Day,' in *Babylonian and Oriental Record*, viii. (1900) 222–229, embodying a 'nineteenth century *rivāyat*' by a modern Parsi theologian; and all the writers on the Avesta and Zoroastrianism. Cf. Literature at end of art. AVESTA.

L. C. CASARTELLI.

DUALISM (Jewish).—Traces of a belief in two conflicting supernatural beings striving for the mastery are nowhere found in the pre-exilic writings of the OT. In the oldest religious belief of the Israelites, Jahweh's jurisdiction extended over Palestine, and He was not at war with any neighbouring god or demon. There was no evil spiritual being endeavouring to subvert His moral government. While dualism ascribes evil to a diabolic agent, the ancient pre-exilic writers found no difficulty in making it emanate from Jahweh Himself (cf. Am 3[6]). No doubt the Israelite was subject to the same psychological laws which raise a horror of the dark and of unfrequented and desert places, and he peopled them with more hurtful beings than are recorded in the OT; but his mythology was of his own creation and associated with his surroundings. Observing a multiplicity of wild life on the edge of the desert, such as monstrous serpents, jerboas, and wild goats, his imagination endowed them with superhuman intelligence, and assigned them a habitation in the interior of the desert. There arose the *sᵉ'îrîm*, the *'alûkā*, the *lilith*. It is doubtful, however, how far he considered them possessed, or only, like the serpent of Gn 3[1], 'subtil.' They were physically injurious to man when he entered their domain, but did not come into his religious and cosmic views. The monotheism of the OT writers kept the popular belief in demonology entirely in the background. The solitary mention of *'Azazel* (*q.v.*), to whom a goat was sent out on the Day of Atonement, is too obscure to justify any conclusions as to the origin of that rite or the person of 'Azazel. In Lv 16 the act is viewed as symbolic of a transference of the nation's sins to another land. The nature and habitation of 'Azazel are left undefined, as if unknown or of no consequence. Nor is the OT Satan an independent Divinity. The root שׂטן signifies 'to oppose' (by standing in the way), not necessarily in a bad cause. In Nu 22[22. 32] the angel of Jahweh was a *saṭan* to Balaam. A personal Satan occurs first in passages of post-exilic date, but even in these he is not yet an independent being. See DEMONS AND SPIRITS (Heb.), in vol. iv. p. 597 f. The 'host of the high ones' of Is 24[21] are not spiritual beings, but astral bodies to the worship of which the Israelites were addicted.

How far Babylonism affected the Jewish belief before the Exile is difficult to decide. Although the history of Israel and Judah was closely connected with Assyria and Babylon, it had not contaminated the strong monotheism of the pre-exilic Prophets and Psalms. It is not likely that the theomachy of Marduk-Tiamat was so widely known as to penetrate into the popular faith of the Israelite peasantry, who were 'a people who dwelt alone,' and who as late as the reign of Hezekiah were ignorant of Aramaic (2 K 18[26]).

The ubiquitous arch-Satan of later Jewish theology, with his diabolic subordinates standing in hostile array against God and good, and planning man's temporal and eternal destruction, is a post-exilic development, evolved primarily from foreign, chiefly Persian, sources, and grafted on Jahwism. Thus early Judaism became tinged with a tendency to dualism. The Jewish conception of the nature and work of Satan, and the hope and manner of his overthrow, leave no doubt that Ahriman was the original model. The place of contact between Judaism and Parsiism was Babylon, whither Mazdæism had already penetrated, and where probably it received accretions from Babylonism (see Cheyne, *Jewish Relig. Life*, N.Y. and London, 1898, p. 259). This would account for the Bab. element in Jewish Satanology and eschatology. Since, however, Judaism absorbed only so much of foreign religions as it could assimilate and invest with a Jewish colouring, ancient allusions to defiant evil in the OT were resuscitated and applied to the newly developed ideas of a Satan. He was crystallized in Jewish literature under various appellations. He is connected with the 'evil imagination' of Gn 8[21]. As Tiamat he had his prototype in Gn 3 and in the obscure passage Is 27[1], and plays an important part in the Qabbālā as נָחָשׁ הַקַּדְמוֹנִי. For the Bab. *Bel Dababi*, the accusing God, the Enemy (Aram. בְּעֵל דְּבָבָא), a voucher and a name were found in Pr 28[21]. The Egyptian Typhon suggested his designation of צְפוֹנִי in Jl 2[20], although in *Suk.* 52*a* derived from צפן, 'hidden.'

In analogy with Jahweh's angels he was supplied with subordinates to execute his will, the connecting link with the OT being the *nᵉphîlîm* of Gn 6[4].

Already in Tobit (3^{8})—an early pre-Maccabæan romance—an evil spirit, no longer, according to Hebrew idiom, 'from Jahweh' (1 S 16^{14}), but of foreign origin, slew seven innocent men. Asmodæus was banished by fumigation into the wilderness of Egypt, but survived in Jewish tradition as king of the *shēdîm*.

It must, however, be remembered that, whereas the growing belief in the transcendence of God created the demand for a solution of the problem of the origin of evil, the new conception of a Satan after the model of Ahriman entered Judaism, not by means of literature (for there are no traces of Jewish acquaintance with the Avesta), but through popular belief; and much of it remained folk-lore and private opinion, and was not shared by the sober practical legalist. This renders it impossible to systematize Jewish Satanology. Nevertheless, dualistic views existed in popular belief, and came strongly to the surface in the Apocalyptic literature. In the *Book of Enoch* the introduction of evil into the world is ascribed to the *nᵉphîlîm* under their leaders, Shem'aza and 'Azael (see DEMONS AND SPIRITS [Heb.], vol. iv. p. 600ᵇ). In the *Book of Jubilees*, Mastema is the head of the fallen angels. At the request of Noah, nine-tenths are imprisoned, and the remainder are the Satans at large, the authors of idolatry, of every kind of evil, of destruction and bloodshed ($11^{4ff.}$). In none of the Apocalyptic writings is Persian influence so prominent as in the *Testaments of the Twelve Patriarchs*. There the source of all evil is Beliar and his seven spirits (see DEMONS AND SPIRITS [Heb.], vol. iv. pp. 599ᵃ, 601ᵃ).

The political commotions of the age, the scanty resources of the nation, the repeated disappointments on numerous occasions when the realization of cherished hope seemed near, the success and prosperity of surrounding nations, and the power of evil intensified the spirit of pessimism which had already commenced in the Exile. The pious looked forward to a compensation in another æon, and assigned this world to the author of evil, which the pious must hate (Enoch 48^{7}). God and Satan, good and evil angels, the upper and the lower world (*ib.* 25 ff.), heaven and hell (Abr. 21 ff.), children of light and children of darkness (En. $108^{7.11}$), are contrasted. In human nature itself there are antitheses—spirit and flesh, soul and body (Wis 9^{15}, En. 108^{7}). Satan and his angels have sown the seed of evil in the world and in man. There lies in man the propensity to sin, the יֵצֶר הָרַע of Rabbinism. Even in the Ezra Apocalypse, where Satan is not mentioned, the flesh is made to be the source and seat of sin (Volz, *Jüd. Eschatol.* 7, 60, 77, 82).

Prayers for protection from Satan occur in Jewish liturgy in collects of ancient date, and are quoted in Ber. 60*b* as well known: 'May it be thy will . . . to deliver me this day, and every day, from a bad man . . . from Satan the destroyer!'

The popular tendency to dualism met with opposition from early times. According to La 3^{38}, good and evil alike proceed from God. The repeated assertion of the unity of God in Is 45 sounds like a polemic against Zoroastrianism. The 7th verse, 'I form light and create darkness; I make peace and create all,'[1] is the *Yozer Or* in the Jewish liturgy and the creed of normal Judaism. The practice of uttering a blessing on every occasion is an institution referred to Ezra (Maim. *Ker. Sh.* i. 7), or to the men of the Great Synagogue (*Ber.* 33), but is in reality a pious imitation of Zoroastrians. Yet no prayer is valid without a שֵׁם and מַלְכוּת, *i.e.*, it must be said in the name of Jahweh, and His Sovereignty must be acknowledged (*Ber.* 40). Suriel, the Prince of the Countenance, who taught R. Ishmael three charms against the power of evil spirits (*Ber.* 51), has been conjectured to be the Sraosha of the Avesta, who contends with the Devs night and day (*Yasna* lvii. 10–23; cf. *Rel.-gesch. Lesebuch*, ed. Bertholet, Tübingen, 1908, p. 339). But it is not he who causes the cock to herald the approaching light, but 'Blessed art Thou, O Lord our God, King of the Universe, who hast given to the cock intelligence to distinguish between day and night' (Daily Morn. Pr.).

The contest in favour of monotheism was carried on by the Rabbis in their combats with Magianism, Gnosticism, and the Minim who believed in 'שְׁתֵּי רְשׁוּיוֹת, 'two powers,' a duality in the Godhead (Friedländer, *Die relig. Bewegungen*, Berlin, 1905, pp. 169–234; Bergmann, *Jüd. Apologetik*, Berlin, 1908). The Mishna enacts that God should be blessed for evil no less than for good (*Ber.* ix. 5). A reader in the synagogue should be silenced if he says, 'Thy name be remembered concerning good,' or 'We praise Thee, We praise Thee' (*ib.* v. 3). 'Whosoever associates the name of heaven with another object is rooted out of the world' (*Suk.* 45*b*). In the Passover service the redemption from Egypt and the slaying of the first-born are emphatically stated as accomplished by God in person: 'I and not an angel, I and not a saraph, I and not a messenger.'

The strong assertions of the Divine unity and the all-importance of legalism left no room in the Halakha for Satanology. Hence the Mishna is free from it. Where Satan does occur in the Haggada of the Talmud and Midrash, the description is coarse, puerile, and inconsistent. At one time he is a fallen angel. When God threw him from heaven, 'he caught hold of Michael's wing, but the Holy One, blessed be He, rescued Michael' (*Yalḳ. Shim.* 68; see Kohut, *Angelologie*, 1866, p. 63). Then he is the 'Great Prince in Heaven' (*Pirḳe d. R. Eliezer*, 13). He is קַטֵּגוֹר, Michael being סַנֵּגוֹר. He is סַמָּאֵל, 'the poison of God,' because of his identity with the angel of death.

The Qabbāla and the mediæval Mystics restored Satan to his Ahrimanic dignity. The piut מי יתנה חוקף, still said by some Jewish communities on the Day of Atonement, reads like a chapter from the Avesta.

If the person of Satan is undefined in Jewish theology, the existence of the *yēṣer ha-rā'* (in *Baba bathra*, 16*a*, identical with Satan and the angel of death) is a Jewish dogma. This theologoumenon is based on the *yēṣer* of Gn 6^{5} 8^{21}, rendered in the AV 'imagination,' and connoting that faculty of the soul which is the cause of rebellion against God. The *yēṣer* became very early hypostatized in Jewish theology (cf. the antithesis in אוֹי לִי מִיּוֹצְרִי וְאוֹי לִי מִיִּצְרִי, 'Woe to me because of my Creator, woe to me because of my tempter' [*Ber.* 61*a*]). He is the 'strange god' of Ps 81^{9}, dwelling in man (*Shabb.* 105*b*). As the source of sin, he was already known to Sirach as ἐννόημα (21^{11}), ἐνθύμημα (37^{3}), διαβούλιον (15^{14}). In these passages, as well as in others in the Apocrypha, where human dichotomy is asserted, such as Wis 9^{15}, an approach was made towards metaphysical dualism; yet the spirit of legalism checked its further development. Whereas the very virtues of the wicked (=Gentiles) are vices in the eyes of the righteous (*Yeb.* 103*a*), a Jew can keep the Law and be sinless. 'Blessed are Israelites. When they are occupied with the study of the Law and the performance of good works, the *yēṣer* is delivered into their hands, and not they into the hands of the *yēṣer*' ('*Abōda zara*, 5*b*; *Ḳid.* 30*a*; cf. Sir 21^{11}). He is not a human faculty and therefore not ante-natal, but an adjunct

[1] The substitution of 'all' for 'evil' is 'for the sake of euphony' (*Ber.* 11*b*), probably also from an aversion to terminate anything with a word of evil omen.

at birth (*Sanh.* 91*b*). He is situated at the left,[1] the other *deus ex machina*, the *yēṣer ṭôb*, being at the right (*Ta'an.* 11*a*). According to *Ber.* 61*b*, he resembles a fly,[2] and is placed between the valves of the heart. He was Divinely created for a benevolent purpose. Unless he existed, 'no man would build a house, or marry or beget children, or transact any business' (*Gen. R.* 89[7]). At the end of the world God will slay him in the presence of the righteous and wicked (*Suk.* 52*b*).

A. E. SUFFRIN.

DUELLING. — I. Under civilization. — Although early Schoolmen declared that the judicial duel was Divinely instituted when David fought Goliath (1 S 17), the point never ceased to trouble the conscience of Christendom. Invested with sanctions of the highest antiquity, the origins of the duel elude definite ascertainment as completely as do the various ordeals among the oldest peoples, of both East and West. Found in various forms, from Japan to Ireland, and from the Mediterranean to the northern latitudes, it was yet no universal practice, but mainly European 'where the hazel grew,' and its traces are scattered. The solemnities preceding the single combat of Menelaus and Paris (*Il.* iii. 38 ff.) are marked indications of ancient custom and ceremonial in Homeric times. Historic Greek examples fail, but the usage existed among the ancient Umbrians and among the Slavs (Nicolaus Damascenus [Didot, *Frag. Hist. Græcorum*, iii. 457]; Kelly, *Hist. of Russia*, London, 1878, pp. 33, 53; Lea, *Superstition and Force*[4], Philadelphia, 1892, pp. 108, 110). While the legendary battle of the Horatii and Curiatii (Livy, I. xxiv. f.) may point to an archaic practice among the Romans, the system of trial by battle has neither any tradition in the fragments of early Roman law nor any countenance from the jurists or the code. Roman civilization knew the duel as a Barbarian institution. Scipio Africanus (206 B.C.) met it in Spain (Livy, XXVIII. xxi.); it flourished among the Celtic and Germanic tribes (Velleius Paterculus, ii. 117 f.; Tacitus, *Germ.* 10); and a particular tradition, unusually circumstantial, associates it with the Burgundians, and ascribes its revival to king Gundobald (A.D. 501) as an antidote to forsworn oaths induced by Christian compurgation (*Leges Burgundionum*, tit. xlv.). Wide diversity of application and form existed; but, with the overthrow of the Empire, the duel as part of the Barbarian codes became a sort of common law of Europe, fostered by the martial traditions which were developing into feudalism and were to culminate in chivalry.

Norse sagas have many records of *hólmgang* (as the duel was called in Iceland—from the islet [*hólmr*], its customary arena) or *hazle-field* (as it is called in Norway—from the posts demarking the ground); there were champions who made it a profession; the saga of Kormak, at once poet and champion, contains regulations of battle in which there are traces of sacrificial rites or incantations. *Orrostuhólmr*, Kormak's name for the place of combat, may be compared with *eornst* or *orreste*, the term for the duel in Anglo-Saxon and early Welsh laws. Ireland knew the institution as *comrac* or *comrac fri óenfer* ('battle against one man'; cf. Joyce, *Soc. Hist. of Anc. Ireland*, London, 1903, i. 152–54). Singularly enough, the evidence for the duel in England prior to the Norman conquest has failed to satisfy the historians. Thus, while elsewhere, through the influence of Christianity, the duel was being abolished early (*e.g.* in Iceland in A.D. 1006, and in Norway in 1012), in England there is the anomaly of its not becoming an undoubtedly national mode of trial till half a century later. The Conquest certainly established it; that it was unpopular with the English is a current inference without a very solid foundation. The laws of William the Conqueror gave an accused person, whether Norman or Englishman, the option between ordeal and duel, reserving a third choice—compurgation (*q.v.*)—to the Norman. The earliest English instance recorded is dated 1077; Norman examples occur forty years earlier. In that epoch it had a very wide application, both in civil matters and in charges of crime. In character it was, by its essential feature of self-help, not really an ordeal. How elaborate was the tradition for the forms of the duel as well as for the substantial law administered by its agency, can be seen from the *Assises of Jerusalem*, drawn up by Godfrey of Bouillon in 1099 for the Latin kingdom established by the First Crusade. This ordinance is equally full and precise regarding the modes of battle, the causes and conditions, the oaths against magic, and the distinctions of rank, whereby only knights fought in mail on horseback with helm and lance, while common folk fought in jackets (*bliant*), on foot, and with batons.

Before the close of the 12th cent. the jurisdiction of the duel was considerably restricted in England by Glanvil's 'great assise,' a sort of magnified jury. The tendency expanded; gradually the duel was superseded in civil causes except land-rights; burghal charters from Henry I. to Henry III. gave numerous exemptions; and by the time of Edward I. the practice was largely confined to trials on the writ of right to land and to 'appeals' for manslaughter and serious crime. Although trial by jury grew fast, the duel was long to remain. The importance of land litigations explains the origin of the professional 'pugil,' or champion, kept sometimes at a regular retaining fee by a religious house. 'From the quhilk consuetude,' said Sir John Skene (*Exposition of Difficill Wordes*, 1597, *s.v.* 'Campiones'), 'cummis the common saying,

"Do thou richt, do thou wrang,
Cheis thou a champion strang."'

In criminal causes a kindred but more corrupt product was the 'approver,' an informer, frequently infamous, who in making his charge underwent the risk of a challenge to battle. The loser in appeals of battle, being convicted of perjury by the fact of defeat, was hanged; and there is extant a contemporary picture of an approver who thus came to the bad end he had earned (Maitland, *Select Pleas of Crown*, Selden Soc., London, 1888).

From the 9th cent. the Church was continuously denouncing the duel, and as continuously giving it countenance. The latter process took many forms, one being the acquisition of jurisdiction by ecclesiastical dignitaries over trials by combat. Perquisites of court deflected even clerical minds from the true path. Sometimes clerics themselves fought duels in person, and it was as hard to stop the practice as to keep churchmen from bearing arms in war. A Glasgow pontifical in 1180 includes the liturgical common form for blessing the shield and baton for a duel, and some saints were esteemed especially efficacious to be invoked for success in such combats. In the First Crusade,

[1] Hence his name in the *Zohar*, סִטְרָא אָחֳרָא, 'the other side,' 'sinister.'

[2] Like Ahriman in the Avesta.

Peter the Hermit himself bore a challenge for a duel of ten, six, or three crusaders against an equal number of Saracens (*Tancredi*, cap. 81). As usual, practice belied precept, and anathema was useless. Indeed, an old French authority on the duel in the 15th cent. (Olivier de La Marche, in *Traité du duel judiciaire*, ed. Prost, Paris, 1872, p. 44) declares that ecclesiastics, like other people, were bound to fight if the case was treason or involved a point of the faith. The sanctions of the duel occasioned much deep discussion. Nicolas de Lyra wrote a treatise on the classic precedent of David and Goliath; Cain and Abel admittedly furnished a less satisfactory example.

Until the end of the 13th cent. the duel was a duel of law, but in the 14th it blossomed anew as a duel of chivalry, once more emphasizing its aristocratic and military impulses. The duel, rapidly decaying in other matters, became the fashion for appeals of treason, and this newer chivalric duel took on fresh splendour, especially in the courts of England and France. An important ordinance of King Philip the Fair in 1306 was a characteristic code, containing regulations most of which passed into general use in chivalric courts. Notable editions of such duel codes were the ordinance drawn up by the Constable of England under Richard II., and the reproduction of it in the Order of Combats preserved by the Constable of Scotland from a MS belonging to James I. The formalities were evidently known to Chaucer, who reproduced them in the *Knight's Tale*.

Mere tilting matches, different as they were in principle from duels, are easily confounded with them, especially when they were 'jousts of war,' in which the combat was *à outrance*. Some of these are historic, such as the 'Combat des Trente' in 1351 between thirty Bretons and thirty Englishmen. It is the subject of a French *chanson de geste*, and its interest is the greater from its having supplied a model for the clan duel (in 1396) of thirty Highlanders of Clan Chattan against thirty of Clan Kay. Not a few fruitless challenges of 100 knights against 100 are extant, and there were many actual duels of numbers, such as of 13 Frenchmen against 13 Italians, and of 7 Frenchmen against 7 English. The duel, strictly construed as a combat of two, adjudged by and fought before a court invariably noble and usually royal, had long a distinct place, chiefly for trials on charges of treason where legal proofs were inadequate. It suited the times. Fourteenth century England devised a Court of Chivalry in which the historical importance of the duel culminates in the wager of battle between the Dukes of Hereford and Norfolk in 1398. This duel was stopped at the outset by Richard II., who arbitrarily and illegally exiled both combatants. Hereford returned from his exile next year to depose Richard and take the throne as Henry IV., and it was he who at his coronation jocularly assured his champion that he would himself see to the defence of his right to the crown. The 'champion of England' was one of the institutional inventions of English chivalry in the 14th century.

Meanwhile, alongside of chivalry the old duel of law was taking an unconscionable time to die. Law in the 13th and 14th cent. had no shudder for its brutality, and Bracton could calmly record (*de Legibus Angliæ*, ed. 1640, fol. 145) that the loss of a front tooth maimed a man and gave him an excuse from the duel, 'for such teeth help much to victory.' Pitiful records in the 15th cent. show this, gruesomely enough, to have been literal fact, for graces attendant on chivalry encountering before kings were absent when humble combatants in inferior courts mauled each other with baton or 'biscorne,' and tore each other with their teeth. One does not marvel that Pope Nicholas, in 867, had denied the Divine institution of the duel, but one does marvel that nearly seven centuries afterwards, John Major's protest, that 'God did not settle questions in that bad way,' was a mere voice in the wilderness. Yet humane opinion was ripening, and in 1549 the Council of Trent (Sess. xxv. cap. 19) denounced the duel, and decreed excommunication against all participators, even including seconds, spectators, and the lords temporal who assigned a place for a duel. The property of duellists and seconds was to be sequestrated, and they were to be delivered to the secular arm as murderers, while the funeral rites of the Church were to be denied to those who fell.[1] This denunciation had had innumerable predecessors, and was to be as little regarded, for the 'detestable use' had then entered on a new phase and was raging in Europe, as if to show that the Reformation of creed wrought little to reform humanity.

There had arisen in that new epoch the private duel, as distinguished from the duel under form of law or chivalry. Its vogue is usually ascribed to the consequences of the personal quarrel in 1528 between Francis I. of France and Charles V. of Spain. The constitutional interest of the new type was that it dispensed with the intervention of a judge or a court, and the great prevalence of this private duel for about two centuries in Europe was doubtless in part a consequence of the fashion of carrying light side-arms. Just as the two-handed sword of mediæval warfare was succeeded by the rapier, so the formal wager of battle with all its ceremonial procedure gave place to the lighter, easier form more apt for the 'sudden and quick in quarrel.' So there was bred the gauntlet-gatherer, the duellist, who inherited and developed all the pretensions of class privilege and other bad points of chivalry. Thus by additions was constructed a new code of the 'point of honour,' largely of Italian manufacture, which was a constant menace to domestic peace in Europe. The 'bons docteurs duellistes,' as Brantôme called them (*Mémoires*, p. 183), devised the pestiferous doctrine of the 'satisfaction of a gentleman,' which for three hundred years exacted a heavy toll of human life. If it fostered courage, it also fostered the bully. 'Men may account a duello,' said Bacon (*Letters and Life*, ed. Spedding, London, 1872, vi. 108), 'an honourable kind of satisfaction, yet it is but a scarlet or a grained kind of murdering.'

One stage of the duel, half-way between the old judicial combat and the new private duel, was the duel by licence, permitted in France and practised in Scotland under James VI. Later, as James I., he issued his edict against the duel in 1613, seconded by Bacon, who insisted that by the law of England the killing of a man in a duel was murder, however fair the duel might have been. Bacon saw the root of the matter in the point that the law gave no sufficient reparation for insult and libel—a consideration which weighs heavily still in estimating the place of the duel in modern Europe.

Wager of battle, dramatically resurrected in an appeal of murder in England in 1818, was repealed by statute in the following year. In all its forms, both judicial and unjudicial, the duel is now extinct in Great Britain and in the United States; in the latter for a time it was one of the most curious importations and survivals of European feudalism. Arising under military conditions, it naturally persists the longer where militarism

[1] Cf. also the unqualified condemnation of duelling by Benedict XIV. (Const. *Detestabilem*, 10 Nov. 1752), the punishment of surgeons and confessors intentionally administering to duellists (excommunication, by response of the Holy Office, 31 May 1884), and the renewed disapproval of the whole system, including even student duels, by Leo XIII. (Brief *Pastoralis officii*, 22 Sept. 1891).

is a determinant of public life. Among German students it has sunk to a rather savage athletic sport; and in Europe generally it has run, and is running, a course parallel to that of private wars—possibly prophetic of that of national wars. Its endurance is determined, not by enactment of law, but by the spirit of society. It is bound up with ideas of private revenge and family blood-feud, not with the conceptions of a State with justice as its primary function. It is instructive, therefore, to compare briefly the law in Britain and in Europe, and to diagnose certain causes of contrast. In Great Britain the duel has in general, since King James's edict, and more particularly during the last century and a half, been treated with far greater severity than was shown to it elsewhere. In this country practically alone is it now the law that to kill in duel is murder, involving the capital penalty. In almost all the rest of Europe this stringency holds only when traditional rules have been infringed, or when there has been some unfairness in the combat. Challenges, preliminary steps, and wounding in duel are, in like manner, much less heavily punished on the Continent than in Britain. On the other hand, exponents of the honour-code of Europe themselves declare that British courts make far more effective provision than Continental courts for the primary pecuniary protection for wrongs to personal honour, this scale being, for instance, contrasted with the slight reparation made in France. Bentham (*Works*, London, 1843, i. 379, 543), soberly balancing the merits and demerits of penal policies in general and 'honorary satisfaction' in special, points out the partiality, uncertainty, and inconvenience of the duel considered as a punishment, although he thought it might be proper to be indulgent to it if the alternative was revenge by poison or the bravo. Duels, he pointed out, were less common in Italy than in France and England, but poisoning and assassinations were much commoner. Like the historian Robertson, Bentham as a moralist thought that duelling tended to preserve 'politeness and peace,' and seems to have had little foresight of its swift decline. In recent times, the conditions, *e.g.* in France, often appeared to ensure immunity from injury but not from ridicule. The facts seem to justify the inference that for once British laws have doubly—by repression of the duel and by adequate civil reparation for injured honour—tended to suppress the duel and to make it unnecessary. *Frapper fort sur la bourse, c'est frapper juste* is the dictum of a modern 'docteur duelliste' (Croabbon, *op. cit. infra*, 399). In Britain the spirit of trial by jury has proved a better guardian even of honour than the sword. Perhaps it is not among the things they manage better in Germany and France that men continue, in however restricted a degree, to countenance the duel, which ranks as probably the oldest barbaric inheritance among the institutions of Europe. Probably Bentham himself did not sufficiently reflect that what had so long been abandoned by Europe as an utterly capricious and irrational mode of justice, where substantial interests were concerned, stood thereby already grotesquely out of court for the finer task, in modern civilization, of healing the sores of honour.

Significant indications of current tendencies, illustrating some of the foregoing views, have appeared in Germany, the centre of modern militarism, especially since 1897, when Kaiser Wilhelm II. issued a Cabinet order declaring his will that duels among officers should be more effectively prevented by remitting private quarrels to Councils of Honour with appeal to Courts of Honour, commanding officers, and the Kaiser himself. These Councils of Honour for a regiment consist of three officers, while the Courts of Honour comprise all the officers. This order by its terms did not prohibit duelling, but it enlarged the province of Courts of Honour. Reconciliation by intervention of such Councils and Courts, however, was, and still is, declared permissible only when not forbidden by the honour of the class to which the officer belongs or by good morals. At first hailed as an abolition of the duel, the order was soon found not to warrant any such hopes. Critics in 1897, and since, have pointed out that the Kaiser had never departed from recognition of the duel as the *ultima ratio* in affairs of honour; they bluntly stated that the so-called scandal of duelling would not be ended, that the order would entirely depend for its efficiency on the spirit of its enforcement, and that it was puerile to anticipate the eradication of so deep-rooted a practice at one stroke. Yet on the whole the order was recognized as a very considerable attempt at restriction in the army. It was subsequently made applicable also to naval officers.

The critical forecast was justified by events. Scandals continued to arise periodically over duels under painful circumstances and with fatal consequences. In 1901 sharp controversy sprang from the discovery that, in violation of an Imperial order, candidates for choice as officers in the reserve had been subjected to questions regarding their opinions on duelling, and had suffered prejudice for answers opposed to the practice. The Minister of War declared in the Reichstag that, while duels were justifiable for such cases as charges of cowardice, insult by violence, or imputation upon an officer's moral integrity or family honour, everything was done to prevent the duelling abuse. These explanations did not satisfy friends of reform, who protested that every officer punished for taking part in a duel should be dismissed from the army. Afterwards, in the same year, a manifesto was influentially signed demanding the prohibition of all duels and the institution of Courts of Honour in their stead. It was expressly urged that the best means of prevention was to afford more effective legal protection against attacks on the honour of individuals. Direct legislative action does not seem to have followed, but the agitation has served a useful purpose in elevating public opinion in Europe.

GEORGE NEILSON.

2. Among primitive peoples.—However much the duel has degenerated from its once high estate, as has just been shown, it must yet be adjudged to have been once one of the numerous forms of ordeal (*q.v.*), although still another factor plainly contributed to its rise and tenacity—the frequent failure of primitive jurisprudence to secure in any other way the ends at which it aimed. The purely religious side of the duel, which, from this point of view, is more commonly termed 'the wager of battle,' may be reserved for art. ORDEAL, but certain primitive forms of legal duels, as summarized by Post (*Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894–5, ii. 236, 351 f., 504–506), may be briefly mentioned here.

In the simplest type, as among the S. American Charruas and Botocudos, the duellists pommel each other with fists or sticks, with scant danger to life or limb, this being the case even in old Bohemian and Polish law. A more interesting form is that in which, as among the Australians, the parties strike each other alternately; and the highest is that in which deadly weapons are employed with intent to kill, as among the Californian Korusi, the Dayaks, the Bataks, the Australians, the Tunguses, the Grusinians, and in Europe generally. An interesting instance of the duel as a proof of guilt is to be found in Nias.

When a girl is found to be pregnant and the man whom she accuses denies his share in her guilt, each of the pair is given a knife, the one first wounded in the ensuing duel being adjudged in the wrong. In this case it is, moreover, interesting to see that the girl may be represented, quite as was the case in Europe, by a champion, this being in Nias one of her kinsmen. Elsewhere, where women are allowed to participate in duels (a privilege normally reserved for the male sex), their opponents may be compelled to have some handicap, as when, in old Bohemian law, they were obliged to stand in a pit dug in the ground. Elsewhere, however, as among the Slavs and Bohemians, the services of a champion were expressly forbidden, on the ground that a man really innocent might be killed.

The cycle of development of the duel would seem to be somewhat as follows: in its ultimate origin it is simply a fight, more or less serious, between two men concerning some real or fancied injury. From this point of view it is precisely like any modern fight between two men for the settlement of some difficulty between them, or even for mere revenge. But at an early time these fights become hedged about, for the welfare of society, with various restrictions; *e.g.* formal witnesses (the later 'seconds') may be required to see fair play, or certain cases alone may be settled by the duel, or certain formalities are required by the authorities before a duel may be fought. There is also doubtless present, even in the most primitive form of duel—or mere fight—the conviction, on the part of at least one of the combatants, that he has been wronged, and he feels that the victory will decide which of the two has been right. Though the methods employed are far different, the underlying principle is the same as in the most highly polished modern controversy of any sort whatever. From this feeling that 'truth is mighty, and will prevail,' comes the concept that the duel has a religious sanction, that Divine powers aid the party in the right, and that it is, indeed, an ordeal, in the technical sense of the term. On the other hand, the increasing scope of law imposes ever narrowing bounds upon the duel, and, as other modes of redress are evolved, the duel becomes more and more needless, especially as it is felt that it involves a useless waste of valuable lives, besides interfering with the majesty of the law. Thus the duel finally decays as an institution, and comes to be treated as a crime, even a challenge, except in time of war, being punished with death among the Aztecs. Yet the duel dies hard, for there lingers a persistent belief among many of fine fibre that there are wrongs for which no court of law can give redress, and it must be confessed that pecuniary damages or even imprisonment of an opponent is thin salve for wounded honour. Church and State have alike condemned the duel, and justly; yet perhaps the duellist's side of the argument should not, in fairness, be utterly ignored.

The peculiar nature of the duel from the point of view of early jurisprudence is well illustrated by its relation to the blood-feud (*q.v.*), to which a man killing another in a duel is rarely liable, this being probably due to the fact that both parties were held to be fighting in self-defence, while, where the duel was a recognized form of procedure, there would be no room for blood-feud.

The extreme degeneration of the duel is almost ludicrously illustrated by the 'nith-songs' of the Greenland Eskimo.

'When a Greenlander considers himself injured in any way by another person, he composes about him a satirical song, which he rehearses with the help of his intimates. He then challenges the offending one to a duel of song. One after another the two disputants sing at each other their wisdom, wit, and satire, supported by their partisans, until at last one is at his wits' end, when the audience, who are the jury, make known their decision. The matter is now settled for good, and the contestants must be friends again and not recall the matter which was in dispute' (Chamberlain, in *Handbook of Amer. Indians*, ii. 77 [*Bull. 30 BE*, Washington, 1910]).

Lastly, it may be noted that any attempt to trace the duel to a single people is hopeless. It had its origin in the fighting spirit of the human race, and that spirit is as universal as mankind.

DUNS SCOTUS.—See SCHOLASTICISM.

DURGĀ.—Durgā is one of the commonest names of Śiva's consort. Other names are Devī, Umā, Gaurī, Pārvatī, Chaṇḍī, Chāmuṇḍā, Kālī, Kapālinī, Bhavānī, Vijayā, etc. (for a very full list, see Dowson, *Classical Dict. of Hindu Mythol.*[4], London, 1903, *s.v.* 'Devī'). The name Durgā originally designated that goddess in her terrific character. As has been shown in art. BRĀHMANISM (vol. ii. p. 813), she is, like her husband Śiva, a combination of several deities and local varieties of similar mythological conceptions. It is, therefore, natural that she should present very different aspects.

The worship of such goddesses as ultimately were combined in, and made up, as it were, the great goddess Durgā, seems to have become more popular about the end of the Vedic period, for some of their names occur already in Vedic literature, especially in the latest works belonging to it. Ambikā is called Rudra's sister in the *Vājasaneyi Saṁhitā*, but in *Taittirīya Āraṇyaka*, x. 18, she has already become the spouse of Rudra, just as in later times. In the same work, x. 1 (p. 788 of the *Bibl. Indica* ed., Calcutta, 1864-72), we find an invocation of Durgā devī, who is there styled *Vairochanī*, daughter of the Sun or Fire; and in x. 1, 7, among verses addressed to Agni, we meet with two more names of Durgā (here called Durgī), viz. Kātyāyanī (the text has the masculine form, Kātyāyana) and Kanyakumārī.[1] Umā, daughter of Himavat, is mentioned in the *Kena Upaniṣad*, iii. 25, as a heavenly woman conversant with Brahman, on which account the commentator regards her as a personification of Brahmavidyā; but in *Taitt. Ār.* x. 18 (according to the Draviḍa text) Rudra is invoked as Umāpati, 'husband of Umā.' Kālī and Karālī, two names of Durgā, occur in the *Muṇḍaka Upaniṣad*, i. 2, 4, among the names of the seven tongues of Agni. Finally, it may be mentioned that, in Weber's opinion, there is some connexion between Durgā and Sarasvatī, since the epithets Varadā, Mahādevī, and Sandhyāvidyā, given to Sarasvatī in *Taitt. Ār.* x. 26, 30, belong, at a later period, exclusively to the consort of Śiva (cf. Muir, *Orig. Skr. Texts*, 1858-72, iv. 428 f.).

From the testimonies adduced, it seems certain that about the end of the Vedic period several goddesses had come to be acknowledged who then or later were promoted to the rank of wives of Rudra-Śiva; and that some of them may, with more or less probability, be connected with mountains and with the element of fire. They have all been blended in the one consort of Śiva, whose character obviously betrays the diversity of her origin. In her terrible aspect she seems to represent fire as the devouring and, at the same time, expiating element; and in her more benign character we seem to catch sight of a goddess of the mountains. But there were probably other goddesses or female demons, belonging to different parts of India and worshipped by different classes of people, who in the course of time were combined into one great goddess, the spouse of Śiva. Yet this coalescence of various elements in the one great goddess does not seem ever to have been complete, since a kind of consciousness of their disparity appears to have lingered in the mind of her worshippers as late as the composition of the *Devīmāhātmya* (assigned by Pargiter to the 6th or perhaps 5th cent. A.D.). In the story of her victory over Śumbha and Niśumbha, related below, Chaṇḍikā (here identified with Ambikā and Chāmuṇḍā) as well as Kālī is said to be an emanation from Durgā; through them, and not in her own

[1] From Kumārī, Cape Comorin, the southernmost point of India, is supposed to have got its name, which we find already in the *Periplus Maris Erythræi* (Κομάρ, cap. 58).

person, she performed those deeds for which she is chiefly celebrated.

This syncretistic process, begun in the Vedic period, is all but complete in the Epics, which, however, do not contain explicit accounts of Durgā's deeds. The divinity of Śiva's spouse was then generally acknowledged, and the ideas concerning her were very much the same as, though less extravagant than, in later times. What they were will best be seen from a hymn of Arjuna to Durgā in *Mahābhārata*, vi. 23, which is here transscribed (tr. Muir, iv. 432):

'Reverence to thee, Siddhasenānī [generaless of the Siddhas],[1] the noble, the dweller on Mandara, Kumārī, Kālī, Kāpālī, Kapilā, Kṛṣṇapiṅgalā. Reverence to Bhadrakālī; reverence to thee, Mahākālī; reverence to thee, Chaṇḍī, Chaṇḍā; reverence to thee, O Tāriṇī [deliveress], O Varavarṇinī [beautiful-coloured], O fortunate Kātyāyanī, O Karālī, O Vijayā, O Jayā [victory], who bearest a peacock's tail for thy banner, adorned with various jewels, armed with many spears, wielding sword and shield, younger sister of the chief of cowherds [Kṛṣṇa], eldest born in the family of the cowherd Nanda, delighting always in Mahiṣa's blood, Kauśikī, wearing yellow garments, loud-laughing, wolf-mouthed; reverence to thee, thou delighter in battle, O Umā, Śākambharī, thou white one [or Śvetā], thou black one [or Kṛṣṇā], O destroyer of Kaiṭabha. Reverence to thee, O Hiraṇyākṣī, Virūpākṣī, Dhūmrākṣī [golden-, distorted-, dark-eyed], O Vedaśruti [tradition of the Veda] most pure, devout, Jātavedasī [female Agni], who dwellest continually near to Jambū, mountain-precipices, and sepulchres. Of sciences, thou art the science of Brahman [or of the Veda], the great sleep of embodied beings, O mother of Skanda, divine Durgā, dweller in wildernesses. Thou art called Svāhā, Svadhā, Kalā, Kāṣṭhā [minute divisions of time], Sarasvatī, Sāvitrī, mother of the Vedas, and the Vedānta [or end of the Vedas]. Thou, great goddess [Mahādevī], art praised with a pure heart. By thy favour let me be ever victorious in battle. In deserts, fears, and difficulties, and in the preservation of thy devout servants, and in Pātāla, thou constantly abidest, and conquerest the Dānavas in battle. Thou art Jambhanī [destroyer], Mohinī, Māyā, Hrī, Śrī, Sandhyā, the luminous, Sāvitrī, the mother, Tuṣṭi [contentment], Puṣṭi [fatness], Dhṛti [constancy], Dīpti [light], increaser of the sun and moon, the power of the powerful in battle,—[all this] thou art seen by the *Siddhas* and *Chāraṇas* [to be].' The translator adds that in *Mahābhārata*, iv. 6, there is another hymn addressed by Yudhiṣṭhira to Durgā, very similar to the preceding. Among other things, she is there said to 'have her perpetual abode on the Vindhya mountains, and to delight in spirituous liquor, flesh, and sacrificial victims.' In the sequel, Muir quotes a remarkable line from the *Harivaṁśa* (v. 3274), according to which Durgā was worshipped by the savage tribes of Śabaras, Barbaras, and Pulindas.

We now proceed to relate the chief mythological data and the deeds of Durgā which are found in Sanskrit literature. Usually she is stated to be the daughter of Himavat (Umā Haimavatī already in the *Kena Upaniṣad*) by Menā. The latter is, according to *Rāmāyaṇa*, I. xxxv. 14, the daughter of Meru, and, according to the *Purāṇas*,[2] the mental daughter of the Manes. According to *Rāmāyaṇa*, I. xxxv. 15, Umā was the younger sister of Gaṅgā, but, according to *Harivaṁśa*, 943 ff. (where she is called Aparṇā), she was the eldest daughter of Himavat, and had two sisters, Ekaparṇā and Ekapāṭalā, wives of Jaigīṣavya and Asita Devala respectively. Sometimes, however, Durgā is addressed as sister of Viṣṇu[3] and of Indra,[4] whence she is said to be called Kauśikī. Her epithet *Vairochanī*, in *Taitt. Ār.* x. 1. 7, seems to make her a daughter of the Sun or perhaps of Fire, while the epithet Gautamī would connect her with one of the seven Ṛṣis. Some of these statements were perhaps prompted by a desire on the part of the worshippers of Śiva to provide their supreme and primeval god with a consort of more equal rank than belonged to a daughter of the Himālaya. Such a tendency almost certainly gave rise to the Paurāṇic story that Śiva's wife originally was Satī, daughter of Dakṣa, the creator, and that in her wrath she abandoned her bodily existence through *yoga*, when Dakṣa slighted her husband by not inviting him to his sacrifice.[1] For this accident is not yet alluded to in the earliest account of Dakṣa's sacrifice in *Mahābhārata*, xii. 284, where Śiva's wife is called Devī and Umā.

The story of Umā's marriage with Śiva forms the subject of Kālidāsa's famous poem, *Kumārasambhava*.[2] The gods, defeated by the Asura Tāraka, consulted Brahmā; he predicted that Śiva's son by Umā, who was not yet betrothed to him, would vanquish their enemy. In order to cause Śiva, who was practising austerities on the Himālaya, to fall in love with Umā, Indra dispatched Manmatha, the god of love, to the spot, where just then the beautiful daughter of the Himālaya, Śiva's host, was offering flowers to the divine ascetic. Manmatha drew his bow at him, and detached his mind from contemplation. Śiva waxed wroth, and reduced the god of love to ashes; but afterwards he was moved by Umā's constancy as she submitted to the severest austerities in order to win him, and wooed her. The product of their love was Kumāra, who on his birthday killed the Asura.[3] It may be added that the Paurāṇic etymology of Umā is based on this story: when she engaged in austerities, her mother dissuaded her from this course, saying, *u mā*, 'no, no.'

Another son of Durgā is Gaṇeśa, the god with the elephantine head. His miraculous birth has been related in art. BRĀHMANISM.[4]

The most famous deeds of Durgā are her victories over several Asuras; they form the subject of the *Devīmāhātmya*, an episode of the *Mārkaṇdeya Purāṇa*,[5] which has become the text-book of her worshippers. In this work Durgā is said to have been formed, under the name Chaṇḍikā, by the combined energies of the gods, which they put forth in their wrath when the Asura Mahiṣa had vanquished the gods, and had set himself up as the Indra of the heavenly dominions. The goddess did battle with the host of Asuras, and killed them wholesale. Then ensued a single combat between Chaṇḍikā and Mahiṣāsura, who assumed many forms, especially his buffalo shape, from which he derived his name. At last Chaṇḍikā stood on the demon, and cut off his head; but out of the trunk grew the Asura in his natural shape, and then he was killed by the goddess. It is in this act of dealing the last blow to the Asura who comes out of the beheaded buffalo that Durgā is usually represented in Indian art, not only in numberless pictures and sculptures, but also in poetry; for the great poet Bāṇa, who lived in the 7th cent. A.D., describes this scene in nearly every verse of his *Chaṇḍīśataka*, a hymn to that goddess (ed. Durgāprasāda and Parab[2], Bombay, 1899; a new ed. and tr. forthcoming by G. Payn Quackenbos, in the Columbia University Indo-Iranian Series).

Besides the killing of Mahiṣāsura, the *Devīmāhātmya* celebrates the victory of Chaṇḍikā over the Asuras Śumbha and Niśumbha. These two demons had routed the gods, and had usurped the government of the three worlds. The gods implored the aid of Pārvatī, who had come to bathe in the water of the Gaṅgā; from her body issued another goddess who is called Ambikā or Chaṇḍikā. Now, it happened that Chaṇḍa and Muṇḍa, two servants of Śumbha and Niśumbha, had seen this goddess, and had been struck by her beauty. They, therefore, advised Śumbha to take her as his wife,

[1] The form in the original is *siddhasenānī*, not *siddhasenānīḥ*, 'generaless of the Siddhas,' the interpretation given by Muir, following Nīlakaṇṭha. The name might be explained as 'wife of Siddhasena'; Siddhasena, however, is a name of Kumāra, not of Śiva.

[2] The same story is also told in the *Śiva Purāṇa* and the Śivarahasya of the *Skanda Purāṇa*. For references, see *ZDMG* xxvii. (1873) 178 ff.

[3] See *ERE* ii. 807.

[4] It may be added here that Gaṇeśa is first mentioned in *Taitt. Ār.* x. 1, 5, where a *mantra* is addressed to him under the name Danti. Cf. also art. GANAPATYAS.

[5] Eng. tr. by Eden Pargiter, *Bibl. Ind.*, 1904.

upon which the latter sent a messenger to invite her to marry him. She consented, on condition that he should vanquish her. Thereupon Śumbha sent Dhūmralochana with a host of Asuras to seize her; but she destroyed them all. Then Chaṇḍa and Muṇḍa were dispatched with another army. When Ambikā saw them, she waxed exceedingly wroth, so that from her forehead issued a terrible goddess Kālī, of emaciated body, clad in a tiger's skin, with a garland of skulls hanging from her neck, and her tongue lolling out from her wide mouth. After a frightful battle, she killed both Chaṇḍa and Muṇḍa, from which feat she received the name Chāmuṇḍā.[1] Now Śumbha himself, at the head of an enormous army of Asuras, went to meet Ambikā, on whose side fought the energies of all gods, which had taken bodily form. Among the Asuras was Raktabīja; when a drop of his blood fell on the ground, it was at once changed into an Asura of his form. Thus innumerable Asuras soon came into existence, and increased the army of the enemies of the gods. Chaṇḍikā then ordered Chāmuṇḍā to drink up the blood of Raktabīja before it fell to the ground, and at last killed the exhausted and bloodless Asura. Now Niśumbha attacked the goddess, while her lion caused great havoc in the army of the demons. The battle was terrible, but at last Niśumbha fell, and Śumbha also was killed by Chaṇḍikā.

There is yet another form of Durgā as Yoganidrā or Nidrā Kālarūpinī, which connects her worship with that of Viṣṇu-Kṛṣṇa, and is apparently intended to bring it under the protection and patronage of Viṣṇu.[2]

In the *Harivaṁśa*, 3236 ff., it is related by Vaiśampāyana that, with the view of defeating the designs of Kaṁsa in regard to the destruction of Devakī's offspring, Viṣṇu descended into Pātāla, where he sought the aid of Nidrā Kālarūpiṇī [Sleep in the form of Time]; and promised her in return that through his favour she should be a goddess adored in all the world. He desired her to be born as the ninth child of Yaśodā on the same night on which he was to be born as the eighth child of Devakī, when he would be carried to Yaśodā, and she to Devakī. He told her that she would be taken by the foot, and cast upon a rock, but would then obtain an eternal place in the sky, becoming assimilated to himself in glory; would be installed by Indra among the gods, received by him as his sister under the name of Kauśikī, and would obtain from him (Indra) a perpetual abode on the Vindhya mountains where, thinking upon him (Viṣṇu), she would kill the two demons, Śumbha and Niśumbha, and would be worshipped with animal sacrifices.[3]

The same story is told in several *Purāṇas*, e.g. in the *Viṣṇu Purāṇa*, v. 1 (tr. Wilson, iv. 260 ff.).

In another myth the goddess is made to share the glory of Viṣṇu.[4] When this god, at the end of the *kalpa*, 'wooed the sleep of contemplation' on the universal ocean, the two demons, Madhu and Kaiṭabha, approached him, with the intention of killing Brahmā, who stood on the lotus that grew out of the navel of Viṣṇu; but the latter cut them asunder with his discus. The part played by Yoganidrā in this transaction was this: that she left Viṣṇu's eyes on being invoked by Brahmā; thus the god was awakened, and could slay the demons. In the hymn quoted above from the *Mahābhārata* she is styled 'destroyer of Kaiṭabha,' which seems to attribute the victory entirely to her.

From the quotations given above, it is evident that in the period of the Epics, probably towards the end, the worship of Durgā was already firmly established; and that it was further developed in the time of the *Harivaṁśa* and the *Purāṇas*. But it is in another branch of later Sanskrit literature, the *Tantras*, that her worship is at its height. The *Tantras*, says Wilson,[5]

'always assume the form of a dialogue between Śiva and his bride, in one of her many forms, but mostly as Umā and Pārvatī, in which the goddess questions the god as to the mode of performing various ceremonies, and the prayers and incantations to be used in them.'

They furnish the rites and formulæ in a new form of worship, which has largely superseded the older one based on the Veda.

There was yet another cause at work to give the worship of Durgā its present form, viz. the theory of *śakti*. *Śakti* is the energy of a god, especially of Viṣṇu and Śiva; it is personified as his female partner, and is identified with the *prakṛti* of Sāṅkhya philosophy, whereby a mystical and speculative foundation is given to the *śakti*-theory, which is already taught in several *Purāṇas*. By far the most popular *śakti* is that of Śiva as Pārvatī, Bhavānī, or Durgā; and the majority of the Śāktas, or followers of these doctrines, worship this goddess.

We have seen above that already, in the *Mahābhārata*, Durgā is said to delight in spirituous liquor, flesh, and sacrificial victims. These have always been characteristic of the worship of Durgā.

'In Bengal,' says Colebrooke,[1] 'and the contiguous provinces, thousands of kids and buffalo calves are sacrificed before the idol, at every celebrated temple; and opulent persons make a similar destruction of animals at their private chapels. The sect which has adopted this system is prevalent in Bengal,[2] and in many other provinces of India. . . . But the practice is not approved by other sects of Hindus.'

Even human sacrifices were offered to the goddess in some places. Bāṇa (7th cent.), in a lengthy description of a temple of Chaṇḍikā,[3] alludes to human sacrifices; Bhavabhūti (8th cent.) introduces, in the 5th act of his play, *Mālatī and Mādhavā*, a temple of Chāmuṇḍā and her votaries, who try to sacrifice a human victim; in the *Samarāichcha Kahā*, by Haribhadra (9th cent.), a temple of Chaṇḍikā and the offering of a human sacrifice by Śabaras are described (p. 435 ff., *Bibl. Ind.* ed.); in the *Kālikā Purāṇa*, 'minute directions are given for the offering of a human victim to Kālī, whom it is said his blood satisfies for a thousand years.[4]

Finally, mention must be made of the most degraded worship of Durgā and other *śaktis* by the Vāmis, or 'left hand' worshippers; in it debauchery and gross immorality are admitted, so that the worship is perverted into a most scandalous orgy.[5]

LITERATURE.—This has been sufficiently indicated in the article.

HERMANN JACOBI.

DUTY.—If taken in a wide sense, the notion of duty is essentially implied in every system of morality and every ethical theory. For all morality and all ethics turn upon the contrast between the inclinations of the individual and some objective and authoritative standard to which these inclinations must be subordinated; and it is just this objective control that is emphasized in the notion of duty. Duty comes to us with a claim; it is a thing laid upon us to do whether we like it or not. But, although the element of objective authority is necessarily implied in every moral standard, the notion of duty is far less prominent and exclusive in some systems of morality than in others; and, of course, is also far less distinctly abstracted and analyzed, and occupies a far less fundamental place, in some types of ethical theory than in others.

1. In Greek ethics, for instance, the moral life is, for the most part, presented as a good to be realized or a type of virtue or excellence to be attained. Man's good or true happiness, the health of the soul, is shown to lie in the life of virtue, the performance of the work or function which his own nature and the part he has to play in the general life of the community mark out for him. To see

[1] This name occurs first here and in the *Mālatīmādhava*, and a *rākṣasā* named Chāuṇḍa appears in *Pauma*, v. 263.

in this life of virtue his real happiness or good is man's true wisdom, whereas the scepticism which sees in it only a burden and a restraint imposed for the advantage of others is short-sighted folly. The restraints of the virtuous life are only the restraints which any man must exercise who would be master of himself and would live a truly human life among his fellows. So long as this mode of presenting the moral life prevailed, the element of duty was completely absorbed into, and subordinated to, the thought of good or achievement. A man must be courageous, temperate, and just, because in no other way can he achieve his good or true happiness.

It was only when, in *Stoicism*, this good was conceived to be determined by, and to be realized in obeying, a cosmical law of universal reason that the notion of duty emerged into a new distinctness and prominence. Not that the Stoics could not, or did not, use the same general formulæ as the older schools had done. The change, apart from details, is rather one in the whole philosophical atmosphere. The same formulæ might be used, but they were used with a different meaning. Everything was coloured by the pantheistic necessity of the Stoic system. The life which it behoved the good or wise man to lead was one determined for him by the law or reason of the universe, which prescribed to man his place in the system of things and the duties pertaining to that place. It was for man to recognize the place and duties assigned to him, and thus consciously to live in accordance with nature, or the immanent reason of the universe. Hence the notion of duty entered into the Stoic system in a double sense, expressed by the two terms *καθῆκον* and *κατόρθωμα*. The former term was applied to right actions regarded simply as fitting or prescribed by nature, the latter to the same actions when consciously done for this reason by the good or wise man;[1] hence only an action which deserved the latter epithet was completely good or virtuous.

2. Thus it was when morality came to be regarded mainly in the light of conformity to a law that the notion of duty became prominent. The Stoic law of nature, however, was also a law of reason, which the same reason in man enabled him to recognize. And this conception of the law of nature, as the law which reason affirms, continued even after the law of nature had come to be, in a manner, identified with positive law in the shape of the *jus gentium*, or equity of Roman jurisprudence. Now, Christianity, like Stoicism, represented morality in the light of obedience to a law, but the Christian law was the revealed commandments of God—not a law which man's reason had to discover, but one which was given to man by Divine revelation, and had simply to be obeyed. Hence the strictly authoritative aspect of duty stands out much more prominently in Christian than in Stoic morality. Of course, it did not follow that, because the Moral Law was thus authoritative, it was in any sense arbitrary; this mistaken inference was a product of later reflexion. The natural assumption was that, being God's law, it could not but be a wise and good law. But the law was to be obeyed by man because it was laid upon him by God, not because man himself saw his good or true happiness to consist in obedience to such a law. Man's eternal welfare—his entrance into the Kingdom of God, as the primitive Christians would have said—was bound up with his obedience to God's law, but so bound by God's own ordinance, not by any sort of connexion which man's own reason discovered to him.

Now, this kind of separation between duty and good, this reference of the connexion between them to a hidden Divine source, remains characteristic of the Christian morality and ethics throughout, whereas it was quite absent from Stoicism. The Stoic, in fact, simply identified the good or happiness with the virtuous life. Christianity makes the former depend upon and involve the latter, but does not identify them; it rather represents man's eternal good or happiness as the Divine seal or reward of obedience to God's commandments. In this sense, then, the performance of duty remains, on the Christian view, always a matter of obedience rather than of insight; the *good* of obedience is not our concern. On the other hand, as regards the actual contents of the law which is to be obeyed and the mere rightness of obeying it, the tendency of the more philosophical expositions of Christian ethics has usually been to assert that man's own reason or conscience not merely assents to, but itself also affirms, the fundamental precepts of revealed morality. That is to say, God has not only revealed the Moral Law by express commandment, but has also implanted it in man's conscience, or made him capable of discovering it by the due use of his natural reason. Revelation only reinforces or amplifies the dictates of conscience or the natural reason.[1] On this view, therefore, the authority of duty is by no means a matter of merely external command; it is no less a matter of internal perception and recognition. We see the rules of duty to be in themselves right, or such as we ought to obey (Intuitionism) without needing to know wherein the good of obedience consists; conscience has an intrinsic authority which makes itself immediately felt. The coarser expositions of Christian ethics, on the other hand, have tended to represent the rules of duty, even when it was acknowledged that they may be *known* by the light of nature, as depending for their *authority* on rewards and punishments (*e.g.* Paley). The same tendency in secular ethics leads to the representation of morality as good policy, and seeks to back up the claims of duty by an appeal to the enlightened self-interest, or at best to the finer sensibilities, of the individual. The prevalence of this type of ethics in the 18th cent. partly accounts, by way of reaction, for the severity of the classical exposition of the conception of duty which we owe to Kant.

3. **Kant.**—The rigid distinction, with which Kant's exposition opens, between action done from duty and action done from inclination is one which, no doubt, lends itself to such caricatures as that drawn in Schiller's well-known lines, but it was really necessary for Kant's purpose. This was—to make absolutely clear the objectivity of duty. What is right is right whether we like it or not, and, were it not that the right thus stands out as something objective and authoritative over against our private inclinations, the notion of duty would have no meaning. Morality does not begin to exist until this contrast is felt and takes effect. As Kant puts it, an action has no moral worth unless it is done from duty, *i.e.* in the consciousness of its rightness. Paradoxical as this proposition has often been found—for good actions surely are often done without any thought of duty—it is, from the point of view of Kant's analysis, a truism. An action that expresses nothing but the present inclination of the agent tells us nothing about his character. What he does from inclination to-day, he may likewise from inclination refuse to do to-morrow. The commands of duty do not wait upon

[1] These terms were also used, however, to express a distinction between absolute and conditional duty (see Zeller, *Stoics*, Eng. tr., pp. 287-290, and notes).

[1] So, *e.g.*, Butler, *Analogy*, pt. ii. ch. i. The conception of a law written in the heart and conscience is already present in St. Paul (Ro 2[15]), who may owe it indirectly to the diffused influence of Stoical ideas.

our inclinations, or strike a bargain with us; the imperative of duty, in Kant's terminology, is a Categorical Imperative.

Some other features of Kant's ethical doctrine which are closely connected with his analysis of the notion of duty may be noted. (1) He regards the Moral Law, or Categorical Imperative of duty, as a formal law, that is to say, as a law which prescribes the spirit in which actions are to be done rather than the objects at which they are to aim, or, at any rate, prescribes the latter no further than is involved in prescribing the former. (2) He regards the conception of the Moral Law as the first and fundamental conception of ethical theory, and that of the good as subsequent to and dependent upon it; in fact, the good is for him, one might say, a religious rather than a strictly ethical conception. From all this it is evident that Kant was not far wrong in supposing himself entitled to look upon his ethical theory as a philosophical version of the Christian morality. (3) He lays great stress upon what he calls the 'autonomy of the will,' *i.e.* the necessity that we should be able to see in the command of morality, not a foreign compulsion, but that self-constraint of our own spiritual nature which is our true freedom. And this conception, again, if less directly related to the ethics of the Gospels, is closely parallel to St. Paul's conception of Christian freedom.

4. The one kind of ethical problem which interested Kant was to find an abstract formula or expression for the moral consciousness, and to determine what were the ultimate conditions involved in this formula. The genetic inquiries, psychological and sociological, which have become so prominent in our time were beyond his horizon. It is not surprising, then, that one of the facts about duty which are most obvious to the present-day moralist, viz. its social origin and basis, does not figure with quite the same kind of prominence in Kant's abstract analysis of the conception. What Kant is concerned to show is that the consciousness of duty is the consciousness of an objective law of conduct, which is, of course, a social law, because it is equally binding upon all men, and pays no regard to the private inclinations or selfish interests of individuals. It does not enter into the scope of his inquiries, however, to ask how this consciousness of a law of conduct grew up, what forces maintain such a law in its actual power over men's minds and actions, and how the individual is brought to a consciousness of his duty to observe it. And it is from the point of view of these questions that an appeal to 'the social factor' becomes so obvious and indispensable. Whatever capacities we may suppose the child needs to be endowed with, in order that he may develop a moral consciousness, it is at all events clear that this consciousness is actually developed by means of the constant commands and instructions of his elders, backed up by punishments and other milder forms of suasion. The sense of duty is, to this extent, at any rate, and so far as the individual is concerned, a product of the social factor. Nor is it less clear that the rules of duty depend, to a very considerable extent, for their actual efficacy over men's minds and actions, on the pressure of law and social opinion. The good man, of course, will need this pressure less than others, but every man is made to feel that society expects from him the performance of certain duties, and resents any conspicuous failure to perform them. It is, further, clear enough that the particular requirements of duty, so far as they have varied from age to age and from people to people, have depended on the historical conditions of social progress, while, so far as in other and more fundamental respects they have remained constant, they have depended on the essential conditions of all social life; so that the requirements of duty have an unquestionable relation to some kind of social utility, if we use this term in a sufficiently wide sense. And, finally, an attempt has been made to show that the very existence and origin of a moral consciousness or sense of duty in the race can be traced, along similar lines, to the operation of the social factor.

One of the best known of these attempts is that of Herbert Spencer, which traces the origin of the sense of duty in large measure to primitive man's experiences of fear of the vengeance of his fellow-savages, his chief, and his gods. This, however, is to invoke the social factor in a rather inadequate form, for we are not really shown how such a fear of the vengeance either of particular individuals or even of unseen powers can generate any sense of duty properly so called. To recognize that we are likely to suffer for doing an action is not just the same as, however closely connected it may be with, recognizing that the action itself is wrong. Referring the sense of duty in this too easy way to the experience of external coercion, Spencer was led to his 'very startling' conclusion, that 'with complete adaptation to the social state'—that is to say, in the future golden age when man will spontaneously do actions that benefit himself without injuring his neighbour, or, still better, actions that benefit both, and will never feel inclined to do any actions that would injure others and so call forth coercion—'the sense of duty . . . will diminish as fast as moralization increases,' and will eventually disappear altogether (*Data of Ethics*, § 46). This paradise of evolution, it need hardly be said, has as little relation to scientific ethics as the paradises of mythology have to scientific history. But the imperfections of Spencer's social psychology and the extravagances of his prophetic ardour do not affect the genuineness of the problem of origins which he endeavoured to solve, or the right of scientific thought to look for a solution of it in some such direction as he took.

5. It makes a great difference whether we take, on the one hand, the objective, social, and historical point of view appropriate to the inquiries just outlined, or, on the other, the point of view of Kant's abstract analysis of the moral consciousness of the individual. Statements which are significant and even obvious from the one point of view become paradoxical or untenable from the other. When we regard duty from the point of view of social expectation, it is evident that there is a more or less definite sum of duties to be performed by any person, a certain minimum requirement the performance of which is sufficient for social respectability. And in this sense it is perfectly possible, not merely to do one's duty, but to go beyond it. We call Grace Darling a heroine because she did more than we could possibly have said it was her duty to do. There are, in fact, 'counsels of perfection' which the average person is not obliged to follow. From the Kantian point of view, on the other hand, this naturally appears to be a pernicious doctrine, and Kant is never tired of inveighing against the 'moral fanaticism and exaggerated self-conceit that is infused into the mind by exhortation to actions as noble, sublime, and magnanimous,' as if the actions could be done 'as pure merit, and not from duty' (*Critique of Practical Reason*, bk. i. ch. iii., Abbott's tr. p. 178). If Grace Darling's conscience laid it upon her to undertake her perilous task, then for her it *was* duty, from which it would have been cowardly and wrong to shrink. Yet we may safely assume that the moral judgment of 'common sense' would not have accused her of wrongdoing if she had shrunk from the attempt, and

would even have regarded remorse for such a shrinking as fantastic and overstrained.

6. When the various duties are regarded in an objective way, it is natural to seek for some kind of classification of them in order to make a systematic survey of the field. But it is difficult or impossible to find any quite satisfactory *scheme of division*. Perhaps the most common and obvious division is that between self-regarding and social duties. But, unless we understand very clearly what we are about in using it, it may easily involve us in somewhat gross confusion and error. Both terms used in the division are treacherous. The term 'self-regarding duties' is apt to be taken in the sense of duties to oneself, and this was, in fact, one of the heads under which duties were ranged in the threefold scheme favoured by the older moralists, viz. duties to oneself, to one's neighbours, and to God. But it is evident that, in any sense in which we can owe it to ourselves to perform some of our duties, we owe it to ourselves to perform them all; while, in the more literal sense, in which a debt or obligation is owed from A to B and involves *two* parties, we cannot properly be said to owe any one of our duties to *ourselves*. The term 'social duties,' again, is apt to suggest that there are other duties which are non-social or concern only the individual, and we may even be led to infer, with J. S. Mill, that 'the only part of the conduct of any one for which he is amenable to society is that which concerns others,' while 'in the part which merely concerns himself, his independence is, of right, absolute' (*Liberty*, People's ed. 1865, p. 6[a]). But such a view is really contrary to the actual tenor of our moral judgments, which condemn, and assert a right to condemn, extravagance, and drunkenness, and idleness in themselves, without waiting to see their directly or indirectly harmful consequences for other persons than the agent. Moreover, it assumes a discrimination between injury to self and injury to others, which, in the case of habits so important as the moral habits, cannot really be made. The spendthrift, drunkard, and idler are inefficient members of society, and as such cannot but do social harm which is much more than 'contingent' or 'constructive.' And, finally, any supposed right to an *absolute independence*, however limited, on the part of the individual is contradicted by the very meaning of a right, which, of course, implies social recognition and social value. But, in spite of the misunderstandings to which the division into self-regarding and other-regarding duties is exposed, it does point to a palpable enough distinction between the objects or spheres of the respective duties. We can practise the duty of temperance by ourselves; the duty of truth-speaking can be practised only in relation to others. This distinction—between what we might call immanent and transeunt duties—is clearly valid enough; but it is not a distinction in the source or basis of the obligation. The performance of both duties alike is owed (metaphorically) to ourselves and (literally) to the moral community of which we are members. The duties which are practised in relation to others may be subdivided into those which are of a more general kind, such as veracity or promise-keeping or honesty, and those which depend upon some more specific relationship or institution, such as parental or filial duty, which depends on relationship within the family. (The distinction between duties of strict or perfect, and duties of imperfect, obligation can hardly be regarded as a distinction of principle, except in so far as it is identified with the distinction of legal obligation and moral duty.)

7. When they are thus classified from the objective point of view, we can hardly deny the possibility of a real conflict between duties. The individual, of course, can do only one thing at a time, and, in face of warring claims, has for his one duty to make the best he can of the situation before him. What this best will be must clearly depend on the particular nature of the situation in question, and, therefore, no general solution of the problem of the conflict of duties is possible. But not merely is no *general* solution possible. When we look at the conflict of duties from the objective point of view, we have no right to assume that every such problem is capable even of a *particular* solution, at all events of one which will be final and complete. From the fact that the individual has to satisfy the claims upon him as best he can, *i.e.* has to find out what is the solution of the problem *for him*, it does not by any means follow that he can reconcile the rival claims completely, or can find a solution of the problem *which will satisfy them*. The problems of conduct are practical problems, and we have no right to assume *a priori* that any practical problem can be solved without remainder.

LITERATURE.—W. Wallace's *Natural Theology and Ethics*, Oxford, 1898, contains a characteristic general essay on 'Duty.' As specimens of the treatment of Duty in the textbooks the following may suffice: Dewey-Tufts, *Ethics* (London, 1908), ch. xvii.; F. Paulsen, *System of Ethics* (Eng. tr., London, 1899), bk. ii. ch. v. For the Stoic conception, see E. Zeller's *Stoics, Epicureans, and Sceptics* (Eng. tr., London, 1892), pt. ii. chs. x. and xi. For a comparison of Stoic and Christian ideas, see E. Hatch's *Hibbert Lectures* of 1888 on *The Influence of Greek Ideas and Usages upon the Christian Church* (5th ed., London, 1895), Lect. vi. Kant's analysis of the conception of Duty is contained in the First Section of his *Grundlegung zur Metaphysik der Sitten*, along with which work must be used *Kritik der praktischen Vernunft* (both translated in T. K. Abbott's *Kant's Theory of Ethics*[3], London, 1879). With Kant's own exposition may be compared pt. i. of the *Ethik*[2] (in *Grundriss d. theol. Wissenschaften* series, Tübingen, 1901) by W. Herrmann. For a representative account of the sense of Duty as a product of social influences see Bain's *Emotion and Will* (London, 1859), ch. x. § 7 ff. H. Spencer's account is given in *Data of Ethics*, London, 1879, §§ 44–46. T. H. Green's *Prolegomena to Ethics*, Oxford, 1883 ([3]1890), bk. iv. ch. ii., deals with the question of conflict of duties.

HENRY BARKER.

DWARFS AND PYGMIES.—These terms are nowadays interchangeable in the diction of ethnology,[1] and are indifferently applied to those undersized races which exist, or have existed, in various parts of the world. In addition to tribes or nations of dwarfs, there are also small-statured individuals, occurring sporadically among the taller races, who may fitly be styled dwarfs. Their low stature is often attributable, however, to morbid physical conditions; although it might be regarded, in the case of healthy persons, as an inheritance from a line of ancestors of dwarfish type. The present inquiry is limited to those who are indubitably dwarfs by race.

In the Teutonic languages, the word 'dwarf' can be traced back for at least twelve centuries, appearing under such forms as O.N. *dvergr*, Anglo-Sax. *dweorh*, O.H.G. *twerg*, Germ. *Zwerg*. It occurs also in Gaelic as *droich* and *troich*, but these are probably borrowed from Teutonic sources. The other Gaelic synonyms, *e.g.* O.Ir. *abacc*, have quite a different etymology, as have also the Cymric terms, *e.g.* Welsh *pegor*. The word 'pygmy' is recognized at much earlier dates, being derived from the Gr. *pygmē*, a measure of length from the elbow to the knuckle or fist (πυγμή)—13½ inches. Similar in connotation is the O.Pruss. *parstuck*, etymologically connected with Lith. *pirsztas*, 'finger'; and a like idea may be present in Lat. *pumilio* (cf. Walde, *Etymolog. Wörterb. der lat. Sprache*[2], Heidelberg, 1910, p. 625), while Lat. *pusilio* is a formation from *pusus*, 'boy.' In Gr. νάννος, Lat. *nanus* (whence Fr. *nain*, etc.), a 'Lallname' is present (cf. Gr. νάννη, 'auntie'). The Balto-Slavic group, represented by Russ. *karla*, Lith. *karlà*, is doubtless borrowed from O.H.G. *karal*, 'man' (cf. Eng. *churl*). Cf., further, Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, pp. 1000–1002.

The fact that the term 'pygmy' was originally held to denote a people of the preposterously small stature of 13½ inches renders that term not so acceptable as 'dwarf' in any serious discussion.

[1] The present art. deals with the subject mainly from the anthropological side. A fuller treatment of dwarfs in folk-belief will be found in the 'Teutonic' and 'Slavic' sections of art. DEMONS AND SPIRITS, and in the art. FAIRY.

It is to be noted, however, that 'pygmy' has now lost its first meaning, and merely denotes the members of a race visibly below the stature of the ordinary races of man. Windle, who has made a careful study of the facts relating to these people, allows a somewhat high level as the upward limit, laying down the definition that 'any race in which the average male stature does not exceed 4 feet 9 inches may fairly be described as pygmy' (Introd. to Tyson's *Pygmies*, reprint of 1894, London). This is the height of the West African Obongos of the Gaboon region, described fifty years ago by Paul du Chaillu, and quite recently by Poutrin (*L'Anthropologie*, 1910, pp. 435–504), who places the average stature of the men at 4 ft. 8 in. (1·43 m.), and of the women at 4 ft. 6 in. (1·37 m.). This indicates a much taller race than the Akkas encountered by Sir H. M. Stanley, who estimated their adult height at from 3 ft. to 4 ft. 6 in. (*In Darkest Africa*, London, 1890, ii. 92). A. B. Lloyd (*In Dwarf Land*, London, 1899, pp. 310, 323) gives a similar report of those whom he met. Even lower is the statnre of a race, presumably Eskimo, inhabiting the north-western shores of Hndson's Bay in the 17th cent., for Captain Foxe records (1631) the finding of a native cemetery in that region in which the longest corpse did not exceed 4 feet.[1] Windle (*op. cit.* p. xxxiii) cites the case of a Bushman woman, the mother of several children, who was only 3 ft. 8 in., while another woman of her race measured 3 ft. 3 inches.

The distribution of dwarf races seems to have been at one time world-wide; but at the present day they are found chiefly in the equatorial regions of Africa and Malaysia. Classic writers, such as Pliny, Pomponius Mela, Aristotle, Ctesias, Herodotus, and Homer, make several references to African pygmies, and they also figure prominently in the records of Ancient Egypt. The most important of the tombs at Assuan explored by E. A. W. Budge is that of a provincial governor, Her-Kheef, who lived in the reign of Pepi, in the VIth dynasty (*c.* 3300 B.C.), and who was sent on an expedition to the Sudan to bring back a dwarf for the king. Brugsch (*Hungersnoth*, Leipzig, 1891, p. 141) cites an inscription at Karnak, belonging to the Ptolemaic epoch,—the three centuries before Christ,—which states that 'the dwarfs of the southern countries come to him [the reigning Ptolemy], bringing their tribntes to his treasury.' Ed. Naville, in his account of the festival-hall of Osorkon II. in the great temple of Bubastis (*10 EEFM*, 1892, p. 30), refers to a picture which seems to show that racial dwarfs were specially selected as the vergers of the temple. A very interesting and suggestive comparison between the pygmies of the classic writers and existing dwarf races has been made by Paul Monceaux in his treatise on 'La Légende des pygmées et les nains de l'Afrique équatoriale' (*Revue Historique*, xlvii. [1891] 1–64), the inference drawn being that the pygmies of the Greek and Roman writers, sculptors, and painters are memories of actual dwarfs seen by their forefathers in Africa and India. He further points to the resemblance between the modern Akkas of Africa and the dwarfs portrayed at Pompeii, Rhodes, and Cyprus, and to the 'Patakas' placed as figure-heads on Phœnician ships. The supposition that the Jews as well as the Egyptians were acquainted with dwarf races underlies more than one tr. of the term *Gammādîm* which occurs in Ezk 27[11]. In the Vulgate this term is rendered by *Pygmæi*, in Aquila by πυγμαῖοι, and the 'Bishops' Bible' of 1572 and 1575 translates it as 'Pygmenians.' The reason for this identification of 'Gammadim' with dwarfs appears to be so far unexplained, though it may well be due to folk-etymology with *gōmed*, 'cubit' (Jg 3[16]). (For other interpretations, see *HDB* and *EBi*, art. 'Gammadim.') According to the later Jewish *Gen. Rabba* (xxxvii. 5), the Caphtorim of Gn 10[14] were dwarfs, and in Rabbinical literature Nebuchadnezzar is often called 'the dwarf of Babel,' or 'the little one-ell dwarf' (with reference to Dn 4[17]; for further data, see Kohler, in *JE* v. 22 f.).

One of the earliest modern descriptions of African pygmies is that given in 1625 (see *Purchas his Pilgrimes*) by Andrew Battel, an English sailor who had spent nearly eighteen years in the Congo region; and they have been subsequently described by many travellers. Those living on the eastern border of the Congo State are distinguished by their long, shaggy beards and hirsute skins. E. S. Grogan, who encountered many of these pygmies in 1898, in the volcanic region of Mnshari, near Lake Kivu, thus pictures one of them:

'He was a typical pygmy as found on the volcanoes—squat, gnarled, proud, and easy of carriage. His beard hung down over his chest, and his thighs and chest were covered with wiry hair. He carried the usual pygmy bow made of two pieces of cane spliced together with grass, and with a string made of a single strand of a rush that grows in the forests' (*From the Cape to Cairo*, London, 1900, p. 194).

The same writer speaks of their amazing swiftness of foot, and of their 'combination of immense strength necessary for the precarious hunting life they lead, and of compactness, indispensable to rapid movements in dense forest' (*op. cit.* p. 178). According to Sir H. Johnston (*The Uganda Protectorate*, London, 1902, pp. 473, 513, 530), the Congo pygmies are often very ape-like in appearance, this effect being, no doubt, partly produced by their hairy skins, their long arms, the strength of their thick-set frames, their furtive ways, and the rapidity with which they move among the branches of the forest trees.

A. B. Lloyd actually mistook his first pygmy for a monkey, and was about to shoot him as such when his native guide arrested his arm. The dwarf was perched high up in a lofty tree in the equatorial forest; and, when he saw he was observed, he swung himself from branch to branch with the ease and swiftness of an ape. This arboreal pygmy was equipped with bow and arrow, and had been himself hunting at the time.

In spite of some outward simian traits, however, the African pygmies seem to be intellectually not inferior to their taller neighbours. This is the testimony of Poutrin with regard to the Obongo dwarfs and the neighbouring Bantus; and another French writer, Breschin, employs even more favourable terms in referring to the Congo pygmies:

'Far from being degenerates, they are, on the contrary, superior to the neighbouring negroes in acuteness of sense, agility, courage, sociability, and family affection' (*La Géographie*, Paris, 1902, p. 443).

Sir Edwin Ray Lankester, speaking of the whole pygmy race collectively, observes (*Daily Telegraph*, Aug. 1910):

'They have all short, round skulls of full average brain capacity. To a great extent their corporeal features suggest an infantile or child-like stage of development, and the same is true of their intellectual condition and of their productions.'

It must be understood, of course, that this is a general statement, not necessarily applicable to every division of the race.

In his *Histoire naturelle* (Paris, 1778, v. 505) Buffon reports the existence of a hill-tribe in Madagascar, known as Kimos, whom he describes as '*nains blancs*,' although this term is subsequently modified by the statement that their complexion is lighter than that of the neighbouring blacks; probably a light brown colour is indicated. Their arms are said to have been so long as to reach below the knee when they stood erect. They are characterized as vivacious in mind and body, and as very brave, using assegais and darts or arrows

[1] Lafitau (*Mœurs des sauvages amér.*, 12mo ed., Paris, 1724, i. 55) records that an Eskimo girl, captured on the Labrador coast in 1717, declared that in her country were entire tribes of men three feet high, the slaves of those of taller stature. On American Indians of low stature (160–165 cm.), see Hrdlička, in *Bull. 30 BE*, i. 55; and on popular fallacies concerning Indian pygmies, Holmes, *ib.* ii. 285.

('*traits*'). They reared cattle and sheep, and lived also upon vegetables and fruits. A woman of this tribe, seen at Fort Dauphin, measured about 3 ft. 8 inches. Windle, in referring to these accounts (*l.c.* p. xxxvi), adds: 'It is stated that people of diminutive size still exist on the banks of a certain river to the south-west.'

The existence of a pygmy race in New Guinea has been known for a considerable time. The Italian traveller Beccari encountered them in 1876, and they have been seen by d'Albertis, Lawes, Cayley Webster, and other travellers. But much interest was aroused in the summer of 1910 by the information sent home by a British exploring expedition with regard to a tribe of dwarfs whom they found inhabiting the Charles Louis Mountains in New Guinea, at an elevation of about 2000 feet above sea-level. Four of the men were temporarily captured by Captain Rawling's party, and on being measured they proved to be respectively 4 ft. 6 in., 4 ft. 4 in., 4 ft. 3 in., and 4 ft. 2 in. in height. They were naked, except for a grass helmet, a bag, and a tiny strip round the waist. They are described as good-looking and well-proportioned, and of a lighter complexion than the natives of the lowlands. The general average stature of these Tapiro pygmies is 4 ft. 8½ in., while that of their lowland neighbours is 5 ft. 6¾ inches.

In several other parts of Eastern Asia there are, or have been, dwarf races. In ancient Chinese records there is mention of black or brown dwarfs in the province of Shan-tung in the 23rd cent. B.C. At the present day, the Pulas, a people whose stature varies from 4 ft. to 4 ft. 9 in., are found living beside the tall Lolo race, in Western China. The northern parts of Japan were at one time inhabited by a pygmy race, from whom the existing Ainus (*q.v.*) of Yezo may be in part descended. The accounts from India, Ceylon, and Persia all point to former dwarf peoples, represented to-day, in a modified form, by races of low stature, although taller than actual dwarfs. It is reasonable to infer that the tall races have frequently intermarried with those of dwarfish type, producing a hybrid race combining the qualities of both lines of ancestry.

[An interesting instance here in point is the description of the 'Pygmies' of Central India, as given by Ctesias, i. 11 (in Photius, *Bibl.* lxxii. 144 ff.). Swarthy in colour, and speaking the same language as the other Indians, 'they are very diminutive, the tallest of them being but two cubits in height, while the majority are only one and a half. They let their hair grow very long—down to their knees, and even lower. They have the largest beards anywhere to be seen, and, when these have grown sufficiently long and copious, they no longer wear clothing, but, instead, let the hair of the head fall down their backs far below the knee, while in front are their beards trailing down to their very feet. When their hair has thus thickly enveloped their whole body, they bind it round them with a zone, and so make it serve for a garment. Their privates are thick, and so large that they depend even to their ankles. They are, moreover, snub-nosed, and otherwise ill-favoured. . . . They are eminently just, and have the same laws as the Indians. They hunt hares and foxes, not with dogs, but with ravens and kites and crows and vultures' (tr. McCrindle, *Ancient India as Described by Ktêsias the Knidian*, Calcutta, 1882, p. 15 f.). To this Megasthenes (in Strabo, p. 711, and Pliny, *HN* vii. 2) adds that they are the 'men of three spans' against whom the war of the cranes, mentioned in *Il.* iii. 3–6, was waged. These accounts have been carefully analyzed by Lassen (*Ind. Alterthumskunde*, ii.², Leipzig, 1874, pp. 661–664), who comes to the conclusion that these 'pygmies' represent the Kirâtas, a race of dwarfs as compared with the Aryan invaders, long-haired (though beardless), flat-nosed (though light in colour), brave hunters, and exposed to the constant enmity of the mythical bird Garuḍa. Moreover, in Sanskrit *Kirāta*, their national name, is one of the terms for 'dwarf.'—L. H. GRAY.]

The accounts from America are not so definite as those furnished by the Old World, but dwarf types are reported from Argentina, Peru, the Amazon basin, and Central America. In North America, the Arapaho Indians of Oklahoma and of Wyoming have many traditions of a fierce race of cannibal dwarfs with whom their forefathers fought. They are described as a little under 3 ft. in height, dark-skinned, pot-bellied, and powerfully built, with large arms and legs—this last statement being scarcely consistent with dwarfish stature. They were expert trackers, very nimble and fleet of foot, and of a low order of intelligence. The Crow Indians of Montana have similar traditions.

'A long time ago,' they say, 'there lived a very dwarfish people who lived in cliffs and had no fire. Their bows were made of deer antlers, and their arrow-heads of flint. Their aim was true and unerring. They were so powerful that they could carry buffalo on their backs.'[1]

These, it is true, are only traditions, and the last statement cannot be accepted literally, although it testifies to the quality of great bodily strength so often attributed to dwarf races. But, in view of the wide-spread distribution of the dwarf type, the traditions may rest upon a sound basis. It is certain that Arctic America can show many undoubted evidences of a race whose stature was well below the maximum limit of dwarfism. Buffon, indeed, ascribes to the most of the Arctic races a stature not exceeding 4 ft. 6 in.; but this is too sweeping a statement, although much of his information is derived from good authorities. He includes the Lapps in this category, whereas their average stature is from 5 ft. to 5 ft. 2 inches. They may, however, be held to represent a crossing with an earlier and truly pygmy race.

Of pygmy races in Europe, the skeletons discovered at Schaffhausen, in Switzerland, and described by Virchow and Kollmann, the numerous specimens found in cemeteries in Silesia and France, described by Thilenius and others, and the Mentone skeletons described by Verneau and de Villeneuve all afford tangible evidence. An early 'Mediterranean race' of pygmy stature has also been deduced from a study of existing types by the Italian anthropologists Sergi, Mantia, and Pullé. All these results are obtained from anatomical research during the past quarter of a century, and the effect has been to create new views of European anthropology. In this study, Kollmann has played a leading part. His earlier monograph, 'Pygmäen in Europa' (in *ZE* xxvi. [1894] 189 ff., 230 ff.), was followed by several others on the same subject, one of which, 'Die Pygmäen und ihre systemat. Stellung innerhalb des Menschengeschlechts' (in *Verhandl. d. naturforsch. Gesellsch. in Basel*, xvi. [1902]), sums up his conclusions. These are as follows, in the words of W. L. H. Duckworth (*Man*, 1903, no. 62):

'(1) Pygmy races can be recognized in all continents. Their stature varies from 120 to 150 cm., and their cranial capacity is between 900 and 1200 c.c. (2) The material collected in Peru by Princess Theresa of Bavaria yielded evidence of pygmies in the New World. (3) The number of localities in Europe whence evidence of the existence of pygmy races in prehistoric times is available, is still increasing. France and Germany must now be added to the list of countries whence such evidence has been obtained. (4) The view which regards the pygmy races as originating through the degeneration of races of normal size is combated. (5) The author regards the pygmy races as representative of the primitive stock whence all the human races have been evolved. (6) The occurrence of the remains of pygmy peoples in interments of the epoch of the first dynasty in Egypt adds a new interest to the historic references made by the ancients to the existence of pygmy races in Africa.'

The rapid development of thought, since 1903, in relation to the pygmy races, is well illustrated by several of the sentences just quoted—perhaps even by all. That these races can be recognized in all continents is no longer a matter for discussion, any more than the statement that there are, or were, pygmies in the New World. That France and Germany furnish evidence of pygmy peoples within their borders is a fact that no one would now dispute. And 'combated' is a verb that would

[1] For these various American Indian traditions, see accounts by S. Culin, in the *Science and Art Bulletin*, Philadelphia, Jan. 1901, vol. iii. no. 1; and by G. A. Dorsey, A. L. Kroeber, and S. C. Simms, in Publications 81 and 85 of the *Field Columbian Museum*, Chicago, 1903.

not now be employed to express a protest against a theory that healthy living dwarf races have originated through the degeneration of races of normal size. The very adjective 'normal' would be ruled out of court in this connexion. On the other hand, Kollmann's conclusion, that the pygmy races represent the primitive 'normal' stock of mankind, is an idea which is received with increasing favour.

It is, of course, too soon for such ideas to have obtained complete recognition, especially among those whose mental bias is innately conservative. In a recent number (April 1911) of *Petermanns Mitteilungen*, R. Andree refers to certain expressions of dissent aroused by Schmidt's new work, *Die Stellung der Pygmäenvölker in der Entwicklungsgesch. des Menschen* (Stuttgart, 1910), which follows the lines laid down by Kollmann. Among the opponents of the new ideas, Schwalbe, Keith, and Czekanowski are specially named by Andree. The leading arguments in Schmidt's book are thus referred to by a reviewer in the *Times*, Literary Supplement, 16th June 1910:

'Dr. Schmidt's long and careful study of the physique, the language, and the culture of the dwarf races of mankind . . . is certainly one of the most interesting works of anthropological investigation that have appeared in recent years. Its conclusions are nothing less than revolutionary: they are arrived at over the graves of many current theories, and, if confirmed, they place the question of the physical and spiritual origin of man in a new light. Dr. Schmidt's minute investigation of all the pygmy races known when his book was being written, has led him to support, with some modifications, the view maintained by the well-known anatomist of Basle, J. Kollmann, who holds the pygmies to be the oldest of peoples on the earth—the child-race of mankind. The child-race, not a half-bestial race. The distinction is shown very clearly when one regards as a whole the characteristics of the pygmy races. They are entirely men, but undeveloped men. Their mind is a human, a thinking mind; they possess human feeling, and a distinct ethical will. Morally, although, like children, they are a prey to many fleeting impulses and wanting in perseverance, they stand often much higher than many of the tall races, and they have a religion which stands in close relation to their ethics. They are anything but vicious or malignant. Their intellectual attainments are very low, but they are capable of responding to demands made upon them, and the mental powers they have evolved are adequate for their way of life. . . . In physical indications, there are, of course, many marks of a non-human ancestry, but the upright or projecting forehead and the frequently large and expressive eyes mark a distinction which cannot be overlooked. . . . Spiritually, the pygmies "stand in no way nearer to the beast than any other race of man"; they "do not give us the smallest encouragement to suppose that in and by them a bridge can be thrown across the gulf between the human and the beast soul." . . . We may close by expressing our hearty concurrence with Dr. Schmidt in one sentence at least of his interesting work: "It is my firm conviction that the investigation of the pygmy races is, at the present moment, one of the weightiest and most urgent, if not the most weighty and most urgent, of the tasks of ethnological and anthropological science."'

The conclusion arrived at by Kollmann, Schmidt, and others has been steadily gaining ground during recent years. It is interesting to note, although the circumstance will have no value in the domain of science, that the same belief was held by the early Scandinavians, who asserted that the dwarfs were created before men. The late Charles Godfrey Leland, by an intuitive process, had arrived at the same conclusion. 'I believe mankind was originally a dwarf,' he observed many years ago, in a letter to the present writer. But the assertions of tradition, and the intuition of a man of genius, are negligible quantities in scientific controversy.

The opposite contention is that the taller races represent normal man, of whom the pygmy type is merely a stunted *Kümmerform*, degraded in body and mind by certain accidents of environment. Those who take this view will find strong support in the statements made by E. Torday in his paper on 'The Land and Peoples of the Kasai Basin' (Belgian Congo), which appeared in the *Geographical Journal* (London) for July 1910. Torday and his party visited a village of pygmies near Misumba, in the country of the Bu Shongo. These pygmies, instead of leading the wandering, forest life of their ancestors, are settled agriculturists, and have been so for the last two or three generations. Now, it seems that a result of this alteration in environment and habits is that the sedentary pygmies are considerably taller than their kindred who still lead the nomadic life of the forest. It has been suggested that their superior stature, and their readiness to take to agriculture, are both due to a possible admixture of blood in a previous generation, and that the settled pygmies are not typical pygmies. This may be so, and the facts of the case must be strictly ascertained before any satisfactory deduction can be made. There is one conclusion, however, that seems inevitable: if these pygmies are of pure, undiluted stock, and have grown in stature by abandoning the forest, then the converse would hold, and the tall Bu Shongo among whom they live would, if driven into the forest by a stronger race, begin to approximate in stature and physique to the forest pygmies, should they be forced to live their life for a similar period of time. The question of environment cannot be overlooked, but it may be doubted whether its potency is so great as to produce such results.

One or two other facts connected with the Bu Shongo and the nomadic pygmies of their region must be noticed here. Each Bu Shongo kinglet has a group of pygmies under his suzerainty, who supply him with game in exchange for vegetable food. But, although the Bu Shongo utilize the pygmies in this way, they regard them as beings of a different nature from themselves. They are held in awe as 'half-ghosts'—spirits born from trees. This attitude is by no means confined to the Bu Shongo; there is a wide-spread dread of the pygmies among other African tribes. When a pygmy arrow is found in a bunch of growing bananas, no man, even the owner, would be bold enough to take away either the arrow or the bananas.

These facts lead naturally to the subject of the reverence paid to dwarfs in many lands. In passing, it may be observed that this reverence tends to support the idea that mankind generally regarded the dwarf races as in some sense beings of a special order. Mention has already been made of the Kimos of Madagascar, a race of long-armed dwarfs. They are known also as Vazimbas, and under this name E. B. Tylor refers to them (*Prim. Cult.*[3], 1891, ii. 114 f.) in the following connexion:

'In Madagascar, the worship of the spirits of the dead is remarkably associated with the Vazimbas, the aborigines of the island, who are said still to survive as a distinct race in the interior, and whose peculiar graves testify to their former occupancy of other districts. These graves, small in size and distinguished by a cairn and an upright stone slab or altar, are places which the Malagasy regard with equal fear and veneration. . . . To take a stone or pluck a twig from one of these graves, to stumble against one in the dark, would be resented by the angry Vazimba inflicting disease, or coming in the night to carry off the offender to the region of ghosts.'[1]

In Southern India a similar attitude is observed towards the dwarfish Kurumbas of the Nilgiri hills. Popular tradition asserts that the megalithic cromlechs of the district were reared by the ancestors of the Kurumbas.

'Though they are regarded with fear and hatred as sorcerers by the agricultural Badagas of the table-land, one of them must,

[1] [A similar belief existed among the pagan Lithuanians regarding the *kaukai* (Lith. *kaũkas*, 'dwarf,' 'elf'), concerning whom Lasicius (*de Diis Samagitarum*, Basel, 1615, p. 51 [new ed. Mannhardt, Riga, 1868]; cf. also Solmsen, in Usener, *Götternamen*, Bonn, 1896, p. 92) writes: 'Sunt lemures quos Russi Uboze ['mannikins, goblins'] appellant; barbatuli, altitudine unius palmi extensi, iis qui illos esse credunt conspicui, aliis minime; his cibi omnis edulii apponuntur, quod nisi fiat, ea sunt opinione ut ideo suas fortunas, id quod accidit, amittant' (quoted by Schrader, *l.c.*). For further allusions to Balto-Slavic beliefs on dwarfs, reference may be made to Hanusch, *Wissenschaft des slaw. Mythus*, Lemberg, 1842, pp. 229, 327–330, although the work must be used with extreme caution.—L. H. GRAY.]

nevertheless, at sowing-time be called to guide the first plough for two or three yards, and go through a mystic pantomime of propitiation to the earth deity, without which the crop would certainly fail. When so summoned, the Kurumba must pass the night by the dolmens alone' (Windle, p. xxvi).

Here we have the recognition of dwarfs as a kind of Levite caste, possessed of a peculiar supernatural power. Possibly the idea of employing dwarfs as temple-vergers in Ancient Egypt may be due to a similar belief. In view of the association between dwarfs and megalithic structures in Southern India, it is of interest to record Captain Meadows Taylor's statement (*Cairns, etc., in the Dekkan*, Dublin, 1865, p. 1) that the cromlechs of the Deccan

'were called by the people, in the Canarese language, *Mori-Munni*, or Mories' Houses; and these Mories were believed to have been a dwarf race of great strength, who inhabited the country in very remote ages.'

A very full account of the Kurumbas, with copious references, will be found in Gustav Oppert's *Original Inhabitants of India*, Madras, 1893, ch. xii.

Mention has already been made of the resemblance, pointed out by Paul Monceaux, between the modern Akkas and the dwarfs portrayed at Pompeii, Rhodes, and Cyprus, as well as the 'Patakas' of the Phœnicians.

'In most of the negrillo races,' he further says (*loc. cit.*), 'are strongly accented the characteristic traits of the classic pygmies, as of the dwarf gods of Egypt or of Phœnicia, the huge head, the thick hanging lips, the prominent belly, the excessively long arms, the excessively short legs, twisted and bowed.'

No doubt there is exaggeration in all this; but the significance of the comparison lies in the indication that the dwarf gods of Egypt and Phœnicia had their origin in a veneration paid to living dwarfs of a similar nature to that accorded in Madagascar and Southern India.

The question of dwarf races is manifestly more circumscribed in Europe than it is in countries where there are living specimens to be studied. Osseous remains there are, certainly, as well as many references in tradition; but the field of conjecture is confessedly wide. Many observers of the African pygmy races have been reminded of European traditions which seem to point to a similar race in Europe.

'Other dwarf races of humanity belonging to the white or the Mongolian species may have inhabited Northern Europe in ancient times, or it is just possible that this type of Pygmy Negro, which survives to-day in the recesses of Inner Africa, may even have overspread Europe in remote times. If it did, then the conclusion is irresistible, that it gave rise to most of the myths and beliefs connected with gnomes, kobolds, and fairies. The demeanour and actions of the little Congo dwarfs at the present day remind one, over and over again, of the traits attributed to the brownies and goblins of our fairy stories. Their remarkable power of becoming invisible by adroit hiding in herbage and behind rocks, their probable habits, in sterile or open countries, of making their homes in holes and caverns, their mischievousness and their prankish good-nature, all seem to suggest that it was some race like this which inspired most of the stories of Teuton and Celt regarding a dwarfish people of quasi-supernatural attributes' (Sir H. Johnston, in *Pall Mall Mag.*, Feb. 1902, p. 178).

Of the dwarf skeletons found in Europe, scientific accounts are furnished in the works of Kollmann and Schmidt, already cited. Special mention may also be made of an article on 'Prähistor. Pygmäen in Schlesien,' by G. Thilenius, which appeared in the Brunswick journal *Globus* in 1902 (Bd. lxxxi. no. 17). A recent addition to the list of European dwarf skeletons is that of a young woman, 4 ft. 6 in. in height, which was found in Scotland in 1907, at the bottom of a pit in the Roman fort at Newstead, Roxburghshire. The skeleton is thus referred to by James Curle, who conducted the excavations of the fort during the period 1905–1910:

'The most curious of all these human relics was the nearly complete skeleton of a dwarf, found in one of the pits. Professor Bryce estimates the age at from twenty-two to twenty-three years, and yet the height cannot have exceeded four feet six inches. Though the creature must have been a dwarf, the bones show no signs of rickets or other bone disease, being well formed, but slight and slender to a remarkable degree. How it came to lie in the pit beneath the bones of nine horses is a problem of which no solution can be hoped for' (*A Roman Frontier Post and its People*, Glasgow, 1911, p. 111).

LITERATURE.—In addition to the works mentioned in the text, the following may be cited: A. de Quatrefages, *Les Pygmées*, Paris, 1887 (Eng. tr. by F. Starr [London, 1895], who supplements its copious bibliography); W. H. Flower, 'The Pygmy Races of Men' (*Proc. Soc. Roy. Inst. Gt. Brit.* xii. [1888] 266–283); H. Schlichter, 'The Pygmy Tribes of Africa' (*Scot. Geogr. Mag.*, June–July 1892); Paul du Chaillu, *Great Forest of Equatorial Africa, and Country of Dwarfs*, London, 1890; G. Schweinfurth, *The Heart of Africa* (Eng. tr., do. 1874); Stuhlmann, Barrow, and Junker, *Travels* (Eng. tr., do. 1890); A. Werner, 'The African Pygmies' (*Pop. Science Monthly*, xxxvii. [1890] 658–671); Broca, 'Akkas' (*RAnth*, 1874); Cornalia, 'Akkas' (*Archivio per l'antrop.*, 1874); Max le Clerc, 'Les Pygmées à Madagascar' (*REth* vi. [1887] 323–335); 'Chimpanzees and Dwarfs in Central Africa,' by J. F. (*Nature*, xlii. [1890] 296); R. G. Haliburton, *The Dwarfs of Mount Atlas*, London, 1891. All of these relate primarily to Africa. Asia is treated by Flower, Fichte, Man, Froer, Hamy, Semper, and by R. Lydekker in his 'Pygmies of Asia' (*Knowledge*, Sept. 1900). For America, see Kollmann, 'Pygmäen in Europa und Amerika' (*Globus*, Brunswick, 1902, no. 21); Clements Markham, in *JAI* xxiv. (Feb. 1895); R. G. Haliburton, in *Proc. Amer. Assoc. for Advancement of Science*, xliii. (1894). Other works, in which the subject is largely treated from the standpoint of popular tradition, are: D. MacRitchie, *Testimony of Tradition*, London, 1890, *Fians, Fairies, and Picts*, do. 1893, and 'Zwerge in Geschichte und Überlieferung' (1902 [*Globus*, lxxxii. no. 7]); Gath Whitley, 'Present Dwarf Races and Prehistoric Pigmies' (*London Quart. Rev.* xii. [1904] 139); Mackenzie, 'The Picts and Pets' (*The Antiquary*, London, May 1906); Elizabeth Andrews, 'Ulster Fairies, Danes, and Pechts' (*ib.* Aug. 1906), and 'Traditions of Dwarfs in Ireland and in Switzerland' (*ib.* Oct. 1909); A. S. Herbert, 'The Fairy Mythology of Europe in its Relation to Early History' (*NC*, Feb. 1908); W. Y. E. Wentz, *The Fairy Faith*, Rennes, 1909, 2nd ed. London, 1911. The Tapiro pygmies of New Guinea are described by C. G. Rawling in *The Geographical Journal*, xxxviii. 3 (London, Sept. 1911), 245–247. An account of pygmy remains found in a cave in Southern Spain is contributed by Willoughby Verner to the *Saturday Review*, London, Sept. 30 and Oct. 21, 1911.

DAVID MACRITCHIE.

DWĀRKĀ (Skr. *Dvārakā*, *Dvāravatī*, 'the city of many gates').—The famous city and place of pilgrimage associated with the life of Kṛṣṇa, situated in lat. 22° 14′ 20″ N., long. 87° 21′ E., in the native State of Okhāmaṇḍal in the peninsula of Kāthiāwār in Western India. In the usual form of the legend, Kṛṣṇa is said to have been assailed by the hosts of Rājā Jarāsandha, whom he repulsed seventeen times. Jarāsandha, finding it vain to continue the struggle alone, called in the aid of Rājā Kālayavana, who with his hordes from the far west bore down upon the doomed city of Mathurā (*q.v.*). On that very night Kṛṣṇa bade arise on the remote shore of the Bay of Kachh (Cutch) the stately city of Dwārkā, and thither in a moment of time transferred the whole of his faithful people. The first intimation that reached them of their changed abode was the sound of the surf beating on the shore when they awoke the next morning. The legend probably represents some attack by forces from the west on the people of the Jumnā valley, and their retreat before their enemies southwards in the direction of the sea. Kṛṣṇa, it is said, reigned in splendour in his new city, and there, by his wife, Jāmbavatī, daughter of the king of the bears, had a son named Sāmba. The latter, by an indecent prank, insulted the Ṛṣis, or saints, who cursed him and his family. To remove the curse they went on a pilgrimage to Somnāth (*q.v.*), and there Kṛṣṇa was accidentally slain by the arrow of a Bhīl hunter. Hearing of his death, the Gopī milkmaids, the companions of his revels, buried themselves alive at a place called the Gopī Talāv, or 'milkmaids' tank.' Their ashes, it is believed, turned into the white clay still found at the place, which is called *gopīchandan*, 'the sandal wood of the milkmaids,' and used by members of the Vaiṣṇava sect to make their forehead marks. J. Kennedy (*JRAS*, October 1907, p. 951 ff.) distinguishes the more ancient Kṛṣṇa of Dwārkā from the Mathurā deity.

Two places are specially venerated in connexion with the life of Kṛṣṇa—the first, Mūl Dwārkā, the 'original Dwārkā,' a little mound on the seashore between the mouths of the rivers Somat and

Singāvrā, surmounted by the ruins of a temple, which popular belief declares to be the original Dwārkā where Kṛṣṇa reigned, and whence he transferred himself to the new Dwārkā in Okhāmandal. Here are many sacred spots which have their counterparts at modern Dwārkā. The temple at the latter place is situated on the north bank of the Gomatī creek, and its erection is ascribed by some to Vajranābha, grandson of Kṛṣṇa; while others assert that it was built in a single night by supernatural agency. It is on the plan of all ancient Hindu temples, containing a shrine, a spacious audience-hall, the roof of which is supported by sixty columns of granite and sandstone, and a conical spire 150 feet in height. The body of the temple and the spire are elaborately carved from base to pinnacle, but internally they are characterized by excessive plainness and simplicity of style. The figure of Gaṇapati, or Gaṇeśa, carved over the entrance door, indicates a dedication to Śiva, which makes it difficult to assign the original building to the Vaiṣṇava cult of Kṛṣṇa.

W. CROOKE.

DYAUS.—Dyaus plays no rôle of importance in Vedic mythology. The more intensively felt activity of gods like Agni and Indra probably threw into shade the personification of the heavenly vault. All that the Rigveda says of him has been collected by Macdonell in his *Ved. Myth.* § 11. Though he is often mentioned and styled 'father,' the father of Agni, Parjanya, Sūrya, and especially of the goddess of Dawn, there is no single hymn addressed to him. He is generally invoked along with Pṛthivī as *Dyāvāpṛthivī* or *Dyāvākṣāmā*, etc. In the *Nivid*, or solemn formula inserted in the Dyāvāpṛthivīya hymns, which form part of the *Vaiśvadevaśāstra* of the *soma* sacrifices, they are called father and mother, bull and cow—he, the *dyaus*, being rich in seed, she in milk (*Śāṅkh. Śrauta S.* viii. 19). The small importance attached to him in the hymns is reflected by the ritual, which rarely mentions offerings bestowed on him apart from his female partner. Together with her he receives his share in the animal and *soma* and other sacrifices (cf. *Ś. Śr. S.* iii. 12. 3, vi. 11. 7, viii. 3. 11, xiv. 6. 3, etc.).

It is well known that *Dyaus* as name and as deity goes back to the Aryan period, and is related to the Ζεύς of the Greeks, the Latin *Juppiter*, and also to the German *Zio-Tŷr*, if the latter word is not better combined with *deva*, as some scholars assert. Though, for want of proofs, he cannot be said to have been a very important or characteristic god of the Aryan pantheon, the mere fact that there was such a god in those times of remotest antiquity is a striking argument against the exaggerations of the one-sided ancestor theory. It was formerly generally supposed that Varuṇa was a synonym of Dyaus, or developed from an epithet of Dyaus into an independent deity of Heaven. This opinion, though still upheld by scholars of distinction, has fallen under suspicion, as it does not answer all objections brought forward against it: and in its place Oldenberg (*Religion des Veda*, Berlin, 1894, pp. 48–50, 193, 287) and the present writer (*Ved. Mythologie*, Breslau, 1891–1902, iii. 45–52; so also Hardy, *Vedisch-brahmanische Periode*, Münster, 1893, pp. 47 ff.) have put forward the moon theory for Varuṇa.

LITERATURE.—A. A. Macdonell, *Vedic Mythology*, Strassburg, 1897, § 11 (where the reader will find all the earlier literature); L. v. Schröder, *WZKM* xix. [1905] 1 ff.

A. HILLEBRANDT.

E

EARTH, EARTH-GODS.—Man's ideas concerning the earth may be divided into three classes—cosmological, mythical, and religious. In some cases these mingle strangely; and, while man thinks of the earth as a created or artificially formed thing, he also regards it as more or less alive.

1. Form of the earth.—The cosmological ideas entertained by various peoples were a mythico-scientific deduction from man's observation of what he saw around him. In no case had he any conception of the extent of the earth. To him it was merely the district in which he lived. He saw the sea, and believed that it encircled the earth like a vast river. Earth was usually thought of as a flat disk or oblong box floating on the ocean, while the heavens were regarded as a kind of dome, stretching above the earth and resting upon it or upon the waters, or propped up by poles or pillars. Such beliefs are found among lower races—Australians, Eskimo, the wild tribes of the Malay Peninsula, the Ewe of W. Africa, and others.[1] In some cases the surface of the earth covers an under world, accessible from various points.[2] Frequently, too, the earth is supposed to rest on pillars, or on a tree, or on the body of a giant or hero, or a god or gods, or on a huge animal.[3] Such primitive ideas as these survive in higher mythologies—Semitic, Egyptian, Greek, Hindu—though parallel with these more philosophic views prevailed.[1]

[2] Rink, 37; Man, *JAI* xii. [1882] 101 (Andaman Islanders).

[3] Keane, *Man Past and Present*, Cambridge, 1899, p. 421; Tylor, *PC*[4], 1903, i. 364 f.; cf. *ERE* i. 491[b].

2. Origin of the earth.—Man's speculations did not limit themselves to the form of the earth; he busied himself also with the problem of its origin, and the various solutions of that problem are found with wonderful similarity amongst widely separated peoples. In some cases direct creation by a divinity seems to be asserted.

Thus in the sacred myths of the Quichés, preserved in the *Popol Vuh*, it is said that in the beginning there existed Divine beings called 'they that give life.' They spoke the word 'Earth,' and earth came into existence. An old hymn of the Dinka of the Upper Nile tells how, 'at the beginning,' Dengdit (on whom see *ERE* iv. 707 f.), a god dwelling in heaven, made all things.[2] Similarly a native hymn from the Leeward Islands tells of Toivi who 'abode in the void. No earth, no sky, no men. He became the universe.'[3] So, too, a hymn of the Zuñis describes Awonawilona, the Creator, forming everything by thinking 'outward in space.'[4]

But, generally speaking, where the making of the earth by a god is referred to, it is rather the framing of existing matter than creation that is meant. Thus some Australian tribes speak of Bunjil going over the earth, cutting it with his knife in many places, and thus forming creeks, rivers, valleys, and hills.[5] As man himself shaped

things out of clay or wood, so he imagined the Creator to have acted, and hence the native word for 'Creator' often means 'cutter-out,' 'moulder,' 'builder,' or 'forger.'[1] In a whole series of myths from different parts of the world, but very common among American Indian tribes, the earth is formed out of a little mud or clay fished up out of the waters by a Divine being, often in animal form. This mud or clay is formed or grows into the earth. Of this myth there are Vogul, American Indian, and Hindu versions.[2] In many cases the waters are those which have overwhelmed a previously existing world, and sometimes it is the earth itself which is fished up or rises out of the deep.

This is found in an Athapascan myth in which the raven flies down to the sea and bids earth rise out of the waters.[3] In a Polynesian myth the god Tangaroa fished up the world, but his line broke and it was again submerged, save a few portions now forming the South Sea Islands.[4] Cf. the Japanese myth of Izanagi and Izanami thrusting a spear from heaven into the ocean, the brine dropping from which coagulated and formed an island on which they now dwelt.[5]

In another series of myths the earth is formed out of part of the body of a gigantic being, who is sometimes hostile to the gods and is slain by them, as in the Bab. myth of Tiamāt, out of whose body, cut in two, Marduk made heaven and (apparently) earth.

Cf. the account preserved by Berosus of the gigantic woman Omoroka whom Belos cut in two, making heaven of one part and earth of the other;[6] and the Scandinavian myth of the giant Ymir, from whose flesh Odin, Vili, and Ve made the earth.[7] In the Hindu parallel to these myths the gods offered in sacrifice the gigantic first man Puruṣa, and out of him made earth, as well as sky, sun, moon, etc.[8]

3. Heaven and Earth as a Divine pair.—The expanse of heaven and the broad earth were early regarded as personal beings, and also as husband and wife; Earth, from which so many living things sprang, being thought of as female. Their union was the source of all things in Nature, and, when the gods of departments of Nature were evolved, these were regarded as their children. Generally also they are parents of gods and men. In most cosmogonies Earth is the fruitful mother impregnated by Heaven, though in some cases the Sun or the 'Great Spirit' is her husband, and they are universal parents. Mythology also solved the problem of their separation by saying that it had been forcible, and (in many instances) brought about by their children.

Myths of Earth and Heaven as a Divine pair are found among African tribes, and, as among the Yorubas, they are represented by the male and female organs of generation, the symbolism pointing to the mythic origin of all things from them.[9] Similar myths are found among the American Indians, though with them the Great Spirit sometimes takes the place of Heaven. In one myth the hero god Mateito causes the removal of Heaven from Earth by magic.[10] Similar ideas are wide-spread among the Polynesians, and in the Maori myth of Rangi and Papa it is their children, especially the father of forest-trees, who cause their separation. In other islands, gods, a sea-serpent, plants, or the first human beings, bring this about.[11] Occasionally the Sun is Earth's husband, and, as in Timor, his union with her is the source of fertility.[1]

In Egypt, Seb (Earth) was male, and Nut (Heaven) was his wife, united with him in the primordial waters before creation. Shu separated them, but the hands and feet of Nut still rest on Seb, and her legs and arms thus correspond to the sky-supporting pillars of another myth. In some myths they were re-united at night, and conceived the sun, which was born of Nut every morning and swallowed by her at night.[2] In Vedic mythology Dyaus and Pṛthivī are parents of gods and men, but are separated by Indra, their child.[3] Hesiod has preserved the well-known myth of Uranus and Gaia, of Gaia visited by Uranus from a distance, and of the mutilation of Uranus by his son Kronos. Gods and men are their children, and this is recalled in the Orphic conception of man as the child of Earth and starry sky.[4] Zeus and Gaia may have been regarded as a Divine pair, and they were invoked in a liturgy at Dodona. But usually Hera, in some aspects an Earth-goddess, or Demeter, goddess of the fruitful earth, takes her place. A Chinese myth tells of Puang-ku separating T'ien and Ti, the universal parents.[5] Cf. Aston, 84, for a Japanese myth.

4. Earthquakes.—The movements of the animal who supports or exists within the earth are supposed to cause earthquakes (cf. ANIMALS, § 10). Where a god or giant is the supporter, they are similarly produced,[6] or a god or giant within the earth or an earthquake deity causes them.[7] In other cases the dead are supposed to cause them, *e.g.* by shaking the palm on which the earth rests,[8] or by struggling to reach the earth's surface.[9] According to Pythagoras, the dead fought and shook the earth.[10] In the naive belief of the Caribs, an earthquake was held to be Mother Earth dancing and signifying to her children that they also should dance.[11]

5. Disturbing the Earth.—The idea that it is dangerous to disturb the Earth or to intrude into her domain, and that, when this is done, Earth must be appeased by sacrifice, is seen in the common custom of foundation sacrifices (see FOUNDATION), in which a human or animal victim is placed below the foundation when the earth is dug out. Frequently this is done to provide a spirit-guardian for the building; but there is no doubt that the propitiatory aspect came first. The analogous custom of sacrificing to rivers when crossing them makes this certain (cf. also art. BRIDGE), and reference may be made to the Japanese *ji-chin-sai*, or 'earth-calming-festival,' for propitiating the site of a new building.[12] Similarly the sacrificial ritual before ploughing, though it has the intention of assisting fertility, doubtless was connected with this idea, and is expressly implied in such rites as those of the Chams, in which ploughing is begun secretly, and is then carefully atoned for with sacrificial and lustral rites, after which it may be proceeded with.[13] The thought is expressed in Sophocles' *Antigone* (339 f.), 'Earth . . . man wears away.' In India, ploughing does not take place on certain days when Mother Earth is asleep.[14] We find the same idea in Celtic myths of lakes which burst forth when a grave was dug;[15] and in India, Earth is worshipped

before a well is dug.[1] Propitiatory sacrifices were frequently offered before gathering various plants.

6. Earth as Divinity.—Earth is generally known as 'Mother Earth,' depicted by the Aztecs as a many-breasted woman,[2] like the Ephesian Artemis, who was in origin an Earth-goddess. Hesiod spoke of 'broad-bosomed' Gaia,[3] and the Zuñis of Earth with her 'four-fold womb.'[4] In primitive agricultural communities Mother Earth was propitiated with sacrifices, or worshipped with orgiastic rites, or her processes were assisted by magic. Among many tribes of W. Africa she is the object of an extensive cult.[5] Such titles as 'Mother,' 'the good Mother from whom all things come,' as well as a cult of the Earth, were wide-spread among American Indian tribes, who also had many myths of man's origin from the Earth. Offerings—from those of food to human victims—were usually buried in the ground, and, as among the Algonquins, roots, medicines, and animals were supposed to be in the care of Mother Earth.[6] Among the aborigines of India, Mother Earth is worshipped mainly in connexion with agricultural seasons. Sacrifices are offered, and she is begged to be propitious, while she has often a special festival, or, as among the Oraons, a spring festival celebrates her marriage with Heaven.[7]

A typical instance of Earth-worship is found among the Khonds, with their cult of Tari Pennu, the spouse of the Sun-god. Her cult is orgiastic and is intended to promote fertility. For this purpose, and in order to recruit her energies, a victim representing her was slain at a great festival and hacked in pieces, and portions of the flesh were buried or placed on the fields.[8]

Among the Teutons, Nerthus (=Terra Mater) was specially worshipped by certain tribes in spring, her waggon being drawn about the land by cows, and attended by her priest, probably in order to make the land fertile.[9] Other goddesses worshipped elsewhere—Frija, Tamfana, and Nehalennia—were probably in origin Earth-goddesses, while the giantess Jordh, mother of Thor, is simply the Earth. Freyr, in some aspects a god of fruitfulness,[10] had also a procession in spring, attended by his priestess, regarded as his wife. After this procession a fruitful year was looked for. Freyr was the son of Niordhr, perhaps a male double of Nerthus, who would thus be his mother. Both Niordhr and Freyr may be regarded as later male forms of an earlier Earth-goddess.[11]

Traces of the cult of an Earth-mother among the Celts are probably to be found in such goddesses as the consort of the Celtic Dispater, Stanna, Divona, Dommu, Berecynthia, and others; while the *Matres* with their symbols—fruit, flowers, and a child—are threefold extensions of the primitive Earth-mother. But, in accordance with a tendency for gods to take the place of goddesses which is not confined to Celtic religion, certain gods, primarily Earth-gods—those equated with Dispater, and Dagda in Ireland—are prominent. They are also under-earth gods. The older goddess now generally appears as the consort of one of these.[1]

The Vedic Earth-mother Pṛthivī was usually worshipped along with Dyaus, and their epithets show their greatness and productivity, as well as their moral and spiritual character. But she is sometimes referred to alone, and one hymn is devoted to her.[2] The cult of Dyaus and Pṛthivī is recalled in the present Indian marriage ritual, and Earth is still revered in the morning ritual, before sowing, ploughing, at milking, etc., while she is worshipped by some tribes as a household goddess. Bhūmi, the soil, has a place in village cults, and to this divinity—now male, now female—cakes, sweetmeats, and fruits are offered.[3]

In Babylon, En-lil was god of the earth, but it is probable that an Earth-goddess had been first worshipped. Such a goddess may be seen in his consort Nin-lil, or in Damkina, 'lady of the earth,' consort of Ea. Probably the great mother-goddesses of the Semitic area—Ashtart (*q.v.*) in Canaan, Atargatis (*q.v.*) in Syria, Ishtar (*q.v.*) in Babylonia, etc.—had been Earth-goddesses. They are connected with fertility, maternity, and the giving of children (hence they are often represented holding a child), and are called 'mother of men.'

Ishtar, at whose descent to Hades fertility ceases, in part symbolizes the death of earth in winter. But, since Earth and under-Earth are closely connected, Allatu, goddess of Hades, may also have been an Earth-goddess, one name of Hades being Irsitu, 'the earth.' From earth sprang man, according to an old Semitic belief, and thither he returned. Ishtar, mother of men, and Allatu, receiver of men, are thus different aspects of one being.[4] Earth is called *E-sharra*, 'house of fertility.'[5] In popular view the gods had sprung from the Earth, and Ishtar is also the mother of the gods.

The cult of Earth was primitive in Greece. Ge or Gaia was the Mother who sent up fruits.[6] She had local cults and temples, and the fruits of the earth, as well as animal and perhaps human victims, were offered to Γῆ καρποφόρος. The title κουροτρόφος, applied to an otherwise unnamed goddess,[7] is connected with Γῆ,[8] and recalls the belief that children or the first men come from the earth. Other goddesses were derived from or associated with the old Earth-goddess—Aphrodite, Semele, Artemis, Pandora, Aglauros, etc.—and in some instances an epithet of Γῆ (κουροτρόφος, θέμις) was separated from her and became a new goddess. Demeter, 'Earth-mother' (Δη=Γῆ), or 'Grain-mother' (δηαί, 'barley'),[9] is certainly also a form of the Earth-goddess, but now rather of the cultivated earth. She is specifically a corn-goddess, but also, more generally, καρποφόρος, as well as 'she who sends up gifts' ('Ανησιδώρα),[10] while her functions concern vegetation and the fruits of the earth as well as flocks and herds. She is also equated with Rhea-Cybele, herself a primitive Earth-mother.

The ritual of the *Thesmophoria* points to Demeter, with Kore, as Earth-goddess. Live pigs, along with dough images of serpents and of the φαλλός, were thrown into underground sanctuaries, and the rite was intended to promote the growth of fruits and of human offspring.[11] The flesh of the pigs was afterwards mixed with the seed-corn, to promote an abundant harvest. All these offerings symbolized fertility, and the throwing of them into underground places resembles the custom of burying offerings to the Earth-goddess.

Kore has also characteristics of an Earth-goddess, and was once probably one with Demeter. She, too, is καρποφόρος, and in the representations of her return from Hades, the return of an Earth-goddess,

the awakening of the Earth in Spring, evoked by ritual actions, *e.g.* striking the earth with hammers, may be seen.[1] While Demeter is said to have visited the earth with dearth, in anger at Pluto's rape of Kore, an older myth may have explained this as the result of her own disappearance, as in the case of Ishtar. The Phigaleian myth of her retirement to a cave because of Poseidon's violence, and the consequent death of vegetation, points also in this direction.[2]

The great goddess of the old Cretan religion was probably an Earth-mother, the prototype of the Great Mother of the gods, the goddess identified with the Cretan Rhea and the Phrygian Cybele, and who is primarily the fruitful earth, mother of gods and men. The Great Mother is often identified with Demeter and Gaia.

Among the Romans the primitive Earth-spirit, who was personified as Terra Mater, or Tellus, may also be seen behind such female divinities as Ops, Ceres (the equivalent of Demeter), Bona Dea, and Dea Dia. At the *Fordicidia* pregnant cows were sacrificed to Tellus, the unborn calves being torn from them and burnt, while the ashes were used at the *Parilia* along with the blood of the 'October horse.'[3] This savage piece of ritual, in which the Vestals were concerned, is clearly of ancient date and intended to assist Earth's fertility, or 'to procure the fertility of the corn now growing in the womb of Mother Earth.'[4] Tellus was also invoked with Ceres at the *Sementivæ* to protect the seed, and offerings of cakes and a pregnant sow were made.[5] Tellus was associated with the under world and the *manes*, as Demeter was with the dead, and she was invoked in the marriage ritual.[6] Earth was thus to the early Romans, as to the Greeks, the giver of fruits, as well as of children, while to her, as to a kind mother, men returned at death (see the grave-inscriptions). The cult of Tellus and other divinities connected with the Earth was carried far and wide by the Romans, who assimilated them to local earth-divinities of other lands.[7]

The ancient Mexicans knew Earth as 'Mother of all,' and invoked her at oath-taking, eating some earth sacramentally. Centeotl, goddess of the maize, must be regarded as an Earth-goddess. She was 'nourisher of men,' as well as 'our revered mother,' and was sometimes represented as a frog, the symbol of the moist earth, with many mouths and breasts. She was also the bringer of children, and was represented bearing a child. Her festivals fell in spring and summer, and at the latter a woman representing her was slain.[8] In Peru, where, as in Mexico, myth told how the first men came out of the earth, Pachamama, Mother Earth, was worshipped, *e.g.* at harvest, when corn and *chicha* were offered to her. A cult of Earth was also carried on in grottos and caves, and oracles were sought there.[9]

Sacrifices to earth-deities are laid on the ground, buried, or thrown into a hole.[10] Human victims were often slain in agricultural ritual; the earth or seed was watered with their blood, or their flesh was buried, to promote fertility, whether the victim was a propitiatory offering or, as Frazer[11] maintains, a representative of the deity of vegetation. Examples from N. America, Mexico, Africa, Indo-China, and India are cited by him,[1] and he is also of opinion that the myth of Osiris' members scattered over Egypt may point to a similar custom there,[2] as suggested by the scattering of the ashes of red-haired victims over the fields.[3]

7. Earth as Mother.—The belief in the earth as the mother of men may be seen in the myth which told how the first men came out of the earth, of which there are many N. and S. American, Zulu, Eskimo, aboriginal Indian, Mexican, and Peruvian instances.[4] Greece also had myths of earth-born tribes (*αὐτόχθονες*), as well as of Erichthonius, the son of Earth. In other myths, men emerge from stones, trees, plants, etc., or, again, the creator moulds them from earth or clay. These are divergent forms of the same myth.

Cf. the Bab. myth of Ea-bani created from clay, and the suggestion of similar myths in Gn 2^{7} 3^{19}. In Ps 139^{15} and Job 1^{21} there appear to be traces of the myth of man's emergence from earth.[5]

The belief is further seen in the idea that children buried in the Earth may be re-born,[6] and a connexion between the two ideas is found in the custom of barren women resorting to the place whence men first emerged from earth.[7] Dieterich has shown[8] that the Roman and Hindu custom of cremating children arose from the belief that Earth could give to the child's soul a new birth, and that the common folk-answer to the question, 'Where do the children come from?'—viz. 'Out of stones, holes,' etc.—may be a relic of the myth of Earth as mother of men. But Earth is not only the womb but the tomb of all, and men return to her womb, from which they may be re-born. Hence the belief in the restlessness of the shade whose body is left unburied may be connected with the idea that burial in the womb of Earth is necessary to re-birth. Hence also it is often sufficient to throw a little earth on the corpse to ensure rest to the spirit. Men were often buried in the position in which the child rests in the womb; or, again, the dying were laid on the earth, or a little earth was placed on them to facilitate the passage of the soul to its true home. Analogous is the custom of laying the newly-born child on the ground—probably as a consecration to Mother Earth, or to obtain her protection and strength.[9]

All these beliefs and customs, and the myth of Heaven and Earth as a Divine pair, are the result of the analogy which man saw between the processes of conception and birth, and those by which the earth brings forth. Hence in many languages the words for begetting, sowing, and ploughing, for *semen* and the seed sown in the earth, for woman or the female organ of generation and the field or furrow, for the male organ and the ploughshare, are the same, or are used metaphorically one for the other (ἀρόω, σπείρω, Heb. *zera'*, Bab. *zêru*, etc.).[10] Hence Earth was regarded as fertilized by Heaven, or by the rain (cf. the Eleusinian formula ὗε, 'Rain,' addressed to Heaven, and κύε, 'Be fruitful,' to Earth); hence, too, the myth of Earth sown with stones which spring up as men, or of plants growing from human *semen* spilt on the ground. Earth, as a fruitful mother impregnated like a female, was easily regarded as mother of men and κουροτρόφος. For this reason the process or symbols of begetting are believed to react magically on Earth's productive powers, and conversely the rites for Earth's fruitfulness on that of man. The

rites of the Ἀρρητοφορία helped the fruitfulness of Earth and man, and during them φαλλοί of dough were flung into the earth. Symbolic sexual acts, as well as sexual union, often performed on the fields, are held to assist fertility, and the myth of the union of Iasion and Demeter on a thrice-ploughed field probably arose out of such ritual acts.[1] The marriage of Heaven and Earth is sometimes celebrated ritually, as in the Leti Islands, where the sun is supposed to come down and fertilize Earth at the rainy season, this being made the occasion of a festival in which the sexes unite.[2] Women, because of the analogy of their fruitfulness with that of Earth, or because they first practised agriculture, have usually a prominent place in agricultural ritual. And, again, because of Earth's influence on human productiveness, or because children were supposed to come from earth, Earth is sometimes invoked in marriage rites.

8. Earth and under-Earth.—Earth as the tomb of all became the abode of the dead; and hence many Earth-divinities are associated with the latter, since there is little difference between Earth and under-Earth, things growing on it springing from below the surface. Traces of this are found in Celtic religion; and in Greece, Gaia was associated with festivals of the dead, and was also called Γῆ χθονία—an epithet also shared by Demeter, whose cult at Phigaleia proves her connexion with the under world; while the dead were called Δημήτρειοι. More obvious still is the connexion of Kore with Pluto, lord of Hades and giver of all blessings which come from the earth, just as Trophonios, an under-world deity, was the 'nourishing' god. Most Greek Earth-divinities have this twofold character.[3] The Roman Tellus was also associated with the under world. Allatu, the Bab. lady of Hades, may have been an Earth-goddess (§ 6), and, contrariwise, Ishtar may have been a goddess of the under world. Her images have been found in Phœnician graves; and Aphrodite, her counterpart in Greece, was occasionally associated with the under world.[4] The death of Earth in winter would also help to suggest a connexion of the Earth-goddess with the region of the dead. Mythology, however, tended to separate Earth from under-Earth, and the death of vegetation was explained by saying that the Earth-goddess was detained in the under world by its ruler—Ishtar by Allatu, Kore by Pluto.

The connexion is further seen in the similar methods of evoking the return of the Earth-goddess in spring and the spirits of the dead, *i.e.* by striking the ground.[5]

EARTHQUAKES.—See PRODIGIES AND PORTENTS.

EASTER ISLAND.—1. Name, geography, and ethnology.—Easter Island is the most easterly inhabited island of the Polynesian group, situated in the Pacific Ocean about 1100 miles south-east of Pitcairn Island, and forming an irregular triangle with an area of about 34 sq. miles. Its name is derived from the current belief that it was discovered by Roggeveen on Easter Day (6th April), 1722. The natives call it 'Te Pito te Henua,' or 'the navel and uterus,' from a seeming resemblance of the volcanoes Rana Roraka to the navel (*pito*) and Rana Kao to the uterus (*henua*). In 1770 the Spaniards named the island San Carlos, and throughout southern Polynesia it is known as Rapa Nui, though this name dates back only to the seventh decade of the nineteenth century. It has also been called Teapy and Waihu by the natives. Many explorers have visited the island, but none stayed long enough to make a thorough investigation, previous to the expedition of the United States Steamship *Mohican*, which remained there from 18th to 31st Dec. 1886. The natives of Easter Island are of comparatively small stature, the largest skeleton measured on the *Mohican* expedition being somewhat less than six feet in length. The women are smaller-boned, shorter, and fairer than the men. The children have somewhat the complexion of Europeans, but grow darker with age from constant exposure to sun and trade-winds, although the covered portions of the body retain their light colour. The coarse black hair is straight, or wavy, but never kinky, the nose straight, eyes dark-brown with thin dark brows and lashes, cheek-bones prominent, lips thin, and beard scanty. The general facial appearance thus corresponds (making due allowance for sculptural exaggerations) with the physiognomy of the statues. The breasts of the women are round, rather large, well up on the chest, and with small nipples but large areolas, though neither so great nor so dark as in many other Polynesian islands. In the oldest adult males the pilage on the body is often very thick.

2. Tatuing, which was introduced by immigrants from the Marquesas Islands some two centuries ago, is not practised at the present time, but the older natives are thus decorated, chiefly on the face, neck, waist, and legs, although no special design is adhered to, and its object is solely ornamental. The women are more elaborately and extensively tatued than the men. The bodies were also painted in early times, while the clothing consisted of scant garments, chiefly of *tappa* cloth, over the shoulders and about the loins. Feather hats were worn on various occasions, but without apparent religious significance, except possibly in cases of marriage-feasts, and when the chiefs used them as insignia of office.

3. The early population of Easter Island is unknown, but it is practically certain that it was never very great. It is known, however, that their numbers have suffered serious depletion in consequence of the brutal deportation of the islanders by Peru in 1863. In 1868 there were 900, but 500 were removed to Tahiti in 1875, and three years later 300 more emigrated to the Gambier Archipelago. At the time of the *Mohican's* visit in 1886 the natives still on the island numbered 155.

4. The general ethical status of the Rapa Nuis, at least in modern times, is relatively high. The women are modest and of a higher moral standard than almost any of the other Polynesians. In disposition the natives are cheerful, contented, and hospitable. Intoxicating drinks, even *kava*, are wholly unknown. Thieving was common, but was not regarded as immoral. The thief was under the protection of a special divinity, and was believed to be detected only when the theft did not meet with the deity's approval. A system of retaliation existed, by which the person wronged might regain the property plundered, the thief in no wise forfeiting social respect or position. A darker side of their ethics, however, is presented by the cruelty which was meted out to their conquered foes after the conclusion of their wars. Pre-nuptial unchastity was common, and after marriage the husband was at liberty to lend or sell his wife to another for as long a time as he wished, receiving her back without detriment to the self-respect of any concerned. Adultery, on the other hand, was punished with death. Divorce depended on the will of the married pair. Suicide was extremely common, infanticide was rare, and

puberty rites were unknown. The aged found little respect or consideration. Despite Christian influences, there are obvious traces of an earlier custom of marriage by purchase, the price, which generally consisted of sugar-cane and other edibles, being consumed in honour of the betrothal.

5. Amusements to-day, except at a marriage-feast or on the arrival of a vessel, are very rare; but the ancient dances are still retained. These are essentially pantomimic, and in them the arms are employed more than the legs. A small dancing-paddle, or wand, is a prominent feature of the posturing. There are also *hula-hula* dances of an erotic type, but the sexes seldom dance together. The *hula-hula* seems to have been danced chiefly at the annual election of a military chief, the celebration in honour of it lasting a month.

6. In ancient times the government of Easter Island was an arbitrary monarchy. The supreme authority, which was *quasi*-priestly, was vested in a king, and was hereditary in his family. He ruled over the entire island, which was divided into districts, each named and presided over by a chief. There was no special code of laws, custom defining the rights of the natives. Each tribe was entirely independent of any other, and in the continual conflicts which took place the king and his family were held sacred and were not troubled by either victory or defeat. Since the kidnapping of the principal chiefs and of Maurata, the last of a long line of kings, by the Peruvians in 1863, and their subsequent death in slavery, there has been no acknowledged authority among the Rapa Nuis.

7. In war the only weapons known to the natives were obsidian-pointed spears, short clubs, and stones, all of which were used with great skill. Shields were unknown, and there was no class of trained warriors.

8. The ancient islanders buried their dead lying at full length, usually with the head towards the sea. The bodies were wrapped in dried grass bound together by a sedge mat; but later *tappa*, or native cloth, was used instead of the mat. There seems to have been no special place of burial, although the platforms and the caves were favourite depositories for the dead. The bodies are now frequently exposed to animals and the elements, and are later thrust into their final places of interment without ceremony. The skulls of chiefs seem to have been marked with special clan-tokens, and numbers of such crania have been found.

9. Cannibalism was practised until a recent date, and an old legend states that children were sometimes devoured by their parents to satisfy the craving for human flesh. There is no evidence, however, that cannibalism was a ritual ceremony.

10. The general style of architecture seems to have been of two kinds. The more temporary form was that of the rectangular house built of bark or reeds and supported by posts set in the interstices of the stone foundation. These structures were from 10 ft. to 15 ft. in length and 6 ft. to 8 ft. in width. They had a thatched gable roof and nearly straight sides, one of which contained the door. In constructing the stone hut, which formed the second type, a convenient hill or rock was generally taken for the back wall. From this were laid side walls varying in thickness from 3 ft. to 7 ft., the shape being determined in great part by topographical conditions, and no definite plan was adopted. The front wall was constructed in the same way as the side, with the exception of the door, which was formed of two stone posts over which was laid a slab of stone, the entrance averaging a height of 20 inches and a width of 19 inches. In some houses two doors are found. The material used was basaltic rock. The average proportions of these dwellings are as follows: height from floor to ceiling, 4 ft. 6 in.; thickness of walls, 4 ft. 10 in.; width and length of rooms, 4 ft. 6 in. and 12 ft. 9 in. respectively. The ceiling was made of slabs reaching from wall to wall. This was topped by a mound of earth, which was covered with sod, making the hut effectually rainproof. In a few instances there are dwellings having one or more rooms opening from the main one. A small place was hollowed out of the wall of every dwelling, to hold the household gods and any valuables which the inhabitants might possess. This *quasi*-closet is remarkable in that it is frequently roofed by a true arch of lava with a keystone. Near Anahoirangaro Point there is a round tower 12 ft. in diameter and 20 ft. in height, supposed to have been used as a look-out to observe the movements of turtles. Another such tower, whose shaft measures 24½ ft., may be seen near Ahuakapu. It stands in the centre of a narrow platform 67 ft. long.

In Easter Island, as elsewhere in the Polynesian Islands, an important form of architecture was the construction of long, narrow platforms which correspond to the Polynesian *marais*. The platforms are usually near the beach on high ground, and are built with parallel walls of squared stones laid together, but uncemented. Inside these walls, at irregular intervals, were built small tombs. Between these, and extending to the top of the retaining walls, were thrown small stones until the horizontal plane of the platform was completed. Into this rubble were set the rectangular stones upon which the images stand. Finally, wings were built sloping from the horizontal plane to the ground. There are 113 platforms in all on Easter Island, each with a name. The largest, Tongariki, is 150 ft. long, 9 ft. wide, and 8 ft. high, excluding the wings, but with these it measures 540 ft., and the platforms vary in character and condition from this to mere shapeless masses of stone. Tongariki was adorned with fifteen statues, all but one of which have fallen face downward on the inshore side and are mostly broken. Another platform, named Vinapu, has six wings. Behind this is a round area 225 ft. in diameter. There is evidence to suggest that this was the ancient place of assembly for feasts and native ceremonies, and other platforms show similar spaces, the platform of Anaoraka having behind it a large triangle paved with cobbles.

Altars, which are said to have been erected for sacrifice, are found in the rear of some of the platforms. They are built of a single shaft, generally of vesicular lava, or sometimes of the material from which the images and crowns were made, and vary in height from 5 ft. to 10 ft., squared from 3½ ft. to 4 ft. on each face. They stand in the centre of a smoothly-paved terrace, and the sides and plinth are covered with figures sculptured in low relief, which, unfortunately, are too worn to be determined. There are traces of fire on the top of these stones, but no charred human bones have been found, so that the idea that they were used for human sacrifice may be discarded, especially as they are unlike the altars used in the other Polynesian islands for this purpose.

11. The art seems to have been of a crude and simple type. Slabs painted white, red, and black have been discovered. Some of the figures upon them resemble birds, while others are remarkable reproductions of European ships. Sculptured rocks, some of which seem to be prior to all remains except a ruined village west of Kotateke Mountain, have also been found. These are covered with fishes, turtles, and a bird-like figure which probably represents Meke Meke. On the wooden clubs and wide-bladed paddles designs of heads

may be plainly seen. Carved necklaces, which were worn during the dances, also exist.

All the stone for the monoliths of Easter Island was quarried either in the southern part of the crater of Rana Roraka or else on the western slope of the mountain. The workshops of the image-builders were situated in both of these places. The workman first chose an appropriate rock, then made a rough drawing of his subject in a recumbent position, and finally carved and completed the statue with the exception of cutting it loose from the rock. This was done last of all, and with caution, to avoid breakage. There are about 248 statues in, or very near, the crater of Rana Roraka, in various states of preservation. Their weight varies from ten to forty tons. An unfinished image, the largest on the island, measures 70 ft. in length and 14½ ft. across the body. The head itself is 28½ ft. long. The faces of these images, which alone are finished with any degree of care, have receding foreheads, high cheek-bones, straight noses, firm lips, long orthognathous chins, and ears of an exaggerated oval shape, possibly representing an early custom of elongating the lobes by means of pendants. The backs of the heads are square, on account of the way in which the statues were freed from the living rock. Little care, if any, was given to finishing the body, which in no case extended below the hips. The heads were invariably flat on the top, to allow for the adjustment of the red tufa crowns with which all the images were originally adorned. Of these crowns the largest is 12½ ft. in diameter. In three or four instances female statues occur. In feature the images correspond closely with the household gods already mentioned, except that the latter are made of wood, with eyes of bone and obsidian; and, unlike the images, they have the body entirely finished. They range from 2 ft. to 8 ft. in length, and are more modern than the stone household gods. The usual view is that they were images of noted persons; but from the analogy of Polynesian religion in general they seem originally to have been closely connected with the cult of deceased chiefs, or, in other words, were the outgrowth of ancestor-worship.

12. The language of Te Pito te Henua is unmistakably Polynesian, being most closely akin to the Maori of New Zealand, and this is the only island of the group which has an alphabet. There are numerous wooden tablets in the possession of the natives, each of which is believed to contain a different tradition. The characters on them are pictorial symbols, and were incised with obsidian points in straight lines on a sunken channel. Some of these tablets seem to have been made of drift-wood, very possibly parts of a canoe. They vary in size from 5½ in. by 4 in. to 5½ ft. by 7 inches. The art of reading them was hereditary in the families of the kings and chiefs, although in isolated cases a priest or teacher might decipher them. Ure Vaeiko, an old inhabitant of Easter Island, related the traditions contained in the tablets, and his version was afterwards corroborated by another man, Kaitae by name, who claimed to be directly descended from the last king, Maurata. At least approximate translations of these are given by Thompson and Geiseler (*opp. citt. infra*).

13. The early religion of Rapa Nui was distinctly Polynesian in type. The chief god was Meke Meke, who was the creator of all, and who is represented in the sculptures of Orongo, and in the paintings, as a bird-like figure. In his honour a feast was held annually in July, at Orongo, when eggs of sea-birds were brought from the rocky islets of Mutu Rau Kau and Mutu Nui, a few hundred yards from Rapa Nui itself—he who first brought an egg unbroken having certain rights to food and other privileges, as being especially honoured of Meke Meke. This god is evidently the Polynesian Tangaloa, the sky-god, who is represented in many Polynesian cosmogonic myths as a bird, originally imprisoned in a gigantic egg (see COSMOGONY [Polynesian]). There were numerous other gods and goddesses, to whose conjugal union was ascribed the origin of all existing things, as told by one of the tablets. Unfortunately the account is too brief for any re-construction of the mythology, since it is merely a list of such statements as 'God Agekai and goddess Hepeue produced obsidian.' It is known, however, that there was a god of fish named Mea Ika. There was also a god of birds called Era Nuku, whose wife was Manana, and who had the shape of a fish. Another bird-god was Mea Moa, while the *bonito* fish had a distinct deity, Mea Kahi. The god of theft has already been mentioned. Legend traces the coming of the Rapa Nuis, under their king Hotu-Matua, in two *proas* from the west, and likewise tells of a conflict between the Vinapu and Tongariki clans which resulted in the destruction of platforms and the overthrow of statues, so that the fallen images are still called 'dead,' while those yet standing are 'alive,' and are believed to have slain their prostrate foes. This tradition may well represent an actual internecine war, which would not be unprecedented in Easter Island, although some explorers prefer to explain the desolation of Te Pito te Henua by the hypothesis of a seismic disturbance. The date of this destruction, whatever its cause, seems to have been about the middle of the 17th century.

The exact import of the statues is a matter of doubt. They are acknowledged to represent chiefs and men of prominence; yet, on the other hand, it is said that they, like the household gods, received no worship. *A priori*, however, this is extremely doubtful, especially as the platforms where they are placed are favourite places of burial. It is more probable that the statues and, at least to some extent, the household gods, through whom communication was held with the spirits, represent the ancestor-cult of the early Rapa Nuis, and that they thus find their analogue in the Melanesian images erected as memorials of *tindalos*, although having in themselves no *mana*, or supernatural power (cf. Codrington, *The Melanesians*, Oxford, 1891, pp. 173–174). The statues are still objects of veneration to the natives of Easter Island, and are even believed to possess *mana*. They are protected by tabu (called *rahui* in this island), which is indicated in Rapa Nui by a white stone set on three common stones. The household gods seem to have received some sort of homage at the principal feasts, especially at the time of the ripening of the fruits, the fishing season, and the gathering of eggs. Temples were unknown, and worship was performed in the open air. The problem of altars has already been discussed.

Fetishism was also part of the religious belief of the island. The *timoika*, or fetish-board, was a whalebone paddle, 30 in. long by 14 in. wide, which was waved to the accompaniment of incantations to injure an enemy, while the *rapa*, or potato-fetish, a double-bladed paddle some 2 ft. long, was employed in similar fashion to protect the potato crops against drought or insects. Still more interesting are the *atua mangaro*, or fetish stones, small pebbles, either rough or fashioned, which were buried beneath the houses to ensure good fortune.

In early times the Easter Islanders had many superstitions, and had recourse to prayers, charms, incantations, and amulets to ward off evil and to bring good luck. They believed in a future life, to which, after death, the soul departed, there to be rewarded or punished as it deserved. For this

reason a small hole was left near the top of the burial-place, so that the spirit of the dead might pass forth. Deified spirits were supposed to be constantly roaming about the earth and to influence human affairs. They appeared to, and communicated with, sleeping persons in visions or dreams. Gnomes, goblins, and ghouls were said to live in inaccessible caves and to prowl around after dark. The islanders of to-day are extremely superstitious, and live in constant dread of the baneful power of demons and supernatural beings. Circumcision is unknown to the Rapa Nuis, and there is no word equivalent to it in their language.

14. The antiquities of Rapa Nui are not without their parallels in other Polynesian islands, although the monuments decrease in importance as one advances eastward. Thus the island of Rapa, some 2000 miles west of Easter Island, contains terraces of massive turretted stone forts, while the tombs of the Tui-Tongas in Tongatabu, the chief island of the Tonga group, form nineteen truncated pyramids, each about 100 ft. square at the base and 25 ft. high, many of the coral concrete blocks measuring 18 ft. in length by 5½ ft. in height, and 3 ft. in width, and weighing over twenty tons. A megalithic dolmen, each of whose sides weighs fifteen tons, and with a top, brought, according to tradition, by boat from Wallis Island, more than 600 miles distant, is also found in the same island. In Tinian, one of the Ladrones, are two rows of columns resembling the uprights of the dolmen in Tongatabu, each capped with a hemisphere, flat side up, and weighing four tons. Ponape, in the Caroline group, contains marvellous cyclopæan ruins of basaltic prisms brought from a quarry ten miles distant, and ruins are also found in various other islands of the same group (see Guillenard, *Australasia*, ii., London, 1894, pp. 452, 500, 515, 519, 522, 527, 549, 554).

FLORENCE L. GRAY.

EASTERN CHURCH.[1]

EASTERN CHURCH.[1]—The Church which believes herself to be the canonical heir of the ancient undivided Church, remaining in the Faith and Orders of the first ages of Christianity, is called 'Orthodox' or 'Eastern.' Both these names distinguish her from, and contrast her with, her sister, the Western Church, which has excommunicated her, as well as from all the Protestant communities which have seceded from the latter. The name 'Orthodox Church,' on the one hand, expresses the idea that she is the Church of Christ which maintains the correct belief; the appellation 'Eastern Church,' on the other hand, in connexion with the division of the ancient Roman Empire, points primarily to the Eastern half in contrast with the Western, of which the centre is the Church of Rome. Yet, inasmuch as the Western Church, under the Pope, by introducing innovations regarding the foundations of government and regarding faith, at length separated herself from the Eastern Church, the name 'Eastern' acquired a moral significance, pointing to the Church as the possessor and champion of the ancient traditional faith, in contrast with the deviating *Western* Church. Thus also, though she has long ago extended greatly towards the North and includes the Russians, she continues none the less to give herself the title of 'Eastern,' and thus to recall, on the one hand, the former eminence of the Orthodox Church of the East, and to bind herself, on the other hand, to the ancient Church of which she claims to be the canonical and genuine heir.

Besides the Christians of those ancient lands in which the Orthodox Church prematurely extended her bounds, she numbers now about a hundred million believers, including, since the 9th cent., the Russians. She consists of fourteen self-governing Churches, that is, Churches completely independent and autocephalous in regard to internal administration. These are as follows:

1. The Ecumenical Patriarchate of Constantinople.
2. The Patriarchate of Alexandria.
3. The Patriarchate of Antioch.
4. The Patriarchate of Jerusalem.
5. The Archiepiscopate of Cyprus.
6. The Church of Russia.
7. The Church of Greece.
8. The Metropolis of Carlovica.
9. The Church of Roumania.
10. The Church of Servia.
11. The Archiepiscopate of Montenegro.
12. The Metropolis of Hermannstadt.
13. The Metropolis of Bukowina and Dalmatia.
14. The Holy Monastery of Sinai, of which the Archbishop, whilst independent as Abbot, is as Archbishop attached for spiritual matters to the Patriarchate of Jerusalem.

All these Churches, though separate and independent, yet constitute one body, inasmuch as they possess (1) the same Faith, (2) the same principles of government, and (3) the same bases of worship.

1. The common Faith.—The common Faith of the Orthodox Churches is drawn from the two sources of revelation, according as the infallible Church has understood and interpreted them through her hierarchy, either assembled in Synods, or by themselves teaching each the same doctrine. The founts and the rule of dogmatic instruction are the dogmatic decisions of the Ecumenical Councils, or those of local Synods confirmed by an Ecumenical Council. As secondary sources, Expositions of the Faith are used, such as have been ecclesiastically accepted, inasmuch as they agree with ecclesiastical doctrine. Such are the so-called Symbolical Books of the Eastern Church, especially the Orthodox Confession of Mogilas and that of Dositheos. The chief points of Orthodox doctrine are as follows:—Man, having transgressed the commandment of God, fell from his original righteousness, on the one hand throwing off the true knowledge of God, on the other hand leaning generally towards evil. But the Son of God, having become incarnate, and having been sacrificed on Golgotha, reconciles sinful mankind with God, and establishes His Church for the continual supply of the benefits of the Cross. Thus the Church is the storehouse of truth and of sanctifying grace; through her the believer is taught the genuine contents of the Faith, and by means of her seven Sacraments (Baptism, Anointing, the Eucharist, Repentance, Ordination, Marriage, Extreme Unction) he is both justified and edified, through faith working by love, in the work of sanctification and in advancement towards all that is good. The Saints are honoured as models of faith and virtue (by feasts, pictures, and relics), and their intercession with God is requested (cf. the Symbolical Books of the Eastern Church, published by Kimmel in two vols., Jena, 1843). The reader may further consult the numerous Orthodox Catechisms, of which the principal is that of the Russian Plato; and the dogmatical works of the Russians Antonios, Makarios, and Sylvester, and in Greek those of Rossi's *System of Dogmatics of the Orthodox Eastern Catholic Church* (vol. i., Athens, 1903), and Androutso's *Symbolics*

[1] Besides this general article, there will be separate articles under the titles GREEK CHURCH and RUSSIAN CHURCH, to which this article is intended to be an introduction.

from an Orthodox Point of View (Athens, 1901), and *Dogmatic of the Orthodox Eastern Church* (Athens, 1907).

2. Church government.—The second chain binding the autocephalous Churches into one whole is the common principles of government. These principles are supported by the holy Canons, by the Fathers, and by the administrative laws of the Emperors, referring to the Church and completing the Canons. Among these canonical collections, entitled *Nomocanon*, the most important is the Code given to Photius, which was sanctioned in 920 by a great Council in Constantinople, and proclaimed as having authority over all the Eastern Church, constituting the fundamental collection of her laws. More modern collections are, on the one hand, the so-called *Rudder of the Intelligent Ship of the one Holy Catholic and Apostolic Church of the Orthodox*, published first at Leipzig in 1800; and, on the other hand, the *Constitution of the Divine and Holy Canons*, published by Ralli and Potli at Athens, in six volumes, in 1852 (Greek).

According to the principles of Orthodox government, the head of the Church is Jesus Christ; but believers are distinguished into *clergy*, consisting of three grades (archpriests, priests, and deacons), and *laity*. Monastic life, without any division into grades, is a single organism resting upon the monastic arrangements of Basil the Great, reduced to order by means of legal commands of ecclesiastical and political legislation.

The monks (whose first and second orders wear cassocks) are spiritually subject to their local bishops, excepting the monks of the *stauropegia*[1] and of the Imperial monasteries. The monasteries are distinguished, according to their regimen, into *cenobitic* and *idiorythmic*.[2]

The centre of each Church is the bishop, but the basis of administration of the autocephalous Churches is the Synodical system, all questions of ecclesiastical administration and discipline being solved in regular or periodically convoked Synods. Not only spiritual questions affecting ecclesiastical life and hierarchical organization are regulated by Church law, but partly also many relations of social life, which are bound up closely with that of the Church, such as questions of marriage, divorce, etc. In spite of all the differences which, owing to their relations towards the civil government, Canon Law presents from this point of view in the various autocephalous Churches, the common spirit of administration appears everywhere. Many Canon Laws have been published among the Orthodox, the best of them being *Ecclesiastical Law*, composed by Milasch at Zara in 1902, of which a second edition has appeared.

3. Worship.—The third mark of the unity of the Orthodox Churches is the common basis of worship. No one liturgical language holds the place in the Orthodox Church that Latin does amongst the Roman Catholics; every race performs its service in its own tongue. The Table of Feasts of the Orthodox Church rests on the Julian Calendar, which has thus an ecclesiastical significance; hence a reform of it, bound up as it is with ecclesiastical life among the Orthodox, cannot take place by means of a political enactment.

The churches are nearly all built on the same plan; the holy place is separated from the rest of the temple by the shrine for pictures.

The feasts are distinguished either as 'great,' because they relate to the Lord Jesus or to the Mother of God, or as Saints' days; but the central one is the Paschal feast (Easter). Easter, Christmas, the Assumption of the Virgin, and the anniversaries of the death of the Holy Apostles are preceded by fasts of many days; other fast-days being also Wednesdays and Fridays, the 14th of September, the 29th of August, and the Eve of the Epiphany.

The stronghold and centre of the whole worship is the Liturgy, of which two types are used—that of Basil the Great, recited on fixed days, and that of Chrysostom, which is usual throughout the year. The Liturgy of the Pre-sanctified, called, after the nomenclature of Gregory, the *Dialogos*, is recited only in Lent. Preaching of the Divine word, for the explanation and imparting of Christian truth, which was anciently an inseparable part of public worship, has now disappeared, and only in Russia does it show some signs of life. Common to all the Churches are certain books for the offices of the Feasts and the Sacraments. (1) Τυπικόν. The *Typicon* is a book which fixes the canonical psalms and hymns to be used, as well as the mode of conducting the services of the Church on the different festivals. (2) Εὐχολόγιον. The *Euchologion* contains the order of prayers for the seven Sacraments, and other prayers for different occasions. (3) Ὡρολόγιον. The *Horologion* contains the seven kinds of petition for the seven hours of prayer, that is, the first, the third, the sixth, the ninth, Vespers, Midnight, and Dawn. (4) Τριώδιον. The *Triodion* contains the hymns to be sung during the whole of the forty days which precede Easter. (5) Πεντεκοστάριον. The *Pentecostarion* contains the hymns to be sung from Easter to Whitsuntide. (6) Παρακλητική. The *Paracletice* contains the hymns of John of Damascus and others, which are sung from Whitsuntide onwards. (7) Μηναῖα. The *Menæa* contains hymns for all the Saints' days and festivals of the year which are not contained in the *Triodion* and the *Pentecostarion*. (8) The Psalter, the Gospel, and the 'Apostle.' The music is vocal and idiorythmic, and is pleasing when it is well performed. Instrumental music and graven images are forbidden (cf., for the Table of Feasts, the Calendar of Nilles, and for the music the Literature of Krumbacher, in *Byzantinische Litteratur*², Munich, 1897, p. 599 ff.).

4. Character of the Orthodox Church.—The essential features of the Orthodox Church are two: (*a*) *theoretical*, that she preserves and keeps unchanged doctrine handed down by her (Traditionalism); and (*b*) *practical*, that she avoids excess or bias in external ceremonies (Ritualism). The first of these marks is generally in agreement with the marvellous beginning of Christianity, because this, according to the Orthodox, is not something empty and invisible, but a revelation having a firm and definite content in regard to faith and the bases of worship and administration; and the Orthodox Church, tolerating no innovation, claims to preserve and exhibit as much as possible the supernatural essence of Christianity. From her point of view, the Western Church came to a rupture with ancient tradition, and Protestantism is a subversion of traditional foundations, whereas she herself claims to teach essentially what was taught by the Church of the first ages. Certainly, that keeping of the traditional Faith does not exclude theological development and the many-sided investigation of Divine truth. And if, from the 8th cent. onwards, treatises about Christian truth are lacking in life and independent thought, this must be attributed not to the principles of Orthodoxy being insusceptible of development, for in the first period of the Church they were shown to be the inexhaustible source of rich theological research, but to external causes, to well-known political circumstances.

All who visit the Churches of the East are

[1] Σταυροπήγιον is a monastery in foreign lands depending on the Ecumenical Patriarchate of Constantinople.

[2] Monks of the former class have common meals and a common purse; in the latter each dwells apart from his fellows, but is under the spiritual direction of his Abbot.

forcibly struck by the attention to external forms. Whereas the main aspect of the Western Church is that of an administrative institution, having a well-formed system of obedience to the authority of the Church, and whilst among Protestants Christianity is principally a matter of teaching and preaching, the Orthodox Church, having on the one hand a loose administrative system, and on the other hand a lifeless preaching, appears now to be chiefly a society for worship. Thus dogma is put aside or hidden in the external forms of adoration; the whole religious being of the Orthodox appears generally in reverence and submission to her numerous rites. But surely religious ceremonies are the necessary expression of the internal spirit; and is it not reasonable that the Orthodox Church, having been distinguished of old by her rich religious life, should afterwards have turned to create appropriate rites to express the living Faith? And if, since the 8th cent. sacred ceremonies multiplied and then came to be incomprehensible to the common understanding, so that their performance by the lips and the simple listening to them are now assumed to be the fulfilment of religious duties, such a zeal for ritual is not a product of the Orthodox spirit, but shows the unfavourable circumstances of which the Orthodox Church was formerly the victim, and under whose power she still remains. The lack of missionary work among the Orthodox must also be attributed to the same unfavourable circumstances, and not to 'the self-complacency of the Orthodox Church or the satisfaction of a glutted possessor,' or the sense of her own weakness, as some modern theologians declare without examination (*e.g.* Loofs, *Symbolik*, Tübingen, 1902, i. 167, and Boulgaris, Θεολογικοί, Vienna, 1872, p. 25.

LITERATURE.—See lists appended to artt. GREEK CHURCH and RUSSIAN CHURCH.

PORPHYRIOS, *Archbishop*.

EATING THE GOD.—The idea that the properties of an organism are acquired by eating its substance is widely spread among semi-civilized peoples.[1] It forms a prevalent explanation of ceremonial cannibalism (*q.v.*), and is probably the chief among the reasons given for the correlated rite of theophagy. This rite is not frequent, though the history of religion and magic teems with examples which just fall short of the definition. The vague and indeterminate conception of deity in the lower religions helps to explain both of these facts.

Communion in the flesh or blood of a god is necessarily indirect. Even when the man, animal, or plant, sacrificed for the purpose, is divine, only the individual is used; the species remains. The nearest approach to actual theophagy is in the employment of a man-god.

'The sacrificial form of cannibalism obviously springs from the idea that a victim offered to a supernatural being participates in his sanctity, and from the wish of the worshipper to transfer to himself something of its benign virtue.'[2]

Sacrificial cannibalism has been a regular institution among the peoples of Central America, in parts of Peru, in Nigeria and various tracts of Equatorial Africa, and in certain islands of Polynesia and Melanesia.[3]

The most remarkable development was in Mexico. At every sacrifice the victim bore the name and filled the rôle of the god. Acosta observes:

'Afore they did sacrifice him, they gave him the name of the idol to whom he should be sacrificed, and apparelled him with the same ornaments like their idol, saying that he did represent the same idol.'[4]

The annual representative of Tezcatlipoca, after a year's luxurious living, was sacrificed at the great festival. His heart was offered to the sun. His legs and arms were served up at the tables of the lords. The 'blessed food' was chopped up small.[1] At the feast of Xipe, prisoners of war were eaten. They were termed *tototecti*, 'dying in honour of *Totec*.' A thigh was sent to the king's table. The dish was called *tlacatlaolli*. The giver of each feast did not eat of his own captive, but of those of others.[2] In Cholula a slave of fine physique was sacrificed as the representative of Quetzalcoatl, and eaten.[3] The Mayas ate the flesh of human victims sacrificed to the gods, as 'a holy thing.'[4] In Caranque, a province of Peru, it was the custom to eat the flesh of persons sacrificed to the gods.[5] In Nigeria, human victims offered to gods are eaten by both priests and people; the flesh is distributed throughout the country.[6] Traces of the rite are found in Vedic India.[7]

Where the god is a deity of the corn, he may be eaten in his anthropomorphic substance or in the form of grain or bread. The Mexican theophagy of Huitzilopochtli is an important example of the rite, though the cult is apparently composite.

A colossal statue of the god Huitzilopochtli in dough was broken up and distributed among the worshippers. The ceremony was described as 'killing the god Huitzilopochtli so that his body might be eaten,' and was termed *teoqualo*, 'god is eaten.' Women were not allowed to partake.[8] The dough was made of all kinds of seeds and the blood of children. After being exhibited in the temple, the image was 'slain' by the priest, who pierced it with a dart. The heart was eaten by the king. The rest of the 'flesh' was broken up small, and all males received a portion.[9] Smaller images of dough were eaten at other feasts. Reasons assigned were to secure good health, and, in the case of warriors, to increase their strength.[10]

Analogous cases of the offering of images of divine beings made of bread are adduced by Frazer.[11] Holy cakes are often in the form of wafers on which the divine image is stamped in relief. This method may clearly arise without reference to the principle of substitution, as may be seen in the case of the Christian Eucharist, where it is unnecessary to assume that the stamped wafer is a substitute for an actual lamb.

In so far as the fruits of the earth are conceived as the embodiments of divine beings, the sacramental eating of the new fruits is a form of the rite of eating the god.[12] In some cases this solemn act of assimilation is preceded by a purgation, both physical and moral. The intention in the former aspect is 'to prevent the sacred food from being polluted by contact with common food in the stomach of the eater. For the same reason Catholics partake of the Eucharist fasting.'[13] It is unlawful to partake of it after a meal. Lent was originally regarded as the fast preparatory to the Easter communion. Continence, often associated with fasting, was also prescribed before communion.[14] A transition from sacrament to sacrifice in this connexion has been suggested.

'At a later age, when the fruits of the earth are conceived as created rather than as animated by a divinity, the new fruits are no longer partaken of sacramentally as the body and blood

of a god; but a portion of them is presented as a thank-offering to the divine beings who are believed to have produced them. Sometimes the first-fruits are presented to the king, probably in his character of a god. Till the first-fruits have been offered to the deity or the king, people are not at liberty to eat of the new crops.'[1]

In Wermland (Sweden), the peasants eat loaves made from the grain of the last sheaf. The loaf is in the shape of a girl, and 'represents,' according to Frazer, 'the corn-spirit conceived as a maiden.' Similarly in France, at La Palisse, a man of dough is broken in pieces and eaten, at the end of harvest.[2] The Lithuanian festival of Sabarios included the eating of loaves ceremonially made from all kinds of seeds. One little loaf was given to each member of the household.

> 'In one part of Yorkshire it is still customary for the clergyman to cut the first corn; and my informant believes that the corn so cut is used to make the communion bread. If the latter part of the custom is correctly reported (and analogy is all in its favour), it shows how the Christian communion has absorbed within itself a sacrament which is doubtless far older than Christianity.'[3]

In Buro, at the end of rice-harvest, each clan holds a sacramental meal to which each member contributes some of the new rice. It is termed 'eating the soul of the rice.'[4] Similar rites are observed in Celebes, among the Hindus, Burghers, and Coorgs of South India, in the Hindu Kush, and among the Chams of China.[5] In Scotland, grain from the Old Wife, the last sheaf cut at harvest, is given to the horses, in order to secure a good harvest next year.[6]

Such worship as the Ainus of Japan paid to the bear 'appears to be paid only to the dead animal.'[7] Though, whether alive or dead, it is described as *kamui*—a term similar to the *ngai* of the Masai, the *orenda* and *wakan* of the North Americans, and the *mana* of the Melanesians—it is slain whenever possible; its flesh is a staple food, and its skin furnishes clothing. But at the annual bear-festival a bear was 'worshipped' and then ceremonially slain. Its blood was drunk by the male members of the family. The liver was eaten raw by women and children as well as by men. The brain was eaten with salt. The heart also was eaten. The rest of the flesh was kept for a day, and then divided among all who had been present at the feast.[8] Similarly the Gilyaks of Siberia pay a certain measure of 'worship' to a bear, prior to its solemn sacrifice.

> After being shot to death with arrows, it is prepared for food. The flesh 'is roasted and eaten in special vessels of wood finely carved. They do not eat the flesh raw or drink the blood, as the Ainos do. The brain and entrails are eaten last; and the skull . . . is placed on a tree near the house. Then the people sing, and both sexes dance in ranks, as bears.'[9]

A more detailed account supplies a valuable type of such theophagous ceremonies:

> 'The broth obtained by boiling the meat had already been partaken of. The wooden bowls, platters, and spoons out of which the Gilyaks eat the broth and flesh of the bears on these occasions are always made specially for the purpose at the festival, and only then; they are elaborately ornamented with carved figures of bears and other devices that refer to the animal or the festival, and the people have a strong superstitious scruple against parting with them. While the festival lasts, no salt may be used in cooking the bear's flesh, or indeed any other food; and no flesh of any kind may be roasted, for the bear would hear the hissing and sputtering of the roasting flesh, and would be very angry. After the bones had been picked clean they were put back in the kettle in which the flesh had been boiled. And when the festal meal was over, an old man took his stand at the door of the house with a branch of fir in his hand, with which, as the people passed out, he gave a light blow to every one who had eaten of the bear's flesh or fat, perhaps as a punishment for their treatment of the worshipful animal.'[10]

In ancient Greece the worship of Dionysus seems to have included theophagy. Bulls, calves, goats, and fawns were torn to pieces and devoured raw by the worshippers. They believed, Frazer infers, 'that they were killing the god, eating his flesh, and drinking his blood.'[1]

At the Athenian *Bouphonia* the flesh of the slain ox was eaten by the participants in the ceremony.[2] The oxen slain at Great Bassam in Guinea annually to secure a good harvest are eaten by the chiefs.[3] Similarly, at a spring festival in China, the flesh of a sacrificed buffalo is eaten by the mandarins.[4] It is possible that at the *Thesmophoria*, Athenian priestesses ate the flesh of sacrificed swine as a communion of the body of the god.[5] Near Grenoble the harvest supper is made from the flesh of a goat killed ceremonially. Similarly, in the case of a slain ox near Dijon.[6] The ancient Egyptians partook of the flesh of a pig sacrificed to Osiris. Instead of the pig, poor persons offered a cake of dough.[7]

The Kalmuks consecrate a ram as 'the ram of heaven' or 'the ram of the spirit.' The animal is tended carefully and never shorn. When it is old, and the owner bethinks him of consecrating a young ram, the ram of heaven is slain, and its flesh eaten.[8] The Todas, by whom the buffalo 'is to a certain degree held sacred,' and is treated 'with a degree of adoration,' never eat its flesh, except at a sacred meal celebrated once a year. A calf is killed in a secret place of the jungle, and its flesh roasted on a sacred fire. Women are not allowed to be present.[9]

Frazer distinguishes two types of 'sacramental killing' of the 'animal god'—the Ainu and the Egyptian types. In the former the animal is one which is habitually killed, and the special sacrifice is a 'special annual atonement' for the habitual slaughter, the individual 'god' of the species 'deity' being 'slain with extraordinary marks of respect and devotion.'[10] The Toda ceremony is an example of the Egyptian type.

The prohibition against the use of salt or of leaven, or other modifying constituents, is noteworthy in the case of the ceremonial consumption of 'strong,' or 'sacred,' foods. The bread of the Passover and the Catholic host are unleavened. Sacred foods generally may not be mixed, and the prohibition of salt and leaven is no doubt a result of the same principle. 'Strong' foods, again, are as a rule forbidden to women, various reasons being assigned. Male selfishness, ideas of male superiority, connected with the androcentric structure of society, are sufficient reasons for the prohibition, taken together with woman's natural aversion to such foods, and, in particular, to strong drink. In the 6th cent. the Council of Auxerre forbade women to receive the Eucharist with the naked hands.[11] Here a complication is introduced by the then prevailing notion of the natural impurity of woman.

As sacred bread is to the flesh of the god, so is sacred wine to his blood. As the 'worshipper' in the hunting stage of social evolution acquired strength and 'inspiration' by drinking the fresh blood of slain animals, so in the agricultural stage the process is repeated by drinking wine.

'Whoever drinks the blood of an animal is inspired with the soul of the animal or of the god, who . . . is often supposed to enter into the animal before it is slain; and whoever drinks wine drinks the blood, and so receives into himself the soul or spirit of the god of the vine.'[1]

In ancient Brâhmanism and Zoroastrianism the worshipper drinking the *soma* or *haoma* was in communion with deity. In the former case, as in the case of the Greek Dionysus, the wine itself had come to be anthropomorphized into a god.

Among totemic peoples it is a general rule that the totem may not be slain or ill-treated in any way. But there are a few exceptions. The Narrinyeri of South Australia were in the habit of killing and eating their totemic animals.[2] In the Euahlayi tribe it is lawful to kill and eat the hereditary totem, which is derived from the mother; but it is forbidden to treat the individual totem, *yunbeai*, in this way.[3] Among the Arunta and other tribes of Central Australia the totem animals are eaten by the members of the totem group at the *Intichiuma* ceremonies, but at no other time, except sparingly. This ceremonial eating is connected with the purpose of multiplying the numbers of the totem animal which forms a staple food for other totem groups.[4] There seems to be no *a priori* reason why a totem animal regularly killed should not on occasion serve as a mystic food. At the *Intichiuma* of the kangaroo totem the members eat a small portion of the flesh of a kangaroo, and anoint their bodies with the fat.

'Doubtless the intention alike of the eating and of the anointing is to impart to the man the qualities of his totem animal, and thus to enable him to perform the ceremonies for the multiplication of the breed.'[5]

But these Australian sacraments, so called, are not only in the magical stage, but, to all appearance, devoid of any sentiment of loyalty to the totem or of solidarity in the clan. They seem to show the mechanical and business-like aspect of magic rather than its emotional aspect.

There is no evidence of any rite of sacramental communion with the totem by eating its flesh, in cases where the totem may be regarded as a divinity. The 'mystic meal' of the Australian *Intichiuma* is not a mode of religious communion, but merely an application of sympathetic magic, both in the mechanism and in the results of the ceremony. All that can be said is that it may be a case of theophagy in the making.

'The totemic animal or plant is not regarded exactly as a close relative, whom it would be wrong to kill.'[6] The Wolf clan of the Tlingits hunts wolves, but, when in danger from them, prays to them as 'relatives.'[7]

The principles on which theophagy rests are apparently simple, when we consider the early views as to the transmissibility of supernatural power and the meaning of the assimilation of nutriment.

'The divine qualities of a man-god are supposed to be assimilated by the person who eats his flesh or drinks his blood. This was the idea of the early Christians concerning the Eucharist. In the holy food they assumed a real bestowal of heavenly gifts, a bodily self-communication of Christ, a miraculous implanting of divine life. The partaking of the consecrated elements had no special relation to the forgiveness of sins; but it strengthened faith and knowledge, and, especially, it was the guarantee of eternal life, because the body of Christ was eternal. The holy food was described as the "medicine of immortality."'[8]

But, even in the early stages of human thought, the distinction between substance and accidents is clearly held. The soul of man is nourished (hence the strength and life of his body) by the soul of the food.[9] The accidents on both sides are either ignored or explained away. As materialism and spiritualism or animism become separated, the necessity is felt of bridging the gulf between substance and accidents; hence theories of transubstantiation. Along other lines of thought come the ideas of symbolism and commemoration. The rite is symbolic of spiritual assimilation; or it is done in memory of a divine being.

In spite of meagre data, not likely to be augmented, the rite is a very logical corollary of several series of ideas. It is a case of convergence; the patent results of the assimilation of food are the basis of the homology. The animism and vitalism so deeply ingrained in religious thought and emotion seem to have a permanent warrant in the facts of nutrition. It is quite natural that the primitive mind should attach magical and animistic ideas to food, as such, and in particular to flesh. Raw flesh is 'living flesh';[1] warm blood is instinct with life and soul. From the point of view of the magical assimilation of properties, human flesh and blood are the most valuable nutriment possible. But, in spite of occasional lapses into cannibalism, man has generally shown an instinctive repulsion to the habit or the perversion. And, if there is some mystery about flesh and blood generally, there is still more about the flesh and blood of men. Hence sacrificial cannibalism is an act fraught with supernatural crisis. Probably all such acts are a form of orgiasticism. So much is suggested by the psychology of cannibalism dictated by revenge, or even by love. Popular expressions such as 'I could eat you' show that a normal tendency of this kind may exist.

Besides the fascination derived from mystery and even from repulsion, there is no doubt that human flesh is preferred by cannibals to any other. Moreover, man being the lord of creation, his flesh is regarded as correspondingly 'strong,' and hence more nutritious and strengthening than any other. The Euahlayi Australians hold that what strengthens them more than anything, both physically and mentally, is the flesh of men.[2]

'It is easy to understand why a savage should desire to partake of the flesh of an animal or man whom he regards as divine. By eating the body of the god he shares in the god's attributes and powers. And when the god is a corn-god, the corn is his proper body; when he is a vine-god, the juice of the grape is his blood; and so by eating the bread and drinking the wine the worshipper partakes of the real body and blood of his god. Thus the drinking of wine in the rites of a vine-god like Dionysus is not an act of revelry, it is a solemn sacrament. Yet a time comes when reasonable men find it hard to understand how any one in his senses can suppose that by eating bread or drinking wine he consumes the body or blood of a deity. "When we call corn Ceres and wine Bacchus," says Cicero, "we use a common figure of speech; but do you imagine that anybody is so insane as to believe that the thing he feeds upon is a god?"'[3]

It has been suggested that the killing of divine men and animals may itself be due expressly to a desire for assimilating, by eating, the divine properties. In order to assimilate these properties the surest method is that of physiological absorption, and slaughter is a necessary preliminary.[4] On this view certain difficulties, such as that noted by Cicero, are apparently lessened.

'It is not the spirit of the corn and vine, as such, but the life-giving virtue of bread and wine that is the essence of the sacrament.'[5]

Among early agricultural peoples, strong meat, such as flesh, is eaten but rarely. Often it is eaten only, as strong drink is drunk only, at feasts. Similarly, the ancient Hindus allowed pregnant women the use of beef by way of strengthening the child.[6] But not all theophagy is of the flesh of

animals or men. It was in the case of bread and wine that Cicero noted a difficulty.

While, therefore, by stretching the idea of godhead to include victims to the god, many animal and human sacrifices may be regarded as theophagous rites, in which there may be a belief that 'god is eaten,' it requires an effort of imagination to hold such belief in the case of eating bread. But a comparison of the facts, both of spirit-belief and of the psychology of eating, shows that the custom is a development rather of the latter than of the former set of ideas and practices. All the ideas of eating, but few of theism, are found in theophagy. For instance, as Westermarck shows,[1] it includes the conception of the conditional curse. A significant case is the ordeal of the Eucharist, in which the swearer, after communicating in the body of Christ, prayed that in case of perjury the bread might choke and slay him.[2] By the nature of the case, on the other hand, there must be either substitution, transubstantiation, symbolism, or analogy, in order to identify the food with the god. In the greater number of instances it would seem that this identification is rather with the divinity of the god than with the god himself.

The two most important instances, the Christian Eucharist and the Mexican sacrifices, are in strong contrast. The latter is evidently a development from human sacrifice to ceremonial cannibalism, unless it was that a habit of cannibalism developed along with a habit of slaughter. It can hardly be regarded as a 'survival' of cannibalism. Much less can the Eucharist be so regarded, in spite of such analogies as may be hinted at in West Asian religions. On the face of it, and in view of parallel sacraments with bread and wine, it began in the form of analogy. The words, 'This is my body,' 'This is my blood,' are no survival of earlier and cruder rubrics, but an imaginative direction to identify the sources of physical with those of spiritual nutriment.

A. E. CRAWLEY.

EBIONISM.—I. *NATURE AND ORIGIN.*—

'Ebionism,' taken generally, is the name given to certain tendencies of thought, which crystallized into sects, within Judæo-Christian circles, in the early centuries of Christianity. The sects could have arisen only on Jewish soil, and apart from Judaism it is impossible to understand them. When we remember that Judaism was a national religion, holding within itself a special revelation and a Law enshrined in the sacred treasure of its past; when, further, we recall with what tenacity Judaism had clung to its Law, and what sacrifices it had made to preserve its historic identity and nationality—it will be understood what a ferment the new ideas of Christianity set up, and what a reaction of strenuous opposition they were calculated to raise. Ebionism, looked at historically, takes its place as one of the resultants of the fierce antagonism of Judaism to the simplicity and universality of the religion of Jesus Christ. The Ebionites had moved out of strict Judaism, but they had not moved into the Catholic faith. In a sense they were Jewish Christians; but their Christianity was nominal, and held by such a feeble thread that the slightest tension might snap it. So nominal was their hold of Christianity in its essence that the tendency of Ebionism was away from the Catholic faith. As the years went on, it became more and more heretical, until by the 5th cent. it had become practically extinct.

1. **Name and general interest of the sect.**—As we shall see, the name 'Ebionism' was given to more than one tendency of thought within Judæo-Christian circles. Some Ebionites were hardly distinguishable from the first Jewish Christians, from men like St. Peter and St. James, who endeavoured to combine the faith of Christ with the obligations of the Law and their national hopes. Others became strenuously antagonistic to the Catholic faith, and, while retaining the name 'Christian,' became really hostile to the spirit of Christ. Finally, there were others who held a faith of a mixed or syncretistic character. While they accepted Christ, they accepted Him only as a revived Moses; and they combined in their creed elements of a heterogeneous character, in which Essenism and Gnosticism are plainly recognizable. But, amid all the elements which we describe as Ebionitic, and notwithstanding the heterogeneous teachings which gather round the name, there were two points common to all Ebionites. The first had regard to the Law, the second to Christ. Ebionites were at one in exalting the Law and in depreciating Christ. The first point of agreement betrays the Judaism in which they had been reared; the second explains how they drifted outside the current of the Catholic faith and were at last stranded.

Why the name 'Ebionites' was given to those Judæo-Christian sects is not very clear. The tendency of the Church Fathers was to trace back such sects as the Ebionites to a *personal founder.* Tertullian (*de Præscr. Hær.*) in the 3rd cent. appears to have been the first to give currency to this view, which was held also by Epiphanius (*Hær.* xxx. 1. 17), who, without much critical judgment, regards Ebion ('callidus ille serpens animoque mendicus') as the author of the heresy. This explanation, which is without foundation, has been abandoned in modern times, though Hilgenfeld advocated it (*Ketzergesch.* 422 f.). There can be little doubt that the name is derived from the Heb. אֶבְיוֹן, 'poor.' But, while this is clear, it is not equally clear on what ground the Ebionites were so designated. The name gave scope for 'Patristic scorn,' and its bearers were denounced for poverty of intellect, poverty of faith, or poverty of Christology (Origen, *c. Celsum*, ii. 1; cf. *de Princip.* iv. 22, and *in Matth.* I. xvi. 12, τῷ Ἐβιωναίῳ καὶ πτωχεύοντι περὶ τὴν εἰς Ἰησοῦν πίστιν). Though the designation gave a convenient handle for Patristic sarcasms, it is improbable that its origin was so subtle. It is much more likely that it was originally a nickname given by the Jews to describe those who attached themselves to the religion of Jesus Christ, and who actually were among the poorer classes. The epithet, given originally in contempt, came to be used by Jewish Christians themselves, and gloried in, as describing sufficiently a characteristic of their order. By and by it lost its original signifiance, as names do; and in course of time it came to describe the sections of Jewish Christians who either failed to advance towards Catholicity or receded into more or less of antagonism to it.

2. **Origin of sect.**—When we endeavour to account historically for the pseudo-Jewish-Christians known as Ebionites, we are brought face to face with well-known facts in the nature and history of Judaism. Judaism, with its inheritance from the past, and its altogether unique appreciation of the Mosaic Law, was essentially a national religion. It might become the soil in which there should grow a Catholic faith, but in itself the religion of the Jews was intensely particularistic and national. From the records of the NT we see how there arose a form of faith, known as Jewish Christianity. In substance this was an endeavour to combine what was characteristic in Judaism with a faith in Jesus as the Messiah, the Son of

[1] *MI* ii. 622 ff.

[2] F. Dahn, *Bausteine*, Berlin, 1879, ii. 16, quoted by Westermarck, ii. 690.

God, and the Saviour of the world. To begin with, this Jewish Christianity must have held, as one of its presuppositions, that the observance of the Mosaic Law was necessary to Christianity (cf. Harnack, *Hist. of Dogma*, Eng. tr., i. 289); and, so far as we can trace its history, this remained one of its characteristics, though, as we shall see, some Jewish Christians were much more tolerant than others. How, then, did this Jewish Christianity develop in contact with the facts of history?

If we read aright the history of the Apostolic age, we see in it the gradual process whereby Christianity freed itself from the swaddling bands of Judaism—a process which was not achieved without struggle. To the first leaders of the Jerusalem Church the truth was not always clear that the Christian religion was independent of Mosaism. The first concession wrung from Jewish Christians was that, while the Law was binding on themselves as Jews born, it was not essential for Gentile Christianity to observe its enactments. That concession was the emancipating act of the Jerusalem conference, and it was due in large measure to the labours and propaganda of St. Paul. While the work and the teaching of the latter were intelligible to the spiritually-minded men at the head of the Jerusalem Church, and, however revolutionary, were accepted by them, it by no means followed that they were intelligible or acceptable to the mass of the Jews who had become converts to the Messiahship of Jesus. This is clear from the hostility which dogged St. Paul's footsteps from city to city; and it becomes clearer in after-history, when that hostility developed into Ebionism, which is simply the residuum of the struggles and heart-burnings of the age when the religion of Jesus Christ shook off the trammels of Judaism.

At this point we are able to estimate the influence of the national upheaval which ended in the fall of Jerusalem in A.D. 70. It was an age of passion, perplexity, and agitation; an age when extreme men clamoured for extreme views; an age which naturally gave birth to sectarianism. After the fall of Jerusalem, the Christian Church was re-constituted at Pella; but it was a changed Church. The Jewish element in it had ceased to be predominant. The passing away of the Temple, the rude triumph of the Gentile, and the cruel hands that had been laid on the sacred memorials of the past combined to cause a shock under which Mosaic ritual staggered. Further, at Pella the Church was recruited from the Essenes, and an Essene element began to penetrate it. By and by the Church came back to Jerusalem; and then came a final crash. Under Hadrian the Jews rebelled; Bar Cochba led a forlorn hope (A.D. 132); the Jews were expelled from Jerusalem; sacrifices were prohibited; Ælia Capitolina was founded (A.D. 138); and in place of the old Judaism, which in turn had yielded to Judæo-Christianity, there was a Church presided over by a Gentile bishop—a Church in which Jews and Gentiles had become one. Jewish Christianity had passed; and those who still clung to their national forms, and tried to combine them with a belief in the Messiahship of Jesus, were driven into heresy. When the Church discards a belief which it has outgrown, the tendency of those who retain that belief is to become heretical. The Church having outgrown Jewish Christianity, Judæo-Christians tended to return to Judaism. The time came when Judaism simply masqueraded in the guise of Christianity. 'Orthodoxy, when left behind by the culture of the age, and deserted by public opinion, becomes heresy' (Hase; see Hagenbach, *Hist. of Doctrines*, i. 68).

II. *Forms of Ebionism*.—When we begin to inquire narrowly into the divisions of the sect, we encounter considerable difficulties. These arise from the fact that the Fathers on whom we rely for our information are not agreed as to who were or were not Ebionites, and as to what precisely constituted the heresy of Ebionism. Probably at one period the nicknames 'Ebionites' and 'Nazarenes' were given indiscriminately to Judæo-Christians. When the names lost their original significance, and when Jewish Christianity in the Apostolic sense passed away, it was not always easy to say what or where were the heretics to whom the designation 'Ebionites' had come to be applied. Moreover, when it is remembered that these obscure sects were found in places as far apart as Syria and Rome, and that writers had few facilities for exact verification, it can be understood that divergences in description were liable to creep in. At the same time, it will be seen that, as a whole, the testimony is singularly consistent.

We may begin with a passage from Justin Martyr in the middle of the 2nd cent., who, in his *Dialogue with Trypho*, tells us that in his day there were two distinct classes of Jewish Christians. The one observed the Mosaic Law themselves, but associated with believing Gentiles, and did not insist on the observance of the Law by them. The other class refused to have fellowship with Gentile Christians until they had complied with the requirements of the Mosaic Law (*Dial. c. Tryph.* ch. xlvii.). Thus, we find the antagonism, already apparent in the NT, perpetuated and intensified in the middle of the 2nd century. One section of Judæo-Christianity had a tendency towards a Catholic faith, the other had a tendency back to Judaism; and in following this tendency the second class fell out of the Catholic movement and became heretical. Probably Justin had in view the developed tendency of the second class when, in ch. xlviii. of the *Dialogue*, he refers to some of the Jewish race who 'admit that He [our Lord] is Christ, while holding Him to be man of men.' Subsequent writers describe these Jewish Christians of Justin as 'Ebionites,' and give to the tolerant section the name 'Nazarenes.' The distinction was clear in the 4th cent. to Epiphanius (*Hær.* xxix.), and to Jerome. The latter found the Nazarenes dwelling in Peræa beyond Jordan, and classed them with the Ebionites, although they held to the Virgin Birth and the Divine Sonship: 'dum volunt et Judaei esse et Christiani, nec Judaei sunt, nec Christiani' (*Ep. 112 ad August.* c. 13).

It is remarkable that in the writers who follow Justin, towards the end of the 2nd cent. and the first half of the 3rd,—Irenæus, Hippolytus, and Tertullian,—there is only one section of Ebionites known, viz. those who deny the Divinity of our Lord. Irenæus, in the end of the 2nd cent., is the first to use the name *Ebionæi* (I. xxvi. 2, III. xi. 7, III. xv. 1, xxi. 1, IV. xxxiii. 4, V. i. 3). He is closely followed by Hippolytus (*Hær.* vii. 34; cf. Tert. *de Præscr. Hær.* 33), while Origen in the middle of the 3rd cent. has several references to the Ebionites. In one he says: 'Those Jews who have received Jesus as Christ are called by the name of Ebionites' (*c. Cels.* ii. 1). In another he makes reference to the Ebionites as 'deriving their name from the poverty of their intellect' (*de Princip.* iv. 22). In a third reference, he writes of 'the twofold sect of Ebionites [οἱ διττοὶ Ἐβιωναῖοι], who either acknowledge with us that Jesus was born of a virgin, or deny this, and maintain that He was begotten like other human beings' (*c. Cels.* v. 61). This is so far clear, and Origen's distinction is entirely in agreement with that of Jerome, to which we have already referred. But in a subsequent passage (*c. Cels.* v. 65) Origen says that 'both classes of Ebionites' (Ἐβιωναῖοι ἀμφότεροι) reject the Epistles of St. Paul. It is probable that he is somewhat confused here, because it is clear from other sources that the Nazarenes, who held the Virgin Birth, did not reject the Pauline Epistles. A simple explanation would be that Origen had not the same opportunity as Jerome of ascertaining the distinctive tenets of the Nazarenes (cf. Ritschl, *Entstehung der altkath. Kirche*, 1857, p. 156 f.). Lightfoot (*Com. on Galatians*, p. 318) approves of the further suggestion that, if originally the names 'Nazarenes' and 'Ebionites' were applied to Jewish Christians, it was inevitable that some confusion should enter into the Patristic narratives (cf. Ritschl, *op. cit.* p. 153).

If, then, we are to accept Origen's distinction (in which he is followed by Eusebius, *HE* iii. 27), we find that the Ebionites fall into two classes, the first acknowledging the Virgin Birth, the other holding that Jesus was simply the son of Joseph and Mary. To the first alone is the name 'Nazarenes' given; the second class are never known except by the name 'Ebionites.' There is another form of Ebionism described to us by Epiphanius (*Hær.* xxx.). It is sometimes known as *Essene* or *Gnostic* Ebionism, sometimes as syncretistic Judæo-Christianity. Apart from Gnostic influences, therefore, pseudo-Jewish Christianity appears in various shades and forms, tolerant or otherwise—forms known as 'Nazarenism' and 'Ebionism.' In Nazarenism, Jewish Christianity became 'stationary' (Uhlhorn, *PRE*³, art. 'Ebioniten'); in Ebionism, as distinct from Nazarenism, it became highly heretical, and this aspect of Ebionism may be described as *Pharisaic*. Under Gnostic and Essene influences,

Jewish Christianity became highly syncretistic, as well as heretical. We may group the characteristics of all the Ebionites under the three divisions 'Nazarenes,' 'Pharisaic Ebionites,' and 'Gnostic Ebionites.' The relations between the different parties may be outlined in a table, such as the following:

A. Gentiles	(1) Non-Christian = Heathenism.			
	(2) Christian			Merged in *Christian Church* after A.D. 138.
B. Jews	(1) Christian	Non-heretical = Judæo-Christianity		Merged in *Christian Church* after A.D. 138.
		Heretical	(*a*) Those who accepted supernatural birth of Jesus, with undeveloped Christology	= *Nazarenes.*
			(*b*) Those who accepted Messiahship of Jesus, denied Virgin Birth, and hated St. Paul	= *Pharisaic Ebionites.*
			(*c*) Those who became gnosticized	= *Essene* or *Gnostic Ebionites.*
	(2) Non-Christian = Judaism.			

1. Nazarenes.—The authorities for our knowledge of the Nazarenes are mainly Epiphanius (*Hær.* xxix.) and Jerome (*de Vir. Illus.* § 3, and various passages in his commentaries). Epiphanius includes the Nazarenes in his list of heretics, but his account is confused; and in regard to their Christology in particular he confesses that he does not know much (*Hær.* xxix. 7). He is aware, however, that the Nazarenes were execrated by the Jews, and that they used the Gospel of Matthew complete (εὐαγγέλιον πληρέστατον) in Hebrew (*ib.* 9). According to Epiphanius and Jerome, these Nazarenes were to be found in the 4th cent. mainly about Pella beyond Jordan. Jerome had unusual facilities for knowing about them, and, when we piece together the various passages in which we have any account of them (cf. Schliemann, *Clement*, p. 445 ff.), we learn that they entertained the following beliefs. They accepted the Divinity of Christ, holding that He was born of the Virgin Mary. They admitted the Apostleship of St. Paul (cf. Jerome, *in Is.* III. ix. 1, 'qui novissimus Apostolorum omnium fuit'). Although they wished to remain Jews themselves and to retain the obligation of the Mosaic Law, they did not desire to bind these obligations on Gentile Christians, nor did they refuse to have fellowship with them. They mourned over the unbelief of the Jewish nation, and eagerly looked for the time when the Jews who loved them not should believe in Christ. It is difficult to describe their Christology, except that, as compared with the Catholic doctrine of Christ, it was primitive and undeveloped. They held to the supernatural birth of Christ. They described Him as 'the first-born of the Holy Spirit.' The Holy Spirit was the μήτηρ Ἰησοῦ from the hour of His birth. At His baptism the 'omnis fons Spiritus Sancti' descended on Jesus (Jerome, *Com. in Is.* IV. xi. 1). It is difficult to describe such an indefinite Christology, but probably Dorner is right when he says: 'They did not hold a pre-existing hypostasis of the Divine in Christ, but only His pre-existence in God generally and His Spirit' (*Person of Christ*, I. i. 193). Anyhow, it is clear that, while their view of Christ had risen far above Judaism and had not degenerated into Pharisaic Ebionism, it had not developed into the Catholic doctrine. It was an arrested belief. It may be added that there is a strong probability that the work called *The Testaments of the Twelve Patriarchs*, written not long after the fall of Jerusalem, and while the memory of that event was fresh, belongs to the circle of the Nazarenes. This is the view of Ritschl (*Entsteh. d. altkath. Kirche*, p. 172) and of Lightfoot (*Gal.* p. 319 ff.); Ritschl, indeed, holds that the author was a Nazarene (*op. cit.* p. 173).

2. Pharisaic (non-Gnostic) Ebionism.—(1) Our authorities for this form of Ebionism are chiefly the following: Irenæus (*adv. Hær.* I. xxvi., III. xv., V. iii.); Hippolytus (*Hær.* vii. 22, x. 18); Epiphanius (*Hær.* xxx.); Eusebius (*HE* iii. 27); Tertullian (*de Præscr.* xlviii.); and Theodoret (*Hær. Fab.* ii. 2). Our first authority is Irenæus, according to whom the views of the Ebionites corresponded closely with the teachings of Cerinthus, whose personality and influence, as we shall afterwards see, were of great significance in the history of heresy. In a sense Cerinthus (*q.v.*) may be described as the father of heresy. The views of Cerinthus are thus stated by Irenæus:

'He represented Jesus as having not been born of a virgin, but as being the son of Joseph and Mary according to the ordinary course of human generation, while he nevertheless was more righteous, prudent, and wise than other men. Moreover, after his baptism, Christ descended upon him in the form of a dove from the Supreme Ruler, and then he proclaimed the unknown Father, and performed miracles. But at last Christ departed from Jesus, and then Jesus suffered and rose again, while Christ remained impassible, inasmuch as he was a spiritual being' (Iren. I. xxvi.; Hipp. vii. 21).

With these views of Cerinthus the Pharisaic Ebionites agreed. In their Christology they further taught that 'Jesus was justified by fulfilling the Law. And therefore it was that he was named Christ of God, and Jesus, since not one of the rest [of mankind] had observed completely the Law. For, if any other had fulfilled the commandments in the Law, he would have been that Christ' (Hipp. vii. 22). Further, according to Hippolytus, they alleged 'that they themselves also, when in like manner they fulfil [the Law], are able to become Christs; for they assert that our Lord Himself was a man in a like sense with all' (Hipp. vii. 22). Apart from their Christology, we learn that the Pharisaic Ebionites rigorously adhered to the Mosaic Law; that they used the Gospel according to St. Matthew only; that they repudiated the Apostle Paul; and, indeed, that they were so Judaic in their style of life that they even adored Jerusalem as if it were the house of God (Iren. I. xxvi.).

(2) From what is thus told us by Irenæus and Hippolytus we can gather an accurate conception of the general character of Pharisaic Ebionism. It was a mutilated Christianity, false to the spirit of the Christ in whom it professed to believe. Its adherents were true to the monotheism of the OT, but, when they refused to harmonize the Person of Christ with historical monotheism, they became false both to the spirit of Christianity and to the true spirit of the OT. They betrayed the soil in which their teaching was bred by their clinging to the Law, their exclusion of the Gentiles, their ostracism of St. Paul, and their reverence for Jerusalem. They showed also their Pharisaism in their denial of the supernatural birth of Christ, in place of which they put His baptism. Their Christology contains certain speculative elements which show influences outside Judaism. Indeed, this form of Ebionism, as a whole, shows a certain vitality and power of progress, though the progress was in the wrong direction—away from the Catholic faith, not towards it.

Not much need be added from subsequent writers to complete the picture as it is given us by Irenæus and Hippolytus. Epiphanius, however, gives a few details which may be referred to. We learn from him that Pharisaic Ebionites were much more widely scattered than the Nazarenes, who were found mainly in the neighbourhood of Pella. Pharisaic Ebionism had travelled as far as Rome (*Hær.* xxx. 18). We learn, also, from Epiphanius something of the silly scurrilities in which the Ebionites indulged about the Apostle Paul. They circulated the story that he was really a Gentile by birth, who, after coming to Jerusalem, endeavoured to marry the high priest's daughter, but failed, even though he had become a proselyte. His wounded vanity, according to the Ebionites, drove him into

bitter hostility to the Jews (*Hær.* xxx. 18, 25). We have seen that these Pharisaic Ebionites used a Gospel of Matthew, and Epiphanius gives us an interesting glimpse of the Baptism narrative in the recension of the Gospel used by them. The most striking point is the account of the voices heard from heaven at the baptism of Jesus: 'Thou art my beloved son; in thee I am well pleased'; and again: 'I have this day begotten thee' (*Hær.* xxx. 13). Thus, the Baptism narrative, as given in the Ebionitic recension of Matthew's Gospel, was clearly meant to show that the day of the Christ-birth dated only from the baptism. Then only did Jesus reach the dignity of Messiahship (cf. Justin, *Dial. c. Tryph.* ch. xlix.).

(3) Certainly the most characteristic feature of Pharisaic Ebionism was its *Christology*. The life of the Jesus whom it recognized as the Christ fell into two distinct and clearly defined parts. At the point of cleavage stood the baptism. Up to the moment of His baptism Jesus was a man, on the level of common humanity, and inheriting the tendency of human nature to sin. His sonship up to the point of His baptism was purely ethical, and along the line of that ethical sonship it was possible, so the Ebionites said, for any man to be a Christ. Jesus was pre-eminent, in that first part of His life, for virtue. He was, like other men, justified through the Law, but so pre-eminent was He 'in justice, prudence, and wisdom' that He became worthy to be the Messiah, and at His baptism that seal of worthiness was placed on Him. It was His birthday as Messiah. Then did He become worthy to be the Messiah, and then only did He Himself become conscious that He was the Messiah; for, at that moment when the voice from heaven said, 'This day have I begotten thee,' there descended on Jesus, and entered into Him, a new power, viz. the Christ. This power was not God, and could not be God, for God was infinitely supreme and could not stoop to union with a man. Ebionism at this point returns to the monotheism, in all its rigidity, which it conceived to be the master-thought of Judaism. What then was this power? It was not God, but, though created, it had 'a proper pre-existing hypostasis.' This power was the Christ, who entered into union with Jesus, not to redeem the world, but to be the prophet of a new order, and to make known the Father. Then only, after the Christ had united with, and entered into, the man Jesus, was He able to perform miracles. It ought, therefore, to be kept clear, in connexion with Pharisaic Ebionism, that the office of the Christ, so united with Jesus, was not redemptive, but prophetic. The union of the Christ, who was no mere impersonal power, with the man Jesus was not an indissoluble union, for the Christ before the death of Jesus departed from Him. Only Jesus suffered and rose again; the Christ had re-ascended and returned to 'His own Pleroma' (Iren. III. xi. 1; and cf. Lightfoot, *Colossians*, p. 264 f.).

It is clear that Gnosticism had already begun its work in connexion with the doctrine of the Church. If, according to Gnostic speculation, matter was essentially evil, it was impossible that a spiritual Being, such as God, could come into union with it; and therefore the way must be found by the indwelling for a time in Jesus of One who was above the angels and a created power. Thus Gnosticism passed over into Jewish Christianity in the form of Ebionism, the link being Cerinthus.

3. Gnostic or Essene Ebionism.—This form of Ebionism may be described (as by Harnack) as *syncretistic Jewish Christianity*. It is differentiated from Pharisaic Ebionism by the fact that it has incorporated in it elements which were not indigenous to Jewish soil. But the problem is not altogether simple—to trace, either as to their origin or as to their character, the speculative elements which are found in this type of Ebionism. The chief authority for a knowledge of these Gnostic Ebionites is Epiphanius (*Hær.* xix., xxx.). Characteristics of their teaching are found also in Hippolytus (*Hær.* ix. 8–12, Clark's tr.), Origen (Euseb. *HE* vi. 38), and the pseudo-Clementines.

(1) We may best approach Gnostic Ebionism through the teaching of Cerinthus, to whom reference has already been made. This heresiarch was a Jew, 'disciplined in the teaching of the Egyptians' (Hipp. *Hær.* vii. 21, x. 17), and the sphere of his activity was in proconsular Asia (Iren. I. xxvi.; Epiph. *Hær.* xxviii. 1). From what we have already seen of his teaching, it is clear that it was Ebionitic. He held the obligation of the Law; he repudiated the teaching of St. Paul; he rejected the pre-existence of Jesus Christ; and he taught the millennial reign of the Messiah in Jerusalem.

The one point in which his teaching departed from typical Pharisaic Ebionism was in regard to his doctrine of creation. Cerinthus taught that 'the world was not made by the primary God, but by a certain power far separated . . . from that Principality who is supreme over the universe, and ignorant of him who is above all' (Iren. I. xxvi.). According to Cerinthus, an immense gulf yawned between God and this world. He bridged it by the conception of a power, inferior to God and ignorant of Him, the world-maker or *demiurgs* (cf. Lightfoot, *Col.* p. 107 ff.; Neander, *Ch. Hist.* ii. 42 ff., Bohn's ed. 1850–58). The affinity of this conception of a demiurge with Gnostic speculations on the evil inherent in the physical world is apparent. In Cerinthus we have the first historical representative of Gnostic speculation linked with Judæo-Christianity. He sets forth a teaching which is certainly heretical Jewish Christianity or Pharisaic Ebionism; but on that teaching he has grafted a speculation which is certainly not Jewish. When the tendency thus shown in Cerinthus—the tendency, namely, to incorporate with Jewish Christianity speculative elements not indigenous to Jewish soil—is further developed, we have *Gnostic Ebionism*.

(2) The character of Gnostic Ebionism may be ascertained from Epiphanius, though his account is somewhat confused. We learn, however, that these Ebionites agreed with those of the Pharisaic type in holding the validity of the Law, especially of circumcision and the Sabbath, in repudiating St. Paul, and in denying the Virgin Birth of Jesus Christ (Epiph. *Hær.* xxx. 2, 4, 16). Their Christology was not uniform, and is somewhat indefinite. Some of them affirmed that Adam and Christ were one. Others regarded Christ as a spiritual Being, created before all things, and higher than the angels. This spiritual Being descended in Adam, was made visible in the patriarchs, and at last, clothed with Adam's body, came to earth, suffered on the cross, rose again, and ascended back to heaven (*Hær.* xxx. 3, 16). We learn, further, that they spoke of Christ as 'the successor of Moses'—the only prophet whom they recognized. Christ was 'the Prophet of Truth.' Jesus himself was a mere man, who, because of super-excellent virtue, deserved to be described as Son of God (*Hær.* xxx. 18; cf. Ritschl, *op. cit.* p. 211; Harnack, *Hist. of Dogma*, i. 309). Christianity, therefore, with these Ebionites was simply true Mosaism, and Christ was the successor of the prophet of Sinai. The only part of the OT which they accepted was the Pentateuch, and even it only in part. Perhaps the most remarkable feature of their treatment of the OT was their rejection of the whole sacrificial system. In their recension of Matthew's Gospel (which Gospel alone they accepted) they made Christ give, as one of the objects of His coming, the abrogation of the sacrificial system (*Hær.* xxx. 16: ἦλθον καταλῦσαι τὰς θυσίας, καὶ ἐὰν μὴ παύσησθε τοῦ θύειν, οὐ παύσεται ἀφ' ὑμῶν ἡ ὀργή). Further, they were vegetarians and ascetics. They refused to partake of flesh or wine, taking as their pattern St. Peter, whose food, they said, was bread and olives (*Hær.* xxx. 15; cf. *Clem. Homilies*, xii. 6). They also followed St. Peter in his custom of daily lustrations (*Hær.* xxx. 15, 21). The Lord's Supper they partook of with bread and water (*ib.* 16). Their asceticism on the point of marriage was originally strict, but it had been modified so much in course of time that the majority of them esteemed marriage highly (*ib.* 2; cf. *Clem. Hom.* iii. 68).

If, then, we take the picture of these Ebionites, as given us by Epiphanius, we note at once that they have departed from the Pharisaic type in three pronounced directions: (*a*) their Christology, while fundamentally alike, is mixed with elements of Gnostic speculation; (*b*) their asceticism is rigid, except on the point of marriage; (*c*) for their abandonment of the sacrificial system the annals of Pharisaism contain neither precedent nor preparation.

(3) How, then, are we to account for these divergences from Pharisaic Ebionism? The problem is intricate, but the solution seems clear. There can be little doubt that the influences incorporated in the form of Ebionism we are considering come through *Essenism.* In this article it is not necessary to enter into a detailed description of the characteristics, origin, or history of the Essenes (see art. ESSENES), nor need we concern ourselves with the perplexing questions arising round this sect, so well described as 'the great enigma of Hebrew history' (Lightfoot, *Colossians*, p. 82). It will be sufficient to point out a few of the characteristics of the Essenes, as these are indicated by our primary authorities (mainly Philo, *Quod omnis probus liber*, § 12 f.; Josephus, *BJ* II. viii. 2–13, *Ant.* XVIII. i. 5; and Pliny, *HN* v. 17). These characteristics may be given in the words of Josephus, which are followed closely by Hippolytus (*Hær.* ix. 13–22):

'These Essenes reject pleasures as an evil, but esteem continence and the conquest over our passions to be virtue. They neglect wedlock, but choose out other persons' children while they are pliable and fit for learning' (*BJ* II. viii. § 2). 'These persons are despisers of riches. . . . There is, as it were, one patrimony among all the brethren' (§ 3). 'As for their piety toward God, it is very extraordinary; for before sun-rising they speak not a word about profane matters, but put up certain prayers, which they have received from their forefathers, as if they made a supplication for its rising' (§ 5). After describing their daily bath in cold water, and their measured eating and drinking, Josephus says: 'They dispense their anger after a just manner, and restrain their passion' (§ 6). 'They inquire after such roots and medicinal stones as may cure their distempers' (§ 6). He further says that novices are tried for three years. 'If he [the novice] appear to be worthy, they then admit him into their society. And before he is allowed to touch their common food, he is obliged to take tremendous oaths . . . and that he will neither conceal anything from those of his own sect, nor discover any of their doctrines to others, no not though any one should compel him so to do at the hazard of his life . . . and will equally preserve the books belonging to their sect, and the names of the angels' (§ 7). 'What they most of all honour, after God Himself, is the name of their legislator [Moses], whom if any one blaspheme he is punished capitally' (§ 9). 'They are stricter than any other of the Jews in resting from their labours on the seventh day' (§ 9). 'They contemn the miseries of life, and are above pain by the generosity of their mind' (§ 10). Their doctrine of anthropology, according to Josephus, is 'that bodies are corruptible, and that the matter they are made of is not permanent, but that the souls are immortal, and continue for ever' (§ 11). Josephus, further, tells us that 'there is another order of Essenes who agree with the rest as to their way of living, and customs, and laws, but differ from them in the point of marriage' (§ 13). In another passage he makes this remark: 'The doctrine of the Essenes is this, that all things are best ascribed to God. They teach the immortality of souls, and esteem that the rewards of righteousness are to be earnestly striven for, and when they send what they have dedicated to God into the temple, they do not offer sacrifices, because they have more pure lustrations of their own' (*Ant.* XVIII. i. 5).

Much of what Josephus records is confirmed by Philo, and a single remark may be quoted from Pliny: 'There flock to them from afar many who, wearied of battling with the rough sea of life, drift into their system' (*HN* v. 17). We are able, without further detail, to understand the leading characteristics of the Essenes. They were brethren of a common order—an order characterized by a rigid asceticism, more especially in regard to food and marriage. They cultivated medicinal and magical knowledge. They preserved their books with absolute secrecy. Their devotion to Mosaism was fervent. They practised a rudimentary sun-worship. They rejected animal sacrifices. They believed in the immortality of the soul only. On one side, they were true to their Jewish faith, for, in their regard for Moses and the Law and the Sabbath, they were simply 'Pharisees in a superlative degree' (Schürer, *HJP* II. ii. 210). But, on the other side, in the secrecy of their monastic life, in their scorn of marriage, in their incipient sun-worship, in their magical arts, in their rejection of animal sacrifice, and in their anthropology and doctrine of immortality they show remarkable and emphatic divergences from the Pharisaic type of Judaism, and such an influence from extraneous tendencies of thought that Essenism may deservedly be called *Gnostic Judaism*; and one has difficulty in believing that it could be wholly a growth from Jewish soil (as Frankel), although it may be that it was the carrying out of the idea of a universal Jewish priesthood (as Ritschl). It is not material for us to inquire here as to the sources of these foreign customs and tendencies of thought—whether from Pythagorean sources (as Zeller), or from Parsi influences (as Lightfoot), or from both (as Schürer). One point, however, must be kept in view: that the Essenes, in their withdrawal from worldly pursuits, and in their doctrine of the immortality of the soul, show the influence of the speculative idea that matter is essentially evil—an idea which reached a full development in Gnosticism.

We may conclude, then, that Gnostic Ebionism, in the form we have described, and as given in Epiphanius, has assimilated elements from Essenism. Its asceticism in meat and in drink, its persistent rejection of sacrifice, and its speculative elements have come through Essenism. In the matter of marriage the Ebionites of Epiphanius go back to Pharisaism, or to that milder party of Essenes to which Josephus refers. If it be asked when the combination could have taken place, the answer is clear. Before the fall of Jerusalem a filtering down of Christian thought must have taken place. After the fall of Jerusalem the Essenes disappear as a separate party, and it is reasonable to believe that many of them attached themselves to the Judæo-Christian Church at Pella, observing, as they must have done, the fulfilment before their eyes of prophecies uttered by Christ in regard to the doom of Jerusalem (cf. Ritschl, *op. cit.* p. 223). When they took this step, it would be hard to imagine that they left their Essenism behind them; and it would be incredible that an order and a system of thought so definite and so masterful as Essenism should have been without influence in the development of Jewish Christianity.

(4) The form of Ebionism which we have described may be illustrated further from the *Book of Elkesai* and the *pseudo-Clementine literature.* In the one we see not merely the essential features of Essene Ebionism, but the indications of an effort to propagate the system westwards; in the other we see Essene Ebionism assuming a literary dress. In regard to both, while we have the features of Essene or Gnostic Ebionism, as we have already described them, we seem to be standing at an advanced stage of non-Christian and syncretistic Judaism, in which an effort is made to eliminate from Mosaism its more national and limited elements, and to commend it to the world as a universal religion. While the book of *Elkesai* and the pseudo-Clementine literature have their distinctive peculiarities, yet in both we discern, with some modifications, the features of the Essene Ebionism presented to us by Epiphanius. It will not be necessary here to do more than to indicate generally the system of thought in the book of *Elkesai* and in the pseudo-Clementines, with their differences and agreements one with the other, and with Essene Ebionism as a whole. See, further, art. ELKESAITES.

The chief authority for our knowledge of the book of *Elkesai* is Hippolytus (*Hær.* ix. 8–12, x. 25), whose account is in the main confirmed by Epiphanius (*Hær.* xix., xxx., liii.) and Origen (Eus. *HE* vi. 38). Hippolytus came into personal contact with the Elkesaites, met them point by point in argument, and felt no little satisfaction with himself over the issue. He tells us that in the time of Callistus (that is, about the year 222) there came to Rome from Syria 'one called Alcibiades, a cunning man, and full of desperation' (*Hær.* ix. 8), who brought with him a book, *Elkesai*, the contents of which had been the subject of direct revelation by an angel. Alcibiades asserted that the angel was 'Son of God,' and with the angel went a female called 'Holy Spirit.' He also declared that 'there was preached unto men a new remission of sins, in the third year of Trajan's reign' (*i.e.* A.D. 100). Hippolytus characterizes this as the 'operation of a spurious spirit, and the invention of a heart inflated with pride.' The book, according to Hippolytus, insisted on circumcision and the Law. Its doctrine of Christ was partly Judaistic and partly Gnostic. It taught that Christ was born as other men, 'but that both previously and that frequently again He had been born and would be born' (ix. 9). '[Christ] would thus appear and exist, undergoing alternations of birth, and having His soul transferred from body to body.' Hippolytus further tells us that the Elkesaites 'devote themselves to [the] tenets of mathematicians, and astrologers, and magicians, as if they were true' (ix. 9). The chief point in the system of *Elkesai* was its doctrine of the forgiveness of sins. Hippolytus gives us a clear account of its teaching on that point. The book taught forgiveness of sins on renewed baptism 'in [the] name of the Great and Most High God, and in [the] name of His Son, the Mighty King,' provided, further, that the person being baptized 'adjure for himself those seven witnesses that have been described in this book—the heaven, and the water, and the holy spirits, and the angels of prayer, and the oil, and the salt, and the earth' (ix. 10). Such a renewed baptism, along with the magical incantations of *Elkesai*, was effectual, not for sins only, but for sickness, such as consumption, or for accidents, such as a dog-bite. The book, finally, enjoined that its mysteries should be kept secret: 'Do not recite this account to all men, and guard carefully these precepts, because all men are not faithful, nor are all women straightforward' (ix. 12).

From the account of the Elkesaites thus given by Hippolytus—an account confirmed by Epiphanius and Origen—it is clear that there were the strongest affinities between their tenets and those of the Essene Ebionites. Indeed, it may be said that the Elkesaites were a step in the development of Essene Ebionism (cf. Ritschl, *op. cit.* p. 222). The Christology, which is the surest test of affinity, is in most respects alike. In both, Adam and Christ are identified, and there is the same belief in successive incarnations. The Elkesaites also agreed with the Essene Ebionites in holding the obligation of the Law, in rejection of sacrifices (with a consequent free handling of the OT), hatred of St. Paul, abstinence from flesh and wine, frequent lustrations, approval of marriage, and secrecy in regard to their books, customs, invocations, and magical rites. The peculiar element in the book and in the beliefs of the Elkesaites is the doctrine of forgiveness through renewed baptisms and magical invocations. Undoubtedly, there is present here a heathen influence, foreign to Jewish soil. Uhlhorn has correctly described it as 'a strong heathen naturalistic element' (art. 'Elkesaiten,' in *PRE*[3]). Probably this doctrine of forgiveness through renewed baptism was meant to take the place of the OT sacrifices (cf. *Clem. Recog.* i. 39).

On the whole, then, we may conclude that the differences between the Essene Ebionites and the Elkesaites were small, practically the only point of divergence being the new doctrine of forgiveness. The roots of Elkesaism, as of Essene Ebionism, go back to that period after the fall of Jerusalem which, according to Hegesippus, was the birthday of sectarianism (Eus. *HE* iii. 32). In *Elkesai*, Essene Ebionism in the beginning of the 3rd cent., and under strong heathen influences, took a step in a direction away both from Judaism and from Catholic Christianity, the impelling influence probably being a desire to commend its tenets to the world by the fiction of a new revelation. In the pseudo-Clementine literature, as we shall see, Essene Ebionism developed in other directions, equally removed from Judaism, but less out of touch with the spirit of Catholic Christianity.

(5) *The pseudo-Clementine literature* consists of three works—one containing twenty *Homilies*; another generally known as the *Recognitions*, and preserved in a translation by Rufinus; and, thirdly, an *Epitome* of the Homilies—a work of little significance. The literature, which is spurious but of great importance, goes under the name of the well-known Clement of Rome. The problems connected with this literature are varied and intricate, while the uncertainties associated with it are among the most numerous in Church history and doctrine. Indeed, the only statements which may be made with certainty are that the literature is not from the hand of Clement of Rome, and that it is the literary dress of a Gnostic Ebionism. It may, further, be said that the Ebionism is not so stringent as in Elkesaism, and that much greater stress is laid on Christian elements. The pseudo-Clementine literature cannot be ignored by any historian of the early Church, though we may rightly refuse to agree with the extravagant claims of Baur, and may doubt if it gives such 'brilliant disclosures' (Hilgenfeld) as some critics imagine.

The problems connected with the pseudo-Clementine literature may be briefly stated, though a discussion of them cannot find a place here. There is, for one, the problem as to whether the pseudo-Clementines or the book of *Elkesai* has the priority in time. The conclusion accepted generally (though not by Ritschl) is that the pseudo-Clementines presuppose the book and doctrine of the Elkesaites. Connected with this is the problem of date, which it is impossible to solve until the further problem is settled as to the priority of the parts. How difficult and intricate the latter problem is becomes at once clear when it is seen how divided opinion is among 'the most eminent critics.' Baur, Schliemann, Uhlhorn (at first), and Lightfoot give the priority to the *Homilies*; Ritschl, Lechler, Hilgenfeld, and Salmon, to the *Recognitions*. If the *Recognitions* is first in point of time, its date may be as early as A.D. 140; if second in point of time, the date may be towards the middle of the 3rd century. On the whole the position may be assumed here that the literature, at least in the present form, belongs to the earlier part of the 3rd century. The trend of opinion is in favour of the view that both the *Hom.* and the *Recog.* are based on a common source such as the *Kerygma of Peter*, the historical contents of which may be best seen in the *Recog.*, the doctrinal in the *Homilies*. There is a further problem as to the aim of the writer or writers. It is conceded that the literature is coloured throughout by Ebionism, but it is not clear if it was meant solely as an Ebionitic propaganda. On this point very diverse views are held, as Harnack's, that in the *Homilies* we have a Catholic revision of a heterodox original, or Bigg's, that we have an Ebionitic revision of an older Catholic original. There is, finally, the problem of the place of writing—whether Rome or Syria, or both.

In this welter of opinions and tangle of problems, one hesitates to express any opinion; but it seems to the present writer, on the whole, most probable that the *Recognitions* is prior in time, as it is certainly nearer to Catholic sentiment, and less anti-Pauline, than the *Homilies*. Further, it is probable that the literature, as a whole, hails from Syria, that it belongs to the earlier part of the 3rd cent., and that it bears a close relation to Essene Ebionism, whether the Ebionism was in the original or engrafted on it. Probably, also, the pseudo-Clementines have some connexion, but by way of repulsion, with the Marcionites, with their developed dualism, and their extravagant ultra-Pauline tendencies. To the authors of the pseudo-Clementine literature Christianity was not the sudden and unhistorical thing Marcion supposed it to be; Christianity was purified Mosaism, and Adam and Christ were one.

When we consider the teaching of the pseudo-Clementines, apart from questions of origin and apart from the literary form in which the teaching is dressed ('Tendenz-roman'), we cannot fail to observe the Ebionism in which the literature is steeped. Certainly its parts are not all equally Ebionitic, for it is plain that in the *Recognitions* the stamp of Ebionism is much less marked than in the *Homilies*. The writer of the *Recognitions* is, on the one hand, much less Judaistic, as in his practical ignoring of circumcision; and, on the other, much nearer the Catholic standpoint, as in his rejection of the anti-Pauline passages which he probably found in the original of his work. But, as a whole, the literature presents us with the features already familiar to us in Essene Ebionism. Compared, for instance, with the book of *Elkesai*, the pseudo-Clementines hold substantially the same Christology. They view Jewish law and custom from the same standpoint. In their rejection of sacrifice, in their refusal to accept St. Paul's teaching, in their encouragement of marriage, in their abstinence from animal food, and in the concealment and secrecy enjoined on their adherents, they attach themselves to the same syncretistic and Judæo-Christian type of thought which we have seen to be characteristic of the Elkesaites and of Essene Ebionism generally. As a whole, the system departs from the book of *Elkesai* mainly on two points: (*a*) in the toning down of the rigid demand for circumcision, and (*b*) in its silence with regard to the peculiar doctrine of *Elkesai* on forgiveness.

In the Christology of the pseudo-Clementines, the most striking feature is the doctrine of the *True Prophet.* If the aim of life is to obtain the highest good, knowledge is essential. God has, indeed, revealed Himself at the beginning, but sin has intervened. The True Prophet, therefore, becomes necessary. He has come again and again. He has come in the seven pillars of the world—Adam, Enoch, Noah, Abraham, Isaac, Jacob, and Moses; and finally, he has come in Christ. Christ, Moses, and Adam are incarnations of the True Prophet (*Hom.* ii. 6, iii. 11, 20, 49; *Recog.* i. 16, 40, 41; cf. *Recog.* i. 45, 'a man over men, who is Christ Jesus'). Thus to follow Moses or to believe Christ leads equally to salvation, for, 'there being one teaching by both, God accepts him who has believed either of these' (*Hom.* viii. 6). According to the pseudo-Clementines, therefore, 'Christianity is simply reformed Judaism' (Baur, *Dogmengesch.* vol. i.), or, as Niedner puts it, 'Christianity is only a restoration of the primitive religion in time, and an enlargement of it in space' (*Kirchengesch.*[2], Berlin, 1866, p. 246). Clearly, however, in the Christology thus presented there is no room for the Deity of Christ. He is simply a created being. On the point of Christ's Deity, the pseudo-Clementines leave no doubt, for Peter is made to say: 'Our Lord neither asserted that there were gods except the Creator of all, nor did He proclaim Himself to be God, but He with reason pronounced blessed him who called Him the Son of that God who has arranged the universe' (*Hom.* xvi. 15).

Reference has already been made in this article to 'the brilliant disclosures' which Baur and the Tübingen school have found in the pseudo-Clementine literature. With Baur it holds a pre-eminent place. The theory of the development of Catholicity, so earnestly advocated by Baur and so candidly abandoned by Ritschl, gives a central place to this literature. Baur's theory was that the early Church was profoundly Ebionitic. Between Jewish Christianity and Ebionism there was 'a very close identity,' and 'Jewish Christianity in general was a kind of Ebionitism' (*Kirchengesch.* i. 182 [Eng. tr.]). Baur postulated a conflict in the early Church between Ebionism, *i.e.* Jewish Christianity, and Paulinism. Catholicity at the close of the 2nd cent. was intelligible only as the result of a conflict between two opposing forces—Ebionism on the one hand, and Paulinism on the other; and through this conflict the particularism of Judaism ('the aristocratic claims of Jewish particularism' [*op. cit.* p. 113]) developed into the universalism of Christianity. To Baur the conflict was clearly discernible in the pseudo-Clementines, and in the controversy between Simon Peter and Simon Magus. The one was a representative of Jewish Christianity (*i.e.* Ebionism); the other was the representative of Paulinism (*i.e.* Gentile Christianity). Simon Magus was unmistakably a pseudonym for St. Paul (*op. cit.* p. 86). Simon Magus was nothing but a caricature of the Apostle Paul. Such was Baur's theory, which it is needless to criticize at length. It will be sufficient here to say that such a theory destroys the historical personality of Simon Magus, who is regarded in the pseudo-Clementines as the historic embodiment of all heresy. It is not denied here that this literature, as a whole, rejects St. Paul, and one passage in the *Homilies* (xvii. 19) has an unmistakable reference to the Apostle of the Gentiles. Nothing else could have been expected from the Ebionism in which the pseudo-Clementines are soaked. Further, it is absolutely clear that Ebionism was something more than Jewish Christianity, and the Ebionites, instead of being co-extensive with Jewish Christians, were really confined to a small area, and had little influence west of Syria.

III. *CONCLUSION.*—Our inquiry is almost over. The Ebionites as a sect continued into the 5th cent., and gradually disappeared (Theodoret, *Hær. Fab.* ii. 11). Nothing else could have been looked for. They had taken a false direction, which led them more and more away from the channel in which the Church's life flowed full and free. Catholic Christianity swept past them. They moved further and further away until all progress was barred against them. While the Church's life and doctrine developed into Catholicity, strong and clear, Ebionism more and more degenerated, until its elements were absorbed either in bitter Judaism or in truculent heathenism. Catholic Christianity gained nothing from Ebionism, unless in that reflex way which heresy often has of causing the Church to make sure of its ground and to mature its Christology.

LITERATURE.—The ancient authorities are referred to in the course of the article. In modern literature the following are important in a study of Ebionism: Gieseler, 'Ueber die Nazaräer und Ebioniten' in Stäudlin-Tzschirner's *Archiv*, iv. 2 (1819); Baur, *de Ebionitarum Origine* (1831), also *Kirchengesch.* (1853, Eng. tr. 1878), and *Vorles. über die christl. Dogmengesch.* (1865–68); Schliemann, *Die Clementinen, nebst den verwandten Schriften und dem Ebionitismus* (1844); Schwegler, *Das nachapost. Zeitalter* (1846); Hilgenfeld, *Die Clement. Recognitionen und Homilien* (1848), also *Ketzergesch. des Urchristenthums* (1884); Uhlhorn, *Die Homilien und Recognitionen* (1854); Ritschl, *Die Entstehung der altkathol. Kirche*[2] (1857); Dorner, *Hist. of the Development of the Doctrine of the Person of Christ* (Eng. tr. 1861–3); Hagenbach, *Hist. of Doctrines* (Eng. tr. 1880–1); Lightfoot, *Galatians* (1881), *Colossians* (1882); Lechler, *Apostolic and Post-Apostolic Times* (Eng. tr. 1886); Schürer, *GJV*[3] (*HJP*, 1885–90); Zahn, *Gesch. d. NT Kanons* (1888); Harnack, *Dogmengesch.*[3] (1893, Eng. tr. 1894–9); Fisher, *Hist. of Christian Doctrine* (1896); Rainy, *The Ancient Catholic Church* (1902); artt. in *PRE*[3] ('Ebioniten,' 'Elkesaiten,' 'Clementinen'), *DCB* (1877–80), *DCG* (1906); also *Church Histories* of Gieseler, Neander, Hase, Robertson, Schaff, Moeller, Kurtz.

ECLIPSE.—See PRODIGIES AND PORTENTS.

ECONOMICS.—I. Connotation of the term.—

Economics originally meant the administration of household resources, being the English form of οἰκονομική (*sc.* τέχνη). Aristotle, in the first book of the *Politics*, thus defines it as household management, including the treatment of slaves. The word 'economy' is, however, now used in a much wider sense, being applicable to the prudent management of all kinds of resources and possessions—the utilization of material goods, of time, of thought, or of labour, in such a manner as to avoid waste. It is not confined to a special department of human activity, but denotes a feature that may appear in any branch. To Aristotle 'Political Economy,' which is now synonymous with Economics, would have appeared to be a contradiction in terms; and even in the present usage of the word 'economy,' the prefixing of 'political' is apt to suggest the science or art of managing the resources, and especially the finances, of a State. This would lead to quite an inadequate conception of the subject, for, though Economics includes the management of State resources in such directions as taxation, and is intimately concerned with State regulation of industrial and commercial activities by factory legislation, tariff policies, land laws, and the like, it considers also the ways in which individuals, groups, and organizations within the State establish relations with one another for the purpose of increasing their means and administering their resources. As the resources of the community are managed far more by the spontaneous activities of individuals and groups than by the direct intervention of Governments, Economics is concerned chiefly with the former. It inquires how man obtains the goods which satisfy his wants, explains the causes upon which the material well-being of mankind depends, and treats of all activities by which goods are produced, exchanged, and distributed among the individuals and classes of which society is composed. Economics has frequently been described as the science of wealth, but this, like most brief definitions, is apt to mislead; and indeed, economists themselves have sometimes carelessly written as if mankind existed for the purpose of increasing the quantity of material wealth. This over-emphasis on one phase of the study was responsible for its being dubbed by Carlyle 'the dismal science,' and for the view still sometimes expressed that it is 'sordid.' But the economist, of all men, should most clearly understand that wealth is subservient to a further purpose, and is not in itself the final goal of man's activity. Thus, while in one aspect it is true to

say that Economics is the science of wealth, in another, and more important, aspect it is a part of the study of man. Wealth is for his consumption, is a necessary basis of his activities; but it is only in so far as it becomes subservient to man's interests that it is of importance in economic study.

2. The social and political aspects.—The change of standpoint which accounts for the preference for the broader term 'Economics' is due to the increasing emphasis upon social rather than upon political activities. At first economic literature was distinctively political, its aim being the attainment of a sound system of public finance, and even the increase of the wealth of the citizens was considered a matter for State regulation as a means to the replenishment of the public exchequer and the provision of the sinews of war. Gradually, however, the promoting of the material welfare of the people began to be considered less from the point of view of politics and public finance, a great impetus being given to this movement by the French Physiocrats in the latter half of the 18th cent., who insisted that the network of State regulations for the enrichment of the people defeated its own end, and that it was not the business of the statesman to make laws for the increase of wealth, but to discover the laws of Nature which themselves operate for the highest welfare of the people, and to guard these laws from violation and encroachment. Hence to Quesnay (*Droit naturel*, in E. Daire, *Physiocrates*, Paris, 1846) and his followers, Economics became the theory of how natural laws worked in an orderly sequence for the establishment of the greatest well-being of the people; and the chief object of the science was the understanding of the conditions imposed by Nature upon human action in the promoting of material welfare. Under this mode of thought, freedom of industry and trade became the dominant doctrine as against the detailed regulation of every branch of economic activity by the State; and in its most extreme form it led to the maxim of *laissez-faire* (*q.v.*).

The influence of these Physiocratic preconceptions upon Adam Smith was very considerable, for, although it is a great exaggeration to say that he was completely under the dominance of the French speculations, he also formulated much of his teaching in terms of the 'system of natural liberty,' and urged that if Nature were only left alone it would enrich the people much more effectually than did the method of governmental interference. However defective this view may subsequently have proved (cf. COMPETITION), the immediate result was that Economics became a study of the processes of production, distribution, and exchange of wealth as accomplished by the spontaneous co-operation of men rather than by the action of Governments. Indeed, the revolt from State regulation tended to pass towards the opposite extreme of non-interference in matters of industry and commerce, save for the provision of the necessary revenue to the public exchequer and the prevention of fraud. Economics became a social science, and, despite important changes during the last century, it is still more concerned with social than with political or private activities. This by no means implies that economic writings had less effect upon politics; they had more. Pitt, Huskisson, Peel, and Cobden took Adam Smith as their authority in the abolition of restrictions on foreign commerce, on domestic trade, and on freedom of combination. Ricardo exercised a profound influence upon banking legislation and the abolition of the corn laws; Malthus upon the reform of the poor laws. Nevertheless, in the early stages of the development of Economics as a social science there was a certain narrowness that arose partly from the simplified presupposition of the beneficence of natural forces, and partly from the fact that the economists were so few in number and so closely agreed that adequate criticism was lacking. The industrial conditions of England in the early years of the 19th cent. were also somewhat exceptional, peculiar both to the time and to the country, so that doctrines derived from the study of them were found to be defective when applied to other times and places.

During the latter half of the 19th cent., criticism and opposition arose both within and without the ranks of professed economists, and the development of fuller analysis has led to changes in both the mental and the moral attitude. There has been an abandonment of inelastic dogmas, so that it is no longer possible to formulate brief economic creeds and catechisms; the modifications due to changes of conditions have shown that the application of principles is relative to time and place. Modern economists could no longer be appealed to against all forms of State interference, as politicians appealed to economic writings in the early 19th cent. as a weapon against factory legislation. Economics, too, had come to be traditionally regarded as concerned with the increase of riches, and there was some warrant for the complaints of Carlyle and Ruskin that, while abundant attention was devoted to the production of wealth, too little thought was given to its distribution in such ways as to improve the condition of the poorer classes. To-day there is a perceptible shifting of emphasis from the acquisition of wealth to the abolition of poverty, from production to distribution; and the most recent text-books treat the subject-matter throughout with constant reference to the material and moral welfare of humanity. Though his primary business is the scientific study and interpretation of facts, the economist never loses sight of this practical aim of affording guidance for social life and reform.

3. Relation of Economics to Ethics.—As a social science, Economics is concerned with the intricate and complex actions and motives of man, and therefore it is closely related to Ethics. It is true that it is no part of the function of a positive science to pronounce ethical judgments, but even the positive science cannot neglect the fact that moral considerations often affect man's conduct in business life, and must be given a place in the same manner as the facts of physical Nature which also condition economic activity. But the relation is much closer in passing to applied Economics, and the increased attention devoted to the problem of distribution of wealth has brought questions of justice into greater prominence, as in the demand for a 'fair wage.' Some have denied that Economics is at all concerned with this ethical aspect of problems, and would confine it rigidly to the positive science. Others, indeed, have carried abstraction still further by excluding even those moral factors which admittedly influence man's conduct in business life, thus creating a purely fictitious person, 'the economic man,' who pursues wealth along the line of least resistance, and is not deflected from this course by any other motive than aversion to labour and the desire for enjoyment. No such man exists, and no social science worthy of the name can confine itself to the study of such an abstraction. Yet even those who readily admit that man must be dealt with as he is sometimes deny that questions of justice can be treated by the economist, so that the result for a long time was that many of the most vital problems of social welfare were treated neither by Ethics nor by Economics. There was

even a prevalent idea that the two were in conflict, and that an elastic conscience was an economic virtue. Clearly, however, such a sharp division cannot be maintained. It cannot be a matter of indifference to the economist whether capitalistic combinations and trusts adopt immoral practices, or whether the adoption of a protective policy leads to corruption. Still less can he ignore the question whether a more equal diffusion of wealth is conducive to the highest welfare, even though it should involve a slight check to wealth production.

This intermixture of ethical and economic considerations need not lead the economist into the deeper controversies that lie entirely beyond the scope of his science. For his practical purposes the precise meaning of 'the good' is less important than the fact that among moralists of different schools there is a general consensus of opinion regarding the desirability of such and such a change in social life. A problem relating to monetary media or banking practice may present little or no ethical aspect, but labour problems which are claiming an increasing share of public attention cannot be regarded as adequately treated without due consideration of ethical factors, and those who speak with authority in the name of Economics now fully recognize the necessity for this wider outlook.

Whether, indeed, ethical and economic considerations may come into conflict in particular cases is doubtful. Honesty is not necessarily the best policy for a particular individual from the standpoint of the acquisition of wealth; illustrations to the contrary are too numerous to admit of doubt. But for society as a whole, honesty is an economic as well as a moral virtue. No doubt, too, a community may sometimes gain immediately in material wealth by actions that the moralist would condemn, and it is surely true that an act which marks a moral gain to society may result in immediate material loss. But in the long run it is doubtful whether the conflict can subsist; and, as a rule, if not universally, that which is from the standpoint of society economically injurious is likely to be ethically wrong, while that which is ethically good is likely to be economically advantageous. This consideration suggests that it is quite as important for the moralist to give due weight to the economic forces as it is for the economist to recognize the ethical aspects of social problems. The former is probably suffering from greater neglect than the latter.

4. Economic method. — Disputes regarding method at one time threatened to divide economists into different schools, but they have now almost ceased. There is no peculiarly economic method of study, and, though the relative importance of analysis and the search for facts varies with the problem under discussion, each is as ineffective alone as is a single blade of a pair of scissors. The controversies about the inductive and deductive, historical and analytical, concrete and abstract methods have yielded place to a general agreement that every method is correct in proportion to its fruitfulness in solving the particular problem, and that in most cases a combination of methods proves most valuable. Thus, while generalization from historical or statistical data is predominantly employed in most of the problems of production, deduction is relatively more important in dealing with the complexities of distribution or such related matters as the incidence of taxation, where the plurality of causes and intermixture of effects baffle purely inductive treatment. There was unquestionably a tendency among the economists of the first half of the 19th cent. to employ the abstract method too exclusively, and to apply the resulting generalizations too hastily, and the protests of the historical school, combined with the advance of statistical science, have led to the fuller application of quantitative and comparative tests. Much progress has still to be made in such quantitative analysis before a thorough estimate can be made of the relative strength of various economic forces, but the economist is frequently handicapped on this side by the inadequacy of existing statistical data. Nevertheless, there has been a marked advance in this direction, which might well be illustrated by a comparison of the English Poor Law Report of 1834, proceeding almost exclusively on *a priori* methods of reasoning, with the Report of the Royal Commission on the same subject in 1909, in which quantitative analysis plays a much larger part. The same feature is evident in comparing the Free Trade controversy of to-day with that of Cobden's time.

In other directions economic method has been influenced by psychological analysis. Jevons in England, Walras in Switzerland, and Menger in Austria simultaneously worked out a theory of value from the side of demand, on the basis of the psychology of choice, which proved complementary to the older theory that started from the side of cost of production. It supplied the fundamental principles of a theory of consumption. Hitherto the economist has generally been compelled to establish his own psychological principles, since they were not sufficiently prepared for his use by the psychologist; but it seems probable that the future development of Experimental Psychology will have an important bearing upon deductive Economics.

Even more fruitful has been the application of biological conceptions to social and economic life, though their uncritical use has sometimes been mischievous by pushing analogies so far that they become untrue. Formerly economists had attempted to explain man's actions by the categories of Physics, and society was treated as if it were a machine. The interactions of men's wills and motives in economic life were explained in terms of stress and strain, attraction and repulsion. The principle of the composition of forces was thought by J. S. Mill (*Autobiography*, London, 1873, p. 159 f.) to afford a key to economic method by adding 'the separate effect of one force to the separate effect of the other.' But, while this method is frequently useful as a first approximation, it generally makes the invalid assumption that economic problems are concerned with external forces operating upon objects which themselves remain unchanged. This was felt to be much too external a conception for a social science. Thus, the effects of an increase of wages in a trade might be studied on the mechanical method by showing how relative wages and profits act as forces attracting or driving away labour and capital; but this would not yield a complete analysis, because the increased wage would tend to affect the efficiency of the worker and possibly of the business organization, so that there is an obvious analogy to functional adaptation in Biology. The step from physical to biological analogies has thus marked a great advance, emphasizing the mutual dependence of the welfare of the whole and the parts, of differentiation and integration, and humanizing economic study. But it has also led to much inaccurate thought, the difference between biological and economic phenomena having frequently been ignored in the first enthusiasm of the discovery of analogies. The 'struggle for existence' in economic life has been treated in a narrowly individualistic way, and the 'survival of the fittest' has been said to necessitate unre-

stricted competition, while it was forgotten that morally inferior men sometimes display greater ability in obtaining for themselves advantages from the environment, and that many competitors are favoured, while others are irrationally handicapped, before they enter upon the economic 'struggle.' These crude uses of biological categories, however, are confined to the minor writers, and intelligently construed biological methods have contributed greatly to economic advance, for the two sciences have a subject-matter which is similar, in respect that the internal structure and nature change as well as the external conditions and outward form.

5. **Economic laws.**—Two circumstances have combined to create much popular misunderstanding regarding the nature of economic laws. On the one hand, the close relation of Economic Science to Ethics and Politics has frequently given rise to the erroneous impression that economic laws prescribe or forbid certain courses of conduct. On the other hand, the old association of the science with the 18th cent. beliefs regarding the natural and with the policy of *laissez-faire* led to the idea that, if only economic forces were left alone, they would work for the highest social welfare. Once it was understood, however, that the beneficence which was claimed for the natural and unfettered action of economic forces presumed that most of the institutions of the time, like rights of property, inheritance, and a criminal law, were 'natural,' while only certain ill-defined kinds of regulations were violations of Nature, this conception was abandoned. For the economist is no longer under the impression that, with the exception of a few details which he does not like, the institutions of the present day are natural, so that economic forces may safely remain unchecked within the limits of the existing social system. On the contrary, the social problem is very largely one of regulating and directing the economic forces so that they may work more surely towards social well-being, and this may involve considerable changes in the institutions which were formerly regarded as natural and taken for granted. Economic laws are, like the laws of Physics, merely statements of the relations between phenomena expressed in the indicative mood, as contrasted with laws in the moral and juristic senses of the word. When, therefore, a proposal is condemned as violating economic laws, the speaker is almost certainly confusing the different meanings of the word 'law.' It is true that no Government can change or destroy an economic law, though it may change the economic conditions that give significance to it. All that it asserts is that given causes will, *ceteris paribus*, lead to certain results; and in that sense the law is inviolable. Yet the statesman may get rid of the causes or introduce other forces which counteract the effect. But, whether it is desired to strengthen or to check the action of economic laws, it is obviously important first to understand their working, since it is usually far easier to accomplish a desired result by harnessing and directing them into proper channels than by struggling against them.

6. **Development of economic thought.**—In the foregoing remarks upon its meaning, scope, and method, reference has been made to some of the more prominent changes in economic thought. Although used by Aristotle, it remains true that in the present sense of the term 'Economics' is essentially a modern science. It is, indeed, usual to refer to Adam Smith as its founder, but this does not mean that he was the first to write upon economic subjects. On nearly every part of Economics there had been previous writers, and some topics, such as foreign trade, money, and taxation, had quite a considerable literature of their own. But he so entirely recast the subject, combining the English and French doctrines and weaving them into a connected scientific whole, that the *Wealth of Nations* (1776) marks as great a departure in Economics as the system of Copernicus did in Astronomy.

The industrial life of Greece and Rome was based upon slavery, domestic manufacture, and petty commerce. Discussions on the principle of private property are found, division of labour had been utilized to a moderate degree, but the chief feature of modern industry was lacking, for industrial capital played no large part in production. Public finance and the nature of money certainly occupied the attention of writers of antiquity; but, apart from an occasional anticipation of modern theories, there is little in Greek and Roman literature that has any direct significance for modern economic life. The industrial conditions were not such as to direct attention to the problems which present themselves most acutely at the present day. In mediæval times the slave was disappearing before the free labourer, but industry was still on a petty scale and there was little industrial capital. Economic speculation was intermingled with theological and moral questions—the determination of a just price, usury doctrines, and luxury exemplifying the topics discussed. On the whole it became little more than a casuistical system of rules for business conduct. After the Reformation, the introduction of printing, the discovery of trade routes to the East, and the influx of precious metals from the New World, there were hundreds of books and pamphlets on economic subjects before the middle of the 18th cent., usually relating to particular controversies connected with monetary matters and foreign trade. As local industrial regulation gave place to national, the Mercantile Theory (cf. COMMERCE) became dominant, with its demand for freedom of exportation and its doctrine of the balance of trade. There was a great advance in the analysis of problems of production and exchange, but the separation of a wage-earning class and the rise of capital were only beginning to turn attention to problems of profit, wages, and labour.

It was when the old industrial order was thus passing away and capitalism was in its infancy that Adam Smith's *Inquiry into the Nature and Causes of the Wealth of Nations* appeared. Much of it is polemical, being aimed against the innumerable rules and regulations for the conduct of trade which had lost any justification they may formerly have had in the conditions of the time. The Physiocratic writers in France had already laid stress upon the natural law of freedom before the publication of the *Wealth of Nations*, but it has now been made clear, by the publication of the notes of his lectures taken by a student, that Adam Smith was teaching very similar ideas in the University of Glasgow as early as 1763 (*Lectures on Justice, Police, Revenue, and Arms, delivered in the University of Glasgow, reported by a Student in 1763*, and edited by Edwin Cannan, Oxford, 1896). Despite an occasional confusion of economic laws with ethical precepts, which arose from the preconceptions regarding the natural, his exposition of the principles of freedom of trade was so forcible and so opportune that it profoundly affected legislation.

But the *Wealth of Nations* also contained a scientific treatise on value and the distribution of wealth, and here the French economists had anticipated him and exercised a strong influence upon him. Turgot, in his *Réflexions sur la formation et la distribution des richesses* (1770; Eng. tr. edited by W. J. Ashley, New York, 1898), gave a

theory of wages, profits, interest, and rent which was largely coloured by the Physiocratic doctrine that agriculture alone yielded a net product over the expenses of production, while manufacture merely changed the shape of materials already produced, adding a value corresponding strictly with the useful materials consumed by the artisans during the period of labour; and commerce merely changed the place of materials without increasing the wealth of the country. The theory of distribution received fuller development at the hands of Adam Smith, and, though he did not accept the view that agriculture alone was productive, but extended the conception to manufacture and commerce, he still thought that the first was productive in a special sense.

'In agriculture nature labours along with man; and, though her labour costs no expense, its produce has its value, as well as that of the most expensive workmen'; while 'no equal quantity of productive labour employed in manufactures can ever occasion so great a reproduction. In them nature does nothing; man does all' (*Wealth of Nations*, bk. ii. ch. v.).

The basis of this assertion appears to be that land yields a surplus in the shape of rent in addition to wages and profits; yet this fact is not due to the greater bounty of Nature in work on the soil than in other industrial pursuits, but rather to the limitations and variations of that bounty. Now, when natural forces have been exploited on a large scale for manufacturing and mercantile purposes, it is futile to ask whether Nature contributes more to production on the land than to other forms of production. The main doctrines of Smith regarding the distribution of wealth did not differ essentially from those of Turgot, though he departed further from the Physiocratic theory and gave more emphasis to the industrial, as distinguished from the agricultural, system. Francis Hutcheson, Hume, Steuart, and other English writers had also made important contributions to economic theory before 1776, but, as Marshall (*Principles of Economics*[5], London, 1907, i. 757) says,

'Adam Smith's breadth was sufficient to include all that was best in all his contemporaries, French and English; and, though he undoubtedly borrowed much from others, yet, the more one compares him with those who went before and those who came after him, the finer does his genius appear, the broader his knowledge, and the more well-balanced his judgment. . . . Wherever he differs from his predecessors, he is more nearly right than they; while there is scarcely an economic truth now known of which he did not get some glimpse. And, since he was the first to write a treatise on wealth in all its chief social aspects, he might on this ground alone have a claim to be regarded as the founder of modern economics.' His highest claim to have made an epoch in thought, according to the same authority, is that 'he was the first to make a careful and scientific inquiry into the manner in which value measures human motive'—a theory which gave a common centre and unity to the science.

The Industrial Revolution, which was only beginning in Adam Smith's time, soon proceeded apace, for Watt discovered the steam-engine in the same year that the *Wealth of Nations* was published. New problems arose as the factory system superseded the domestic system of production, and, as England was industrially far in advance of any other nation, the discussion of them took place chiefly in that country. In the hands of Ricardo and Malthus, therefore, the development and extension of Adam Smith's principles had the directly practical aim of contributing towards the solution of the special problems of the early years of the 19th cent., and this work they did very effectively. Freedom of trade was now more necessary than ever; questions of distribution became more acute with the growth of the business unit and the increased number of wage-earners, so that the relation of wages to profit was a prominent feature of discussion; the condition of the poor and the influence of the poor-laws were seen in the contributions of Malthus; the effects of the restrictions upon importation of corn led to an elucidation of the theory and nature of rent; while the financial difficulties of the period of the French war and the suspension of specie payment by the Bank of England caused a development in monetary theory. The Malthusian theory seemed to warrant the view that the poor condition of the labouring classes was due to the fact that when wages rose above the level of subsistence there was a tendency for population to increase and force them down again. Ricardo strengthened this view in one way by his theory of rent, which showed the tendency to diminishing returns from increased applications of labour to land, and also that the surplus produce above the margin of cultivation went to the owners of the soil. By a careless expression to the effect that wages could not rise above the level of necessaries he also provided the basis for the Socialistic doctrine which represented the margin of cultivation as the margin of necessary wages, generalized it to the whole of industrial life, and held that capitalists and landowners swept off all surplus produce.

7. **Recent development.**—Later economic doctrine has been mainly an amplification and modification of that which flourished in England under Ricardo, Malthus, MacCulloch, and Mill. But, since the middle of the 19th cent., other countries have been overtaking England in industrialism, and have begun to contribute also to the development of economic thought. Prior to that time France and England were almost the only countries which had contributed anything of importance, but during the last half-century American, German, Austrian, and other writers have applied themselves to the science with such skill and success that they have rid it of much of its former insularity and widened its outlook. The increased concentration of capital and the immense growth of commerce, following upon improvements in railways and steamships, have brought about newer conditions, so that problems of transport, international trade, monopoly, and speculation have assumed a larger place in economic treatises. The doctrine of non-interference has been greatly modified, and the latest phase of this movement of thought, which promises to be the most important for some time to come, is the use of the machinery of the State for social amelioration, partly by means of restrictive legislation regarding the conditions of employment, partly by the utilization of the system of taxation for improving the condition of the labourers, and partly by extending the collective ownership and operation of industrial enterprises.

The subject of distribution of wealth is claiming fuller investigation, and the desire for raising the economic condition of the less fortunate members of the community is tending to overshadow all minor controversies. The economists of the first half of the 19th cent. treated distribution from the standpoint rather of abstract classes like capitalists and labourers than of individuals, and did admirable work in explaining the nature and variations of each category of income—rent, profits, and wages. But to-day the emphasis of popular discussion is upon the great inequalities of incomes which arise largely from inequalities of inherited property and inequalities of opportunity, and economic inquiry has tended to follow the same direction. Consequently, greater stress has been laid upon the fact that the increase of aggregate wealth is not the same thing as the increase of material well-being; and, through the work of Jevons and the Austrian school, the theory of value has been re-stated from the side of consumption and utility in such a way that no modern economist can fall into the common error of earlier authorities of confounding the two conceptions. It is now of fundamental importance, not only in general

economic theory but also in its application to the principles of taxation and socialistic proposals, to recognize the simple psychological fact that the relative urgency of wants depends largely upon the extent to which they have already been satisfied, so that it cannot be a matter of indifference in estimating the amount of well-being whether a particular quantity of material goods accrues to the rich or to the poor. No doubt recent economists in elaborating this profoundly significant principle have sometimes attempted to give it an air of mathematical precision which it cannot sustain, and such calculations of pleasure or utility are apt to raise the suspicions of the philosopher. But, while it is impossible to give absolute proof that a particular poor man suffers more from the loss of a shilling than does a particular rich man, and it may even be quite untrue in special cases, yet in dealing with large numbers any scruple regarding the matter vanishes, for no one would find much comfort in the fact that the aggregate of material wealth was the same whether a million sterling went to the working-classes or to the payers of super-tax. The earlier economists, partly under a false impression regarding the relation of capital to wages as expressed in the doctrine of the 'wages-fund,' partly from lack of an adequate theory of demand and consumption, usually thought that if a policy increased or diminished what is now called the 'national dividend,'—the quantity of goods produced in a year,—it was *ipso facto* good or bad, economical or wasteful. But the principle that the utility of a good depends upon the quantity possessed makes it clear that even a policy which injures the national dividend may yet promote material welfare if it modifies the distribution of wealth to the advantage of the poorer sections of the community; and a policy that increases the dividend may likewise fail to promote material welfare if it alters the distribution of wealth to the disadvantage of the poorer classes. Hence among economists, as well as by socialists, a more even distribution of wealth is considered to be desirable, and modern controversy turns rather upon the advisability of particular methods of achieving it, and upon the magnitude of their effects on productive efficiency and the like, than upon the desirability of the end.

This conception of utility or psychic significance has affected not only the standpoint from which the distribution of wealth is regarded, but also many of the aspects of the production of wealth. The fuller recognition of the distinction between material wealth and material welfare has made it necessary to take account of the disutility involved in excessive and uninteresting toil as a deduction from the material gain. Consequently, it is no longer considered a sufficient answer to claims for the reduction of hours of labour in particular employments merely to assert that the national dividend will be injured thereby. Often, of course, such an injury does not result from curtailing the hours of labour; but, even though it should be so, the economic aim is the maximizing not of material goods, but of material welfare, and it is possible that the latter may be achieved by means which slightly injure the former. On the other hand, everything that increases the interest in, and satisfaction directly derived from, an occupation is a gain of material welfare, even though it may not similarly increase the output of goods.

Apart from this elaboration of the principles of utility and demand, which has exercised a larger influence upon recent Economics than is commonly realized, there have been a number of other changes of a more limited nature in general economic theory. The distinction between capital and land was too sharply drawn by the older writers, not merely because capital becomes incorporated with the soil, —for that they knew,—but because the incomes yielded by the two are not so strictly distinguishable as they thought. Marshall has shown that the rent of land is not a thing by itself, but a leading species of a larger genus, and to the other species he gives the name of 'quasi-rent.' The distinction between rent and quasi-rent depends chiefly upon the possibility of increasing or diminishing the supply of the article, but economically they are otherwise similar. The doctrine of the pressure of population upon the available means of subsistence from land has also been modified since the time of J. S. Mill, partly by a clearer understanding of the influence of a rising standard of life upon the birth-rate and upon the efficiency of labour, partly by a more complete analysis of the factors which may counteract the tendency to diminishing returns from land, and partly also by the opening up of new countries and the consequent increase of the area of food supply. The wages-fund theory—that some rather ill-defined fund of capital constituted the source of wages, and that if one workman obtained more of it another must get less—flourished with slight modifications down to 1870, and was frequently set up as a barrier against any pretence on the part of a Trade Union that it could increase wages without equally injuring those employed in other trades. It was, however, directly attacked by Longe (*A Refutation of the Wage Fund Theory of Modern Political Economy*, London, 1866) and by Thornton (*On Labour*, London, 1869), so that Mill himself abandoned it. The increasing differentiation between the capitalist and the entrepreneur in business life has been coincident with a clearer distinction of their respective functions and gains. In Germany and America careful work of a similar nature has been done by a number of brilliant scholars who have produced thorough analyses of particular branches, added greatly to the available historical and statistical material, and widened the boundaries of the science. The names and works of the more important of these recent writers will be found in the 'Literature' at the end of this article. Suffice it to say here that modern economic theory has not only been brought more closely into touch with the facts of industrial life, and thrown aside the insular narrowness which characterized the first half of the 19th cent., but has become, partly through the influence of socialistic criticism, though chiefly by development from within, more closely associated with social reform.

8. Problems of Economics.—A summary of all the various subjects that are treated in a textbook on Economics would yield but a dry table of contents. What is here proposed is rather to explain, without unnecessary technicalities, the essential features of the science at its present stage of development, dealing first with the more general principles upon which the material welfare depends, and secondly with their application to particular policies for the furtherance of material welfare through the action of the State.

(*a*) The primary requisites of material welfare are *labour* and *natural agents*; without the cooperation of these no production of any kind is possible. In a secondary place come *capital* and *organization*—meaning by 'secondary' not that they are less important in the process of production as now carried on, but that production of some sort is possible without them and they become important at a later stage of industrial development. Labour cannot create material things; but, by operating upon the materials which Nature gives, changing their form, place, or qualities, it adapts them to man's needs. In Nature there is remarkably little suitable for human provision until it

has thus been re-made according to man's own plan. Down to the second half of the 18th cent. this adaptation, which is called the production process, had to be performed almost wholly by man's muscular force aided by that of domesticated animals. There were tools, but, the motive-power being muscular, their range of operation was definitely limited by the physical and nervous energy of man. In a very few directions, which now seem by comparison almost negligible, the earlier period had attempted to progress beyond the merely muscular, as in utilizing the wind for ocean traffic and for small mills; but since the advent of the age of inventions we have looked more and more to the intelligence of man curbing and directing the forces of Nature in such forms as steam and electricity to perform most of the heavier work.

This perfecting of the agencies of production, which is still proceeding rapidly, removes the former limit of physical endurance, and the only bounds to the increase of material goods are the far-distant one when all natural forces shall have been economically exploited, and the improbable one that man's inventive capacity will come to a halt. This rapid adaptation of the world to man's requirements, by which natural forces are made to work for us, should, if rightly directed, result in a much higher general level of living. A community is not, however, well-off merely because of the increase of the aggregate output of goods; these are only instruments that may contribute much or little to welfare and to the raising of the standard of living according to the manner in which they are divided and utilized, and to the number of people embraced in the community. As man's wants are never fully satisfied, or likely to be, the first principle of production is that a people should strive to obtain the goods it requires with the minimum expenditure of effort. This is sometimes questioned by those who are painfully conscious of the fact that people are often to be found who have no work to do, and projects for 'making work' are sometimes advocated. Yet there can be no such thing as a general scarcity of work until mankind is supplied with everything it desires. Defective organization of industry shows itself in maladjustments of the labour force between different trades; in the inability to predict with certainty the future supply of raw produce or food, and the character of future demand for goods; in the spasms and reactions of credit, as well as in the temporary displacements that accompany all progress and change. Such causes as these lead to unemployment; but there is no lack of work to be done, and it is wasteful to spend more effort upon making any class of goods than is absolutely necessary.

The effectiveness of labour in production is greatly increased by the advance of science, which teaches men how to make the most of the natural environment by applications of chemical and physical discoveries, and by the general raising of the level of skill and intelligence. It is also increased by the fact that the stock of appliances for production is growing faster than the population, so that every generation bequeaths to its successor a much larger quantity of the products of past effort, in the shape of machinery and other forms of capital, than it received from the preceding generation. And the effectiveness of labour depends, too, upon the manner in which individuals co-operate for the supply of their wants through the separation of employments and division of labour, allowing each to perform the work for which he is most suited by nature or training; through the combination of labour, which can perform what would be quite impossible to any single individual; through the localization of industries in the places best suited to the particular branch of production. If one man can weave more cloth in a day than can another, while the second can produce more or better boots than the first, the productivity of their labour will be increased when they specialize their work and exchange their products. Similarly if, for climatic or other reasons, one district can produce cotton goods more easily than another, while the second can produce coal or granite more easily than the first, it is economical that the districts should specialize their production and exchange their products. Indeed, even if a man possessed such excellent abilities that he could do a dozen things better than most other people, it would still be most beneficial to production that he should devote himself to the occupation in which his superiority was most marked, for it is not economical for a successful lawyer to do his own typewriting, even though, with practice, he might be able to do it expertly.

These commonplaces are seldom directly denied, but it is often forgotten that they are not changed by political boundaries and lines of latitude, and that the advantages of territorial division of labour are not essentially different in comparing two nations from what they are in comparing two towns or counties. If, by hindrances to exchange, a community is compelled to make for itself the goods in which it has little or no superiority, it must make fewer of the goods in which its relative superiority is great; and such hindrances, by impeding the territorial division of labour, lower the productivity of industry. No doubt there are some incidental disadvantages in all forms of localization of industry, as there certainly are when labour becomes so specialized that it is difficult to readjust the amount of it in different lines of production as the demand changes; but on the whole the productivity of industry increases when the localization of industry is unimpeded, for much the same reasons as when each man is performing the work for which he has the highest aptitude.

It follows from this conception of localization also that the effectiveness of labour depends upon the condition of the land or other natural agent with which it operates. Different areas are very unequally fitted for assisting labour, because of their variations of fertility, climate, geological formation, or geographical position; and, though some of these natural circumstances may be altered by man's action through the incorporation of capital with the soil, others admit of no great modification. In any case, the labour required for producing a given quantity of goods in a favourable locality is less than in an unfavourable one, so that labour is more productive when applied under the former circumstances than under the latter. This gives rise to variations of rent, for those who control the superior sources will naturally reap higher gains than those who control the inferior. Besides variations in natural endowments affecting the productivity of labour applied to land, it is also affected by the response that land makes to intensive cultivation, so that there was at one time a fear that the number of people would increase to such a point that the supply of food and other products of the land would not keep pace with the growth of population. In other words, the effectiveness of labour depends on the amount of land available, for after a certain point, as cultivation becomes more intensive, there is a lower and lower return of produce to the successive increments of labour, unless changes have meantime occurred in the arts of agriculture. If it were not so, there would be no limit to the intensity of the cultivation that could be profitably carried on. The earlier economists may have given too

little weight to the possible improvements in agricultural methods, facilities of transport from abroad, and the like; but it remains true that, if population increases in an old country while no change occurs in these respects, greater difficulty must be experienced in producing the food required for the additional numbers, and therefore it is quite possible that there may be too many people in comparison with the area of land available, though the limit may be pushed back by various kinds of improvements. There may also be the opposite phenomenon of under-population, where the addition of every immigrant tends to increase the productivity per head of the community.

(*b*) Specialization and localization are obviously dependent upon the facilities for *exchange of products*, and the problem arises why a quantity of one commodity exchanges for another quantity of a different commodity. If each person worked with his own land and instruments, producing only those goods which he directly consumed, there would be no exchange, and the income of each would be merely the goods he made. The complexities of exchange and of the distribution of wealth arise because a man's income depends not only upon what he personally produces, but also on the ratio of exchange of his produce with that of other people, and on the payments that must be made for the use of factors of production like land and capital lent to him by others. To facilitate exchange a monetary system is required, both as a standard of value and as a means of transfer from one person to another, and, though a host of commodities, such as furs, feathers, cattle, grain, shells, and tobacco, have in different communities performed the functions of money, these have all tended to give way to the precious metals, especially to gold, which is peculiarly suited to the purpose because of its portability, homogeneity, divisibility, and similar qualities. But such a medium as gold can only serve as a means of comparing the values of different commodities at one particular time, and not at different times, because the value of gold itself changes from period to period for the same reasons as ordinary goods change in value, viz. from circumstances affecting the supply or the demand for it. One of these circumstances in the case of gold is the extent to which exchange takes place without the intervention of actual metal. The most important forms of credit documents are connected with banking, which assists production further by facilitating the transfer of capital from those who can make little or no use of it, to those who can employ it to great advantage, and by affording credit on the security of future repayment.

The problem of value is not, however, settled by the adoption of a monetary medium; for, when the question is asked why six different commodities all sell for a shilling, it is futile to answer that money balances them, since money is merely one of the seven things balanced. Some socialists have asserted that goods are of equal value because they embody equal amounts of labour; but that is not only untrue of goods the supply of which is definitely fixed, as its upholders often admit; it does not apply even to those goods which are being constantly produced for meeting the demands of the market. To explain value by means of labour it is necessary to resolve all kinds and qualities of labour to some common unit, and, when any attempt is thus made to weigh different forms of labour against one another, the only way of doing it is by the price paid for their results, and this involves a *petitio principii*. The true answer is that the value of goods depends, from the side of demand, upon the relative estimate of their utility or significance in the satisfaction of human desires; and, from the side of supply, upon their relative abundance, which again depends upon the cost of production. As regards the demand side, the fundamental factor is that, the greater the quantity of a good we possess, the lower is the significance to us of any further addition to the stock of it, until, when superfluity is reached, no satisfaction is dependent upon any one item of the good, and therefore its value is zero, as in the case of air. There can be no value in the absence of utility, and the value of any good depends upon the marginal utility—that is, upon the utility of the final increment of the commodity which we are just induced to purchase. Cf. art. CONSUMPTION. Thus, the nearer the quantity of the commodity approaches to the amount required for complete satiety of the wants dependent upon it, the smaller will be the marginal utility and the lower the value of any single increment of it. Hence it may be briefly stated that, other things being equal, the demand price of a commodity decreases with every increase of supply, because the marginal utility falls. It is by analysis of the conditions affecting the supply of the goods that the complementary truth is explained, viz. that the price reacts upon the amount produced and determines the extent to which labour and capital will be devoted to the production of the particular article. Goods will not permanently be produced unless they 'pay,' and so account must be taken of the cost of production as well as of utility. Cost of production, in the sense of an irrevocable fact that capital and labour have been devoted to producing an article, has no real influence on the value; nevertheless, there is a constant tendency for value to conform to cost of production, because capital and labour will turn to the production of those goods which offer the best remuneration. Instead of making more of a good when the price of it is below the cost, industrial resources will be shifted to other lines of production where the price is above the cost, thus lowering the supply and raising the marginal utility of the former, while increasing the supply and lowering the marginal utility of the latter until they balance. The fact that under competitive conditions the value of a good is normally very near its cost of production has led many to assert that it is the cost of production that causes value. But this is a confusion of mind. Value depends upon utility and scarcity, while cost of production is important inasmuch as it affects the degree of scarcity, but in no other manner. Values change when either of these factors changes, unless, perchance, both change in such directions as to neutralize one another. An increase in the supply, while the demand remains the same, will lower the value of each unit of the commodity; a diminution of the supply will raise the value. An increase in the demand, while the supply is unchanged, will raise the value of each unit; a fall in the demand will lower it.

(*c*) The problem of the *distribution of income* in the form of wages, rent, interest, and profits is an application of these principles of value. The relative incomes of different people depend upon the value of the produce of their labour and the value of the use of their property, so that a full explanation of the fact of wide differences of income would involve a statement of all the reasons why some own more property than others, why some properties yield a higher return than others, and why different forms of exertion, from unskilled labour to the organization of a huge industry, are so variously valued. This can only be here indicated in the broadest outline. In existing conditions there is no pretence to reward moral worth or even intellectual merit as such: what is rewarded is simply an economic service. Many are

paid not for any work that they personally perform, but for the service of factors of production which they own. The variations in the magnitude of incomes from the possession of such property depend upon the amount and the efficiency of the property possessed, and these again depend upon individual providence, judicious choice of investments, luck, and the quantity inherited, as well as upon the magnitude of the individual's earnings, which largely determine the possibility of saving. Within any one class of property incomes there are variations: one landed estate yields a higher income than another of equal size, because of its superior situation, natural endowments, and the improvements made upon it by expenditure of capital and labour in the past; one use of capital yields a higher income than another because the different uses to which capital is put vary in their productiveness, in their security, and in their marketability; and people are willing to accept a lower return on an investment which has a high security and is easily marketed. Similarly, the wages of labour depend upon the value which the public attaches to the goods or services produced by it, and consequently upon the number of workers ready to perform the tasks. In each trade the wages will be fixed by the value of the product of the marginal worker—the worker, that is, whose presence or absence makes little appreciable difference to the employer. If the number of labourers increases while other things remain the same, the remuneration of each will be lowered, because the value of the marginal product will fall as more of it is placed upon the market, unless the industry happens to be one in which the addition of workers makes production so much more efficient that the increased output per head is more than sufficient to counterbalance the fall in the price of each unit of produce. In this way it emerges that the importance of an occupation to society is no test of the wages that will be paid in it, any more than the relative value of corn, air, and diamonds is explained by their importance to human well-being. Precisely as goods rise in value if there are few in the market when many are wanted, so the value of a particular kind of labour rises when there are few labourers in comparison with the demand for their work. Hence the reason why wages in one trade are higher than in another depends upon the number of people and the demand for their produce in each case. If all workers were equal and all trades equally desirable, there could be no such differences of wages. But not only do occupations vary in the advantages, other than money wages, which they afford; the workers are also differentiated into classes who can rarely do each other's work, and the main reasons for the relative over-supply of labour in some occupations as compared with others are therefore to be sought in the circumstances that render labour immobile, and that prevent workers from entering the more highly paid trades. For some temporary reason, such as a change in the nature of demand, too many people may have become specialized to a particular trade and too few to another, but the error cannot be quickly rectified, because of the time required to train new workers. In the course of time it may be expected that the higher wages will attract to the one occupation, and the lower wages will repel workmen from the other; but in the meantime the maladjustment of the labour force between the trades will cause a corresponding variation of wages.

Of more permanent and serious import is the fact that the choice of a trade is not free. The people become distributed between different occupations in a rather unsatisfactory manner, and it would promote welfare if more people followed some, and fewer other, occupations than at present. Since many employments call for lengthy and expensive training, it depends upon the number of parents who are both willing and able to undertake this preliminary expenditure for their children, whether the supply of labour of that kind will be great or small. The chief reason why those kinds of work that any ordinary person can perform are at present paid for on a very low or miserable scale is that there is a very large number of parents who either have not the power or have not the will to bear the expense involved in training their children. Customs of various kinds also limit the freedom of choice in some cases, and this is particularly important in fixing women's wages, for women are by custom excluded from many employments, and so relatively overcrowd others. The difficulty of gauging in advance the comparative advantages of employments when conditions are rapidly changing, the differences of physique and mental strength, also give rise to differences of wages from trade to trade, while the last-mentioned factor also causes variations of earnings within the same trade.

Besides competition of workers and the relative supply of them in different trades, there is still another factor tending to fix the limits of wages, viz. the principle of substitution. Men compete with machinery, and different combinations of labour and capital with other combinations. It is the employer's function and interest to keep down the expenses of production by choosing those factors and groupings which are most economical. Thus land, labour, and capital are all needed in farming, and no one of them can be wholly substituted for the others; but they can be substituted for one another at their margins. The farmer may conceivably produce the same crop from a given area with more labour but less machinery or manure, with less labour and more machinery or manure; or he may produce the same crop from a smaller area of land by still further increasing the labour and machinery. Land, labour, and capital are here being balanced against one another as factors of production, and, if the price of one rises considerably, the others may be chosen to take its place in some measure. So it is in every industry. Each factor and subfactor, however necessary to production, may find a substitute at the margin in some other factor or subfactor; and in this fact there is found some justification for the hard and misleading saying that 'most men earn just about what they are worth,' that being calculated as their economic factor-worth. The wages in a trade tend to equal the marginal worth of the labour in that trade, and that marginal worth is fixed both by the number of workers in the occupation relatively to the demand for their produce and by the competition of other factors capable of performing similar work. Unfortunately, however, the saying just quoted is often used to support the very different idea that a man's income measures his personal efficiency. That is by no means justified by economic analysis. Through the method of substitution the portion of the aggregate produce of the community which goes to remunerate any particular agent or factor of production tends to be adjusted to the efficiency of that factor in supplying the wants of mankind, so that distribution depends upon factor-worth. But, besides labour and organizing ability, capital and land are factors of production; and, though these earn in proportion to their efficiency in the supply of wants, they cannot be said to acquire incomes; their owners receive the reward whether personally efficient or the reverse. Moreover, the theory of distribution takes the wants of mankind as they are, not as they ought to be; so that, if the popular demand

requires successive editions of a sensational novel, while a book embodying the profound researches of the scholar will not sell, the author of the former is the more efficient in supplying the wants of mankind, and accordingly obtains a greater share of income. In a deeper sense, no doubt, a man may be so very efficient that the people are unable to appreciate his wares; but that is only to reiterate that intellectual merit and moral worth do not, as such, constitute a claim upon the national dividend under existing conditions.

9. State action for the promotion of material welfare.—After this survey of the general principles, it remains to exemplify their application to particular proposals for State action in furtherance of material welfare. This section cannot pretend to systematic completeness, and selection can only be made of two samples from the multiplicity of projects and activities. The subjects chosen as sufficiently representative and widely debated are the raising of the economic condition of the worst-paid labour, and the imposition of import duties for the protection of home industries

(*a*) *The problem of very low earnings.*—The subject of low earnings connects itself with the general principles of wages already enunciated. The tendency of economic forces, in so far as they are not impeded, is to pay to workers their marginal worth in the particular trade. Clearly they cannot permanently get more than this, because, if the marginal worth of a class of men were 20s. a week while the wages were 21s., it would be to the advantage of an employer to dismiss men up to the point at which the gain resulting from a further dismissal would be equalled by the loss. On the other hand, competition for labour among employers should normally prevent wages from falling below the marginal worth of the labour.

Hence, when a large class of work-people is found to obtain very low earnings, two questions arise to the mind of the economist: Are the low wages to be accounted for by the low marginal worth in that occupation, or are they due to special circumstances which prevent the general economic forces from operating properly in the trade in question?—more briefly, Are the workers not obtaining as much as their marginal worth? In some cases both questions may admit of an affirmative answer. Thus, in the case of sweated home-work among women, the supply of labour relatively to the demand for it is very high, so that its marginal worth is low. Much of the work is of a kind that can be performed with the aid of machinery in factories, and the cost of production in the factory fixes a limit to the wages that can be paid in the home. Many of the articles may be made by the consumers themselves, and, if their price rises, this method of production will be stimulated. There is thus an excessive supply and a limited demand, and these facts alone warrant the conclusion that the marginal worth of the labour must be low. At the same time there are also reasons for believing that the wages, in some cases at least, fall below the marginal worth, because the bargaining power of the home-workers is very weak; they know little of one another, and cannot take combined action in resistance to a fall of wages. So far the conditions of a true market are absent, and in practice different piece-rates are sometimes paid for precisely the same work by different employers. It is chiefly in this latter fact that the institution of minimum wages by law for such industries may be expected to have a good effect; for, if the home-workers were already in all cases obtaining their marginal worth, any raising of the wage must inevitably displace some of them, unless, indeed, their worth immediately rose in proportion to their higher wages. But in the case of unskilled men there is little reason to believe that the payment of wages below their marginal worth is very common or important. The main cause of their low earnings is that their marginal worth is low on account of the magnitude of the supply of such labour relatively to the demand for it. The idea that the prescription of a minimum wage by law will in such circumstances suffice to remove the evil cannot be sustained, for it is impossible to force employers to give more for labour than it is worth, and a man is not worth more simply because the Government declares that he must not be employed for less than a given sum. The result of a minimum wage in these circumstances must be to throw a large number of men out of work altogether. Conceivably this may be desirable as an incident in a larger scheme of reform where the gain is more than sufficient to counterbalance this loss, but the legislative prescription of a minimum wage alone is no remedy. Far more hope lies in an attempt to make the men worth more by raising some of the members of the overcrowded class to a higher level of efficiency, or by checking the degradation of members of the higher grades. The economic reason for the deplorable state of things is that there is a maladjustment of supply to demand, and the best course to pursue is to rectify this, for economic forces will then work with us in raising the wages of the poorer classes. This means that some of the sources of the over-supply of such labour must be stopped up, and in particular that at the adolescent age boys must be trained to fill some positive function in industrial life, instead of being allowed to drift into any uneducative job that offers good wages at the moment but leads to nothing in the future.

A serious objection is frequently raised to this course by the skilled workman, who asserts that the drafting of boys from unskilled and casual to skilled and regular trades can do no real good, because the skilled trades are already over-stocked; and a number of anti-social policies by Trade Unions and others have been dictated by this view. It arises largely from the practice of thinking about values and wages only in terms of money; as soon as one goes behind the money expressions, it is seen to be fallacious. The bootmaker's objection to the training of more boys for his trade, instead of allowing them to drift into casual and unskilled labour, is that the want he exists to satisfy will be more fully met while the other wants that he himself feels will not be more fully met, so that society gives him less of general commodities for a week's work than before. The objection would be partially valid if all the boys were diverted into this one skilled trade, though it might still be said that, when a set of men who would otherwise be doing little work, or casual work of very low worth, are making boots that are much needed instead, society as a whole will be enriched by the change, despite the fact that the price of boots and the wages of boot operatives would fall. But it is not proposed to draft all the boys into any single skilled industry; they would be distributed over industries of all kinds, so that all wants would be somewhat more fully met in due proportion. Then, despite the fact that boots are rather less urgently required than before when the supply increases, the bootmaker will not suffer because the same is true of the things he wants in exchange for boots. The only qualification to this is that by withdrawing labour to a large extent from casual occupations the price of such unskilled labour would rise, and, unless it increased in efficiency fully in proportion, or unless there were progress and invention in the work performed by the unskilled, their produce would rise in price

and they would be relatively favoured by obtaining a greater command of general commodities for each unit of their labour. But in any case the economist will not quarrel with this result; it makes real wages more equal as between skilled and unskilled trades by raising the earnings of the latter, and welfare is thereby promoted. The function of State action in this matter is, therefore, to carry its educational policy further into the more adequate training of youths, the suppression and regulation of undesirable forms of boy labour, and the more thorough direction of the labour force into the most desirable channels by the diffusion of information regarding occupations and the like. In such ways it can raise the marginal worth of the workers in unskilled trades, by reducing the supply and by raising the efficiency, so that economic forces themselves will then raise the wages. The State may also bring pressure to bear upon employers in order to regulate work as far as possible, instead of offering it in a casual fashion, and this will likewise tend to diminish the supply, as people will see that the chances of picking up a living by odd jobs are reduced, and they will have a stronger inducement to prepare themselves and their children for regular occupations. The surest means that the State can employ for improving the position of the poorest classes are those which directly or indirectly increase the efficiency of the workers, and distribute them more evenly among different trades in comparison with the demand, so that their marginal worth is at least sufficiently high to give them command over the necessaries for decent living.

(*b*) *Free Trade and Protection.*—The object of foreign trade is to render it possible for the people of a country to obtain goods more easily than they could otherwise do. That exchange is a gain to both parties, and that it realizes the economies of division of labour and localization of industries, is always admitted in regard to domestic trade; consequently no one questions the advantages of a policy of free exchange within the limits of a single country. The doctrine of freedom in international trade rests upon the same elementary facts. If each nation devotes its resources to those forms of production for which it has a relative superiority, and exchanges such goods for those which it cannot produce with equal facility, the income of its people will be higher than if they were compelled to produce for themselves all the goods consumed within the country. The idea that one country gains at the expense of another is absurd, and a country that will not buy cannot sell. Hence impediments to trade diminish the productivity of labour and capital within the protected area by nullifying the advantages of territorial division of labour. There is a *prima facie* presumption that it pays Britain better to produce the goods she is producing and exporting rather than to divert some of her productive forces from these to making the goods she is now importing. The burden of proof, therefore, lies upon the protectionist to demonstrate the falsity of this simple general principle, or its inapplicability to some particular circumstances. Broadly, protectionist arguments may be divided into two classes: those which urge that impediments to trade will increase the wealth, employment, or productivity of the country imposing them; and those which appeal to wider considerations such as national defence or imperial sentiment.

The oldest and the crudest of the arguments arises from the conception that foreign trade benefits a nation only when the value of the exports exceeds that of the imports, because it is then supposed that the difference must come in gold and so enrich the country. The refutation of the argument is manifold. The excess of imports or of exports is usually fully explicable without the passing of gold, by taking account of such items as shipping services and interest on investments abroad. It is impossible to obtain a surplus of exports by the imposition of import duties; and, even if the balance did come in gold, it does not follow that the country is richer. No economist to-day advances the balance of trade argument.

One of the strongest economic arguments is that temporary protection may encourage the development of infant industries. Under free importation an industry for which a new country is naturally adapted might not be able to obtain a footing, but once sufficiently protected it would grow up, obtain the economies of production on a large scale, and after an 'apprenticeship' period be able to stand without tariff support. The validity of this argument has been allowed by many free traders. Its best exponents grant that the immediate effect of the restrictions will be to lower the income of the community, but they look to a greater gain in the future from the more rapid development of the industries. The limitations to its validity, however, are that the industries to be fostered must be such as are likely to become self-supporting after a limited period, otherwise the loss is permanent; and that the protective support must be withdrawn after the 'apprenticeship.' In practice these two conditions are seldom fulfilled. The new country gives protection indiscriminately instead of to a few well-chosen industries; and, as the industries become important, they come to have a vested interest in the maintenance of the tariff, using the political machinery rather to increase than to lower the duties. Hence, while it is quite possible that temporary protection of this sort, if wisely administered, might yield a net advantage in the long run to a new country, it is doubtful whether it has in practice ever achieved as much good as harm. What strength it possesses lies in its being strictly limited both in scope and in duration.

The argument upon which the greatest stress is generally placed is the benefit of protection to the working classes by increasing the quantity of employment or of wages. For this various reasons are assigned. The first consists in pointing to specific instances in which a trade could be made to employ more people if the competing foreign goods were excluded. But the free trader has never denied that the amount of employment in a particular industry may be contracted by allowing imports to compete with it, and charges the protectionist with the fallacy of *ignoratio elenchi*. The position of the free trader is that those industries that would gain by a tariff would do so at the expense of a greater aggregate loss to other trades by diverting productive forces from more to less remunerative channels. In political campaigns, however, this argument for protection is one of the most effective. It appeals to the economic truth that it is to my interest that the goods I make should be scarce while everything else is plentiful, and if a tariff will bring about that state of things I shall gain. But, as soon as the promise of making goods scarce by a tariff ceases to be confined to a particular trade and is generalized to all trades, it becomes flagrantly absurd.

Another form of the same method of argument is to point to the effects of a tariff in leading to the investment of capital—sometimes foreign capital—in the protected industry. Even granting that the cases cited were always attributable to the tariff, it does not follow that protection has attracted more capital to the industries of the country as a whole. On the contrary, it causes a diversion of capital to an equal or greater extent

from other trades which are directly and indirectly injured by the tariff.

A different kind of argument in support of the protectionist view is that workmen in particular may be benefited by such a tariff as would exclude manufactured goods while permitting importation of raw materials, because the factor of labour is more important in the former than in the latter. Quite apart from the difficulty of distinguishing raw materials from manufactures in a state of industry where the product of one trade becomes the raw material of another, the argument appears to rest on a confusion of thought. More labour has, of course, gone to the production of a ton of steel than to the production of a ton of coal; but, then, nobody exchanges a ton of the one for a ton of the other. The question is whether labour has played a greater part in producing £100 worth of steel than in producing £100 worth of coal, and in point of fact a higher proportion of the value of coal goes to remunerate labour than in the case of steel. The comparison of values alone is relevant here; and, value for value, it is not the case that manufactured goods embody more labour than raw materials.

The most recent plea under this head is that protection might steady employment by lessening the fluctuations of industry. Statistical comparison of countries in regard to unemployment is very difficult to make at present, and, even if it were not so, it would fail to be convincing, because at most the fiscal policy can be but one among many factors influencing the intensity or recurrence of depressions of trade. The protectionist, however, asserts that the 'dumping' of surplus goods by foreign countries into a free trade country at very low prices is a cause of instability. Cf. art. COMMERCE. The extent of such operations by foreign trusts and kartels has been greatly exaggerated, but they do occur; and on the one side is the gain to the industries that use the cheap imports, which are almost always half-finished goods, while on the other side is the injury to the industries with which the dumped goods compete. The free trader tends to emphasize the former, the protectionist the latter, but the net gain or loss to the importing country depends on the circumstances of the particular time at which the dumping takes place. It is possible that on the whole the loss may predominate, inasmuch as dumping is intermittent: if it were steady and calculable, the gain would be greater. But the burden lies upon the protectionist to show that a tariff would cure the evil by preventing any unsteadiness of employment that it may occasion, and he is apt rather to take this for granted than to prove it. It is quite untrue to say that a free trade country alone is subject to dumping, for similar complaints have been frequently made in protected areas. Moreover, if the price of the goods in a protected country is higher by about the amount of the tariff than in a free trade country, there is no more inducement to dump into the latter than into the former. Indeed, if a country A habitually sends goods of a certain class to B, a free trade country, and to C, a country with a ten per cent tariff, and A now finds itself with a temporary surplus to get rid of without lowering prices at home, dumping will be slightly easier into C than into B, because in C the tax per ton falls as the price falls, and so stimulates sales the more. Further, low protection of about ten per cent, which is all that the Tariff Reform Commission in Britain has suggested, would not check dumping, because, on the authority of that unofficial Commission itself, the dumping prices are already dropped by a much larger percentage. Very high protection that stopped imports of that class altogether would, of course, prevent dumping; but, so far from securing stability of employment, it would increase instability by raising new causes of fluctuations which free trade prevents. It is a steadying influence that, when the price of iron in a free trade country falls, importation is checked, and when the price rises more is sent. If this influence is removed, every industry dependent upon iron will be subject to greater disorganization and fluctuation of employment, so that a tariff sufficiently high to prevent dumping would create much worse conditions for the workers, quite apart from the other injuries of high protection.

The wages argument, especially in the United States, takes the form of ascribing high wages to the tariff, and appeals for the exclusion or taxation of the products of low-waged European labour. That some fallacy is here involved is suggested by the facts that the countries with low wages are among those which adopt protection, and indeed sometimes urge the necessity for tariff aid against their highly paid competitors, and that no country in the world has ever differentiated in its tariff by favouring imports from countries where wages are high as against those from countries where wages are low. The argument does not allow for the difference between money wages and real wages, and generally in a protected country the cost of living is relatively high. Also, low wages do not mean low cost of production, for commonly, where high wages are found, the output per worker is at least as high in proportion. The true economic relation has thus been inverted. High real wages are due to the high productivity of labour, and that in turn depends chiefly on the superior natural resources of a country, the efficiency of its workers, and its business organization. It also depends upon foreign trade to the extent that productivity is increased by the exchange of goods between countries, but this point would favour free exchange. In fine, wages are dependent upon the effectiveness of labour; and, since the artificial inducement of industries in which labour is not sufficiently effective to render them profitable without a tariff results in lowering the general effectiveness of the labour force of the country, the average level of real wages will be thereby reduced.

It is occasionally proposed that a nation should adopt free trade only towards the countries granting to it the same privilege. In so far as this arises from the belief that trade must be free on both sides if it is to be at all advantageous to both, it is fallacious; but, in so far as it is based on the view that a tariff may be used for purposes of bargaining, and thus may lower or remove foreign restrictions, it was admitted by Adam Smith as a possible exception to the general free trade doctrine. It involves immediate loss in the hope of future compensation through freer trade. Its validity depends upon the probability of success, as it can be justified only when it removes the hindrances to trade; and in estimating this probability the nature and conditions of the export and import trade of the particular country must be considered. Experience has generally shown that retaliation creates animosities which lead to still higher protection, so that a balance of injury commonly results to the country using the weapon as well as to those retaliated upon.

It may be urged that, even though the wealth of the nation is diminished by protection, this loss may be off-set by political considerations, increased national security, or the like. Such arguments were at one time urged in favour of the Corn Laws and Navigation Acts in Britain, and each particular case can be treated only on its own merits. On general grounds it may be said, however, that, while a loss to the aggregate wealth does not alone suffice to condemn a policy,

wealth is now a very important factor in national security.

LITERATURE.—The chief works of the so-called Classical School of economists and their immediate followers are: Adam Smith, *Wealth of Nations*, London, 1776 (last ed. by E. Cannan, 2 vols., London, 1904); T. R. Malthus, *On Population*, London, 1798, and later editions; D. Ricardo, *Principles of Polit. Econ. and Taxation*, London, 1817 (ed. E. C. K. Gonner, London, 1891); J. R. MacCulloch, *Principles of Polit. Econ.*, Edinburgh, 1825; J. S. Mill, *Principles of Polit. Econ.*, London, 1848 (ed. W. J. Ashley, London, 1910); J. B. Say, *Traité d'écon. polit.*, Paris, 1803. As representing the reaction of the Historical School, the following may be mentioned: Cliffe Leslie, *Essays in Political and Moral Philosophy*, Dublin, 1879; A. Toynbee, *The Industrial Revolution*, London, 1884; G. Schmoller, *Grundriss der allg. Volkswirtschaftslehre*, 2 vols., Leipzig, 1900–4.

The best works of the Austrian School are: E. von Böhm-Bawerk, *Capital and Interest* (tr. by W. Smart), London, 1890, and *Positive Theory of Capital* (tr. Smart), do. 1891; F. von Wieser, *Natural Value* (tr. C. A. Malloch), London, 1893. English writers who have emphasized the same doctrines are: W. S. Jevons, *Theory of Polit. Econ.*, London, 1871; W. Smart, *Introd. to the Theory of Value*, London, 1891; P. H. Wicksteed, *The Commonsense of Polit. Econ.*, London, 1910.

On the subject of logical method the best work is J. N. Keynes, *The Scope and Method of Polit. Econ.*, London, 1891.

On the history of economic theory the chief works are: E. Cannan, *Hist. of Theories of Production and Distribution*[2], London, 1903; J. Bonar, *Philosophy and Polit. Econ. in their Historical Relations*, London, 1893; L. Cossa, *Introd. to the Study of Polit. Econ.*, London, 1893; J. K. Ingram, *Hist. of Polit. Econ.*, London, 1907. The following are among the best recent treatises: A. Marshall, *Principles of Economics*, vol. i. (last ed. Lond. 1910); H. Sidgwick, *Principles of Polit. Econ.*, London, 1883; A. W. Flux, *Economic Principles*, London, 1904; J. S. Nicholson, *Principles of Polit. Econ.*, 3 vols., London, 1893–1901; M. Pantaleoni, *Pure Economics*, London, 1898; H. R. Seager, *Introd. to Economics*, New York, 1909; E. R. A. Seligman, *Principles of Economics*, New York, 1905; J. B. Clark, *Distribution of Wealth*, New York, 1899; A. Wagner, *Grundlegung der polit. Ökon.*, 3 vols., Leipzig, 1892–4; G. Cohn, *System der Nationalökonomie*, 3 vols., Stuttgart, 1885–98; P. Leroy-Beaulieu, *Traité théorique et pratique d'écon. politique*, 4 vols., Paris, 1896; V. Pareto, *Cours d'écon. polit.*, 2 vols., Lausanne, 1896–7.

The subjects of Free Trade and Protection are treated in most of the foregoing general works; the following deal specifically with the problem from various standpoints: C. F. Bastable, *Theory of International Trade*[3], London, 1900; W. Smart, *Return to Protection*, London, 1904; P. Ashley, *Modern Tariff History*, London, 1904; W. J. Ashley, *The Tariff Problem*, London, 1903; F. W. Taussig, *Tariff History of the United States*, New York, 1888; J. A. Hobson, *International Trade*, London, 1904.

On Poverty in its economic aspects, the *Reports of the English Poor Law Commission*, 1909, with their voluminous appendixes, are the amplest source of information. The special phases touched upon in this article are treated more fully in: W. H. Beveridge, *Unemployment*, London, 1909; R. A. Bray, *The Town Child*, London, 1907; E. Cadbury, *Women's Work and Wages* [in Birmingham], London, 1906; and the *Report on Home Work* (no. 246 of 1908), issued by a Committee of the House of Commons.

It is impossible to indicate here the vast literature on other parts of the field of Economics, such as Taxation, Monetary Problems, Trusts, Socialism, Trade Unions, Industrial History, etc. A good bibliography, entitled *What to Read on Social and Economic Subjects*, compiled by the Fabian Society and published by King, London, 1910, may be recommended for those desirous of guidance on particular topics. The two best Cyclopedias are: R. H. I. Palgrave's *Dict. of Polit. Econ.*, 3 vols., London, 1894–99, Appendix 1908; and Conrad's *Handwörterbuch der Staatswissenschaften*[2], 6 vols., Jena, 1898–1901.

Among the leading periodicals devoted exclusively to Economics, and in which much of the contemporary literature appears, may be mentioned *The Economic Journal*, London, quarterly from 1891; *The Quarterly Journal of Economics*, Boston, from 1886; *The Journal of Polit. Econ.*, Chicago, quarterly from 1892; *Journal des Économistes*, Paris, monthly since 1843; *Jahrbücher für Nationalökonomie*, Jena, monthly since 1863; *Revue Économique Internationale*, Brussels, monthly since 1904.

STANLEY H. TURNER.

ECSTASY.—**1. Definition and forms.**—'Ecstasy' (ἔκστασις) may be defined as an abnormal state of consciousness, in which the reaction of the mind to external stimuli is either inhibited or altered in character. In its more restricted sense, as used in mystical theology, it is almost equivalent to 'trance.' During ecstasy, the visionary is impervious to messages from without, and can even feel no pain. In the wider sense, all self-induced excitement may be called a kind of ecstasy.

Among human beings in every stage of culture there is a natural tendency to seek some means of exalting the consciousness above the ordinary level of daily experience. The satisfaction which is sought from this heightening of the consciousness may be of a sensuous, or of an intellectual, or of an æsthetic kind. It is generally, but not always, associated with religion, since the experience is most easily explained by supposing that the soul has been brought into communication with higher powers. The means used to induce this mental rapture are very various, and have all been discovered empirically. The *kava*-drinking of the Polynesians, the inhalation of tobacco-smoke by the North American Indians, the use of *hashish* (Indian hemp) by some two hundred millions of Asiatics and Africans, and the use or abuse of alcohol—the favourite medium of intoxication among the white races—and of opium by the Chinese, are all expedients for artificially altering the state of consciousness in such a way as to produce pleasurable sensations; and most of them are used to induce quasi-religious ecstasy. Very different methods of liberating the mind from the trammels of ordinary sensation are protracted fasts, flagellation, orgiastic dancing, whirling, or jumping, and self-hypnotization by the mechanical repetition of words, such as 'Om' by the Buddhists, 'Ḥasan Ḥusain' by Muhammadan Shī'ites, and the Paternoster or Ave Maria by Roman Catholics, or by gazing steadily at some bright object (see CRYSTAL-GAZING), or at some part of one's own body (the tip of the nose, by some Indian contemplatives; the navel, by the monks of Mount Athos). It is difficult to describe the generic type of ecstasy, especially in what may be called its lower forms, since its manifestations are determined partly by the nature of the means employed and partly by the mental state and character of the experimenter. The phenomena of drunkenness differ from those of opium intoxication; the dancing dervish works himself into a different state from the howling dervish; the dreams of the Persian mystic, inspired partly by wine and strongly tinged with sensuality, are very unlike the raptures and torments of the Roman Catholic *ecstatica*; and these again differ widely from the vision of the all-embracing and all-transcending unity which gave to the neo-Platonic philosopher the assurance that his quest of the Absolute had not been in vain. The *yogi* in ecstasy feels the blissful void of Nirvāṇa; the celibate ascetic experiences the indescribable mysteries of *les noces spirituelles*; Swedenborg saw heaven and hell opened to his view; the Roman Catholic fanatic sees heretics torn with hot pincers; the Platonist sees the forms of earthly beauty transfigured into their eternal and more lovely archetypes. In every case the dominant interest and aspirations of the inner life are heightened and intensified, and in every case the enhanced force of auto-suggestion seems to project itself outside the personality, and to acquire the mysterious strength and authority of an inspiration from without.

2. History.—The historical manifestations of ecstasy fill so large a place in the records of religious experience that only a few typical examples can be given. The ancient Greeks were no strangers to what Plato calls θεία μανία; but orgiastic religion was scarcely indigenous in Hellas, and was especially associated in the minds of the Greeks with the barbarous land of Thrace. The *Bacchæ* of Euripides is a magnificent study of the sinister aspects of religious ecstasy. Under the Roman Empire, Oriental cults of an ecstatic type were widely diffused; but by this time the population even of the European provinces was largely of Asiatic or African origin. Descriptions of

religious frenzy are to be found in Lucretius, Catullus (the *Attis*), and Apuleius. The mystery-cults of the Empire were designed to induce both higher and lower forms of ecstatic feeling. Meanwhile a sober and deeply religious use of the mystical state was encouraged by the later Platonism. Ecstasy was for Plotinus the culminating point of religious experience, whereby the union with God and perfect knowledge of Divine truth, which are the conclusion and achievement of the dialectical process and the ultimate goal of the moral will, are realized also in direct, though ineffable, experience. Plotinus enjoyed this supreme initiation four times during the period when Porphyry was with him; Porphyry himself only once, he tells us, when he was in his 68th year. It was a vision of the Absolute, 'the One,' which, being above even intuitive thought, can only be apprehended passively by a sort of Divine illapse into the expectant soul. It is not properly a vision, for the seer no longer distinguishes himself from that which he sees; indeed, it is impossible to speak of them as two, for the spirit, during the ecstasy, has been completely one with the One. This 'flight of the alone to the Alone' is a rare and transient privilege, even for the greatest saint. He who enjoys it 'can only say that he has all his desire, and that he would not exchange his bliss for all the heaven of heavens' (*Enn.* vi. 7. 34, vi. 9 *passim*). From neo-Platonism this philosophic rapture passed into Christianity, though we seldom again find it in such a pure and elevated form. We trace the succession of metaphysical mystics from pseudo-Dionysius to Erigena, Eckhart, Boehme, and Swedenborg. Some modern poets have described an experience similar to that of Plotinus. Wordsworth, for instance, speaks of being led on

'Until, the breath of this corporeal frame
And even the motion of our human blood
Almost suspended, we are laid asleep
In body, and become a living soul:
While with an eye made quiet by the power
Of harmony, and the deep power of joy,
We see into the life of things'
(*Lines composed above Tintern Abbey*).

Tennyson records:

'A kind of waking trance I have frequently had, quite up from boyhood, when I have been all alone. This has generally come upon me thro' repeating my own name two or three times to myself silently, till all at once, as it were out of the intensity of the consciousness of individuality, the individuality itself seemed to dissolve and fade away into boundless being, and this not a confused state, but the clearest of the clearest, the surest of the surest, the weirdest of the weirdest, utterly beyond words, where death was an almost laughable impossibility, the loss of personality (if so it were) seeming no extinction, but the only true life' (H. Tennyson, *Tennyson: A Memoir*, 1897, i. 320).

This experience is utilized by the poet in his 'Ancient Sage.' In his case, though not in Wordsworth's, acknowledged methods of self-hypnotism are recorded as inducing the trance. Boehme, too, prepared for his visions by gazing intently at some bright object. The mystics of the cloister often spent hours before a crucifix (so St. Francis of Assisi and Julian of Norwich) or an image of the Virgin, till they were half-hypnotized. When these artificial methods are resorted to, ecstasy is a much more frequent phenomenon than Plotinus would lead us to expect. So far from being the crown and goal of the contemplative journey, an experience hardly to be looked for in this life, it came to be regarded, by the directors of Roman Catholic piety, as an act of grace accorded by God as an encouragement to beginners. Aspirants after holiness are bidden not to be disquieted by the cessation of such favours, since this is the normal course of education in the inward life. It should be added that the best directors deprecate any great importance being attached to ecstasy as a sign of progress in holiness, and discountenance recourse to mechanical methods of inducing it.

There are two periods in the history of Christianity in which the mystical experience was unusually frequent and intense. These are the 14th and 17th centuries. In both cases the great ecstatics came soon after a great spiritual and intellectual awakening—in the earlier period the culmination of the scholastic theology and the revival of mental activity which accompanied it, and in the later the Renaissance and the Reformation. Unless at exceptional epochs like these, ecstasy seems to be more common in the lower levels of culture. We find it at present very common in Russia; while in Western Europe and America it appears from time to time as a phenomenon of 'revivals,' which spread chiefly among the semi-illiterate peasantry. Individual ecstatics are often men and women of high cultivation, though with unusual and partly abnormal psychical endowments. But, as a social phenomenon, ecstasy breaks out like an epidemic among normal people, chiefly belonging to the lower classes. The study of psychical epidemics is still in its infancy, and is a subject of great interest and importance. From this point of view, the individual is rather the patient than the creator of psychical storms, which sweep over whole populations. Ecstasy is communicated by direct contagion, just as panic invades whole crowds. Salient examples are the waves of religious excitement which produced the Crusades, in which millions of ignorant folk met with their death; the outbreaks of the dancing mania (St. Vitus' Dance), which in Central Europe followed the devastating pestilence called the Black Death; the *tarantula* epidemics in Italy in the 14th and 15th centuries, which were attributed to the bite of a spider, but were certainly due to psychical contagion; the 'convulsionists' in France at the beginning of the 18th century; the 'Jumpers' among the English Methodists; and the trances which were not uncommon during the recent Welsh revival.

In extreme cases, ecstasy produces complete insensibility. 'Schwester Katrei,' who is spoken of as a pupil of Eckhart, is said to have been carried out for burial when in a cataleptic trance. Anæsthesia of the skin is very common; the ecstatic feels nothing when pins are driven into his flesh. A poor girl in Germany persuaded her friends to crucify her, and expressed only pleasure when the nails were driven through her hands. Here there was no loss of consciousness, but only extreme spiritual exaltation, inhibiting the sensation of pain. It is almost certain that many of the martyrs endured their terrible tortures with but little suffering; and even so base a criminal as the assassin of William the Silent bore his cruel punishment with the same unnatural fortitude. In the account of the martyrdom of St. Perpetua we read that a catechumen named Rusticus, who suffered with her, asked when they were going to be gored by the wild cow of which they had heard, and could hardly be convinced, by the sight of his own wounds, that he had just undergone this ordeal.

The duration of ecstasy is extremely various. Half an hour is frequently mentioned by the Roman Catholic mystics; but St. Teresa on several occasions 'remained for the space of above six hours as if dead'; and of one of the 'Friends of God,' Ellina von Crevelsheim, we read that, after remaining dumb for seven years, absorbed in the thought of the Divine love, she fell into an ecstasy which lasted five days, during which she had a revelation of 'pure truth,' and was exalted to an immediate experience of the Absolute. She 'saw

the interior of the Father's heart,' was 'bound with chains of love, enveloped in light, and filled with peace and joy' (Underhill, *Mysticism*, p. 441).

Although there is a natural tendency to ascribe these abnormal states to Divine influence, the experts in this strange science were constrained to admit the frequency of 'diabolical counterfeits,' and to caution the aspirant against the wiles of our ghostly enemy. It was observed that unwholesome ecstasy was generally the result of too impatient craving for supernatural favours, though it might assail even the truest saint, especially after too rigorous self-discipline. It was also a matter of common observation that self-induced trances were frequently followed by intense mental depression, and by that sense of abandonment by God which was called 'the dark night of the soul.' These reactions were, indeed, expected by all mystics, and were explained as the last death-pangs of the lower nature, before the final illumination. They were frequently merely the result of nervous exhaustion, caused by too intense concentration of the mind, ecstasy being (from the psychological point of view) an extreme variety of mono-ideism.

In conclusion, we must ask a question which to the religious mind is of the greatest importance. What is the value of ecstasy as a revelation of objective truth? Has it any of the transcendent value which has so long been claimed for it? Two opinions may be hazarded. First, the notion that the *emptiness* of the trance is a sign that the subject is in contact with absolute truth may probably be dismissed as an error, though it has the sanction of many great mystics. The doctrine implied may be stated in the words of Aquinas:

'The higher our mind is raised to the contemplation of spiritual things, the more it is abstracted from sensible things. But the final term at which contemplation can possibly arrive is the Divine substance. Therefore the mind that sees the Divine substance must be wholly divorced from the bodily senses, either by death or by some rapture' (*Summa contra Gentiles*, iii. 47).

The argument is that, since we can see only what we are, we cannot apprehend the Absolute without first being divested of all that belongs to particular individual existence. We must sink into the abyss of nothingness in order to behold that which is deeper than all determinations. The warning of Plotinus, 'to seek to rise above intelligence is to fall outside it,' is very pertinent here. And, secondly, the apparent *externality* of a revelation is no guarantee of its truth. The subliminal consciousness has no peculiar sacredness; it may be evil as well as good, and probably, as a rule, echoes racial memories of mixed value. Malaval, the author of *La Pratique de la vraye théologie mystique* (Paris, 1709, i. 89, quoted by Underhill, *op. cit.* p. 431), distinguishes true from false ecstasy as follows:

'The great doctors of the mystical life teach that there are two sorts of rapture which must be carefully distinguished. The first is produced in persons but little advanced in the way, who are still full of selfhood; either by the force of a heated imagination which vividly apprehends a sensible object, or by the artifice of the devil. . . . The other sort of rapture is, on the contrary, the effect of pure intellectual vision in those who have a great and generous love for God. To generous souls who have utterly renounced themselves God never fails in these raptures to communicate high things.'

A very typical statement of the mystical doctrine of ecstasy is the following from Ruysbroek, a writer who lived in the richest flowering-time of mysticism, the 14th cent., and who is perhaps the most characteristic of all the Roman Catholic mystics:

'When love has carried us above all things, above the light into the Divine darkness, we are transformed by the eternal Word who is the image of the Father; and, as the air is penetrated by the sun, we receive in peace the light incomprehensible, embracing and penetrating us. What is this light, if it be not a contemplation of the infinite and an intuition of eternity? We behold that which we are, and we are that which we behold, because our being, without losing anything of its own personality, is united with the Divine truth which includes all diversity' (*de Contemplatione*).

It is unnecessary to be sceptical about such testimony. Ecstasy can never be reproduced in description, because it could be described only by one who was at the same time inside and outside the mystical state; and this is impossible. But the fact of intuition into Divine truth, during states of spiritual exaltation, seems to the present writer incontrovertible, and the admission can cause no difficulty to a theist. We can, however, maintain that the saner forms of ecstasy, which are not propagated by contagion, and which contain a strong moral and intellectual as well as emotional element, are at once the rarest and the most trustworthy. The νοῦς ἐρῶν (Plotinus) sees healthier visions than the excited and half-morbid imagination of the cloistered devotee. Cf. also artt. ENTHUSIASTS (Religious), MYSTICISM, ṢŪFIISM.

EDDAS.—**1. The name.**—The meaning of 'Edda' is the subject of much dispute. According to the older view, the name is identical with *edda*, 'great-grandmother,' and was bestowed on account of the supposed high antiquity of the Eddic songs. But, this being considered somewhat far-fetched, modern scholars have proposed other explanations. Konrád Gíslason tried to show that the name is derived from *óðr*, 'song,' 'poem,' so that the proper meaning of 'Edda' would be 'Manual of Poetics,' assuming, as we shall see, very justly, that the name really was the title of the work of Snorri Sturluson. Eiríkr Magnússon has sought to connect the word with *Oddi*, the old seat of learning in Iceland, and the place where Snorri himself was educated. Both these explanations are, indeed, exposed to philological objections, but the former is the better and more natural. Originally Edda was only the title of the didactic work of Snorri, in one of the chief manuscripts of which we read: 'This book is called Edda; it was composed by Snorri Sturluson, and in this arrangement' (Cod. Upsaliensis). This manuscript was discovered by the famous bishop of Skálholt, Brynjólfr Sveinsson († 1675), who was also the possessor of the chief manuscript of the Eddic poems. The discovery of these manuscripts led to the theory, based upon the intimate relation of their contents, that the two books were closely connected, and the manuscript of poems was also called 'Edda,' without any sufficient reason. The manuscripts came to be spoken of as 'the Elder' and 'the Younger' Edda, the former of those appellations being given to the manuscript containing the ancient poems; this manuscript was also called *Sæmundar Edda*, as the songs were erroneously supposed to have been collected by the famous priest Sæmundr fróði († 1133). This last name has come into general use, but in our own times the poems are mostly called 'the Eddic poems'; and, as these are the chief source of Snorri's work, the appellation is not altogether incorrect.

2. The Edda of Snorri Sturluson.—This work was composed by the famous Icelandic historian and chieftain Snorri Sturluson (1178–1241), one of the most cultured and highly gifted men of his time. Besides his chief historical work, the *Heimskringla*, he left another, the *Edda*, a manual for young beginners in the art of poetry. In the poetry of all the old Teutonic peoples there had been developed a special poetic language, consist-

ing of simple or composite words, which either had become obsolete in prose or never had belonged to the spoken language (cf. in A.S. such words as *béaggyfa*, 'a munificent prince,' *hringedstefna*, 'a ship,' etc.). In Norway and Iceland this peculiar poetic language, especially in the matter of the intricacies of the metrical art, attained its highest development, and was elaborated systematically at an early period. The composite appellations called *kenningar* were derived from many different sources, partly from everyday life, and partly from Nature; and a great many of them were founded on the old mythology and its legends. Thus gold was called 'Sif's hair' because the goddess Sif, according to a myth, had her hair made of gold. Another appellation of gold was 'the bed of Fáfnir' (the serpent), on account of the legend of the serpent Fáfnir and his bed of gold. In order to form and use these *kenningar*, a certain amount of knowledge was indispensable; we also meet with certain cases indicating that the younger scalds learned from their older colleagues the mysteries of their art. Snorri, himself a poet, felt called on to write a manual of the art of poetry, his *Edda*. That work consists of three parts.[1] The middle part is called *Skáldskaparmál* ('the Language of Poetry'), and gives general rules for poetic denominations of living beings and dead things. First there are the composite denominations of Odin and poetry, gods and goddesses; and the appellations of heaven, earth, sea, sun, wind, fire, winter, summer, man, gold, battle, weapons, ships, God (of the Christians), kings. Then follows a list of the simple and uncomposite names in a similar order, all accompanied by scaldic verses, serving as examples. Lastly, there is a third list of appellations (synonyms from everyday language). Two manuscripts add some lists of names (in verse), but they are interpolations and did not originally belong to Snorri's work. The author sometimes inserts longer stories to explain the origin of some of these names; but, as already mentioned, the old myths were the basis of the whole, and so Snorri found it convenient to write as an introduction to the work a complete survey of the old mythology, based on the best sources—the ancient poems relating to the gods (the 'Eddic poems'), and various living traditions. In those times this was a bold thing to do, but he succeeded in giving such a view of the whole subject that his work could hardly have been done better, considering the circumstances. He proceeds systematically, beginning with the cosmogony, and its accessaries; then follows a description of the oldest times of the gods, the golden age, and the Ash of Yggdrasil (the world-tree). This is followed by an account of the gods and goddesses, their place of abode, Valhalla, and everything connected with it; he then relates more fully two myths of Thor's exploits, and proceeds with the story of the death of Balder, the imprisonment of Loki, the wonderful things foreboding the approach of Ragnarök; and, finally, he gives a wonderful description of that last fight of the gods and the regeneration of the world. All these things are presented in a dialogue between a Swedish king, Gylfi, and the trinity of Odin. The name *Gylfaginning* ('the Delusion of Gylfi') alludes to this, as Gylfi does not know with whom he is speaking.

Snorri's sources were principally the three important Eddic poems, *Völuspá*, *Vafþrúðnismál*, and *Grímnismál*, and a few of the other poems; he chiefly used the *Völuspá*, from which he probably got the idea of the arrangement of the whole. He often quotes verses from these poems, but not so frequently as he might have done. Snorri treats the myths critically, sometimes in a somewhat arbitrary fashion, and he has not escaped the influence of Christian ideas, especially at the beginning. His greatest fault is that the punishments, which in the *Völuspá* come before Ragnarök, are placed by him after that event—a total misconception. Another source was the oral tradition, so strong and vigorous in Iceland. The style is magnificent, everywhere adapted to the varying contents—earnest and solemn, or playful and jocose, always full of life. The author reveals himself as the great master of Icelandic prose.

Between the first and the second part—as an introduction to the latter—there is a very interesting chapter on the origin of the 'drink of the poets,' and how Odin became the owner of it. Thus Odin, alone of all gods and men, was the owner and giver of the poetic faculty, and *he* was said to give 'the drink of the poets' to his favourites.

The third chief part of the Edda is Snorri's own poem, the *Háttatal*, consisting of 102 strophes in praise of Hákon the Old, king of Norway († 1263), and Earl Skúli. The peculiarity of this poem is that it is written in various kinds of metre, arranged systematically; Snorri has, however, missed the true historical development of Icelandic metrics; he begins with the 'most perfect' kind of metre (*dróttkvæðr háttr*), which in reality is the youngest, and places at the end the oldest kinds of metre, those used in the Eddic poems, and some other metres closely related to them. Of course, Snorri everywhere uses the scaldic phraseology. The reason why he placed his own poem at the end of his work was that he desired to show how his theories looked when carried out in practice. The poem exhibits the technical finish of Snorri, and his complete mastery of the language and the difficult metres.

This poem gives us a hint regarding the time of the composition of the work, but only a *terminus ad quem*. It cannot have been composed earlier than the winter of 1222–23, and certainly not very much later. Snorri had lived between 1218 and 1220 at the courts of the princes he praised. The poem is a thanksgiving for the honours bestowed on him. It is most probable that the two earlier parts of the work were written, partly at least, before 1218, although the whole may have been written in the years 1221–23.

The *Edda* of Snorri is one of the principal works of Icelandic literature, admirable both in form and in contents, and quite unique in the latter regard. Of course, it does not give us a perfectly accurate picture of the old heathendom which had then been practically extinct for 200 years; but, on the other hand, it is certain that it always must remain one of our principal sources of information regarding that faith, as the old traditions were preserved in Iceland with a singular tenacity and faithfulness, owing to the remoteness of that country and its very limited intercourse with the outside world.

In one MS (A. M. 242) there are added four grammatical treatises, of which the second is found also in the Upsala MS, and the third also in two fragments. Their contents are linguistic, rhetorical, and didactic, but they have nothing to do with Snorri or his *Edda*. The first of these treatises is on the phonetical system of the Icelandic language in the 12th cent., and is of extreme value. The third treatise is written by Snorri's nephew, Ólafr Þórðarson.

LITERATURE.—(1) *EDITIONS*: The great Arnamagnæan ed., 3 vols., Copenhagen, 1848–87, with Latin tr.; special ed. of Cod. Upsaliensis and other fragments (in vol. ii.), and an ed. of the so-called *Skáldatal* with the biographies of the poets and a survey of their poems; critical ed. of the text by Finnur

[1] The form varies in the chief MSS—Codex Regius 2367, 4° in the Old Royal Collection in the Royal Library, Copenhagen; Codex Arnamagnæanus 242, fol., in the University Library, Copenhagen; and Codex Upsaliensis, Delagardie 11, in the University Library, Upsala—and partly in some other MSS.

Jónsson, Copenhagen, 1900, and Reykjavik, 1907.—(2) *TRANSLATIONS*: Danish: *Gylfaginning*, by F. Jónsson, Copenhagen, 1902; German, by H. Gering, Leipzig and Vienna, 1892; English, by G. W. Dasent, Stockholm, 1842.—(3) *CRITICAL TREATISES*: E. Mogk, 'Untersuchungen über die Gylfaginning, I.–ii.,' in Paul-Braune, *Beiträge*, vi.–vii. [Halle, 1879–80]; see also K. Müllenhoff, *Deutsche Altertumskunde*, v. [Berlin, 1883]; E. Wilken, *Untersuchungen zur Snorra Edda*, Paderborn, 1878; F. Gislason, in *Aarböger*, 1884; Eiríkr Magnússon, 'Edda,' in *Sagabook of the Viking Club*, London, 1896.

3. **The Eddic poems** (the 'Elder Edda,' 'Sæmundar Edda').—These famons poems are for the most part found in a single MS, 2365, 4°, in the Old Royal Collection in the Royal Library in Copenhagen (Codex Regius). The MS consists of 45 leaves, but a whole sheet (8 leaves) is wanting, thereby causing a deplorable lacuna. The MS dates from about 1270, and it was discovered shortly before the middle of the 17th century. It is a very fine one; a phototype edition, with the text printed on opposite pages, was published by L. Wimmer and F. Jónsson in 1891. The first known owner of the MS, Bishop Brynjólfr Sveinsson, presented it to the king of Denmark. We have now only six leaves of another MS, A. M. 748, 4° (Univ. Libr. Copenh.), containing some of the same poems as Codex Regius, with one addition, but partly defective.

The contents of Cod. Regius may be divided into two groups: (1) mythical and (2) heroic poems, arranged in a certain, but imperfect, chronological order, which could more easily be applied to the last group of the legendary poems, as the persons described there are all genealogically connected. In the mythical group this was generally impossible, except in one case. Here the interest of the poems centres in the two principal gods, Odin and Thor. One heroic poem, the *Völundarkviða*, has been incorrectly inserted in this group. In each group there may be observed a tendency to subdivisions, beginning with certain important poems of a more general character. The collector has in many places, especially in the last group of poems, given explanatory and connecting prose pieces. The MS is a copy, not the original collection, which must have been compiled in the end of the 12th century. The MS A. M. 748 is another copy of the original collection, with some additions. A third collection (or copy) was in the possession of Snorri.

The collection begins with the *Völuspá*, a grand poem, a kind of world drama having for its subject the mythical life of gods and men from the beginning of the world to Ragnarök; the death of Balder is the central event. The dominating thought of the author is that all evil deeds breed fighting and death. The poem is written throughout in a tone of stern morality. It was composed abont the middle of the 10th century. The next in order is the *Hávamál* ('The Song of the High One'), a collection of several fragments of poems, all of a more or less ethical and moral character. The first poem is the principal one; in it Odin gives counsels to the human race, as to what is best for man, and how to behave in the different conditions of life, ending with pointing out that after death a good name is the best. Another poem contains the magical songs of Odin; and a third has counsels to a young man, of a similar character to the first. Then follow some poems, which are pre-eminently Odin lays: *Vafþrúðnismál* ('Lay of Vafthrúdhnir'), describing a trial of intellectual strength between Odin and a giant; the giant is defeated, and loses his life; in *Grímnismál* ('Lay of Grímnir'), Odin reveals his terrible character to a blind and hard-hearted mortal king, his own foster son; in *Hárbarðsljóð* ('Lay of Hárbardh'), Thor quarrels with the disguised Odin, whom he does not know—a struggle between wisdom and mere strength, where wisdom prevails. Thor is the special hero of *Þrymskviða* ('Song of Thrym'), which tells of how he lost his hammer and recovered it. *Hymiskviða* ('Song of Hymir') tells how Thor got a brewing cauldron large enough for the gods, and records other instances of his trials of strength; *Alvismál* ('Lay of All-wise') is the story of a word-duel between Thor and a dwarf. The beautiful poem *Skírnismál* ('Song of Skírnir') describes Freyr's vehement love for the giant maiden Gerðr; while in the *Lokasenna* ('Scolding of Loki'), Loki, the enemy of the gods, scolds all the gods and goddesses, but is obliged to fly before Thor and his hammer. In *Baldrs draumar* ('Dreams of Balder' [found only in A. M. 748]), the dreams of Balder are related, and the ride of Odin to the under world to consult a dead sibyl.

To these lays of the gods there are generally added some poems found in other MSS: *Hyndluljóð* ('Song of Hyndla') (from the Flatey Codex), relating how Freyja procures information from a giantess regarding the family of her favourite, Óttar. Here is found inserted a fragment of a mythical poem, *Völuspá in skamma* ('The Short *Völuspá*'). *Rigsþula* ('Song of Rigr' [found in A. M. 242]) is a philosophical poem on the origin of the different social orders of men, and the supposed development of social life. The poem, which ends by mentioning kingship, was possibly composed in honour of Harald Fairhair. *Grógaldr* ('Magical Song of Gróa') and *Fjölsvinnsmál* ('Song of Fjölsvinnr') go together and treat of a young man, Svipdagr (probably a mythical person), who gets good advice from his dead mother Gróa, and then starts on a dangerous journey in pursuit of his ladylove Menglöð.

To the second group of Eddic poems, the heroic lays, belongs first of all the important poem, mentioned above, *Völundarkviða* ('Lay of Wayland'), describing the smith Völund, his imprisonment by king Níðuð, and his revenge on the king and his family. Then there follows a group of *Helgakviður* ('Helgi Lays'), two poems about Helgi Hundingsbani, and one treating of Helgi Hjörvarðsson, two different heroes, chiefly describing their revenging their fathers, their martial deeds, and specially their love affairs with the Valkyries (Sváfa, Sigrún). Next comes the long cycle of poems about the Völsung family, especially Sigurðr Fáfnisbani—a kind of verified historical narrative; *Grípisspá* ('Prophecy of Grípir'), a comparatively young poem, giving a view of Sigurd's life in the form of a prophecy; *Reginsmál* ('Lay of Regin'), fragments of two poems—on the first great deed of Sigurd; *Fáfnismál* ('Lay of Fáfnir'), on the slaying of the serpent Fáfnir; *Sigrdrífumál* ('Lay of Sigrdrífa'), on Sigurd's meeting with the Valkyrie Sigrdríf, and the good counsels which she gives him. Here comes the lacuna mentioned above; there must be at least two long poems wanting (cf. the *Völsungasaga*). The text begins again with a poem relating the murder of Sigurd; he had been married to Guðrún, daughter of king Gjúki, and had been brought (by magical means) to forget the Valkyrie Sigrdríf (Brynhildr), a sister of Atli Buðlason (Attila), who had been treacherously married to Gunnar Gjúkason. In a following poem the characters of these two ladies, the principal female actors of the story, are contrasted psychologically. *Sigurðarkviða in skamma* ('Short Lay of Sigurd') relates briefly the death of Sigurd; then follows a long monologue by Brynhild, who kills herself; and in *Helreið* ('Brynhild's Ride to Hel') she goes to Hel and defends her deeds against the censure of a giantess. In the *second and third Guðrúnarkviða* ('Songs of Guðrún') Guðrún surveys her own tragical fate; she is now married to king Atli; and the poem closes with dark dreams of their future relations; in the last poem Guðrún, by a kind of ordeal, proves her conjugal fidelity to Atli. There follows a poem with an entirely new heroine, *Oddrúnargrátr* ('Lament of Oddrún'). Oddrún, Atli's sister, has loved Gunnar, but a union between them has never been brought about;

she gives a survey of her tragical story. The next two parallel poems, *Atlakviða* and *Atlamál* ('Songs of Atli' [the latter called the Greenlandic, because composed in the Icelandic colony in Greenland]), describe, each in a slightly different way from the other, the relations between Atli and Guðrún and her brothers: the brothers are killed at Atli's command, and Guðrún in revenge causes his death. Now, one would think the tragedy would be at an end, but the last act remains. Guðrún contracts a third marriage with Jónakr, and bears to him three sons, Sörli, Hamðir, and Erpr. Her daughter by Sigurd, Svanhildr, has been given in marriage to King Jörmunrekr, who has accused her of infidelity, and at his command she is trampled to death by horses; she is revenged by her brothers, who also are killed. Such are the contents of the two last poems in Cod. Reg., *Guðrúnarhvöt* ('The Urgings of Guðrún') and *Hamðismál* ('Lay of Hamðir'). *Gróttasöngr* ('Song of the Grótti') must also be reckoned with the heroic lays; it is found in a MS of Snorri's *Edda*, and treats of the giant maidens grinding gold, peace, and, at last, death to Fróði, king of Denmark.

The legends of the heroic poems were originally, for the most part, German importations into Scandinavia, where they have been transformed and imbued with the true Northern spirit, and combined with each other without regard to original times or places. They are of primary importance for German and Teutonic legendary history. The persons are idealized; they are typical heroes and heroines, a quintessence of the people of the Viking age. Some of the minor characters are, however, drawn from common life. The descriptions of persons and events are exceedingly clear and racy and strictly logical, and the language is correspondingly so. The sentences are short and pithy, everything superfluous is banished; still, the poems differ in this, that some are more wordy than others; difference in age may be inferred from this.

The *age* of the poems is, on the whole, the period from A.D. 900 to 1050. This may now be regarded as beyond all doubt. But within the limits of this period there may be discerned older and younger groups of poems, when we consider the more or less elaborate descriptions, stories, the persons mentioned, etc. Thus *Þrymskviða*, *Völundarkviða*, and *Rigsþula* are among the oldest; *Sigurðarkviða in skamma*, *Atlamál*, and *Oddrúnargrátr* among the youngest. Only a few are very young, from the 12th cent. (*Grípisspá*, *Völuspá in skamma*), and belong to a late renaissance of Icelandic poetry.

The *home* of the poems has been the subject of much dispute. Some maintain that they are all Icelandic, others think they are all Norwegian, or composed in the Norwegian colonies in the British Islands. One poem can definitely be proved to be Greenlandic (*Atlamál*). The truth is that everything of value for deciding the question of the home of the poems points decidedly to Norway, Norwegian life, Norwegian culture, and Norwegian nature. The poems must, therefore, be Norwegian for the most part. We have no certain way of deciding what is Norwegian and what possibly may be Icelandic. It is not right to consider poems as Icelandic merely because they lack outward signs pointing to a Norwegian origin; all these poems are on the same level; there is, on the whole, the same way of considering life, and the same manner of thinking; one might say they are all of the same school in spite of their different age.

The metres of the poems are chiefly the three oldest: *fornyrðislag*, verses of four syllables, in the epic poems; *ljóðaháttr*, strophes of six verses of different length, in the moral and didactic poems; *málaháttr*, verses of five syllables, in epic poems. One poem, *Hárbarðsljóð*, is very irregular in its metre. All the poems are strophical, each strophe as a rule consisting of eight verses—six in *ljóðaháttr*; when strophes of more or less than eight verses are found, this is probably due to corruptions of the text. The tradition was only oral for perhaps more than 200 years, and, of course, as might be expected, rather bad. Strophes or verses are often lacking, or words are so corrupted that it is very difficult, sometimes impossible, to emend them critically, metrically, or linguistically. Some verses are in the tradition given in duplicate form, and the collectors have written down both without choosing between them.

The poems are all anonymous, probably because the authors considered themselves only as re-narrators of known subjects. It may, however, be considered as certain that they gave the poems certain individual colours, and moulded the characters with their psychological peculiarities. How far they invented new persons or events has not been decided conclusively. On the other hand, it is certain that they were very independent in their combinations of the old legends.

LITERATURE.—(1) *EDITIONS*: S. Bugge, *Norræn fornkvæði*, Christiania, 1867 (of fundamental value); phototype ed. of the Cod. Reg., with the abbreviation in italics, by L. Wimmer and F. Jónsson (Copenhagen, 1891), of A. M. 748 by F. Jónsson (Copenhagen, 1896); ed. of the text by K. Hildebrand (Paderborn, 1873 and 1904), with a dictionary by H. Gering (3rd ed., Halle, 1907); editions with commentary by H. Lüning (Stuttgart, 1859), R. Heinzel and F. Detter (Leipzig, 1903), and, above all, B. Sijmons (Halle, 1888–1906, vol. i., text with variants; vol. iii., a complete dictionary by Gering; vol. ii., commentaries, has not yet been edited; vol. i. contains a long and excellently written introduction, treating critically the MSS, the age and home of the poems, etc.). (2) *TRANSLATIONS*: Danish, by O. Hansen (Copenhagen, 1911); Dano-Norwegian, by G. Gjessing (Christiania, 1899); Swedish, by P. A. Gödecke (Stockholm, 1881); German, by H. Gering (Leipzig, 1892); English, by B. Thorpe (London, 1865); an ed. with an Eng. tr. is also found in G. Vigfusson's *Corpus poeticum boreale*, Oxford, 1883 (tr. in prose, bad text). Besides the dictionary by Gering, already mentioned, Sveinbjörn Egilsson's *Lexicon antiquæ linguæ septentrionalis* (Copenhagen, 1860) deserves to be noted. (3) Of other works useful to the student may be mentioned: E. Jessen, 'Über die Eddalieder, Heimat, Alter, Character,' in *Ztschr. f. deutsche Philologie*, iii. (Halle, 1871, of fundamental value); K. Müllenhoff, *Deutsche Altertumskunde*, v. (with an analysis of several of the mythical poems and a critical survey of the heroic lays); F. Jónsson, *Den norske og islandske litteraturs historie*, i. (Copenhagen, 1897), and polemics between him and B. M. Olsen, in *Tímarit hins íslenzka Bókmentafjelags*, xv.–xvi. (Reykjavík, 1894–95); E. Mogk, 'Norwegisch-isländische Litteratur,' in Paul's *Grundriss*, ii.[2] (1902); E. H. Meyer, *German. Mythol.* (Berlin, 1891), pp. 36–45, 51–53; Chantepie de la Saussaye, *Religion of the Teutons* (Boston, 1902), p. 194 ff.; A. Hensler, *Die Lieder der Lücke in Cod. reg.* (Strassburg, 1902), also 'Heimat und Alter der eddischen Gedichte' (*Archiv f. neuer. Sprachen*, xvi. [Brunswick, 1905]); S. Bugge, *Home of the Eddic Poems* (London, 1899): G. Neckel, *Beiträge zur Eddaforschung* (Dortmund, 1908). On syntax: Wisén, *Ordfogningen i den äldre Eddan* (Lund, 1865); M. Nygaard, *Eddasprogets syntax*, i.–ii. (Bergen, 1865–67). On metrics: E. Sievers, 'Beiträge zur Skaldenmetrik,' ii. (in *Beiträge*, vi. [Halle, 1879]), and *Altgermanische Metrik* (Halle, 1893). Regarding the great number of treatises on special subjects the reader may be referred to Sijmons' edition.

F. JÓNSSON.

EDOMITES.—1. **Introductory.**—'Edom' is the name of a people frequently mentioned in the OT, and generally located to the south of the Dead Sea. They are regarded as a 'brother' of Israel, and this relationship is vividly expressed in the popular stories in Gn 25, 27, 32 f., which represent Esau—*i.e.* Edom—as the elder twin-brother of Jacob, who is otherwise known as 'Israel.' Apart from the direct and indirect evidence for Edomite culture and religion, there is good reason to believe that the Edomites and allied peoples of the area lying outside Israelite territory, and especially in N.W. Arabia, played a somewhat prominent part in Israelite religion and history. This has often been emphasized since the earlier observations of Wellhausen, Kuenen, Stade, and Robertson Smith; and in recent years has come more to the front in Biblical research. In discussions of the origin of

the Israelite Jahweh, the tribes of Israel, the rise of the kingdom of Judah, the locale of the patriarchal stories, the extension of the term 'Egypt' (Heb. *Miṣrayim*, Assyr. *Muṣri*) outside the limits of Egypt—in these and other questions the Edomite area, its population and history, and its relations with Israel invariably enter into the field of inquiry; and it is therefore necessary to premise that a treatment of the *religion* of the Edomites unavoidably raises certain problems of the OT which cannot be discussed in these pages.

The Edomites are otherwise known as 'Esau,' or 'sons of Esau,' after their reputed 'father'; and as 'sons of Seir,' after the district of Mt. Seir. Their land may be described as the district between the Dead Sea and the Gulf of 'Aḳabah, bordered by Moab, Judah, S. Palestine, the Sinaitic peninsula, N. Arabia, and the Syrian desert; the more precise boundaries varied from time to time according to the larger political circumstances affecting the surrounding States or confederations. Thus, for purely geographical reasons, it was entirely exposed to the political, social, and religious movements in Western Asia; and its vicissitudes cannot be understood apart from the history and thought of the old Oriental world. An important fact is the very close relationship which, as the Horite and Edomite genealogies in Gn 36 represent, was felt to subsist between the Edomites and their neighbours; Edom, Midian, and Ishmael are intimately connected, and names of Edomite origin or affinity can even be traced in the Israelite tribes of Judah, Dan, and Benjamin. It has long been recognized that the tribe of Judah as constituted in 1 Ch 2 and 4 was 'half Arab,' and of its two main divisions—Caleb and Jerahmeel—the former is explicitly connected with the Edomite Kenaz (Gn 36^{11}, Jg 1^{13}, 1 Ch 4^{13}), while Edomite or 'Horite' elements are somewhat strong in the latter (see Meyer and Luther, *Die Israeliten u. ihre Nachbarstämme*, Halle, 1906, p. 406). The whole body of evidence, when carefully studied, is such as to suggest that a closely inter-related group (which may be called Horite, Seirite, or Edomite-Ishmaelite) extended westwards into S. Palestine, and that some portion separated and was ultimately incorporated in Judah, thus becoming truly Israelite (see *ib.* p. 446). This relationship, to which the genealogies testify, is to be supplemented by numerous features of 'Edomitic' influence in the OT, the full significance of which can as yet be only imperfectly understood.

2. The gods.—Although there is little direct evidence for Edomite culture and religion, there is much that is indirectly valuable, and, even though it is often of a somewhat hypothetical character, it cannot properly be ignored.

(*a*) *Edom* itself may be the name of a deity. This is suggested partly by the name of the Gittite *Obed-Edom* in the OT (2 S $6^{10ff.}$, 1 Ch $15^{18.24}$, 2 Ch 25^{24}, *et al.*), who becomes prominent as a Levitical singer and doorkeeper. The interpretation 'servant of [the god] Edom' is not to be rejected, although it is open to dispute whether the deity in question is necessarily identical with the familiar Edom. Further, Egyptian evidence for a place-name *Shemesh-Edom* in the Lebanon district (time of Thothmes III. and Amen-hotep II.) seems to equate Edom with the sun-god; and the deity reappears in an obscure Egyp. passage, together with Resheph, the warrior-god of fire and lightning (W. M. Müller, *Asien u. Europa nach altägypt. Denkmälern*, Leipzig, 1893, p. 315 f.). This would suggest a deity of the Hadad-type, fairly well distributed, who became the god of a group or people which called itself by his name.[1]

(*b*) *Esau.*—This obscure name, perhaps found in an old Arabian inscription (Hommel, *Südarab. Chrestomathie*, Munich, 1893, p. 39 f.), has been plausibly connected with that of the goddess 'A-si-ti, represented on Egyp. monuments as a wild, warlike rider of the desert (Müller, 316 f.). The Biblical story of Esau, the wild hunter, is commonly associated with the Phœnician myth of Usōos and his brother Samēmrum or Ὑψουράνιος ('high heaven').[1] The strife between the more civilized brother and the hunter Usōos naturally recalls the account of the twin-brothers Jacob and Esau, and the various points of resemblance between the late euhemeristic Greek record and the older, simpler, and more primitive story in Gen. are sufficiently close to suggest some common Canaanite cycle of tradition. In its present form, the story of Esau and Jacob clearly shows the influence of other elements, and Gressmann has drawn attention to features in Esau which are suggestive of some satyr-like figure (*ZATW*, 1900, p. 22, n. 3); a considerable modification of the original tradition must in any case be recognized. There is other evidence for some survival of old Canaanite myth in the Cainite genealogy (see J. Skinner, *Gen.*, 1910, p. 123 f.); and consequently, both here and again in the stories which the Danites told of their hero Samson, the present forms are the outcome of a very intricate development. Hence, although the above evidence may be used to prove that primarily Esau was not a distinctively Edomite figure, it is clear, nevertheless, that the Biblical story in its present form belongs to a time when Esau stood for some section (at least) of Edom, and that this fact alone explains its preservation in the Biblical history.

(*c*) The Edomite king *Ai*(AN-AA)-*rammu* ('Ai is high'), mentioned by Sennacherib, has a name compounded with a deity who may possibly be identified with Jahweh (cf. in this case the Biblical name *Jehoram*). But the equation is very uncertain (Zimmern, *KAT*^{3}, 1903, p. 467), although on other grounds the appearance of Jahweh in Edom might be expected.

(*d*) More specifically Edomite is the god *Ḳaush*, in the names of two Edomite kings: *Ḳ.-malaka* ('Ḳ. is king *or* reigns'), in the time of Tiglath-Pileser IV. (after the middle of the 8th cent. B.C.), and *Ḳ.-gabri* ('Ḳ. is mighty *or* a hero' [cf. the name *Gabriel*]), in the 7th century. Nothing is known of the god. The name may be identified with the common Arab. *ḳais*, 'lord,' 'husband' (cf. the appellative *ba'al*).[2] It is conjecturally connected with the Biblical *Ḳīsh* (Benjamite and Levitical), with the place-names *Ḳishion* and *Ḳishon*,[3] and with *El-ḳōsh*, the home of Nahum (according to one old tradition, in Judah). More interesting are the Levitical *Ḳishi* or *Ḳushaiah*, if the latter may be interpreted 'Jah[weh] is K.' on the analogy of *Bealiah*, 'Jah[weh] is Baal'; but this interpretation is not certain. In the form קיש (with vocalic endings) it occurs in Nabatæan names, and also as a deity (together with other gods) at el-Ḥejra (in N. Arabia, south of Tēma). It is doubtless the *Kus* in Assyr. contract-tablets of the reigns of Darius I. and Artaxerxes I., where we meet with *K.-yada'* ('K. knows'), *K.-yaḥabi* ('K. gives'), and *bar-K.* ('son of [an Aram. form] K.'). With the last it is natural to compare *Barḳōs*, one of the temple Nethinīm (Ezr 2^{53}, Neh 7^{55}), whose names often betray a foreign origin.[4] These forms can scarcely be severed from *Kos*, met with in Greek sources, especially among a family of Sidonian origin settled in the Idumæan Marissa or Mareshah (close of 3rd cent. B.C.); and in a rather later inscription from Memphis, remarkable for the variety of foreign names and the prominence of Kos.[5] The names comprise Κοσμάλαχος, Κοστόβαρος (Jos. *Ant.* XV. vii. 9, XX. ix. 4, probably for Κοσγόβαρος); cf. the two Edomite compounds of Ḳaush (above); Κοσάδαρος ('K. helps,' an Aram. form) and Κοσνάτανος ('K. gives,' explicitly *not* Aram.), both also in Nabatæan and Sinaitic inscriptions (spelt קס and קוס); Κόσβανος ('K. builds'), Κασβάρακος ('K. blesses' [*CIG* 5149]), Κόσραμος ('K. is high'), Κόσγηρος (? 'K. a sojourner'), and perhaps Κόσαδος (doubtful [Peters and Thiersch, *op. cit.* p. 46 f.]).

[1] See Meyer, *Gesch. d. Altertums*², Stuttgart, 1909, i. § 343. Edom appears elsewhere as a place-name, and as a personal name is found in Phœnician and the Ṣafa inscriptions (cf. perhaps also Lidzbarski, *Ephemeris f. semit. Epigraphik*, Giessen, 1901, i. 41 f.).

[1] Philo Byb., in Euseb. *Præp. Ev.* i. 10; see esp. Lagrange, *Études sur les relig. sém.*², Paris, 1905, p. 415 f.

[2] W. R. Smith, *Rel. Sem.*², London, 1894, p. 170, n. 4, and J. Wellhausen, *Reste arab. Heid.*², Berlin, 1897, p. 67.

[3] See R. J. H. Gottheil, *JBL* xvii. [1898] 199–202.

[4] See Zimmern, *op. cit.* 473.

[5] For the former, see J. P. Peters and H. Thiersch, *Painted Tombs in the Necropolis of Marissa*, 1905; and for the latter, E. Miller, *Rev. archéol.*, 1870, pp. 109–125, 170–188; and cf. Lidzbarski, *Ephem.* ii. [1903] 339.

(e) Quite distinct, on the other hand, is the Idumæan *Kozeh*, to whose hereditary priesthood the ancestors of the patriot Costobaros (see above) belonged (Jos. *Ant.* xv. vii. 9, Κοζέ; ed. Niese, Κωζαί). The god is identified with the Arab *Ḳozaḥ*, who was venerated in the vicinity of Mecca; and, since the rainbow is called the 'bow of K.' (cf. Jahweh's words 'my bow,' Gn 9^{13}), he was apparently the head-deity of the district. It is tempting to suppose that *Kozeh* was the Idumæan Apollo of Jos. *c. Ap.* ii. 10 (see W. R. Smith, *Kinship*², 1903, p. 302).

(*f*) Some indirect evidence is furnished by the Edomite proper names in the OT, where the common Ḳaush or Ḳos is conspicuously absent. On the other hand, *Hadad* occurs thrice as the name of a king; and this at least points to a knowledge of the well-known god of storm, rain, etc.

(*g*) *Bĕdad*, the father of Hadad I. (Gn 36^{35}), may represent *Bir-dadda* (also the father of the Arab. Uaite, 7th cent.), in which case Hadad is again involved (see Zimmern, *op. cit.* 443 f.).

(*h*) Acquaintance with *Baal* appears in the king *Baal-ḥanan* ('B. is gracious' [Gn 36^{38}]), as also in the inscription from Memphis (φασάβαλος, 'B. has opened *or* saved '?) and in a Nabatæan inscription from Petra. This throws no light upon the particular deity intended by the appellative 'lord,' although there is some evidence that the Baal of Western Asia was a god of battle of the Hadad-type.[1]

(*i*) Equally vague is *El*, 'god,' in the names *Eliphaz* and *Reuel*, and later at Memphis (where, however, others than Idumæans may be meant).

(*j*) *Uz* (עוץ), connected with Edom (Gn 36^{28}, La 4^{21}), may be conjecturally identified with the Arab. god *'Auḍ* (see W. R. Smith, *Kinship*², 61, and his defence, against the criticisms of Nöldeke, in *Rel. Sem.*², 43 n.).

(*k*) *Jeush* (יעוש), identified by W. R. Smith with the Arab. lion-god *Yaghūth* ('he protects'), is found also in Nabatæan and Tamud inscriptions, and is doubtless represented by ἰέγουθος at Memphis.[2] Purely conjectural is the identification with Iauta', a king of Kedar in the 7th century. See, further, W. R. Smith, *Kinship*², 224 f.; Wellhausen, *Reste arab. Heid.*² 17–19; Nöldeke, *ZDMG* xviii. 869.[3]

3. Miscellaneous evidence for Edomite religion.—Evidence of another sort is furnished by those Edomite (and allied) names which may be interpreted, with more or less probability, as animal-names.[4] Here are to be included *'Achbōr* ('mouse'), *Ărān* (perhaps 'wild-goat'), *Ayyah* ('falcon'), *Cālēb* ('dog'), *Dishān*, *Dishōn*, and *Ja'lām* ('mountain-goat'), *Shōbāl* ('young lion,' though phonetically difficult), *Zibeōn* ('hyæna'), and others. The animal-names found in the OT are connected especially with people (or clans) and places with Judæan, S. Palestinian, and Edomitic connexions (note, *e.g.*, the Midianite *'Ōrēb* and *Zĕēb*, 'raven' and 'wolf'). It is disputed whether they point to the former existence of totemism (so W. R. Smith), or whether they may be explained merely as 'natural poetry' (Nöldeke; see Gray's discussion, pp. 98 ff., 113 ff.). On the whole, it may be said that a more definite explanation is needed than the latter, but that the former is not proved by the evidence alone. The question turns upon the meaning and development of totemism (*q.v.*), and in the meanwhile it is enough to notice that *a priori* objections based alike upon low ideas of totemism and upon elevated conceptions of Oriental religious thought and practice are untenable. As bearing on the sociological aspect of the inquiry, it may be remarked that J. G. Frazer, observing that the eight kings of Edom are not hereditary, infers that 'in Edom, as elsewhere, the blood royal was traced in the female line, and that the kings were men of other families, or even foreigners, who succeeded to the throne by marrying the hereditary princesses.'[5] It is probable, also, that the Edomites practised circumcision. It is true that, according to Jos. (*Ant.* XIII. ix. 1), the Idumæans were circumcised by John Hyrcanus, but the custom could hardly have been introduced then for the first time (see Jer $9^{25f.}$, cf. Ezk 32^{29}, and the circumcision of Ishmael in Gn 17^{23-27}). It is more likely, therefore, that, as Nöldeke suggests (*EBi* ii. 1188), 'the Jewish rite of circumcision shortly after birth was substituted for the rite in use among the kindred peoples, namely, circumcision shortly before puberty, the former alone being recognised as real circumcision by the Jews.'

On *a priori* grounds it is reasonable to assume that Edomite religion was not isolated from that of the surrounding peoples. The traces of Egypto-Semitic cult found by Petrie in the south of the Sinaitic peninsula date before the age of the Israelite monarchy, but point to the antiquity of definite religious ideas in the desert region outside Palestine.[1] It is interesting to notice that about the 6th cent. B.C., in an Aramaic inscription from Tēma (Ishmaelite, Gn 25^{15}, named with Dedan, Is $21^{13f.}$, Jer 25^{23}), contact with Egypt is shown by the name *Pet-Osiris*, the father of a priest who ministers to Ṣalm of M-ḥ-r-m (evidently a local form of a more prominent deity), Shingala (שנגלא, perhaps a form of Astarte), and Ashira (apparently the well-known Ashirat, Ashirta). But the inscription also shows linguistic and art indications of Bab.-Assyr. influence. Moreover, Edomite contact with Arabia, the presence of a Minæan colony in N. Arabia at el-Ōla, and the fact that the name *Ḳēnān* (Gn 5^{9}, son of Enosh, and corresponding to Cain) is that of an old S. Arabian deity afford ground for further speculation. Although there is no trace in Edom of the deity Sin, the name is familiar both in ancient Arabia and in the Edomite area (the wilderness of Sin, Mt. Sinai). So also there is no trace of the cult of Ishtar-Astarte; but the male 'Athtar or 'Attar is found in Arabia, and is joined with Chemosh in Moab; and Atar-Samain ('Ishtar of the heavens') was venerated by the Kedar tribes in the 7th century. The corresponding 'lord of the heavens,' found in Palestine and later among the Nabatæans, and with an equivalent in ancient Arabia, may also have been familiar in Edom, though perhaps under one of the more definite names (*e.g.* Hadad, Ḳaush) already noticed. Finally, some indirect evidence is afforded by the points of contact between Israelite and old Arabian religion, a noteworthy example of which is the Minæan title לוא, fem. לואת. These terms apparently mean 'priest,' 'priestess,' and, with Hommel and others, may explain the words 'Levi,' 'Levite' (לוי). If so, the word probably entered into Israel through the 'Edomitic' connexions which the genealogies represent, and it is significant that the Levitical traditions and personal names agree in manifesting a peculiar relationship with S. Palestine, Ḳadesh, and that area which is connected more closely with the Edomites generally than with Israel.[2]

4. Edom and Israel.—Suggestive hints for the older religion of the Edomite area may be gleaned from the Nabatæan evidence, notably in the cults at Petra, which obviously were not entirely novel growths (see, further, NABATÆANS; on the later evidence for Idumæan cultus at Adora, see Büchler, *ZATW*, 1909, p. 224 f.). A more intricate inquiry is involved in Hebron and Mamre, the persistent heathenism of which is proved by the statements of Sozomen (*HE* ii. 4). The practices were presumably Idumæan; but such is the vitality and

[1] S. A. Cook, *Rel. of Ancient Palestine*, 1908, pp. 84, 89–91.

[2] The LXX ἰεούς for *Jeush* does not prove that the translators were acquainted with a Semitic pronunciation of the name which distinguished it from the form which the Greeks at Memphis transliterated with γ.

[3] Smith's suggestion that *Ja'ăḳān* (1 Ch 1^{42}; cf. Gn 36^{27}) may be identified with the Arab god *Ya'uḳ* (*Kinship*², 242, 254) is too doubtful to be included in the above list.

[4] See, in the first instance, W. R. Smith, *JPh* ix. [1879] 75–100, with the qualification in *Kinship*², 253 f. For criticisms, see Nöldeke, *ZDMG*, 1886, pp. 148–187; J. Jacobs, *Studies in Bibl. Archæol.*, 1894, p. 64 ff.; Zapletal, *Totemismus*, Freiburg, 1901, p. 29 ff.; Kautzsch, in *HDB*, vol. v. p. 613 n.; and the clear and convenient analysis by G. B. Gray, *Heb. Proper Names*, 1896, p. 86 ff.

[5] *Adonis, Attis, Osiris*², 1907, p. 12, n. 6.

[1] See W. M. F. Petrie, *Researches in Sinai*, 1906, ch. xiii.

[2] See, for the old Arabian data, F. Hommel, *AHT* (Eng. tr., 1897), and his study in Hilprecht's *Explorations in Bible Lands*, Edinburgh, 1903, pp. 735 f., 746 ff.; also art. ARABS (Ancient); for the Levitical relationships, see S. A. Cook, *Critical Notes on OT History*, 1907, p. 84 ff.

persistence of religious observance that some of them may have gone back to Israelite times (cf. Nöldeke, *EBi* ii. 1188). Moreover, Hebron had not always belonged to Israel; it had been taken by Caleb (Jos 15[13ff.]), who, though subsequently reckoned to Judah-Israel, was originally a Kenizzite, and therefore of Edomite affinity. It is also evident from the Biblical narrative that the Edomites could reckon the ancestors of Esau as their ancestors: Abraham and Sarah at Hebron and Mamre, or Isaac at Beersheba. Have any of their legends persisted? Meyer has suggested that some features in the stories of Abraham point to a heroic figure who was Calebite before his adoption into the common Judæan-Israelite tradition (*Die Israeliten*, p. 262 f.), and both Isaac and Ishmael are more naturally located outside Israel and Judah, in the ordinary sense of the terms. Hence, while elements of myth and legend of wide distribution appear in Genesis in a localized form, attached to definite figures and places, it is very noteworthy that much of the material is S. Palestinian. As Meyer and Luther have emphasized, the true popular Israelite tradition is scanty, whereas many traditions concern S. Palestine or could only have arisen there (pp. 227, 259, 279, 305, 478); to call them Judæan is too restrictive (pp. 386, 443); the interests are those of the Seirite and Edomite connexions (as illustrated by the genealogies) rather than of the Israelites.[1]

This tendency to discover in the OT data which primarily were 'Edomitic' rather than Israelite involves the recognition that their presence is not fortuitous; they have stamped themselves upon Biblical (*i.e.* Israelite) tradition as surely as certain 'Edomitic' groups became—as is seen in 1 Ch 2 and 4—Israelite. The process may be illustrated by Gn 4[17ff.], the account of the aboriginal patriarchs and the beginning of civilization. This is evidently a piece of distinctively Cainite (*i.e.* Kenite) lore, and the natural inference is that it was brought into the common stock of Israelite tradition by the Kenites when they entered Judah; so, A. R. Gordon (*Early Trad. of Genesis*, Edinburgh, 1907, pp. 74 f., 168, 188), who ascribes to them also the account of the origin of the world (Gn 2[5ff.]). These fragments testify to some larger and more organic body of tradition, which, in its present modified form, has points of contact with old Canaanite or Phœnician culture-myths (see Skinner, *Gen.* p. 123 f.); and, since the invocation of Jahweh is dated from Adam's grandson Ěnôsh ('man' [Gn 4[26]]), its view of Jahwism ran upon lines quite different from the prevailing Biblical view. But, as comparative research has shown, divers peoples or tribes have their own beliefs of origins, and consequently the Kenite lore not only illustrates material brought into the Israelite stock from a S. Palestinian ('Edomitic') area, but also shows, by its very presence, that through certain vicissitudes the Kenites were able to impress *their* tradition upon the literature.[2]

Edom and the desert peoples enjoy a reputation for wisdom (Ob [8], Jer 49[7], Bar 3[23]), and the superlative wisdom of Solomon is emphasized by placing him above certain sages whose names have Edomite connexions (1 K 4[31]—Ethan the Ezrahite, Heman, Mahol). The names recur in 1 Ch 2[6] as sons of Zerah (an Edomite clan affiliated to Judah [Meyer, 350]); and thus, quite apart from the question of value, the *claim* of a Judæan relationship is unmistakable. This, however, is not more striking than the presence of other 'Edomitic' Judæans in 1 Ch 2 and 4. The un-Israelite names in Pr 30[1] 31[1] are too doubtful for the conjecture that these chapters contain specimens of Edomite wisdom. On the other hand, the background of the grand book of Job lies outside Israel and Judah, possibly in the Edomite area,[1] and there is no *a priori* reason why the thought of the book should be regarded as exclusively Israelite. Further, Israelite tradition itself explicitly ascribes to the Midianite Jethro the inauguration of the judicial system (Ex 18), and the father-in-law of Moses subsequently appears in Israel (Jg 1[16], cf. 4[11]). The Levites also have connexions with S. Palestine, and it is noteworthy that such names as *Obed-edom*, *Korah*, *Ethan*, *Heman*, etc., link the temple of Jerusalem, its officers and its singers, with features which take us away from Judah and Israel.

5. **Edom and Jahweh.**—That Israel and Edom were very closely connected at certain periods is clear from the history of Palestine. In later times the Idumæans bear such names as *Jacob* (the rival of their ancestor!), *Phinehas*, *Simon*, and *Saul*—names familiar in Israelite tradition. On the other hand, the repeated occurrence of names in *Ḳaush* and *Kos* from the 8th cent. onwards points to tradition more distinctively Edomite; and it is noteworthy that, while the district and clan-division of Edom would favour local and minor cults, the names of the kings include such more prominent and widely distributed deities as Hadad (thrice), Ḳaush (twice), and Baal (once, in *B.-ḥanan*, son of 'the Mouse'). It is a striking fact that, although the Edomites, like the other peoples, had their gods, they are placed by Israel apart from other heathen neighbours. The third generation after inter-marriage had full Israelite privileges, whereas Ammon and Moab were banned for ever (Dt 23[3. 7f.]); these two lands are regarded as stumbling-blocks, but there is no warning against Edomite idolatry except in relatively late passages. Nor is allusion made to any Edomite national deity corresponding to Milcom, Chemosh, and Jahweh, in Ammon, Moab, and Israel. Although the gods Hadad, Baal, and possibly Ḳaush were or had been known in Israel, Jahweh could be worshipped by the Edomite Doeg (1 S 21[7]), and was, no doubt, known in Edom, as He also was—to judge from personal names—in N. Syria. Indeed, according to one very favourite view, Jahweh was the god of the Kenites;[2] and, since Gn 4[26] refers to His immemorial worship, it would seem that their clan claimed to possess the cult from the earliest times. But the evidence does not confine Jahweh to the Kenites. His rise is connected with Sinai, Mt. Paran, Seir, Teman, and probably Ḳadesh (Dt 33[2], Jg 5[4f.], Hab 3[3]); and the persistence of this belief is shown partly by the tradition that Elijah was impelled to visit Horeb, the mount of God, in search of the true Jahweh (1 K 19[8ff.]), and partly by the lateness of the reference in Habakkuk. It is clear that the Edomite area was, in some very special sense, regarded as the home of Jahweh. In addition to this, with the Kenites are associated the Rechabites (1 Ch 2[55]; Calebite in 4[12] [reading 'Rechab' for 'Rechah,' with LXX]), and these certainly held that desert conditions were proper to the religion of Jahweh (Jer 35). Their uncompromising zeal, as suggested in the account of Jehu's revolt (2 K 10[15ff.]), illustrates a reforming spirit, which finds a parallel when the Levites take their stand for Jahweh and put their brethren to the sword (Ex 32[26]). Thus, with S. Palestine are connected, directly or indirectly, traditions of the

[1] See, further, Meyer, pp. 83, 305; Luther, p. 107 ff., and esp. 129 ff., 158 f.; cf. also H. Gressmann, *ZATW*, 1910, pp. 15, 26, 29. N. Schmidt (*HJ*, 1908, p. 339) does not hesitate to regard Aaron as originally 'an Edomitish divinity, having his shrines on Mosera and Hor,' the traditional scenes of his death.

[2] 1 Ch 2[55] refers to families of scribes connected with the Kenites. With the tracing of mankind to Ādām, 'man,' compare the suggestion that the name Ĕdôm is a dialectical form of *ādām* (Nöldeke, *EBi* ii. 1181).

[1] Uz is named with Edom in La 4[21]; and, for Eliphaz of Teman, cf. the names in Gn 36[11].

[2] Tiele, Stade, Budde, Guthe, Moore, H. P. Smith, and others; see Paton, *BW*, Aug. 1906, p. 116 ff.

origin of Jahweh and certain impetuous reforms which are bound up with Rechabites and Levites, both of whom have S. Palestinian relationship. It is very difficult to find an adequate explanation of all the data. The Jahweh of the south, from the Edomite area, became *the* Jahweh of the Israelites; and, since the deities Hadad (or Addu) and Shemesh (the sun-god) are most conspicuous in Palestine in the age of the Amarna Letters (*c.* 1400 B.C.),[1] it may be inferred that only some sweeping change in the history of the land can account for the subsequent appearance of Jahweh as the sole recognized god of Israel. But there is no good evidence for any early wide-spread movement from the south, such as is represented in the Israelite conquest, nor is there any reference to apostasy to Hadad or Shemesh. The evidence suggests rather that the south was responsible for a new era in Jahwism, for the inauguration of a new stage in the development of conceptions of Jahweh's nature. It is intelligible that, just as a new stage may be inaugurated by a new name (*Abraham* for Abram, *Hebron* for Kirjath-arba, etc.), the adherents of a purer worship of Jahweh might regard Him as a new god; and, in point of fact, the reformers of Israel view the heathenish worship of Jahweh as Baal-worship. It is another question whether Jahweh had actually been a recognized god in Edom. If, for example, the cult of Jahweh in Palestine had been enforced over S. Palestine, it might have existed in a purer form among the wild but simpler desert tribes. It is also possible that allowance must be made for reflexion, and that southern groups, afterwards incorporated in Israel, held the belief that their purer worship of Jahweh had been brought with them from their earlier seats. Finally, the traditions may imply that certain Edomite groups separated themselves from their brethren, and ranged themselves under the banner of Jahweh; and, if Jahweh was not originally Edomite, the relations between Him and these new adherents would be without naturalistic traits—they would be rather a matter of free choice. The relationship in such a case would be more of an ethical character.

In conclusion, there is a very close relationship between Esau (Edom) and his twin-brother Jacob (Israel); this is enhanced by the genealogical data in Gn 36, and by the evidence linking Israel with an area which is Edomite rather than Israelite. Certain clans in Israel appear to have come direct from Ḳadesh, on the Edomite frontier, and with such a movement as this may be associated the presence of specifically S. Palestinian traditions, which are now Israelite in the ordinary sense. There is no reference to a national Edomite god, no condemnation of the cults or of the people in the earlier literature; the Edomite area appears to have influenced Israelite legal and ecclesiastical institutions; and Jahweh Himself, or perhaps rather the purer form of Jahwism, is closely connected with this district. The bearing of this Edomite evidence upon the wider questions of OT criticism has yet to be worked out.[1]

LITERATURE.—In addition to the authorities cited in the article, see artt. on 'Edom,' by A. H. Sayce, in *HDB*, Nöldeke, in *EBi*, and S. A. Cook, in *EBr*[11]; F. Buhl, *Gesch. d. Edomiter*, Leipzig, 1893 (an excellent pioneering work); geographical and archæological information by Gray Hill and Sir Charles Wilson, in *PEFSt*, 1896–98; Brünnow-Domaszewski, *Provincia Arabia*, Strassburg, 1904–6; Libbey-Hoskins, *The Jordan Valley and Petra*, London, 1905; A. Musil, *Arabia Petræa*, Vienna, 1908. See, further, P. Thomsen, *Palästina-Literatur*, Leipzig, 1905–9, ii. 170, and Index, *s.vv.* 'Edom,' 'Petra'; and the opening articles by G. A. Smith, in *Expositor*, Oct.–Dec. 1908.

S. A. COOK.

EDUCATION.

EDUCATION (Introductory).—**1.** The meaning attached to the word 'Education' varies greatly. According to some writers it includes all the forces that influence human development. According to others it is limited to something so narrow as to be equivalent to nothing more than *teaching*. The widest meaning is well expressed in the words of John Stuart Mill, who tells us that education

'includes whatever we do for ourselves, and whatever is done for us by others for the express purpose of bringing us nearer to the perfection of our nature; in its largest acceptation it comprehends even the indirect effects produced on character, and on the human faculties, by things of which the direct purposes are different; by laws, by forms of government, by the industrial arts, by modes of social life; nay, even by physical facts not dependent on human will; by climate, soil, and local position' (Rectorial Address, St. Andrews, 1867).

He himself seems to feel that this is rather too wide a view to be of practical application, so he restricts it in the same address to

'the culture which each generation purposely gives to those who are to be its successors, in order to qualify them for at least keeping up, and, if possible, for raising, the level of the improvement which has been attained.'

In both definitions it will be observed that the idea of Purpose is involved in the process of education. 'To have loved her' may have been 'a liberal education,' but the epigram owes its point to the very omission of this idea of purpose, which is always felt to be essential in education.

If we examine a large number of the definitions supplied by eminent writers, we shall find that there is one term present in almost all of them. This term is 'Development.' The word itself is seldom absent, and the idea implied by it is always present. Thus Pestalozzi states his views in the familiar plant metaphor:

'Sound Education stands before me symbolized by a tree planted near fertilizing water. A little seed, which contains the design of the tree, its form and proportion, is placed in the soil. See how it germinates and expands into trunk, branches, leaves, flowers, and fruit! The whole tree is an uninterrupted chain of organic parts, the plan of which existed in its seed and root. Man is similar to the tree. In the newborn child are hidden those faculties which are to unfold during life' (see Address on Birthday, 1818).

Froebel as a loyal disciple naturally follows:

'So the man must be viewed not as already become perfect, not as fixed and stationary, but as constant yet always progressively developing, . . . always advancing from one stage of development to another' (*Menschenerziehung*, Vienna, 1883, § 16).

Besides the ideas of development and deliberate purpose, there are always present in some form or other two additional ideas, those of System and of Knowledge or Culture. In a certain sense a child is educated by the process of living, even when there is no purpose of educating him, and no system in the process; but, in so far as Education

[1] See S. A. Cook, *Rel. of Anc. Pal.*, p. 88 ff.

[1] On some of the questions involved, the writer may be permitted to refer to the articles 'Genesis,' 'Jews,' 'Levites,' and 'Palestine,' in *EBr*[11], and the Introduction to 1 Esdras, in R. H. Charles' edition of the Apocrypha (1912).

is treated as an art or as a science, it must be carried on with the deliberate purpose of modifying development by means of knowledge systematically imparted.

Of the four ideas that we have found to be essential to the connotation of the term 'Education,' that of Development applies to the pupil, and must be accepted as a datum in the problem; the other three are more or less under the control of the educator.

The idea of Development involves the correlative idea of organism, and organism implies the existence of an inherent law that is brought to light in the development of the organism. The idea of life, literally or figuratively, is always implied when we speak of an organism. This, indeed, would compel us to hunt for the meaning of this mysterious thing called Life, but we must here assume a knowledge of the general meaning of the vital principle. Whatever it is, it pervades the whole of the structure in which it is found. Of it may be said, as is said of the soul, 'it is all in the whole, and all in every part.' This distinction, indeed, is of great value in marking off an organism from a machine. Only an organism can develop. As we discriminate between an organism and a machine, so we must discriminate between development and growth. Growth may take two forms—accretion and multiplication—but neither increase in bulk nor increase in number of parts of itself implies development. Increase in complexity of structure must be added to adaptation to function, before we have genuine development. Development, then, is a process of differentiation correlated with adaptation to function.

This brings us to the third essential element in the connotation of the term 'Development.' It always implies self-determination on the part of the developing organism. This, indeed, is implied in the idea of an organism. It begins, flourishes, and decays, all according to laws that are inherent in its own nature. The laws of its development are indeed part of itself. Its life is simply the exemplification of these laws. The question may be asked, in fact, Which is the butterfly; is it the egg, the larva, the chrysalis, or the imago? The answer clearly is that it is all four. The idea of the butterfly is incomplete unless it includes all the stages through which the creature passes in the process of its development. We cannot define a developing being unless we take into account what it has been and what it is going to be. A frog both is and is not a tadpole. The acorn, the seedling, the sapling, and the full-grown tree are all essential to the true idea of the full-grown oak. The oak is implicit in the acorn; the acorn is explicit in the oak. The acorn realizes itself only by becoming an oak.

2. Theories and problems of education.—The true fundamental aim of every individual is self-realization in the widest and truest sense of the term; but here at the very threshold a serious difficulty arises. The mere phrase 'self-realization' suggests an objection of the first importance in Education. If true development is self-development—development from within in accordance with the laws of our nature,—is there room in the process for an educator? Does it not seem almost self-evident that an educator, so far from aiding in true development, must of necessity hinder it by imposing on the developing self an influence other than that of the developing ego? This difficulty is at the bottom of the popular saying that all true education is self-education. But even Jacotot, an ingenious French teacher who, in his writings, took great pains to depreciate the work of teachers, does not go to the root of the matter. It is a strange demonstration of the uselessness of teachers that results in perhaps the most absurd of all methodologies, as Jacotot's system turns out to be. The same difficulty is felt in Rousseau's scheme, but is evaded by the inept plan of overt inaction. Why write a volume on Education, as Rousseau does, to prove that the teacher figures as a practically negligible element?

The radical difficulty shows itself to be what it is in Pestalozzi, and still more clearly in Froebel. The cause of this recognition of the difficulty and the attempt to meet it is to be found in the fact that these writers based their theory of education upon more or less clearly conceived Idealistic principles.

It is true that Rousseau usually gets the credit of being the philosopher who won Pestalozzi for Education. But Pestalozzi lived a long life, and the force that impelled him to Education was not the only one that modified his thought. Kant was just finishing his University studies when Pestalozzi was born, and by the time the educator had found his vocation, and was actually engaged in it, the Kantian thought was beginning to make itself felt. The germs of Idealism were in the air: Pestalozzi could not hope to escape the infection. The plant metaphor, which has since been so overworked, appears to have had considerable influence in modifying his principles; but the metaphor was, after all, only a concrete statement of the Idealist position.

As Kant was followed by Hegel, so Pestalozzi was followed by Froebel, and in both cases an advance in Idealism has been made. For our present purpose, principles, not persons, interest us. We are not specially concerned with either the Pestalozzian or the Froebelian development. The important thing is that the development of the whole school has given a clear demonstration of the educational effect of the theory of self-realization.

There exists at this moment a large and important school of educationists who ground their opinions on a more or less intelligent interpretation of the life and works of Pestalozzi and Froebel. They have outlived the philosophical difficulties that troubled their later master. They have a system which experience has proved to be valuable, and they are inclined to rest content without going into uncomfortable details. It was otherwise with Froebel. He felt keenly the initial difficulty of his system, and throughout the whole of his *Education of Man* he struggles with more or less success to justify the educator in interfering in the work of education at all. The ordinary Kindergarteners dabble in the mechanism of Idealism without in the least understanding the nature and necessity of the primary assumption that gives it life and meaning. Naturally, as soon as they set themselves to think at all, they come to a deadlock. The child is like a plant, it can grow and develop: it is growing, but only in a determinate way. True education, therefore, must aim at permitting and encouraging the child to develop in the greatest possible freedom. Froebel sees this very clearly:

'Therefore Education, instruction, and teaching should in the first characteristic necessarily be passive, watchfully and protectively following, not dictatorial, not invariable, not visibly interfering.' Further, in the following section we are told: 'The still young being, even though as yet unconsciously, like a product of nature, precisely and surely wills that which is best for himself, and, moreover, in a form which is quite suitable to him, and which he feels within himself the disposition, power, and means to represent' (*op. cit.* § 7 f.).

If, then, the child thus makes for what is for his good as certainly as a duckling makes for water, it is obvious that the occupation of the teacher is in a parlous state. Why employ a man to make a child do what the child cannot help doing? The usual reply is botanical. A given seed can pro-

duce nothing but a particular plant, and yet there may be work for a gardener. The very elaborate scheme of gifts and occupations that characterizes the Kindergarten system shows that Froebel regarded education as at least possible, and, by inference, desirable. We are therefore entitled to a better argument than a mere analogy. The problem is how to find a place for a teacher between a developing nature, with a determination towards good, and a world that is by hypothesis good, inasmuch as 'all has proceeded from God, and is limited by God alone.'

Froebel's answer rises above Botany. The educator, he tells us, is himself a part of the world in question: he has, therefore, a place. That this place is consistent with the rest of the theory is manifest, because the teacher who is found imposing laws and restrictions on the child 'himself is strictly and inevitably subjected to a perpetually governing law; to an unavoidable perpetual necessity; thus all arbitrariness is banished.' The educator must at every moment act under two different influences, which yet lead him to the same line of conduct. He must guide and be guided. His consistency as governed and governor is guaranteed by the continual reference of himself and his pupil to an invisible and invariable third. The teacher, while seeking to enable the pupil to attain to self-realization, must seek at the same time to realize himself. Only by rightly guiding the pupil can the master himself be right. If the boy's nature and the master's are each developing freely, then their actions must of necessity fit into each other, and produce a harmony which *is* the invisible and invariable third, in other words, the inherent rationality of the universe.

In Education, as in some other directions, the Idealist position has been accepted timidly and incompletely. Instead of boldly accepting the whole of the doctrine thus enunciated in the *Education of Man*, later Froebelians have selected for special emphasis the principle, '*Find what Nature intends for the children, and follow that.*' 'A passivity, a following,' has become their watchword; and so true are they, in theory at least, to this view-point that it is hardly to be wondered at that a sort of general paralysis is the result. So passive must the Froebelians become, if they are true to their theory, that they must cease to have any influence over their pupils at all.

When we consider the bewildering paraphernalia of gifts and occupations in the Kindergarten, we are inclined to think that the Froebelians have hardly been loyal to their principle of non-interference. The justification usually offered is that the various exercises have been discovered by experiment to be exactly the sort of thing that Nature demands, and that the teacher in applying his methods is, after all, only 'passive, following.'

It would be unfair to the system, and not to our present purpose, to argue from the fact that anything more unnatural than many of the practical applications of the principle, it would be impossible to find. The principle can hardly be held responsible for the rigid, and, therefore, irrational application made by unsympathetic teachers. Yet it is surely not unreasonable to maintain that a benevolent superintendence is too modest a name for the complicated system the Froebelians have now elaborated. The value of the Kindergarten is not the point at issue. The question is—Can the 'passive, following' theory be held to be consistent with the system as now developed?

By observation it is found that children are fond of making things, of expressing thus their own ideas, of 'making the inner outer.' When the teacher gives them the opportunity of exercising this power or gift, he feels that he is 'passive, following.' He is but the jackal that provides the meat. The eating is the part of the child. If the teacher is content with this function, nothing more need be said. Education is recognized as a mystery. Given a child and certain materials, it is found that a certain result is produced. This may be interesting as a fact in Natural History; it cannot be held to explain anything. The educator does not educate; the child is his own educator.

There is obviously a sense in which it is true that all education is self-education. No man can learn for another; no man can be moral for another. Jacotot's definition of teaching, 'causing another to learn,' has been discredited. Can the definition of Education, 'causing another to develop himself according to the laws of his own nature,' be defended? By the conditions of the case, the subject must develop somehow: the only point left for consideration, therefore, is, Can we modify this development so as to produce the best result possible in the given case? This again involves two distinct problems: First, we have to discover what the highest form of development possible in the given case really is. Secondly, we have to discover some means of attaining this form.

The first problem, as it is stated above, is insoluble. No doubt, were all the conditions of the case known, the highest form of development possible for the given subject would be at once evident. But such knowledge is absolutely beyond our finite minds. Viewed *sub specie æternitatis*, the problem ceases to be a problem, and becomes a mere statement of fact. Unfortunately, this point of view is not attainable.

The case is not yet altogether hopeless. The second problem, which seems to depend upon the first for its very conditions, may itself supply the solution of the first. In working out its own development, the ego may indicate its own ideal, indeed must indicate that ideal. The important question that now arises is, Does it indicate that ideal soon enough for the educator to profit by the indication? Even if this question be satisfactorily answered, there remains the final problem, Can an external mind have any share in determining the development of a self-determining organism? To face the question fairly, we must give up all metaphors, however convenient. Above all, we must give up that wearisome acorn with its resulting tree. It has to be admitted that the tree is implicit in the acorn, and that certain laws can be discovered which aid us in furthering the development of the oak; but a child is not an acorn: a man is not a tree. We may endow an acorn with life—organic life; we may, if we will, endow it with a sort of generalized consciousness; but in the case of the child there is something quite new, and much higher than the highest we can possibly attribute to the tree. The oak is, no doubt, as absolutely self-determined as is the child, but it is not consciously self-determined. The developing human being is not only self-determined, he is self-conscious.

How does this new element affect the case? Can external influences modify self-development characterized by self-consciousness in the same way as they modify self-development not so characterized? Manifestly they can, in a negative sense at least. The environment, conscious or unconscious, can and does interfere with the full and free process of self-realization. A force that can hinder may reasonably be assumed to be able to help, if only in a negative way. By merely withholding its action, the environment may be said to produce a positive effect; nature is clearly dependent on nurture. It must not be forgotten

that in the process of development there are two forces—an outer and an inner—the nature of the developing ego, and the nurture supplied; and any influence must differ according as it is allied to the inner nature or to the outer nurture.

We have the antagonism between two forces—the self-developing ego on the one hand, and the environment against which it strives on the other. It is in and through this strife that the ego realizes itself, so far as it rises above the antagonism, and attains an ever higher and higher unity. If the educator is to exercise any influence at all, he must throw in his force either with the ego or with the environment.

The natural thing is to throw in his influence with the struggling ego; but what is the result? Suppose that by his help a higher unity is obtained: how does the self-realizing ego fare? The unity thus attained may be real for the educator: it is empty for the struggling ego. This mistake in moral training is exactly parallel with the popular blunder in intellectual education. The blunder in question is the supplying of cut and dry definitions and rules, which certainly introduce order among the confused mass of presented ideas, but an order that is meaningless. The child, for example, is struggling to understand the meaning of the concept 'Abstract Noun.' There is a manifold of presented ideas. The teacher may give his cut and dry definition which produces an appearance of order. This definition, which imposes a mechanical unity on the hitherto rebellious manifold, may be perfectly accurate, and may represent a real unity to the teacher. To the child it is a hindrance. No general principle can be of use to a child till he has worked for it, that is, till he has made it his own by rising above the antagonism of the particulars it combines.

To seek to aid the ego, then, by directly helping it, is to weaken it. Even if we understand the ideal the ego seeks to attain, we cannot directly aid it in its efforts, for in so doing we reduce the development below the level of conscious self-realization.

The place of the educator is, therefore, limited to the environment. He is but one element of the manifold against which the ego reacts. We must influence the ego by means of its limitations. If we can so modify the environment that the ego must react upon it in a determinate way, we seem to be able to influence the ego directly, and to restrict its power of self-development. Yet the very power thus exercised is possible only because of the laws according to which the organism develops itself. If the developing organism responded capriciously to given forces, it could not be said to be self-determined. A perfectly unlimited self ceases to be a self at all, and loses all meaning. If, then, the child answers the educator's stimulus exactly as the educator expects, it is because the nature of the child demands that this reaction and no other shall follow this stimulus.

It may be here objected that, if this be so, man-making is really possible. The child is clay in the hands of the potter. All the educator has to do is to discover the laws according to which the child develops, and apply this knowledge. To this a cheerful assent may be given. So far as the educator knows the laws according to which a child develops, so far is that child clay in his hands, to make of him what he will. Nor does this admission in the least endanger the independence of the child as a self-determining organism. The educator can make of the child what he will only by obeying the laws of the child's development. The very freedom that marks the self-development of the child is the necessity which impels him to act as the educator leads him to act. The child realizes himself fully and freely in the environment that has been modified by the educator. No less freely and fully does the educator realize himself in the environment which he has modified.

Viewed from too close a standpoint, there seems here to be a distinct contradiction. How can a child be at the same time self-determined and determined by another? Viewed from a higher level, the contradiction disappears, and the two forces—the child ego and the educator ego—are seen to form parts of a wider organism in which each finds its only possible freedom in attaining a harmony with its surroundings—in acting thus and thus and not otherwise. If this be so, it may be asked, Why do educators as a matter of fact so often fail to obtain that determining power over their pupils? It is generally admitted that within certain narrow limits the educator does mould the character of the pupil as a potter does the clay; and, when the matter is looked into with any degree of care, those limits are found to be constituted by the bounds of the educator's knowledge of the laws according to which the pupil's ego is self-determined.

The objection of the loss of freedom of the child, whose nature is guided by the skilful teacher, may be met by the correlative objection of the loss of freedom on the part of the teacher. If the child must react in a fixed way to certain stimuli, he seems to lose his freedom; but what of the freedom of the educator? In order to modify in a given direction the development of a given organism, the educator must modify his own energies in a definite direction—must, in short, to some extent give up the freedom of his own development. There is here no fatalism. Educator and educated develop alike according to the laws of their being. The fact that a complete knowledge of the nature of the educated would enable the educator to modify the development in no way interferes with the free self-development of the educated. Such complete knowledge is admittedly unattainable. But, supposing it to be attained by the educator, he would by that very knowledge have ceased to be an educator. He would have risen to a point of view from which he could look with full comprehension upon both parties in the work of education. He would see that master and pupil in their action and reaction upon each other are gradually working out their differences, and are attaining ever higher and higher levels at which certain antagonisms of the process disappear. What causes it to appear that the ego of the educator is dominating the ego of the educated is that the former always works from a slightly higher level. He cannot, indeed, rise to such a height as to be able to envisage at one sweep all the antagonisms and reconciliations that make up the entire sphere of education, but he is always working from a level high enough to resolve the immediate antagonism that makes up the now of education at any given moment.

Underlying all this is the great assumption of Idealism which we must be content to receive and to acknowledge as an assumption. We cannot transcend thought; we cannot prove the organic unity of the universe; but, if the universe be not an organism, if there be no reason underlying the manifold of experience, then philosophy has no meaning for us. All the same, it must be admitted that these wide generalities, while showing that explanation is possible, that a system of education is within the grasp of complete knowledge, give little help in the practical work of education. Within this rounded whole that makes up the Idealist's universe, we must begin our work somewhere. We must have a system that fits into the

limited area within which we live. Our practical method does not require to supply a complete explanation of its principles. The essential thing is that it shall not contradict any of the findings of the more general theory set forth above.

To come down from the clouds—let us see how the thing works out. Given a newly-born child, how can the educator bring his influence to bear upon it? The faculty psychologist is at once busy with talk about exercising the faculty of discrimination by changes of light and temperature. This exercise demands, he tells us, a rudimentary form of memory and judgment. And thus the building up of the ego proceeds. The whole process may be summed up in the one word 'training.' In modern educational works this word has acquired a sort of sacred meaninglessness. Few words labour under such a weight of assumptions. Naturally its use is marked by a great deal of vagueness; but, as often as it occurs, it appears to connote a process that is peculiarly philosophical yet practical. Despite its ordinary vagueness it is not left without a fairly well defined special meaning. R. H. Quick, for example, would divide all educators into the three great classes: Realists, Humanists, and Trainers; and the school of educators who follow David Stow claim to form what they call '*the* training school.' If we have regard to the results of the process of education, this classification obviously implies a cross-division; for each of the schools claims to train its pupils, though they differ regarding the means to be used to accomplish the training. Without pressing the distinction too closely, it may be said that teaching lays stress on the knowledge to be conveyed, training rather on the process of conveying it, and particularly on the effect of this process upon the mind of the pupil.

Sometimes, indeed, a lower view of training is held. It is regarded as more or less physical. In his *Introduction to the Pedagogy of Herbart* (London, 1895), p. ix, we find Ufer saying:

'Animals cannot in any true sense be educated: they can only be trained. Education is an influence upon man. When a person is spoken of as well-educated, we do not think of bodily qualities. The educating influence has reference to the soul, and concerns itself with the body only in so far as the care of the latter is immediately serviceable to the former.'

The very existence of the training school of educators proves that this comparatively low view of training is not universal; yet there is clearly an element of truth in it. At college there are *trainers* for the river, and *tutors* for the schools. As usual, whatever difficulty there is arises from a metaphor. The process represented by the word is carried over from the body to the mind. Fortunately there is more than the usual attenuated connexion between the two terms of the metaphor. In the last resort physical training consists in teaching an animal to perform certain acts easily by making it do them frequently. Here it is the first step that costs. After the act has been performed once, there is little difficulty in having it repeated, till it can be done perfectly. *Faber fabricando* is the trainer's motto. In physical training this first step causes no real difficulty. A dog is taught to pretend to smoke a pipe by having the pipe placed in his mouth; the rest of the training resolves itself into biscuits and blows. In the region of morals the same thing may be applied to a limited extent. We may make a child act in certain ways by sheer physical force, and then by rewards and punishments transform isolated acts into habits. This is probably all that is implied in the aphorism adopted by the training school: 'Train up a child in the way he should go: and when he is old, he will not depart from it.'

But this is not enough. If it were, we should not have got beyond the idea of virtue as a bundle of good habits. Many writers, among them Locke, are content to accept this view of moral training, at any rate in the earlier years. At this stage the young mind is regarded as incapable of reasoning: there can be no real thought about morals; the practice of virtue must precede the principles. It need not, of course, be denied that there is in life room for automatic virtue, not merely in bodily habits, but in those intangible influences that make up so great a part of moral and intellectual life. But such a virtue is a *terminus ad quem.* It explains nothing, and indeed increases the need for explanation. No system of moral training can recognize mere habit as the ultimate moral aim. If the soul becomes a mere self-acting machine, morality is impossible. We attach no blame to the dynamiter's clockwork.

Are we then driven back upon the Socratic 'Virtue is *knowledge*'? Can we not be moral without being consciously moral? The answer is Yes or No according to the time element involved. An act that is purely a reflex act is in itself unmoral, neither moral nor immoral; but the process by which a deliberate act has been changed into a reflex one is a moral process. Without making too much of the distinction, it may be maintained that all acts that are originated in the cerebrum are moral; those that can trace their origin no further back than the cerebellum are in themselves unmoral. Botanists tell us that at the tip of each budding twig there is a point at which all the cells that are generated come into being undifferentiated. In all the other parts of the plant the cells begin their existence with a definite bias: they are bast cells, or sap cells, or fibre cells, or cambium cells; they are that and can be nothing else. Only the undifferentiated cells at the growing point are fitted to become any sort of cell that the plant stands most in need of at the time. The part of our being that deals with new cases is our moral growing point. Most of our nature soon gets a set which is moral only from what it implies in the past; the real living morality must be looked for in the application of principles to new cases. In ordinary life, every time a drunkard gives way to his craving we believe that he is guilty of an immoral act, and hold him responsible for it; yet our condemnation should in fairness fall not upon the individual act, but upon the series of acts that rendered this individual act inevitable. It is true that the drinking habit hardly reaches the purely reflex stage, but in some cases it comes extremely close to it, and the closer it comes to this point the less the responsibility of the subject for each individual act.

Underlying all the theories of training is the fundamental assumption of capacity. We can train only within the limits of this assumed capacity. The relative importance of capacity and training, however, varies considerably in the theories of different writers. On the one side we have the Idealists, with their theory of development which places capacity in the very forefront; on the other we have the Atomistic school, which all but eliminates faculty in favour of training. According to Herbart, 'The soul has no capacity or faculty whatever, either to receive or to produce anything' (*Lehrbuch zur Psychologie*, Leipzig, 1851, § 152). This startling statement does not block the way of the educator so completely as at first sight appears: for what Herbart takes from the soul he gives to the ideas; and whatever may be the metaphysical and psychological rights of the matter, the educational process does not suffer. It is sometimes objected to Herbart that his educational theories cannot be deduced from

his psychology; but as a matter of fact his educational theories were elaborated before his psychological, and there can be little doubt that the needs of education had a great deal to do with the peculiar form his psychology took. Carried out to its logical issue, the Herbartian system of education implies the possibility of man-making not only on the intellectual but also on the moral side. As Locke demolished the theory of innate ideas, so Herbart demolished the theory of innate faculties. His educational system may not unfairly be said to be a process by which faculties can be supplied. His evolution of the will from the conflict of ideas really amounts to the creation of the will by circumstances if no educator deliberately interferes, or by the educator if there be one who cares to modify the interaction of the conflicting ideas. If, as Herbart maintains, 'Action generates the will out of desire,' there is evidently room in education for a more effective application of the maieutic art than even Socrates ever imagined.

The positions of the Herbartian metaphysic and psychology are untenable, but the educational applications are in themselves very useful, and are really not involved in the condemnation that their supposed foundation deserves. Herbart distinguished between mere instruction and 'educative instruction,' the distinction depending upon the nature of the connexions involved in the subjects taught. Those subjects that touch human life at the greatest number of points form the best kind of *Gesinnungsstoff*, as he names the material for educative instruction. In estimating the value of the Herbartian system, the mistake is commonly made of attaching too much importance to the purely intellectual aspect, sometimes even to the exclusion of the moral, though, as a matter of fact, the moral side bulked very largely in Herbart's mind. No doubt Herbart does attach very great importance to Knowledge as an educational organon, but no competent critic can read his educational work without at once seeing the moral implications of the system. The whole value of instruction, indeed, from Herbart's point of view, consists in its moral bearings. So far does he go in this direction that he has given rise to a great deal of indignation by his well-known saying, 'The stupid man cannot be virtuous.' A view of the Herbartian system as a whole makes it clear that he did not mean the word *stumpfsinnig* to be understood as referring to capacity, but rather to the use made of capacity, though it has to be admitted that the word is not the best he could have chosen to convey this meaning. He is continually emphasizing the need of supplying the mind with healthy ideas in order that a full life may be possible. We are too apt to set up a purely negative ideal of virtue. Our favourite moral axioms consist of prohibitions. Herbart is more inclined to demand positive goodness. His advice is not so much 'Avoid evil' as 'Do good.' The dull untutored man cannot be virtuous because he has not made the most of himself. He is not what he might have been. *Ignoti nulla cupido*, quotes Herbart, and the remark applies to good as well as to evil. All temptation in the last resort comes from within. We have here the psychological explanation of the saying, 'To the pure all things are pure.' The 'circle of thought,' by which Herbart means the organized content of the mind, determines the character of a man. If all Herbartianism could be gathered up into one sentence, that sentence would be: 'The will has its root in the circle of thought.'

At the present moment the great need of the Science of Education is a synthesis of the Herbartian and Froebelian systems, and signs are not lacking that such a synthesis is well within sight. Each supplies the defects of the other, each corrects the other's errors.

3. **History of education.**—From a certain point of view, the history of Education is the history of the development of civilization. All moral and intellectual progress results from educational processes that need not, however, be conscious processes. At the earliest stages of civilization, Education is confined to the ordinary influences of intercourse. The child is educated by the mere process of living. He learns by the reactions on his environment, and particularly by imitation, both in its positive and in its negative form. It is true that parents and other adults do at this stage give a certain amount of instruction to the growing child; but all this instruction is given with an immediate and definite aim, and has no intentional relation to the development of the character of the child. True education begins when the community attains to a sort of collective self-consciousness, and, as it were, turns itself back upon itself and takes itself in hand, with the deliberate intention of guiding development. The mere existence of schools is no proof that there is any attempt at education. These may exist only as a means of imparting a certain dexterity that will increase the value of the children to the community, or to some section of the community.

Since religion was the first of the social forces that led to a special organization, it is very natural that it should be the first to see the need of education. To secure the proper observance of religious rites, it was essential that there should be a body of skilled priests, and this body could be maintained only by a system of carefully selecting and training young men to take the place of those who succumbed to age or disease. Experience would show that the earlier the training began, the more effective it proved, so what began as a professional college gradually developed a sort of preparatory department. Two influences would at once begin to act in such a way as to keep the school and the college distinct. First, the priests would come to regard the school as an excellent means of sifting out all the characters that gave promise of proving good subjects for the religious life. It was obviously desirable, therefore, to mark off the school from the college by means of certain rites that came to be essential to full admission into the religious community. In the second place, it would soon be found that pupils who had gone through the school had benefited by the training, even though they had not been deemed worthy to enter the college. A desire would accordingly arise among the more ambitious parents that their children should share in the advantages of the school, even though there was no desire that they should take up the religious life. This tendency would be strongest where the Church was most powerful, and where the lay nobility was weakest. The connexion between the Church and Education is maintained throughout the ages, though the nature of the connexion varies according to the spiritual state of the Church. When the Church was predominantly a political organization, the schools became little better than technical colleges, preparatory to the clerical profession. When the Church reached a high spiritual level, the schools gave their attention to human beings in general, and became places to fashion the raw material of humanity into its noblest forms, literally *officinæ hominum*.

Of the history of Education among the primitive races we know very little with certainty. The only point that is quite clear is that Education has taken a form in each case determined by the prevailing ideals of the race. Caste in India,

Tradition and Ancestor-Worship in China, Dualism in Persia, Practical Common Sense in Egypt, all leave their mark on the kind of education adopted, and the lines along which it was developed. The Theocracy among the Jews, with its consequent enhancement of the value of the individual, resulted in a wide-spread popular education, which was fundamentally moral and religious, but did not neglect the purely literary side. From the Old Testament record we gather that among the Hebrews as a nation a knowledge of reading and writing was wide-spread, and in this respect they stand out in a most favourable light compared with their contemporaries. See EDUCATION (Jewish).

With the Greek States, we enter upon a new phase of the history of Education. Not only do we have written records of the actual state of education at the time, but we have more or less detailed discussions of the theory of education and of educational ideals. Among the Greeks generally, the individual was entirely subordinated to the State, the man was lost in the citizen. The subjects taught were classed under the two heads, Music and Gymnastics, corresponding generally to literary and physical training. For it must be remembered that Music among the Greeks included not only what we understand by that term, but also poetry, which in due course involved a knowledge of reading and writing and the literary arts generally, though, of course, those arts were cultivated in very different degrees in the different Greek States. Among the Thebans, for example, Gymnastics meant mainly the training necessary for war, and Music was limited to the attainments that gave a charm to the orgies they loved. The Spartans had higher ideals; but even among them the aim of Gymnastics was to give skill and endurance in warfare. The literary training was confined to the three R's, and some warlike Music. It is difficult to say under which head the peculiar educational subject of larceny is to be placed. Probably this form of training in dexterity and cunning is most fitly classed as Gymnastic. The training of citizens fell naturally into four periods: *childhood* at the mother's knee up to 7 years of age; *boyhood* up to 18, during which period the boys were at public training schools, but each had to have some grown man as his special friend and trainer; *youth* up to 30, during which time the young men were trained in the practice of war; *manhood*, during which they practised what they had been trained to do. It is to the credit of the Spartans that female education was fairly well organized in their State. Among the Athenians, the literary side received more attention, though Gymnastic retained its prominence, the recognized physical exercises being now grouped together in the *pentathlon*: running, leaping, quoit-throwing, wrestling, and boxing. The wider life of Athens, and the influence of the foreign element there, favoured the development of individualism. In his great educational work, *The Republic*, Plato sets himself to combat this individualism, and constructs an ideal scheme of Education in which the best elements of the actual Spartan and Athenian education are worked up into a system in which the individual is again overshadowed by the State. The Sophists, against whom Socrates was never tired of girding, were teachers rather than educators. They professed to communicate a certain amount of valuable knowledge rather than to form character. See EDUCATION (Greek).

This class of teacher became popular in Rome, which owed most of its culture to Greece. Among the Roman teachers were some notable men who deserve to rank as genuine educators. Chief of these is Quintilian, who, though his book professes to limit itself to the training of an orator, gives us a treatise on Education which Professor Laurie is inclined to regard as the best ever written. The Public Schools of Rome were secular and political, rather than religious; but with the introduction of Christianity a new system of education was established among the early believers, the main object of which was to enable converts to understand the new religion, and, if occasion favoured, to promulgate it. Hence arose the Catechetical Schools of the early Christians. By and by, the establishment of permanent places of worship led to the appearance of Monastery and Cathedral Schools, which were able to carry on the work of education after the fall of the Roman Empire. In the time of Charlemagne we find the value of Education recognized in the existence of a famous institution known as the Palace School. This was an itinerant institution which accompanied the Court in its wanderings, for the purpose of providing a suitable education for the sons of the nobility. Though probably not founded by him, it certainly attained its fame mainly through the intelligent patronage of Charlemagne. To him is also due the honour of issuing the famous Capitulary of 787, probably drawn up by Alcuin, then Master of the Palace School. This is a sort of general order sent to all the abbots of the monasteries under the great king, giving them his views on education, and his instructions regarding it. It has been described by Mullinger as 'perhaps the most important document of the Middle Ages,' and by Ampère as 'the charter of modern thought.'

The subjects taught in the mediæval schools formed the seven 'liberal arts.' They were divided into two groups, named respectively the *Trivium* and the *Quadrivium*. The 'trivial' arts were Grammar, Rhetoric, and Dialectics (the last corresponding to what we usually call Logic). The 'quadrivial' arts were Geometry, Arithmetic, Astronomy, and Music. These seven arts were held to include all that was worth knowing in the mediæval world. The first reference to the seven liberal arts, as matter of study or discipline, has been traced to Varro, but the credit of dividing them into the two groups is claimed for each of two writers—Augustine, and a certain Carthaginian named Martianus Capella. The truth probably is that Augustine made the distinction, while Capella, by his more picturesque style, called attention to and perpetuated it.

Universities as institutions were not founded; they really founded themselves; they grew out of the nature of things. The tendency of learned men to gather together for mutual help led to a process of segregation in suitable districts. No doubt in many cases favourable centres were found at certain schools connected with Cathedrals or Abbeys. In most cases the Cathedral School proved more attractive to learned men in search of intellectual freedom than did the Abbey School. A University was originally known as a *studium publicum vel generale*, but this phrase does not occur frequently till about the end of the 12th century. The *studia generalia* differed from schools inasmuch as they were meant for men. They were further distinguished by claiming and exercising the right of free teaching and free self-government. The teaching was not limited to students from one district or one country, hence the charter of a University had to come from one who had an authority recognized in different kingdoms. The only two such authorities in Europe were the Pope and the Emperor. To these, therefore, it became customary to apply for a charter to establish a new University, though some of the oldest and most famous Universities never had any charter, but claimed and exercised the privilege of granting to their graduates the *jus ubique docendi*

by right of old custom. The *studia generalia* were very early identified with specialized instruction. Indeed, the idea of a *studium generale* very soon included the possession of at least one of the higher faculties in addition to the Arts faculty, which in those early times corresponded really to a preparatory course for one of the three higher—Theology, Law, and Medicine.

Parallel with the education of the Monastery, the School, and the University, was that of the Castle, where, instead of the seven 'liberal' arts, were taught the seven 'free' arts—those of Riding, Shooting, Hawking, Swimming, Boxing, Chess-playing, and Verse-making. The contrast between the free and the liberal arts emphasizes the weakness of the *Trivium* and the *Quadrivium*—their unwholesome aloofness from the affairs of everyday life. The mediæval scholars, as scholars, held themselves jealously apart from the common things of life; they lived in a world of their own, in a world of abstractions. When we consider that for nearly five centuries the finest intellects of Europe were applied to the discussion of the question of the relation of the general to the particular, we can understand the peculiar intellectual atmosphere in which mediæval scholars lived. On its educational side the Renaissance manifested itself in a revolt against this arid scholasticism. The charge of bookishness is sometimes made against the Renaissance education, and it must be confessed that in some of its developments it afterwards yielded to the tendency towards abstraction which is inherent in most forms of teaching. But on its first appearance the Renaissance education valued books mainly for their contents and their general style. It was a later generation that fell into the slough of 'scholarship' and grammatical pedantry.

By the time of the Renaissance the writers and thinkers on educational questions had developed their subject so much that different schools of thought have to be recognized among them. A triple classification is frequently made, the divisions being into Humanists, Realists, and Naturalists. The distinction is based largely upon the nature of the material upon which the mind is exercised as a means of training. The Humanists are those who prefer language and other specially human functions on which to nurture their pupils. They did not, as a matter of fact, at first confine themselves to language, but rather treated language as one means among many of expressing human aspirations. Painting, Music, Sculpture, Literature, and all that had a direct bearing on human life and action formed the materials with which the Humanists dealt. It is only when the Humanistic view is carried to excess that it leads to the pedantry associated with the mere language drill condemned by Carlyle under the name of *gerund-grinding*.

(1) Among the most distinguished *Humanistic* educators was Vittorino da Feltre (1378–1446), a schoolmaster at Mantua, who exercised a very considerable influence on education in Italy. John Sturm (1507–1589) was the master for many years of a famous grammar school at Strassburg, where he elaborated a procrustean system of instruction, in which the amount of work for each year was absolutely regulated, so that to exceed the amount prescribed was as great an offence as to fall short of it. By his pedantry Sturm did a great deal to obscure the real merits of Humanism. The English Humanists, Roger Ascham (1515–1568) and Richard Mulcaster (1531–1611), exemplify a better form of Humanism, and it has been remarked that it would have greatly benefited the education of Europe if the example of Mulcaster had been followed instead of that of Sturm. When the Jesuits saw the political importance of education, and deliberately set themselves to become the teachers of the governing classes of Europe, they founded their teaching on a Humanistic basis. Their work has been variously estimated. Religious prejudice no doubt plays a considerable part in the criticism to which the Order has been subjected, but the general view appears to be that their teachers more or less deliberately sacrificed matter in favour of form. This did a good deal to bring Humanism into disrepute, since it was regarded as an elegant but useless basis of education. The 'little schools' of the Port-Royalists in France adopted a more satisfactory form of Humanism. Their main contribution to Education was an excellent series of text-books, some of which have only recently become obsolete. It is well known that the education supplied at the present day in our great Public Schools in England is mainly Humanistic.

(2) The *Realists* prefer things to words. They maintain that the Humanists spend their time in a mere vapouring with signs, while neglecting the things signified. Underlying the Realistic reaction was the educational principle, now universally recognized, that in learning we pass from the concrete to the abstract, and that we must learn by direct contact with the material of our study. The saying of the old schoolmen, *Nihil in intellectu quod non prius fuerit in sensu*, is nowhere better exemplified than in the work of a Moravian bishop, John Amos Comenius (1592–1671), who gave his long life almost entirely to the cause of education, though his basal interest lay in a scheme of pansophy which he never found time to develop. Some of his ideas were anticipated by a peculiar personage called Wolfgang Ratke (1571–1635), who in those early days believed he had made discoveries in Education that had a great commercial value, and who tried to make money by selling his educational secrets. Probably the best work of Comenius consisted in his introduction of the vernacular as a means of teaching, and his recognition of the national importance of Education. He proclaimed the importance of all kinds of schools, from the village school up to the University, and maintained that no educational system could be complete which provided merely for one class of the community. Comenius wrote and published many class-books. Although these exemplify many breaches of educational principle, they were much ahead of anything then available; and one book in particular, the *Orbis Pictus*—a small picture-book in which the exercises in speech are founded upon the pictures supplied—had a phenomenal success, being indeed the first illustrated book for children. In direct succession from Comenius comes the Swiss educational enthusiast, Pestalozzi (1746–1827), whose self-denying labours have done wonders for educational theory and practice. He succeeded more by his intense human sympathy than by either his knowledge or his intellectual capacity. His great principle was, as he maintained, to psychologize education; but his writings and his practice have done little towards this end. His follower, Froebel (1782–1852), extended and elaborated the Pestalozzian principles. He carried the plant metaphor of his master to its legitimate conclusion by establishing the Kindergarten system, in which the school is treated as a garden, and the children as the plants. Among quite modern writers the most prominent realist was Herbert Spencer (sometimes, however, classed as a Naturalist), whose little book on *Education*, though decidedly weak in certain directions (clearly indicated by Professor Laurie in a criticism to be found in his *Educational Opinion from the Renaissance*, 1903), has probably had more effect in

modifying public opinion on Education than any other publication of the Victorian period.

(3) The *Naturalists* lay less stress on the more subjects to be taught, and more upon the training supplied by life itself. Their aim is not so much to teach this, that, or the other subject as to bring the pupil into direct contact with life at the proper points, and thus enable him to work out his own education. Instruction is not lacking in the Naturalistic system, but it is not the only thing, nor even the most essential thing. The first Naturalist may be said to be **Rabelais** (1483–1553), who, as soon as he had escaped from his monastery, set himself in his more serious moments to the study of the possibilities of education in producing the kind of man that the world requires. His attitude is largely destructive, though in his *Eudœmon* (a well-endowed and well-trained youth used as a contrast to Gargantua) we find the ideal at which we ought to aim; and in certain passages we get fairly clear hints towards the method of attaining that ideal. The second Naturalist is **Montaigne** (1533–1592), who in the learned leisure of an easy life set himself to develop his theories of what education should be. **Locke** (1632–1704), on the other hand, went out of his way to publish a somewhat unmethodical and easy-going essay under the title of *Thoughts concerning Education.* In this we have the fruits of the observation of the medical man, the private tutor, and the philosopher. What the book lacks in system is more than made up for by its practical common sense and by its suggestiveness. **J. J. Rousseau** (1712–1778), in his pedagogical story of *Emile*, presents probably the most influential work on Education that has been written in modern times. He believes that man is by nature good and has been corrupted by civilization. The cry of the book is therefore 'back to Nature.' The educator must learn to lose time wisely, and to keep himself in the background, letting the educand develop in his own way. All initiative is to come from the pupil. **Fichte** (1762–1814), so far as he can be classified at all, must be ranked with the Naturalists. His claim to special notice is his famous *Reden an die deutsche Nation*, in which he deliberately set forth the claims of education as a regenerator of nations. **Goethe** (1749–1832) treated of Education as he treated of almost everything else. His contribution is to be found in the section on the educational province in *Wilhelm Meister*. This marks him out as Naturalistic. It was formerly customary for every German professor of Philosophy to deliver a course on Education, so most of the best known German writers on Philosophy have written something on the subject, Kant among others. At the present moment there is a prolific literature on educational subjects. While each country contributes to the general problem, each has acquired a specific character by emphasizing some aspect. Thus in the United States, Child Study and the relation of education to social life have received their fullest development. France has done exceptionally good work in tracing out the relations of temperament to education. In France, too, the educational applications of 'Suggestion' are best developed. Germany is specially strong in dealing with the philosophical bases of education, but has also given a great deal of attention to the methodology of the subject, particularly in connexion with the relation between the Froebelian and the Herbartian Systems. In Great Britain there is less interest in the philosophical bases, and the subject is usually treated in a more or less empirical way.

LITERATURE.—G. Stanley Hall and John M. Mansfield, *Hints towards a select and descriptive Bibliography of Education* (Boston, 1886); W. S. Monroe, *Bibliography of Education* (New York, 1897). These have naturally a strong American reference. E. P. Cubberley's *Syllabus of Lectures on the History of Education* (N.Y., 1902) is useful. In *National Education* (London, 1901), Laurie Magnus gives a very useful 'Bibliographical Note.' Reference may also be made to the catalogues of the various Educational Libraries, such as the Board of Education Library at the Whitehall Office, the Library of the College of Preceptors, the Teachers' Guild Library. There are some more or less commercial publications, such as the *Führer durch die pädagogische Literatur* (Vienna, 1879), that are not of much general utility. Of Educational Encyclopædias the following are the most important: Kiddle and Schem, *Cyclopædia of Education* (New York, 1877); Sonnenschein, *Cyclopædia of Education* (London, 1892); F. Buisson, *Dictionnaire de pédagogie* (Paris, 1882); Wilhelm Rein, *Encyklopädisches Handbuch der Pädagogik* (Langensalza, 1902). [This great work in seven large volumes is excellent.] Paul Monroe's five-volume *Cyclopedia of Education* published its first volume in 1911. On the development of Education, Letournean writes well in his *L'Évolution de l'éducation* (Paris, 1898). The two most comprehensive Histories of Education are the *Geschichte der Pädagogik* of K. v. Raumer (Gütersloh, 1902), and the *Geschichte der Pädagogik* of K. Schmidt (Köthen, 1876). Of a more popular character is the *Histoire de la pédagogie* of Gabriel Compayré (Paris, 1883). Both Raumer and Compayré appear in English translations. Friedrich Paulsen's *Geschichte des gelehrten Unterrichts* (Leipzig, 1896) is now a standard work. The Herbartian controversy is admirably treated by F. H. Hayward in his *The Critics of Herbartianism* (London, 1903). The chief writers on the Herbartian side are: F. W. Dörpfeld, *Denken und Gedächtnis* (Gütersloh, 1904); T. Ziller, *Grundlegung zur Lehre vom erziehenden Unterricht* (Leipzig, 1884); W. Rein, *Outlines of Pedagogics* (Eng. tr., new ed., London, 1899). The 'critics' of Herbartianism are represented by H. Wesendonck, *Die Schule Herbart-Ziller und ihre Jünger* (Vienne, 1885); E. v. Sallwürk, *Gesinnungsunterricht und Kulturgeschichte* (Langensalza, 1887); O. Hnhatsch, *Gespräche über die Herbart-Ziller'sche Pädagogik* (Wiesbaden, 1888); August Vogel, *Herbart oder Pestalozzi* (Hanover, 1893); P. Natorp, *Herbart, Pestalozzi, und die heutigen Aufgaben der Erziehungslehre* (Stuttgart, 1899). A good general book is P. Monroe's *Text-book in the History of Education* (London, 1905). French writers deal less specifically with Education; the following are typical works: M. J. Gnyau, *Education et hérédité* (Eng. tr., London, 1901); P. F. Thomas, *L'Education des sentiments* (Paris, 1898), and *La Suggestion* (Paris, 1898); Frédéric Queyrat, *L'Imagination* (Paris, 1896), and *L'Abstraction* (Paris, 1894); J. Payot, *L'Éducation de la volonté* (Paris, 1894); C. A. Laisant, *L'Education fondée sur la science* (Paris, 1904). Three French writers who have most profoundly affected the Science of Education, without directly writing upon it, are: Alfred Fouillée, *Tempérament et caractère* (Paris, 1895); Fr. Paulhan, *L'Activité mentale* (Paris, 1889), and *Les Caractères* (Paris, 1902); G. Tarde, *Les Lois de l'imitation* (Paris, 1895). In English there is a large and rapidly increasing literature on the subject. Herbert Spencer's *Education* (1861); A. F. Leach's *English Schools at the Reformation* (London, 1896); W. T. Harris's *Psychologic Foundations of Education* (New York, 1898); S. S. Laurie's *Institutes of Education* (Edin. 1900), and H. G. Wells's *Mankind in the Making* (London, 1903), are probably the works that have produced most effect on educational opinion. Educational theory is now becoming consolidated, and the results appear in such works as E. N. Henderson's *Text-book in the Principles of Education* (1910), and F. E. Bolton's *Principles of Education* (1911). The *Great Educator Series* (Heinemann) and the *International Education Series* (Appleton) contain some excellent contributions.

J. ADAMS.

EDUCATION (American). — **1. Primitive teachers.**—As elsewhere throughout the world, the teachers of children among the American Indians include the *father*, who early instructs his sons in the arts and activities which more especially concern the male half of the tribe; and the *mother*, who in like manner teaches her daughter the domestic activities and industrial arts belonging to women. The *grandfather* and the *grandmother* are also teachers, particularly of the mythic lore, tribal legends, wealth of story and proverb; and often certain other aged men and women devote themselves more or less completely to giving such instruction, so that they are practically professional teachers, such as we have among ourselves to-day. The *medicine-man*, or shaman, appears likewise as teacher, often in connexion with secret societies, for admission into which children are prepared at an early age. Other interesting phases of teaching in aboriginal America are the following, where in some cases a high appreciation of the value of the 'profession' is involved in the actions indicated.

(*a*) *The captive.*—It is a great mistake to suppose, as some writers have done, that in their wars savage and barbarous peoples refrain from killing

prisoners only to enslave or to debauch them. Even as

> 'The great Emathian conqueror bid spare
> The house of Pindarus, when temple and tower
> Went to the ground' (Milton, Sonnet viii.),

so many an uncivilized tribe spared the teacher amid the wild turbulence of strife. Woman's rôle as the mother and disseminator of so many forms of primitive culture, from ceramic art to the mysteries of religion, caused her, even in very remote ages of human history, to be thus spared; sometimes, too, when she was the apostle of the darker side of knowledge, she was feared rather than loved for her skill and cunning. J. W. Fewkes tells us that, when, in 1700, the Indians of the Pueblo of Oraibi, in New Mexico, took and destroyed the Pueblo of Awatobi (both settlements of the Tusayan people), the conquerors 'spared all the women who had song-prayers and were willing to teach them.' Among those saved was the *Ma-zrau-moñ-wi*, or chief of the Ma-zrau society, who declared her readiness to 'initiate the women of Walpi in the rites of the Ma-zrau'; and it was in this way that the observance of the ceremonial known as the *Ma-zrau* came to Walpi. We learn further that 'some of the other Awatobi women knew how to bring rain, and such of them as were willing to teach their songs were spared and went to different villages.'[1] The learning of men, too, made them safe amid the horrors of war, though not always so conspicuously as was the case with women. At the same conquest of Awatobi,

> 'the Oraibi chief saved a man who knew how to cause the peach to grow, and that is why Oraibi has such an abundance of peaches now. The Mi-çoñ-iñ-o-vi chief saved a prisoner who knew how to make the sweet *so-wi-wa* (small-eared corn) grow, and this is why it is more abundant here than elsewhere.'[2]

Captive women who married their captors have often been not merely teachers of individuals, but of families, clans, and even tribes. They have in not a few cases influenced the social customs and the religion of the peoples among whom their new lot was cast.

(*b*) *The pedlar.*—The pedlar, who survives now only in the more backward of our modern civilizations or on the fringes of the more advanced cultures of to-day, still retains traces of his former importance as an educator. He has often been quite as noted for his dissemination of intellectual wares as for the distribution of creature comforts or other material things. As O. T. Mason well says,

> 'itinerants and peddlers and tramps have marched about the world over, and men and women have been enslaved and wrecked. These have transported things and ideas and words. They have set up a kind of internationalism from place to place.'

These itinerant primitive 'tradesmen' are to be found among the American aborigines, where they served as dispensers of knowlege, distributors of tales and legends—in fact, as 'teachers' of a great variety of human lore.

(*c*) *The stranger and the foreigner.*—Among primitive peoples the stranger is often welcome, not because he brings with him good luck, fine weather, and the like, although such things also cause him to be happily greeted, but because he is a bringer of news. This characteristic is noted also among civilized races, particularly where they inhabit regions more or less cut off from the culture-centres of the world. Here the stranger really takes rank as an educator, being an important channel for the dissemination of knowledge of all sorts. Westermarck says: 'During my wanderings in the remote forests of Northern Finland I was constantly welcomed with the phrase, "What news?"'[3]

It is by no means true, as is often believed, that all primitive or uncivilized peoples are utterly averse to receiving knowledge from outside their own tribal bounds, and look with disfavour on any practical recruiting of their own intellectual resources from foreigners or strangers within their gates. In all probability, however, races, like individuals, have differed widely in their sense of receptivity, and in their attitude towards the exotic in all fields of human activity—mental, moral, social, and religious. What is true to-day of civilized races in this respect is true of the uncivilized peoples now existing, and we are justified in believing the same of their ancestors of the earliest human times. *Heterophilia* and *heterophobia* find their representatives at all stages of man's progress, from pre-historic 'savagery' to the culture of the twentieth century. Nor has the most progressive of modern nations exceeded some primitive peoples in eagerness to receive and absorb the new, the strange, and the foreign. Indeed, the same people, race, or even tribe may contain within itself these two diverse types, the neophobes and the neophiles—those who hate and those who love the new. Uncivilized peoples, likewise, are well acquainted with the condition of mind indicated by the famous couplet of Pope—

> 'Be not the first by whom the new are tried,
> Nor yet the last to lay the old aside'
> (*Essay on Criticism*, pt. 2, line 133 f.).

Among the American Indians, for example, all varieties of attitude towards the new and the reception of exotic objects and exotic knowledge can be found. Some of the Athapascan tribes of north-western Canada are extremely neophile. Some ethnologists (*e.g.* F. Boas) attribute this receptive attitude to lack of intensity of culture rather than to race.

2. Social institutions in relation to education.—Some Indian tribes, like the Kutenai, *e.g.*, have few, if any, secret societies and kindred social institutions; but with many other aboriginal peoples of America these abound, and children are carefully prepared for membership in them. These societies are of various sorts—social, political, religious, etc. In many of the tribal ceremonies and dramatic performances of the Indians, children have their regular rôles, for which they receive due training at the hands of their elders. As in some other parts of the globe, the advent of manhood and womanhood (see art. PUBERTY) is prepared for by much instruction of the young in special ways, among various American Indian peoples. Marriage, likewise, among many tribes has certain educational pre-requisites. Concerning the Omaha, one of the principal tribes of the Siouan stock, Miss Fletcher informs us (*27 RBEW* [1911], p. 330):

> 'In olden times no girl was considered marriageable until she knew how to dress skins, fashion and sew garments, embroider, and cook. Nor was a young man a desirable husband until he had proved his skill as a hunter and shown himself alert and courageous.'

3. Educational processes, institutions, etc.—The scope and general character of education among the American aborigines are thus described by Mason (*Handb. Amer. Ind.* i. [1907] 414):

> 'The aborigines of North America had their own systems of education, through which the young were instructed in their coming labours and obligations, embracing not only the whole round of economic pursuits—hunting, fishing, handicraft, agriculture, and household work—but speech, fine art, customs, etiquette, social obligations, and tribal lore. By unconscious absorption and by constant inculcation the boy and girl became the accomplished man and woman. Motives of pride or shame, the stimulus of flattery or disparagement, wrought constantly upon the child, male or female, who was the charge, not of the parents and grandparents alone, but of the whole tribe. Loskiel (*Mission of United Brethren*, Lond. 1794, p. 139) says the Iroquois are particularly attentive to the education of the young people for the future government of the state, and for this purpose admit a boy, generally the nephew of the principal chief, to the council and solemn feast following it.
>
> The Eskimo were most careful in teaching their girls and boys, setting them difficult problems in canoeing, sledding, and hunting, showing them how to solve them, and asking boys how they would meet a given emergency. Everywhere there was the

[1] *Amer. Anthrop.* vi. (1893) 366. [2] *Ib.*
[3] *MI* i. 581.

closest association, for education, of parents with children, who learned the names and uses of things in nature. At a tender age they played at serious business, girls attending to household duties, boys following men's pursuits. Children were furnished with appropriate toys; they became little basket makers, weavers, potters, water carriers, cooks, archers, stone workers, watchers of crops and flocks, the range of instruction being limited only by tribal custom. Personal responsibilities were laid on them, and they were stimulated by the tribal law of personal property, which was inviolable. Among the Pueblos, cult images and paraphernalia were their playthings, and they early joined the fraternities, looking forward to social duties and initiation. The Apache boy had for pedagogues his father and grandfather, who began early to teach him counting, to run on level ground, then up and down hill, to break branches from trees, to jump into cold water, and to race, the whole training tending to make him skilful, strong, and fearless. The girl was trained in part by her mother, but chiefly by the grandmother, the discipline beginning as soon as the child could control her movements, but never becoming regular or severe. It consisted in rising early, carrying water, helping about the home, cooking, and minding children. At six the little girl took her first lesson in basketry with yucca leaves. Later on decorated baskets, saddle-bags, bead work, and dress were her care.'

Miss Fletcher informs us that among the Omahas of olden times no 'baby talk' was in vogue; and special attention was given to the grammatical use of language. The Twana Indian children 'are taught continually, from youth until grown, to mimic the occupations of their elders' (Eells, *Bull. U.S. Geol. and Geogr. Survey*, iii. [Washington, 1877] 90). Among the Seminoles of Florida, 'no small amount of the labor in a . . . household is done by children, even as young as four years of age' (MacCauley, 'Seminole Indians of Florida,' in *5 RBEW* [1887], p. 498). With some of the Indian tribes of Guiana, 'while the women are shaping the clay, their children, imitating them, make small pots and goglets' (Im Thurn, *Among the Indians of Guiana*, 1883, p. 278). Among the Kato Pomo Indians of California, 'the chiefs, especially, devote no little care to the training of their sons as polyglot diplomatists,' and sometimes send them away from home to learn foreign dialects (Powers, *Indian Tribes of California*, 1877); the Mattole of California were reputed to give their children careful lessons in topography and geography of a primitive sort, resembling the excursion lessons now in vogue since the currency of 'Nature-study' in the schools of to-day in civilized lands. Among the Algonquians and other peoples of N. and S. America, professional story-tellers existed, whose business it was to instruct both adults and children in the mythic lore of the race. Forms of education corresponding somewhat to those in use among European peoples of the Middle Ages, including schools for special professions, existed among the more or less civilized peoples of Ancient Mexico, especially in connexion with the training of priests and nuns and attachés of the temples and similar institutions. Here we can speak of 'schools'—Mason (*Woman's Share in Prim. Cult.*, p. 208) even states that 'annexed to the temples were large buildings used as seminaries for girls, a sort of aboriginal Wellesley or Vassar.' There were seminaries for boys also. Barnes (*op. cit. infra*, p. 79) says:

'In ancient Mexico, the instructors were the priests, parents, and elders; the schools, the temples of the gods; the curriculum, careful courses in manners and morals.' Moreover, 'the method of instruction was didactic precept, and its aim the formation of an obedient, kind, submissive character.'

For several Indian tribes we have now interesting sketches of child-life (often of an autobiographical nature), which give many details as to the early education of the young of both sexes.

In Jenks' *Childhood of Jishib* is to be found a sympathetic account of the progress of an Ojibwa boy from birth to manhood, treating especially of his association with the animal world. For Indians of the Siouan stock (here the child's growth in primitive religious relationship with the *wakanda* or *manitous* is more or less emphasized) we have various writings of C. A. Eastman, himself of Indian descent, including his *Indian Boyhood* and *The Soul of the Indian*; also F. La Flesche's *The Middle Five*, and the writings of Miss A. C. Fletcher. The educational literature concerning the Pueblo Indians (with these peoples the effects of conservative sacerdotalism are much in evidence) is represented by Mrs. Stevenson's 'Religious Life of the Zuñi Child' (1887), and Spencer's 'Education of the Pueblo Child' (1889). The ceremonial education of the ancient Mexicans and the ritual of infancy, as recorded in some of the hieroglyphic manuscripts, have been treated by Hagar in his 'Four Seasons of the Mexican Ritual of Infancy' (1911), and Dr. and Mrs. Barnes in their brief article on 'Education as seen in Aztec Records,' based on Clavigero, Sahagun, etc.

4. Proverbs and sayings of pedagogical import.—Comparatively few American Indian proverbs are upon record (see Mrs. O. Morison, *op. cit. infra*, and Cushing's *Zuñi Folk-Tales*, N.Y., 1901). Instruction by 'wise proverbs' was practised by many Indian tribes, as, *e.g.*, the Omaha, amongst whom the old men of the tribe had long talks with boys and girls, emphasizing the need of good manners, consideration for others, industry, etc. These talks were illustrated with proverbs condensing and strengthening their significance.

5. Song and story as pedagogical material.—Amongst American Indians there are numerous instances of the more or less direct employment of song and story as pedagogical material for the young of both sexes. The great ritual songs and ceremonies of primitive peoples often contain sections that are directly pedagogical. Such, *e.g.*, are the 'parables' of the Pawnee Indians, concerning which Miss Fletcher, who has penetrated some of the deepest secrets of these American aborigines, says (*Indian Story and Song*, p. 30):

'Scattered through an elaborate ritual and religious ceremony of the Pawnee tribe are little parables, in which some natural scene or occurrence serves as a teaching to guide man in his daily life. . . . The words of the song are purposely few, so as to guard the full meaning from the careless, and to enable the priest to hold the interpretation as a part of his sacred treasure. They are sufficient, however, to attract the attention of the thoughtful; and such a one who desired to know the teaching of the sacred song could first perform certain initiatory rites, and then learn its full meaning from the priest.' In the *Hako*, which is 'a prayer for children, in order that the tribe may increase and be strong, and also that the people may have long life, enjoy plenty, and be happy and at peace,' a Pawnee ceremony celebrated 'in the spring when the birds are mating, or in the summer when the birds are nesting and caring for their young, or in the fall when the birds are flocking, but not in the winter when all things are asleep' (A. C. Fletcher, in *22 RBEW*, pt. 2, pp. 26, 23 f.), there are a number of these 'parables.'

In these 'parables,' or brief-worded songs, as interpreted by the *kurahu*, the genius of the Pawnee Indians, as we may term the high-minded and thoroughly human 'priest' of this tribe, who revealed to Miss Fletcher the true religion professed by his fathers, we get a glimpse into the mind of the aboriginal American in one of its most didactic moments.

Among the things condemned in Indian stories (as recorded by G. A. Dorsey, *Pawnee Mythology*) are: making fun of poor children by rich ones, making fun of or maltreating animals, betraying friendship, meddling with ceremonial objects, quarrelling of children (especially brothers and sisters), wandering away from home, too great pride, needless sacrifices to the gods, false reports of 'buffalo in sight,' etc. Things approved and recommended are: respect for poor boys on the part of rich girls, belief in success through continued effort, hope of greatness and power being attained, obedience to and reverence for the gods, taking care of one's clothing, attention to things while travelling, friendship among young men, high aims in life, marriage of the maiden of one's choice, kindness to birds, listening courteously to everything but not believing all one hears, recognition of the fact that a chief is not, by the mere fact of being such, a great man, and that a prophet is without honour in his own country.

It was upon such devices rather than upon corporal punishment (see CHILDREN [American]) that the American aborigines relied for the ethical results of manhood and womanhood.

LITERATURE.—Besides the material on the American Indian child-life and education to be found in the monographs on various tribes published in the Annual Reports, Bulletins, etc., of the Bureau of Ethnology at Washington, the Memoirs of the American Museum of Natural History (New York), and in the numerous ethnological publications of the Field Museum of

Chicago, the University of Pennsylvania, Harvard University, the University of California, etc., the following may be cited: E. and M. S. Barnes, 'Education as seen in Aztec Records,' in *Studies in Education*, 1896–7, pp. 73–80; F. Boas, *The Mind of Primitive Man*, N.Y. 1911, *Ind. Sagen von der nord-pacif. Küste Amerikas*, Berlin, 1895; D. G. Brinton, *Rel. of Prim. Peoples*, N.Y. 1897, *Amer. Hero-Myths*, Philad. 1882; D. I. Bushnell, Jr., 'The Choctaw of Bayou Lacomb' (*Bull. 48 BE*, 1909); A. F. Chamberlain, *The Child and Childhood in Folk-Thought*, N.Y. 1896, 'Indians, North American,' in *EBr*[11]; G. A. Dorsey, *Pawnee Mythology*, pt. 1., Washington, 1906 (Carneg. Inst. Publ., no. 59); C. A. Eastman, *Indian Boyhood*, N.Y. 1902, *The Soul of the Indian*, Boston, 1910; A. C. ALEXANDER F. CHAMBERLAIN.

EDUCATION (Buddhist).—To present a consecutive history of educational theory or practice among Buddhist peoples is hardly possible in the absence of historical records or material. It is probable that the practice, if not the theory, has varied much in different countries and at different periods of time. There is, moreover, no evidence at how early a date, or under what circumstances, the monasteries of Buddhism became in general centres of instruction and training, not only in the precepts and observances of religion confined to those who had entered upon the religious life, but in more secular branches of education and study. And, if the training offered has been within all recent years of the most elementary description, there is reason to believe that limitations of this nature have not always ruled—certainly in India and Ceylon, and also in the lands of the Further East. The eagerness with which the Chinese pilgrims and students during many centuries sought access to the great Indian schools of learning, and, for the sake of the advantages which they offered, were prepared to face the dangers and endure the privations of long and distant journeyings, is proof not only of the reputation, but of the real worth of these schools. They were in all probability carrying on an educational practice which they had inherited from Hindu ancestry and precedent. They worthily maintained, however, the legacy of regard for learning and zeal in its pursuit; and they seem to have extended its scope—if a safe inference may be made from the practice of later centuries—beyond the confines of the purely religious or philosophical to subjects of a more general and popular interest.

Buddhist literature, however, is silent with regard to all such practices and developments. Wholly dominated by the religious interest, and occupied with matters of doctrine and philosophical speculation, it is even less informing than is the Hindu with regard to matters of historical detail, of the constitution and condition of the lay community, and of the opportunities open to all to obtain the training in knowledge or the arts which would suffice for the needs of daily life. Independently of the monasteries, such educational opportunities did not exist. Nor indeed, so far as is known, have they ever existed in Buddhist countries until recent times, unless in isolated and exceptional instances. Secular as well as religious education was in the hands of the monks, who alone possessed, and had the leisure to impart, knowledge. It was the duty of the senior monks to teach; the subject-matter of their teaching was for the most part religious faith and doctrine; and in cases in which it went beyond these subjects it is not probable that the curriculum embraced at any time much more than the rudiments of general knowledge. There are traces also of the beginning of an industrial training on a small scale. Manual toil was honourable to the layman, and was an obvious necessity if he was to minister to the support of the numerous inmates of the monasteries.

I. *EARLY RECORDS.*—The writings of the Chinese Buddhist monks and pilgrims who visited India afford abundant proof of the active pursuit of learning there carried on, and the many opportunities for study. The purpose of their travels was to secure copies of Buddhist sacred books, which on their return to China were translated into Chinese; and for several centuries a close and active intercourse appears to have been maintained between the two countries with this object. The earliest of these students whose narrative has been preserved, Fā-Hian, was absent from home in the early part of the 5th cent. for a period of fifteen years, visiting the sacred sites of Buddhism. He remained for two or three years at a time at monasteries in Pāṭaliputra (Patna) and Tāmralipti (Tamlūk), and spent two years also in Ceylon. In all these places he occupied himself in study, and secured copies of Sanskrit and other sacred texts. Many of the monasteries were large, containing 600 or 700 monks; and he describes how students resorted to these centres of piety and learning in search of truth. In Northern India, by which is meant the Panjāb and adjacent districts, Fā-Hian found that all the instruction was oral, and the rules of the various Buddhist schools were transmitted only by word of mouth. Further to the east, however, the monasteries preserved written copies of the Vinaya, the Sūtras of the schools, and also the Abhidharma. The utmost freedom appears to have been permitted to him in every place, every facility being afforded for study and the copying of the manuscripts. Some of the Buddhist books he is said to have himself translated into Chinese after his return to China. There is also in his narrative a single passing reference to Nāla or Nālanda, the site near Gayā of the Buddhist monastery or university which in later years was so widely renowned. In Fā-Hian's time the place had apparently not yet attained the greatness or importance which subsequently belonged to it. He refers to it as a village a *yojana* east of Rājagṛiha, and the birth-place of Sāriputta, where also he died and was buried; but he makes no mention of the presence of monks or a monastery.[1]

About two centuries after Fā-Hian a second and more famous Buddhist monk from China, Hiuen Tsiang, visited India, and during a period of sixteen years (*c.* A.D. 629–645) travelled widely in Central Asia and the northern parts of India, returning home, at the close of his wanderings, by land across the continent without seeing the monasteries of Ceylon or the south, of which he gives a merely hearsay account. During the interval of two centuries there had been frequent intercourse and exchange of visits between India and China, but no record of the experiences of the travellers appears to have been preserved. The most striking feature of Indian religious life, as Hiuen Tsiang found it, was the revival of Brāhmanism, and the growth and extension of the

[1] *Record of Buddhistic Kingdoms*, ch. xxviii. Beal identifies Nāla or Na-lo not with Nālanda, but with Kālapināka, on the ground that the latter is stated by Hiuen Tsiang to have been the name of the place where Sāriputta was born (see *Buddhist Records of the Western World*, i. p. lviii, ii. 177).

Mahāyāna school of Buddhism accompanied with a decline in numbers and influence of the Hīnayāna. Numerous monasteries of both sects, however, existed, some with as many as a thousand resident monks, engaged in the study of the law and the discussion of questions of religion and philosophy. For example, at the 'Golden Hill' (*Hiraṅyaparvata*), a city on the Ganges, there were ten *saṅghārāmas*, with about 4000 priests, belonging for the most part to the Sammatīya school of the Hīnayāna. At Tāmralipti, also, there were about ten monasteries with 1000 monks; and similarly in many towns of which he makes mention. Hiuen Tsiang further records, as Fā-Hian had done, the continual movement of students from all parts of India to these centres of learning and interest.

The most important and flourishing school of Buddhist learning, however, was at Nālanda, identified by Cunningham with the modern village of Barāgāon near Gayā,[1] about nine miles from Rājgīr. Here there existed an ancient *saṅghārāma*, or monastery, built in memory of the Buddha, who had made the place his capital in a former existence; and numerous monasteries and temples, maintained out of the royal revenues, in which were several thousands of monks, of great distinction and fame, belonging to the eighteen principal Buddhist sects, engaged from morning to night in the study of the sacred books and the discussion of religious questions. Learned men from different cities resorted in large numbers to the schools of Nālanda for study and the resolution of their doubts and questionings. And the name itself was held in honour far and wide.

It is a proof of the intensive character of this love of learning, as well as of the power and influence of Buddhism, that Hiuen Tsiang reports the existence of a great monastery only about twenty miles west of Nālanda, with a thousand priests studying the Mahāyāna, the resort of scholars and learned men from distant countries.

In Central Asia also, Buddhism was possessed of a wide-spread influence. The devotion to learning and to the copying and study of the sacred books seems to have maintained itself for a considerable period. In his recent travels in the districts bordering upon China on the west, M. Aurel Stein found that the name and memory of the Chinese monk were still known and revered as of a scholar and saint.

In the latter part of the 7th cent. a testimony to the extension of Buddhist learning to Malaysia is given by a third Chinese traveller and monk, I-Tsing, who spent more than six years in Srībhoja, or Sumatra, engaged in the study of the law and the collection and translation of manuscripts, Sanskrit and Pāli. I-Tsing made his way to Sumatra and India by sea, sailing from a southern Chinese port in or about the year A.D. 671. His absence from home extended over a quarter of a century, during which time he is said to have travelled in more than thirty different countries, and to have brought or sent home to China four hundred Buddhist texts, of which after his return he himself, with the help of native Indian scholars who accompanied him to China, published translations of more than two hundred. I-Tsing gives a more detailed account of the manner of life in the monasteries and the doctrines of the different schools than either of his predecessors. And his narrative conveys the same impression of great activity of discussion and thought, and a wide-spread interest in knowledge, both religious and secular.

Within the boundaries of India itself the travels of I-Tsing were not so extensive as those of either Fā-Hian or Hiuen Tsiang. He spent, however, ten years at the university of Nālanda, which he describes as possessed of considerable wealth, receiving the revenues of land with more than two hundred villages—an endowment for which the monasteries were indebted to the generosity of the rulers of many generations. The monastic regulations at Nālanda were more strict than in other monasteries that I-Tsing visited, and the time and habits of the monks were all subject to rule. The hours of worship and work were determined by a clepsydra. Within the monastery itself there were more than 3000 resident priests, and the building contained eight halls and three hundred apartments. Besides the ordinary religious services of the monastery, the time of the monks was occupied in reading and stndy, and in the composition of religious poems and of expositions and commentaries on the sacred texts.

The course of instruction for boys began at the age of ten with the study of grammar, to which three years were devoted. This was followed by the reading of commentaries and works of a more advanced character on grammatical science, logic, and philosophy, which were all committed to memory. Thus far the course of study was alike for priests and laymen; and no one could claim to be well educated who had not made progress to at least this extent. The priests further studied works on the Vinaya, with the Sūtras and Śāstras. More than once I-Tsing compares the stages or attainments of the student with the several degrees of the Confucian scholar, and enforces the duty of unremitting study by the example of Confucius himself. The treatises of the Abhidharma were also made subjects of study; and public discussions were held, at which heretical opinions were considered and refuted.

It is evident that I-Tsing was imbued with a great respect for the learning, ability, and devotion of his teachers. Of one to whom he was indebted in his early years he writes that he was equally learned in both Confucianism and Buddhism, and was well versed in astronomy, geography, mathematics, and other sciences; and that he took the greatest pains in giving instruction, whether his pupil were a child or a full-grown and capable man. A second teacher was never wearied of teaching from morning to night. The personal attention and counsel which I-Tsing himself received from these and other men elicited his warmest gratitude.

With the cessation of intercourse between India and China, or in the absence at least of written records of such intercourse, direct evidence of the prosecution of Buddhist learning and of the study of the sacred books in the monasteries and at the courts of Northern India fails. There is no reason to believe, however, that the monasteries in any sense ceased to be centres of education and discipline, where facilities were to be found for literary study, and where the mind and habit were trained in the discussion of the theological and philosophical questions of the time. With the gradual decay and disappearance of Buddhism from India, its influence on literary culture and the thought and life of the people also passed away. To some extent, however, and in some centres, at least, it is probable that there were maintained to the end the tradition and practice of learning, and the devotion to study, which made the monasteries influential in forming

[1] *Ancient Geography*, 1870, p. 468; see *IGI*, *s.v.* 'Barāgāon.' The site has been marked for excavation by order of the Government of India. It is perhaps hardly probable that remains exist dating from as early a time as the visit of Hiuen Tsiang. In a note on the name and site (*JRAS*, 1909, p. 440 ff.), Bloch describes a statue of the Buddha still standing, with attendant Bodhisattvas, and writes that the modern name of the place would be more correctly spelt, as pronounced, *Bargāv*. The origin and meaning of the name Nālanda are uncertain.

the character and giving direction to the thought of successive generations of students. It is true that of the long lists of Buddhist authors and teachers which are recorded many of the names cannot be identified, and the date or even the existence of the writers is problematical; but the lists are nevertheless proof of the respect in which learning was held, and of the prevalence of a manner of life which gave opportunity for the cultivation of knowledge and rewarded its possessors.

There is sufficient evidence also that in Ceylon and Burma, no less than in India and China, and probably in other Buddhist countries, the literary tradition was well maintained. In Ceylon, in particular, the life and labours of Buddhaghoṣa (5th cent.) would have been impossible except on the basis of a well-established and long-continued practice and tradition of learning, which held literary pursuits in esteem, tested literary worth, and gathered together and carefully preserved the materials for literary study. How far during these early centuries of intense and fruitful monastic life the education and culture of the monasteries were in touch with, or influenced, the common people, it is impossible to determine. Perhaps not to any very great extent. The usage of later times, however, would indicate that, in some Buddhist countries at least, education was not confined to those whose lives were spent, or intended to be spent, in the comparative seclusion and leisure of the monasteries; that these last were in a real sense schools of general learning; and that in some instances, and possibly universally, where Buddhist control was sufficiently strong to enforce the rule, the entire population received a measure of education at the hands of the monks, all the boys being required by law or custom to pass a certain length of time within the walls of a monastery, and to submit to the discipline of a training in the elementary principles of knowledge. That the consequences of Buddhist zeal for knowledge, freedom of thought, and speculation were very great and beneficial, it is impossible to doubt. Alone of the great religions of the East, Buddhism stood for liberty of individual thought and action. To a high appreciation of knowledge for its own sake and to principles of generous tolerance the Buddhist faith owed in large part the influential position which it held so long among the nations of the East, and the attraction which it has never ceased to exercise upon minds of a more reserved and contemplative character.

II. *IN MODERN TIMES.*—In some Buddhist countries, notably in Japan and Burma, the tradition of scholastic learning and educational practice has been maintained in connexion with the monasteries down to the present time; and it is reasonable to suppose, although detailed proof cannot in the nature of the case be forthcoming, that the tradition has never been broken. Until the revival of interest in recent years, however, the education given had become increasingly perfunctory, greatly degenerate both in form and substance from what has been shown to be the zeal and habit of early days. The revival of interest in the sacred books and in Buddhist literature and teaching generally, which the closing years of the 19th and the beginning of the 20th cent. have witnessed in Ceylon and other countries, can hardly be counted altogether to the credit of Buddhism itself. In many, perhaps most, instances, it has been stimulated by external influence and example, and has often been inspired by a polemical aim, to counteract the growth and progress of Christianity as an alien religion. A real literary and historical interest has by no means always been wanting. The initial impulse, however, has been supplied by the West, widely as it may have been fostered and extended by native industry and research. These movements, at their present stage at least, hardly enter into consideration as contributions to the history or practice of Buddhist education. Where, as in Ceylon, they are under Buddhist and priestly control, they are imitative of Christian procedure in missionary and other schools, and have as their primary and avowed aim the counteracting of Christian propaganda, which they seek to meet with its own weapons. Elsewhere, as in Japan, the education is national in the fullest sense of the term, and Buddhism shares in it only as it has become and remains part of the national life. The following brief survey, therefore, of modern practice and achievement in regard to education in Buddhist countries takes account as far as is possible of what has been or is being done by native effort alone, independently of suggestion or pressure from the outside.[1] It should be added that there is nowhere any trace in Buddhism of a secular system of education, that is, of one independent of the monasteries or conducted by laymen. The monks have apparently always been the sole teachers, as they have been without exception the sole custodians, of sacred learning.

1. **Ceylon.**—In Ceylon systematic instruction is given in the monasteries to both monks and laymen. There are, further, two native Buddhist societies, the Theosophical and the Mahābodhi, which possess schools at which children receive instruction; and others have been established under local or private management. The stimulus to this extra-monastic educational work, which is all of recent date, has undoubtedly been given by European incentive and example. To the same cause, and to the desire to retain in their own hands the religious control of their children, are due the numerous Buddhist Sunday schools in the island, at which the subjects of instruction are, of course, purely religious. In the monastery schools the senior monks undertake the office of teacher, not necessarily but of choice. They receive no stipend, but in many instances gain a wide reputation and influence. In the other schools salaried lay teachers are employed. Both monks and laymen teach in the Sunday schools, but the latter are always understood to be men of proved knowledge of the Buddhist scriptures. The ordinary schools come under Government control, and receive a grant-in-aid. In the latest year for which statistics are available, about 30,000 children were thus being trained in Buddhist aided schools. In these the subjects of instruction are necessarily those of the Government Code; but in addition a catechism of Buddhist doctrine is taught, and the life-history of Gautama Buddha himself is studied. In the monastery schools the education is, as a rule, entirely religious, but includes a knowledge of the sacred languages, Pāli and Sanskrit, and also classical Siṅhalese (Elu); in some instances astrology is included in the curriculum, and the elements of a science of medicine. Attendance at the Sunday schools is entirely voluntary; and, in addition to Buddhist doctrine, ethical teaching of a more general character is given. Apart from Government aid the Buddhist schools are supported by the gifts and liberality of the Buddhists themselves.

The Government of Ceylon has recently adopted a system of compulsory elementary education, but as yet (1911) it has hardly had time to become completely effective. Probably it is correct to state that about 60 per cent of the children of school-going age are in actual attendance at school. It

[1] Grateful acknowledgment is here made of information and help received from many correspondents in the different lands where Buddhism prevails. Without such aid, freely and generously afforded, the following account could not have been written.

has proved less difficult in general to carry out the ordinance in the country districts than in the towns; and greater progress in this direction has been made in the Southern Province than in the Northern. The system tends, and will increasingly tend, to eliminate private schools, whether belonging to the Buddhist or to any other community.

The general estimate of the moral influence of the education given does not seem to be high, especially of that in the monasteries. The deficiency is ascribed to the character of the teachers employed, in many of whom a lack of moral fibre and strength communicates itself with injurious effect to their scholars. With the monastic schools under present circumstances it would be impossible to interfere; but elsewhere it would seem that it ought not to be difficult to apply a remedy. The pride and power of Buddhism have been in her ethical system. And a practical failure in this direction would be a confession of failure in the whole.

The education of the girls, as in Eastern countries generally, is greatly deficient as compared with that of the boys. In the monasteries, of course, only boys and young men are received and taught. To the other schools and to the Sunday schools both boys and girls are admitted, but the latter form a small minority. Nor do any nunneries exist, as in other Buddhist lands, with the exception of a recent establishment near the centre of the island, in which an education and training might be given to Buddhist girls, parallel with that which is offered freely to all the male population in the monasteries.

2. **Burma.** — Buddhist educational practice in Burma has been more systematic and complete than in Ceylon, although perhaps hardly more advanced. Instruction is given in connexion with all the monasteries by the senior monk *hpongyī*, a title frequently given by courtesy to all monks in Burma, but properly restricted to the senior monks of more than ten years' standing; from among these the abbot or head of the monastery is selected, and is known as *sayadaw*, 'royal teacher'; and he is assisted usually by one or more probationers, *upasins*, unordained monks who are still in their novitiate. Before the country came under British control, with the consequent establishment of a system of independent vernacular schools under lay teachers, the whole male population of Burma passed through the monasteries, and for a longer or shorter period of time received instruction at the hands of the monks. Every Burmese boy entered the *kyaung*, or monastic school, at an early age, and remained for some years resident in the monastery. If it was intended that he should return to the life of a layman, he left school at the age of twelve or earlier, having, in addition to religious instruction, been taught reading and writing and the elementary rules of arithmetic. The boys who were designed for a monastic life remained permanently in the monasteries, and received further instruction in the Vinaya and Abhidharma, and later also in the Suttas. In the ordinary curriculum the religious teaching was confined to the life and sayings of Gautama and the stories of his previous existences (*Zats*, 'Jātakas'); the latter were committed to memory, and also a few simple prayers and hymns of praise in Pāli.

The establishment of Government and mission schools has had the effect of withdrawing the boys to a great extent from the monastery schools; and of those who have never been resident in the *kyaungs*, but have received their entire education in other institutions, it is generally true that through life their knowledge of, and attachment to, Buddhist rule and doctrine are of a much less marked character than is the case with most of their fellow-countrymen. In some instances also the *kyaung* serves the purpose of a preparatory discipline, and after three or four years at the monastery the boys pass on to complete their education at a school under Government or mission control. It is still true, however, that the great majority of the people owe their training and knowledge to the monasteries. The last Census Report states that 95 per cent of the whole male population of the country is literate, and this result must be ascribed almost entirely to the monastic teaching. Within recent years attempts have been made from without to raise the standard of the monastic schools, and those that have been willing to submit themselves to Government inspection and accept the Government conditions and code have been placed on the list for a grant-in-aid. These overtures, however, have been received with a measure of reluctance and suspicion; and no great progress has been made. As in Ceylon, and under the influence of similar motives, a few independent Buddhist schools have been founded on native initiative, where instruction in Buddhist doctrine and practice takes the place of the Christian teaching in the schools established by missionary agencies.

That the general effect upon the Burmese nation of the monastic instruction in the past has been beneficial there can be little doubt. The results of the system were twofold. Although the teaching was very elementary, and, as regards the lay portion of the population, ceased at an early age, it nevertheless imparted a character and tone of literacy, and placed the whole people on a higher level of interest and knowledge. No Burman need be, or as a rule was, entirely ignorant. He was at least able to read and write. And thereby, both by the mental discipline and by the stimulus to sympathy and thought, his outlook was widened and opportunities were afforded of further development of mind and character. The cumulative effect of a universal training in the elements of knowledge, perpetuated and enforced by custom and religious sanction through many generations, although it might not carry the individual very far, could not but exercise a broadening and elevating influence upon the nation as a whole. The Burman stands, and has stood, on a high level as compared with most of the surrounding peoples who are probably of the same origin and kin. And it is reasonable to place a part at least of his progress and superiority to the credit of his schools.

The second result has been on the side of ethics and religion. The teaching of the monastic schools has tended powerfully to the support of the national Buddhist faith. Every Burmese boy was instructed in the history and doctrines of Buddhism, and left school with a more or less intelligent knowledge of the principles of his religion, and a reverence for its ideals. The 'three jewels'—the Buddha, the Law, and the Community (Buddha, Dharma, Saṅgha)—represented a reality to him; and his sympathies and interest were enlisted at the most impressionable age in favour of the interpretation of life and duty which Buddhism offered. The hold of the Buddhist religion upon the heart and thought of the people has been very greatly strengthened thereby, and the faith itself preserved in comparative purity. Morally the teaching has not perhaps exercised the restraining influence that might have been expected. At the present day the evil example and the low standard of living of many of the monks counteract the good effects which might have been anticipated from the lofty theory and precepts of ethics which Buddhism inculcates. It is probable that in early times the moral power of

the religious teaching of the schools was greater, less embarrassed and thwarted by the inconsistent lives of the monks themselves. It has, moreover, been preservative of much that is good in the national life, and through all has declared a standard of correct living, and has promoted and maintained a national consciousness of right and wrong.

Until the establishment of British rule no systematic instruction was provided for Burmese girls, as for the boys in the monastic schools. Nunneries, however, existed, and an order of nuns, *methilah*, but they were comparatively few in number and of little knowledge or influence. Part of their duty was to visit the women in their homes and give religious teaching. In a few instances also schools on a small scale were established in connexion with the nunneries, where an elementary education was offered on similar lines to that of the monasteries. There was no regular system, however, and it appears to have depended on the inclination or caprice of the nuns themselves whether any teaching work was undertaken. Little is done in this direction at the present time. Since the introduction of British Government, lay schools for girls as well as for boys have been established in considerable numbers under native Buddhist auspices, and these are found frequently in competition with the Government or mission schools. The work done in them is of a similar character, and the curriculum is the same as in the schools for boys. The standard also of effectiveness is being raised under the stimulus of competition and the influence of example, and in larger numbers the teachers employed are of certificated rank.

3. In Annam and Cochin China native schools are found widely distributed in some instances, but apparently they have had no direct relation to Buddhism. In Sikkim also and the Buddhist States on the north and north-east border of India the monks occasionally undertake the duty of giving instruction, or gather around them a few pupils as opportunity offers. There exists, however, no system or rule, and the occasional practice can hardly be regarded as having exercised any appreciable influence on the character or capacity of the people.

4. China.—The Buddhist zeal for learning, which was dominant in China in the early centuries, appears to have been entirely lost at the present time. The monks themselves are almost without exception uneducated and ignorant men, who are not held in any respect by the people, and are incapable of giving instruction in any real sense of the term, even if they possessed the will. There are, therefore, no native Buddhist schools in which a directed and definite attempt might be made to inculcate the principles of religion or to spread knowledge. The education of the country is entirely Confucian and based upon Confucian ideals (see EDUCATION [Chinese]), with which the Buddhist monks have no concern; and the children trained in the national schools learn to regard the monks with indifference and even contempt. Within recent years large numbers of the monasteries have been reclaimed by the Chinese Government, to be used as secular schools on modern lines, and the monks have been ejected.

Within the monasteries also the training given to the novices has been of the scantiest description, and confined to almost elementary necessities. For the most part the pupils who entered the monasteries with a view to the monastic life were drawn from the lowest classes of the population. They were, therefore, as a rule possessed of little aptitude or desire for learning. The usual vows are imposed, and the pupils are then taught by the abbot or senior monk sufficient to enable them to take their part in the general services and ritual of the monastery and in the recitation of masses. Beyond this the training seems never to go. The result has been, and is, that among a nation by whom learning is held in high honour the Buddhist monks as a class are despised, and they exercise no influence for good. Buddhist nunneries also exist; but the nuns no more command the respect of the people in general than do the monks. Novices are received in the temples and undergo the usual ceremonies of initiation, with shaving of the head; but no schools for girls are found in connexion with them, nor are any of the nuns definitely engaged in teaching.

The revival of interest in Chinese Buddhist literature on the part of some native scholars is due almost entirely, as in Ceylon, to example and incentive from the West. The literature is very extensive, and consists of translations of sacred books made from the Sanskrit or Pāli, of many of which the originals are no longer extant. It is, therefore, of the greatest value from the point of view of Buddhist doctrine; but it has been almost entirely neglected by the Chinese people themselves in favour of the Confucian Classics, and has exercised no educative influence upon the nation at large, or been a source of moral or religious progress of any kind. Buddhism in China, in contrast to its attitude and standing in some other countries, seems to have been overcome by mental and spiritual inertness and lethargy, and to have long ceased to be an element of account in the intellectual life and history of the nation.

It is not without interest, also, to note that the defective condition of Buddhism in China has aroused the sympathy of some of the more active and spiritually minded Buddhist churches of Japan. Proposals have been made to send Buddhist missionaries from Japan to open Buddhist mission schools in China, where a free training should be given to the children of the poor, with the object not only of extending a true knowledge of Buddhist principles and teaching, but of promoting civilization and education in general. It is very probable that thus, and in other ways, the newly awakened readiness in China to admit Western learning and instruction from without will show itself in a revived interest in and appreciation of a faith to which the people and land have owed much in the past, and the present atrophy and neglect be followed by a period of awakening and activity.

5. Japan.—In the larger sense of the term, Japan owes more educationally to Buddhist influence and instruction than perhaps any other nation, with the possible exception of the Burmese; and the Japanese have shown greater power of assimilation of teaching and example, both intellectual and moral. B. H. Chamberlain, whose knowledge of 'Things Japanese' was unrivalled, writes:

> 'All education was for centuries in Buddhist hands; Buddhism introduced art, introduced medicine, moulded the folklore of the country, created its dramatic poetry, deeply influenced politics and every sphere of social and intellectual activity. In a word, Buddhism was the teacher under whose instruction the nation grew up.'[1]

The same writer adds that Japanese scholars are usually forgetful of the fact of the paramount influence of Buddhism during the early and formative centuries of the national life. That influence has been deep and strong and lasting. And, although Buddhism as a religion was disestablished and disendowed in Japan forty years ago in favour of Shintoism, its moral teaching and ideals, which are those of the Mahāyāna school, remain effective, and are probably increasing their

[1] *Things Japanese*[3], London, 1898, p. 71 f.

hold upon a large proportion of the more thoughtful minds of the nation. As a formal religion, Buddhism is now to a considerable extent ignored in Japan, and is not likely to re-assert an extended sway. During the twelve or thirteen centuries, however, of her more or less continuous ascendancy, the Buddhist missionaries were the instructors of the nation in every department of learning, and the leaders in all progress; and they have left a deep and permanent mark upon almost every department of the national life. In no country, not even in Ceylon or Burma, has Buddhism had a greater opportunity, or made a more effective and, on the whole, beneficent use of the opportunity put into her hands.

The details of the educational history it is impossible to trace in the absence of direct evidence or of documentary records. Buddhism was introduced into Japan from Korea in the middle of the 6th cent.; and it is probable, therefore, that Korean monks took a large part in the preaching and dissemination of Buddhist principles. Korean civilization was itself, however, of Chinese origin, and was wholly, or almost wholly, exotic. Although it entered Japan by way of Korea, it was essentially Chinese in method and character, and Chinese teachers took the lead in conveying to the people both the Buddhist religion and a knowledge of the arts and sciences which it had made its own in the land from which it was derived. What might have been the effect of the introduction of Chinese civilization apart from the refining and gentle influence of Buddhist teaching it is impossible to determine. The two were intimately conjoined. And the latter was the agent or medium through which the former reached the hearts of the people, and moulded their habits and lives.

Before the opening of Japan there existed schools taught by the monks, known as *tera-koya*, 'temple-huts.' They were not universal, or in connexion with every monastery; but that they were to be found in effective working in most parts of the country is proved by the fact that nearly all the male population were able to read. Attendance at these schools was entirely voluntary, and it is probable that the education given did not, in the country districts at least, go much beyond the elements of reading and writing. There were also schools open for girls, which were, it may be assumed, always under the direction of nuns. As a result of these schools a large proportion of the women under the old régime in Japan were literate in the sense of being able to read. In more recent times the system of national education, with compulsory attendance in the primary grade schools from the age of six to the age of twelve years, has for the most part superseded these schools, which find it difficult to maintain themselves in competition with the Government institutions. A few remain, chiefly for the benefit of the poorer classes; and some Buddhist schools of a higher grade have been established, supported by private interest and contributions. In these lay teachers are employed as well as monks. The total number, however, is small, and their influence upon the general education of the country is very restricted; for the Government system is so complete in its provision for education, from the lowest grade to the highest University and post-graduate requirements, that there is little room or opportunity for private enterprise. The curriculum of the schools in secular subjects conforms to that of the Government regulations. In addition, Buddhist doctrine is taught—probably in no instance to any great extent—and the principles of Buddhist morality are inculcated. There are also a few girls' schools of this class, but they have little or nothing to do with the nunneries, and the nuns do not teach in them.

In all the monasteries, provision is made for the training of the younger monks in Buddhist doctrine and practice. The sacred books are studied and expounded, and the principles of the faith explained and enforced. Many of the monks are men of considerable learning as well as of piety. An increasing interest also is taken in the history and tenets of the various sects; and in no direction has the tendency to a religious revival shown itself more clearly than in the emphasis laid upon the devotional and spiritual element in the teaching of the Buddhist books. In the country districts there has been little movement or awakening of interest. In the larger towns, however, partly no doubt with the polemical aim of counterworking Christian teaching and the influence of Christian missionary schools, a considerable increase of zeal and activity has been manifest, which endeavours by direct instruction, as well as by the Press, to confirm the principles of the faith in the minds of the people. And the monasteries have become, at least in some instances, centres of religious thought and of a real literary culture, which cannot fail to be of influence on the nation.

Buddhist *Kindergarten* schools also exist, but in no great numbers. The suggestion of these has been adopted from the Christian missionary institutions, and both in form and methods the model of the latter has been followed. Within the limits of age and training there is naturally hardly any opportunity for distinctively Buddhist teaching, although the schools are under Buddhist control. In some instances Christian instructors have been employed, in view of their superior technical capacity and knowledge.

6. Korea, etc.—In countries where Buddhism has been a secondary influence, at least in recent times, as in Tibet, Korea, Manchuria, and Mongolia, it is not easy to determine how much of educational practice and the teaching of the young, where this has been carried out at all, has been due to Buddhist example and effort. Training in doctrine and ritual is always given in the monasteries to the younger monks and novices, and usually includes a knowledge of at least the elements of reading and writing. It is hardly probable that in any of these lands the education was carried beyond the most elementary stage. During the most flourishing period of Buddhism in Korea, from the beginning of the 10th to the end of the 14th cent. of our era, all learning was concentrated in the hands of the monks, and politically, as well as ecclesiastically, their influence was dominant. They cultivated the sciences and shared in the government of the country, using the power and prestige of knowledge to secure temporal advancement. There was no attempt, however, to extend the advantages of learning to the laity, or any evidence that the schools of the monasteries were open to others than the resident monks and novices. In Siam also learning was cultivated, and in recent years has revived under royal patronage. It was confined, however, to a minority; and its influence upon the nation as a whole was small, although it undoubtedly tended, as in Burma, to the preservation of Buddhism as the national religion and a permanent force in the national life. Astrology and magic also in some instances, especially in Tibet, have entered into the curriculum. But the introduction of these has been due not to Buddhism but to the primitive Nature or other worship upon which Buddhist forms and doctrine were imposed.

Under ordinary circumstances there did not exist in any of these countries a system of educa-

tion for the Buddhist laity. Individual monks might, and probably did, gather around them a few pupils, to whom of their own free will they imparted elementary instruction, teaching them out of the limited store of their own knowledge. The practice, however, was infrequent, and seems to have entirely died out. The almost universal condition of comparative ignorance and neglect is, indeed, in striking and not pleasant contrast to the habit and life of the early centuries, when, in Central Asia at least, the Chinese travellers make reference to a stirring intellectual life in the large cities, and monastic establishments on a considerable scale with eager students of the Buddhist writings. It is evident that the influence of Buddhism was at that time much greater than at the present day, and was exerted in the direction of literary culture and pursuits. Recent discoveries by M. Aurel Stein and others have tended to corroborate the Chinese accounts of the flourishing condition of the Buddhist faith.

The conclusion to be drawn from a survey of the whole is that, with the exception perhaps of Burma, the early efforts of Buddhism for the promotion of educational training and advancement have not been maintained. Japan ranks next to Burma in regard to the degree in which Buddhist discipline and intellectual training have continued to exercise a real influence upon the general population; and it is far in advance of Burma in the richness and variety of its intellectual interest. Ceylon is overshadowed by the antagonistic influence of the religions of India; but partly for that reason, partly in opposition to the religion of the West, Buddhism is there making a great effort to free itself from foreign admixture, to re-establish the purity of its own teaching, and to keep and strengthen its hold upon the thought and training of the young. It is, indeed, too early as yet to determine, or even to forecast, what the effect will be of the religious revival within Buddhism. It is not a little remarkable that after a long period of stagnation and decay there is an almost universal awakening on the part of Buddhists themselves to an interest in their own history and doctrines, and a zeal for the maintenance of the faith, and even for its extension amongst foreign peoples. Nor is the movement by any means confined in the East to Buddhism alone. The efforts of the latter, however, are more markedly on the lines of a literary culture and the education of the mind and thought. Such an appeal, made on behalf of an ancient faith with a widely renowned and honourable past, cannot fail to command sympathy and respect, even among those who believe that the practice and discipline of the faith are inconsistent with the best interests of mankind, and its teaching out of harmony with the highest truth.

LITERATURE.—There is not much literature that can be cited upon the subject of education in Buddhism, and there is no work that attempts to give a connected view of the whole. The narratives of the Chinese monks have all been translated into English as follows: Fā-Hien, *Record of Buddhistic Kingdoms*, tr. J. Legge, Oxford, 1886; Hiuen Tsiang, *Si-yu-ki, Buddhist Records of the Western World*, tr. S. Beal, 2 vols., London, 1906, also *Yuan Chwang's Travels in India*, tr. T. Watters, 2 vols., London, 1904–1905; I-Tsing, *A Record of the Buddhist Religion*, tr. J. Takakusu, Oxford, 1896. Works on Buddhism in the various countries usually contain more or less detailed reference to the training of the monks, *e.g.*, R. S. Copleston, *Buddhism in Magadha and Ceylon*[2], London, 1908, pts. v. and vi.; H. Kern, *Manual of Indian Buddhism*, Strassburg, 1896, pp. 73–85; Shway Yoe, *The Burman, his Life and Notions*[3], London, 1910, chs. iv., xii., xiii.; H. Hackmann, *Buddhism as a Religion*, London, 1910, *passim*; W. E. Griffis, *Corea, the Hermit Nation*[7], London, 1905; J. H. Langford, *Story of Korea*, London, 1911; M. Aurel Stein, *Ancient Khotan*, Oxford, 1907, and *Ruins of Desert Cathay*, London, 1912. The recent policy and practice of education in Japan are most fully expounded by Baron Kikuchi, *Japanese Education*, London, 1909, where will be found also references to earlier practice, p. 83, chs. x., xiii., etc. The Governments of Ceylon, Burma, and Japan issue annual reports on education, which are the authoritative statements in the several countries. See also the artt. on BURMA AND ASSAM (Buddhism in), CEYLON BUDDHISM, CHINA (Buddhism in), etc.

A. S. GEDEN.

EDUCATION (Chinese).—As no nation can vie with China in the alleged antiquity of her literary origins, so perhaps no nation surpasses her in the importance attached throughout her history to education.

'If he [a ruler] wish to transform the people and to perfect their manners and customs, must he not start from the lessons of the school? The jade uncut will not form a vessel for use; and, if men do not learn, they do not know the way (in which they should go). On this account the ancient kings, when establishing states and governing the people, made instruction and schools a primary object' (*Li Chi*, xvi. 1f. [*SBE* xxviii. 82]). 'Without education the nature deteriorates.' 'If in youth one does not learn, how will he do when he is old?' (*Three Character Classic*).

From these quotations it is already evident that, as is right, education is taken to mean more than the imparting of knowledge. Its aim is the formation of character so as to fit a man to play his part in society, and more particularly in State employment. Previous to the T'ang dynasty (A.D. 618), 'letters were valued solely as an aid to politics, and scholarship as a proof of qualification for civil employment'; and, if in later times 'letters began to assume the position of a final cause,' still civil employment was the incentive proposed. Of the four classes into which Chinese society is divided—scholars, agriculturists, artisans, and traders—scholars take precedence. But for the word translated 'scholar' the dictionaries give the meanings 'officer, soldier, minister, learned man, scholar, gentleman'; and 'gentleman' perhaps best covers all that a Chinese scholar should be. The ideal scholar is thus described:

'Early and late he [the scholar] studies with energy, waiting to be questioned. . . . The scholar's garments and cap are all fitting and becoming; he is careful in his undertakings and doings; . . . he seems to have a difficulty in advancing, but retires with ease and readiness; and he has a shrinking appearance, as if wanting in power.' He guards against death, that he may be in waiting for whatever he may be called to; he attends well to his person, that he may be ready for action. 'With the scholar friendly relations may be cultivated, but no attempt must be made to constrain him; . . . he may be killed, but he cannot be disgraced; . . . he may be gently admonished of his errors and failings, but he should not have them enumerated to him to his face. The scholar considers leal-heartedness and good faith to be his coat-of-mail and helmet; propriety and righteousness to be his shield and buckler; he walks along, bearing aloft over his head benevolence; he dwells, holding righteousness in his arms before him; the government may be violently oppressive, but he does not change his course—such is the way in which he maintains himself. . . . If the ruler respond to him, he does not dare to have any hesitation (in accepting office); if he do not respond, he does not have recourse to flattery. . . . The scholar lives and has his associations with men of the present day, but the men of antiquity are the subjects of his study. . . . The scholar learns extensively, but never allows his researches to come to an end; he does what he does with all his might, but he is never weary. . . . The scholar, when he hears what is good, tells it to (his friends); and, when he sees what is good, shows it to them. . . .' Gentleness and goodness, respect and attention, generosity and large-mindedness, humility and courtesy, the rules of ceremony, singing, and music, these are the qualifications and manifestations of humanity. 'The scholar possesses all these qualities in union, and has them, and still he will not venture to claim a perfect humanity on account of them—such is the honour (he feels for its ideal), and the humility (with which) he declines it (for himself). The scholar is not cast down, or cut from his root, by poverty and mean condition; he is not elated or exhausted by riches and noble condition. . . . Hence he is styled a scholar' (*Li Chi*, xxxviii. 3–19 [*SBE* xxviii. 403–409]).

Such a sketch shows us the *ethos* of Chinese education, and is the more interesting as purporting to come from Confucius himself.

In very ancient times there was an official whose title has been translated 'Minister of Instruction.' His functions, as summarized by J. Legge, were to teach the multitudes 'all moral and social duties, how to discharge their obligations to men living and dead, and to spiritual beings' (*SBE* xxvii. 231 n.). It is not easy, however, to discover through what machinery he discharged these functions. The most vivid glimpse we get of

ancient education is in the *Analects*, which records the intercourse between Confucius and his disciples. In his 22nd year Confucius came forward as a public teacher. He taught all who, attracted by his reputation, were willing and able to receive his instructions, however small the fee they could afford. His school was peripatetic, and the teaching conversational. Its note is struck in the opening sentences of the *Analects*: 'The Master said, Is it not pleasant to learn with a constant perseverance and application? Is it not delightful to have friends (fellow-students) coming from distant quarters?' His themes were the Book of Poetry, the Book of History, and the maintenance of the Rules of Propriety. He taught ethics, devotion of soul, and truthfulness. He attached great importance to the ancient poetry as an instrument for stimulating the mind and assisting in self-contemplation, and to music, which, in his opinion, as in that of Plato, could, according to its kind, either deprave or correct the mind (cf. *Shun Tien*, ch. v.).

Such instruction as that given by Confucius to his disciples may be compared with tutorial instruction of University students, and implies some preliminary opportunities of learning. We find surviving from ancient times the names of schools of various grades, but little definite can be learned of their organization and scope. Perhaps they were only for the children of men of rank, though they may have been imitated by the non-official classes. Probably in those early times education was left largely to private enterprise, as it has been in later periods. The Sacred Edict expressly commends the founding of a family school. A wealthy man may invite a teacher and start a school for the children of himself and his friends, perhaps even for all the children of his clan or village; or a whole village may unite and open a school, the expenses of which are met by fees or by a contribution from the public funds of the village. In the larger towns colleges may be started pretty much in the same way. Such schools, not otherwise graded than by the ability of their teachers, have been the nursery of all China's scholars. Home education, in the narrower sense of the imparting of book-lore by parents to their children, has never counted for much in China. The mothers of China are for the most part too ignorant to give instruction, and, even where the same reason does not hold good for the fathers, still, opinion is rather against a parent acting also as teacher (Mencius, bk. iv. pt. i. ch. 18). Home influence, however, does count, and to tell a child that he has had 'no home training' is reckoned a severe rebuke by reason of its oblique reflexion on his parents. One of the Odes contains the lament of a father over his indocile son; in another it is said, 'Our mother is wise and good; but among us there is none good.'

A well-known anecdote of Mencius' mother both exhibits her solicitude to exert a right influence on her son's character, and dates the beginning of that influence in his pre-natal days. One day Mencius asked his mother what the butcher was killing pigs for, and was told that it was to feed him. Her conscience immediately reproved her for the answer. She said to herself, 'While I was carrying this boy in my womb, I would not sit down if the mat was not placed square, and I ate no meat which was not cut properly—so I taught him when he was yet unborn. And now, when his intelligence is opening, I am deceiving him —this is to teach him untruthfulness.' Accordingly she went to the butcher's and bought a piece of pork for Mencius.

The education of a Chinese youth was thus left to the home, and to what schools, of this unofficial sort, might be accessible to him. But, though there have been no Government schools, it would ill become one who writes from the Chao-Chow Prefecture, which still remembers the great debt it owes to Han Wên-kung (A.D. 768–824), to forget how powerfully education in any district may be fostered by an intelligent and energetic official. Moreover, it must not be supposed that the influence of the Chinese Government has not ever been effectively in favour of education. That influence has been brought to bear on the nation through the great system of competitive examinations. The germ of the system may be found in the post-official examinations already in existence in the time of Shun (2255 B.C.), who every three years examined into the merits of those holding office under him, degrading the undeserving and promoting the deserving (*Shun Tien*, ch. v.). But in its development this post-official examination system has been overshadowed by the pre-official. The system may be said to have reached its full development in the Ming period, and was until recently continued under the Manchu rule. The whole Empire was knit together in a great network of examinations for an ascending scale of degrees, *hsiu-tsai*, *chu-jen*, *chin-shih*, held periodically in each county, prefecture, and province, and culminating in an examination for admission to the Imperial Academy (Hanlin), held in the capital under the immediate supervision of the Emperor. To the lower examinations all subjects of respectable birth were admissible, and to the higher examinations all who had passed the lower. Indeed, once a student had, by passing his examination, got his name on the register of scholars, he was bound to present himself periodically at the examinations for the degrees he held, even though he did not aspire to a higher.[1]

The primary object of this system of examinations was to obtain able men for State service. While securing this, it gave a great stimulus to education, but at the same time reduced it, latterly at least, to a narrow uniformity. In more ancient times, candidates were examined in the rules of propriety, music, archery, horsemanship, writing, and arithmetic, to which were afterwards added such subjects as law and military science. But latterly, however the ancient names have been retained, what has been sought is neither varied accomplishment nor a mass of acquired knowledge, but rather an intimate acquaintance with the classical books and an exquisite facility in Wen-li (the literary language) both in prose and verse, together with skill in penmanship.

A boy who begins to attend school—usually at the age of 7 or 8—enters on a new epoch of his life, marked by the bestowal on him of a new name chosen by his teacher. He starts at once, with loud-voiced repetition, to memorize the books which are the scholar's equipment, beginning with the *Thousand Character Primer* or the *Three Character Classic*, and passing on to the more strictly classical books. Not till the memory has been well drilled is a beginning made in explaining the meaning of the books memorized, the explanation being a midrash founded, in the case of the classical books, on the commentaries of Chu Hsi (A.D. 1130–1200). The necessity of such explanation is obvious if it is borne in mind that Wen-li, in which the books studied are composed, never has been a vernacular medium anywhere in China at any time of her history. *Pari passu* with his reading, the pupil is taught penmanship and composition in all the approved rhetorical forms, specially with a view to excelling in the famous 'Eight-legged Essay.' The result of years of such training is the production of a ripe Chinese scholar, 'in knowledge a child, in intellectual force a giant, his memory prodigious, his apprehension quick, and his taste in literary matters exquisite' (Martin, *Hanlin Papers*, 1st ser., p. 38). The fact already mentioned, that Wen-li is not the mother-tongue

[1] A somewhat parallel system of examinations for degrees in military subjects needs only to be mentioned.

of any Chinaman, helps to explain why, in spite of all the importance attached to education, the percentage of illiteracy in China is so high. Martin estimated that the proportion of those who can read understandingly is not more than 1 in 20 for the male sex, and 1 in 10,000 for the female. Not even in China are all boys sent to school; still, in deference to the maxim that it is culpable for a father to bring up a son without education, even very poor parents will make shift to send their sons to school for a year or two. Unfortunately, what is acquired in that time is, for the most part, merely the ability to recognize and pronounce, but not to understand, a number of characters; and to repeat verbatim, but equally without understanding, some portion of the books studied. If poverty then compels the withdrawal of the boy from school, the knowledge acquired is apt to be evanescent, and is in any case useless. As might be expected, however, among a people so painstaking as the Chinese, and attaching so much importance to education, there are not wanting examples of learning successfully pursued under the severest stress of poverty.

In considering Chinese pædagogics we must never forget the underlying psychology. According to the orthodox view, human nature is radically good, and is corrupted, not by the breaking out of an internal taint, but by external infection. This failure to reach the deep root of evil explains the exaggerated view which meets us everywhere of the power of example and of instruction. Reference may also be made to Mencius' interesting discussion of the passion nature (bk. ii. pt. i. ch. 2), and to the account given by Confucius of his own intellectual and moral development (*Anal.* ii. 4).

In educational method what is most noticeable is the prominence given to memory discipline, the effects of which are seen not only in the frequent apt quotation of classical phrases, but in a perfect plague of recondite allusions. Some suggestive hints as to method are found in *Li Chi*, xvi. 13 (*SBE* xxviii. 87): 'He [the skilful teacher] leads and does not drag, so producing harmony; he strengthens and does not discourage, so making attainment easy; he opens the way but does not conduct to the end, so making (the learner) thoughtful.' The catechetical method is reversed, the pupil questioning the teacher, who, as he skilfully waits to be questioned, is compared to a bell which gives a sound, great or small, corresponding to the hammer with which it is struck. If the pupils are not able to put questions, the master should put subjects before them; and, if then they do not show any knowledge of the subject, he may let them alone. So we find Confucius saying, 'When I have presented one corner of a subject to any one, and he cannot from it learn the other three, I do not repeat my lesson' (*Anal.* vii. 8).

A teacher's position is regarded with respect, and gives him great authority over his pupils; and the latter are supposed to cherish a life-long deferential regard for their teachers. A well-known line in the *Three Character Classic* gives the Chinese 'dominie' sufficient warrant for severity, and 'the cane and the thorns' are noted as part of the awe-inspiring apparatus of ancient schools.

What has been said has reference almost exclusively to boys. A girl has always been at a discount (*Odes*, II. iv. 5), and is not supposed to require book-lore. According to the *Li Chi*, it was sufficient if she learned pleasing speech and manners, to be docile and obedient, and to deal with hemp and silk and viands. The Chinese have ever been imitators of the ancients, and female literary education has therefore been neglected, though, of course, literary ladies are by no means unknown.

Of more informal educational influences may be mentioned the constant issue of old and new tracts, hortatory and dehortatory, some of which, such as the 'Family Instructions' of Chu Tzŭ, are accepted as standard works. One would like to include that solitary example of Chinese preaching, the official expositions of the Sacred Edict on the 1st and 15th of each month; but the exposition is a formality, and its influence nil. Of the Sacred Edict itself it is said (Martin, *Hanlin Papers*, 2nd ser., p. 325) that 'nothing, since the discourses of Mencius, gives us a better view of the kind of morals inculcated by the head of the nation.' Of incalculable, but doubtless great, effect in moulding character are the numerous proverbs, with their pithy statements of morality and prudence.

The present condition of education in China is very different from that outlined above. Under the new régime, which may be conveniently dated from 1902 (establishment of Ministry of Education; note also decree of Oct. 1905 abolishing the old system of examination for degrees), the Government has issued an educational programme, with schools of all grades up to a University. The published code is interesting as showing what is aimed at, but has less in it that is peculiarly Chinese, being based on Western systems. One notes with satisfaction the wider range of studies, the place given to ethics and to physical drill, and the recognition of female education. The approved lesson-books also indicate an advance in educational methods. The working of the scheme varies according to the interest of the officials in each locality. There is an inevitable shortage in the supply of competent teachers, so that we find schools well equipped with apparatus which no one can use; and further obstacles easily arise from the fact that each locality has to bear the financial burden of its own schools. But, if there are difficulties at present, still, with all drawbacks, the situation is full of promise; and one may hope that, when things have settled down under the republican regime, more rapid advance will be made in organizing a system of national education. In view of the importance in education of the religious element, which is ill provided for by the teaching of ethics supplemented by a perfunctory worship of Confucius, much may depend on the attitude that the educational authorities take up towards Christian pupils and teachers, and towards schools under Mission auspices which have shown the way and are still in the front rank. Existing Mission schools of all grades (if they are educationally efficient) and the projected Christian University may be most useful, directly and indirectly, even though they fail to secure recognition as part of the Government educational system. And, indeed, in complaining of the non-recognition of educational institutions under foreign control, and teaching a religion the foreign associations of which are still prominent, it is easy to become unreasonably forgetful of the point of view naturally taken by the rulers of an ancient and proud people inspired by a lately awakened patriotism.

LITERATURE.—*The Chinese Classics* (tr. by Legge, *SBE* iii., xvi., xxvii., xxviii., Oxford, 1861–85); Morrison, *Dict.*, ed. 1815, i. 746, *s.v.* 'Heŏ'; *Variétés sinologiques*, no. 5: 'Pratique des examens littéraires,' Imprimerie de la Mission Catholique, Shanghai, 1894; Martin, *Hanlin Papers*, 1st ser., London, 1880, 2nd ser., Shanghai, 1894; Graybill, *The Educational Reform in China*, Hongkong, 1911.

P. J. MACLAGAN.

EDUCATION (Greek).—*Introductory.*—What form education took in the first period of Greek history, we have no means of knowing; and, even when we come to later times, our information is often without precise dates. But, making allowance for that, we have a considerable body of ascertained facts to rely on for the latter part of the 6th cent. B.C., for the whole of the 5th, and for the 4th till

about 322, the year of Aristotle's death. With him ancient Greek thought and ideals ended; though the spirit of the Athenian system of education did not die, but was destined to spread and to exercise a powerful influence in Rome and in other cities of the Mediterranean region.

1. Homeric times.—Attempts have been made to picture Greek education during the period when the Homeric poems arose (850–750 B.C.). The evidence in Homer, however, is meagre, and any inferences must be very uncertain. The speeches of Achilles, Nestor, Odysseus, and other heroes, with their perspicuous argument, their repartee, irony, and pathos, imply that, while the *Iliad* was taking shape, orators existed who could speak, and audiences existed who could appreciate the spoken word. Phœnix claims (*Il.* ix. 443) to have taught Achilles to be a speaker of words and a doer of deeds: *μύθων τε ῥητῆρ' ἔμεναι πρηκτῆρά τε ἔργων*. In those days, however, mental culture came mostly from singing and lyre-playing. Bodily training consisted of dancing, wrestling, swimming, running, and such like; and these would be acquired chiefly through practice with comrades. By precept and example, the father would instil religion and morality into his boys; while the girls would learn household duties and the rules of an upright life from their mother.

2. Dorian.—(*a*) *Crete.*—'In the normal Greek conception,' says Jebb (*Attic Orators*, 1893, ii. 14), 'Society and the State were one. The man had no existence apart from the citizen.' And, as an indigenous type of education inevitably harmonizes with the national ideal, Greek education is closely related to the Greek idea of citizenship. Hence, to take one aspect, we find education restricted to the free population possessing full civic rights. Among the Dorians, whether in Crete or in Lacedæmon, all whose birth entitled them to citizenship were bound to undergo the complete course of training. In Crete the males of a certain number of families shared the common meals (ἀνδρεῖα = συσσιτία) in a common dining-hall (Aristotle, *Pol.* ii. 10. 3). There the boys of those families lived, and received an education from observing the conduct and listening to the conversation of their elders, one of whom was the παιδονόμος, or superintendent of the boys of that house (Athenæus, 143 E). Scantily clad both summer and winter, they passed through a hard training to teach them skill and endurance. They were exercised in gymnastics, in handling the bow and other weapons, and in fighting—sometimes single combats, sometimes house with house. They learned also to read; to sing hymns in honour of the gods, and songs to the fame of the brave; and to chant the laws, which were set to music (Strabo, x. 480, 482, 483; Ælian, *Var. Hist.* ii. 39). At the age of seventeen, having sworn to serve the State loyally and to hate its enemies, they were freed from the supervision of their elders and gathered in ἀγέλαι, or droves. They remained members of these till marriage. Each drove was under a captain (ἀγελάτης), who had full powers to punish. He led them to the gymnasium for practice, and to the open country on hunting expeditions. One drove fought mimic battles with another. The sole aim of the Cretan training was military.

(*b*) *Sparta.*—The military ideal was still more prominent in Sparta, where the Dorians tenaciously clung to a traditional system which had arisen when they were a comparatively small band of invaders in the Peloponnese, keeping men of alien race in subjection by main force. In Sparta, the Dorians possessed of full citizenship were outnumbered by the περίοικοι, who were personally free but politically unenfranchised, and by the helots, who were serfs attached to the land; and it was, therefore, necessary that the citizens should be made, as far as training could make them, men of courage and endurance.

As soon as a child was born, it was inspected by the elders of the tribe. If weakly, it was exposed (cf. art. CHILDREN [Greek], in vol. iii. p. 540); if strong, it was handed to the mother to remain in her care till the age of seven. Spartan discipline began early. The child was taught to fast, to keep from screaming, and to overcome the fear of being alone in the dark. The boys were taken to the public dinners (φιδίτια), where they learned to be Spartans like their fathers.

When they reached the age of seven, the State intervened and carried them off to be educated in public boarding-houses. They were arranged in βοῦαι, droves, and ἶλαι, troops, under the strict charge of a State official, the παιδονόμος. Sleeping on beds of straw or reeds, with no blankets, going about barefooted, clad in a single garment, and stinted in regard to food, they became inured to hardship. Food they were encouraged to steal; but, if caught in the act, they were punished, to make them cunning foragers in war. The boys in each house were under a βουάγορ, who was one of the εἴρενες, or men over twenty years of age. It was his duty to superintend their mimic battles, to stimulate them to smartness in foraging, and to train them in concise answering of problems on behaviour and conduct. Severe punishment was all-pervading. Floggers (μαστιγοφόροι) attended the παιδονόμος; any citizen might inflict a beating; the βουάγορ punished disobedience. Flogging-competitions were held to decide who could stand the greatest number of strokes (Xenoph. *Resp. Laced.* ii.). The chief means of education was gymnastics, which aimed solely at developing warlike qualities, such as bodily activity and powers of endurance. The boys learned to run, leap, play ball, swim, throw the javelin and the discus, ride, and hunt. They also practised dancing. Some of the dances were religious; but most were war-dances, *i.e.* rhythmical marchings and evolutions (Lucian, *de Saltatione*, 10–12; Athenæus, 630 E, 631 A). The gymnastic training hardened, but it brutalized (Aristotle, *Pol.* v. [viii.] 4; Xenoph. *op. cit.* v. 9). Yet the Spartans were not without humanizing influences, though these had not free play. Their music was meant to form character; and the Dorian mode was regarded as inspiring the hearer with firm and deliberate resolution which kept the mean between pusillanimity and fool-hardiness (cf. Milton, *Par. Lost*, i. 550 ff.). They sang hymns in praise of the gods, and chanted the laws of Lycurgus. Their other poetry, designed mainly to stir up bravery and patriotism, consisted of songs eulogizing their heroic ancestors and jeering at cowards. Reading, writing, and arithmetic were not in great repute, and seem to have been introduced comparatively late. Even in the 4th cent. B.C. many Spartan citizens were declared to be unable to read or write (Isocr. *Panathen.* 276 D, 285 C). But, apart from reading, the Spartans possessed literary equipment, acquired by memory; nor were they without a turn for pithy and terse speech—what Plato calls βραχυλογία τις Λακωνική (*Protag.* 342 E, 343 B). In addition to their national songs and hymns, they knew and valued Homer (Plato, *Laws*, 680 C).

In their eighteenth year, the youths left the boys' houses, and, for the next two years, were styled μελλείρενες, *i.e.* those who were to be εἴρενες. They were still under strict discipline. They were trained in arms and in military evolutions; in organized battles, team against team; in hunting; in musical drill and choral dancing. They were also dispatched on secret service (κρυπτεία), when

they prowled about the country, scouting, and, if necessary, slaughtering helots. On this service they learned to rough it, and had opportunity to display courage and resource (Plato, *Laws*, 633 B, C).

In Sparta the girls had a training similar to that of the boys (Xeneph. *op. cit.* i. 4). They practised physical exercises—dancing, running, wrestling, leaping, throwing the javelin and the discus—to make them worthy mothers of a sturdy race. They were instructed in music. Youths and maidens joined in choral songs and dances. The other Greeks remarked that, in spite of this training, Spartan girls were not less modest or well behaved. In the capacity of sisters, wives, and mothers, their opinion was respected, their censure dreaded, their commendation sought.

This system of education, with the stern discipline that pervaded Spartan life as a whole, created a nation of soldiers—brave, self-sacrificing, reverencing old age, devoted to the State, ready with a jest and a smile to die for their country. But their morality was *of* the State, not *in* the individual. When the Spartan was free from public constraint, *e.g.* when he went abroad, he was apt to degenerate. The system failed to develop the intellect and the imagination, and personal power of initiative (see, for various points, Plutarch, *Lycurgus*, xiv–xxviii).

3. Athenian.—(1) *Aim and scope.*—Athenian education can be treated in detail, for the sources of information are fuller. This is fortunate, for two reasons. First, the Athenian type was, with modifications, the general Hellenic type, except among tho Dorians. Then, it is of greater intrinsic worth: it gave more play to the individual nature, and sought to effect a full and harmonious development of the man. Its aim, especially at first, was distinctly ethical. The different branches of education were designed not to produce scholars or musicians or athletes, but to develop and build up moral qualities. It is true that this goal was not always reached. Sometimes balance was upset by too much devotion to one or other of the branches, sometimes the end was lost sight of in the means. No better statement in brief of the Athenian aim can be fonnd than a passage from Plato's *Protagoras* (325 C–326 E). When the problem 'Can virtue be taught?' is started, Protagoras declares the teaching of virtue to be the main intention in education, and man's life, from the cradle to the grave, to be one round of instruction and admonition. Then follows the description of the Athenian training of the young:

'As soon as a boy understands what is said to him, his nurse, his mother, his *pædagogus*, and even his father, spare no pains for the sole purpose of making him as good as possible. At the very moment when he does any act or speaks any word, they point out to him that one thing is just, another is unjust; this is beautiful, that is ugly; this is holy, that is unholy; and they say "Do this," "Do not do that." If he obeys willingly, well and good: if not, they correct him with threats and with blows, like one straightening a piece of wood that is bent and warped. Then, when it is time for boys to go to school, their parents enjoin upon the masters to pay far more attention to training in proper behaviour (*εὐκοσμία*) than to teaching letters and lyre-playing. The masters attend to this; and, when the boys have learned their letters and are sure to understand what is written, just as formerly they understood what was said, the master places beside them on the benches the works of good poets for them to read—poems abounding in moral admonitions and in narratives, eulogies and panegyrics of the brave men of old. These the boys are forced to learn by heart, that they may zealously imitate those heroes and desire to be like them. The music-master, in turn, does exactly the same. He gives heed to inculcating self-control (*σωφροσύνη*), and sees to it that the boys do no evil. In addition, when they have learned to play the lyre, he teaches them the works of other poets—lyric poets this time—and sets the verses to music. He causes the rhythms and harmonies to dwell as familiar friends in the souls of the boys, that they may be more refined, and, becoming more permeated with good rhythms and good harmonies, may be more effective for speech and for action. Further, the boys are sent to the palæstra that their bodies may be strengthened to do yeoman service to their efficient intellect, and that a bad condition of body may not force them to play the coward either in war or in any other of life's activites. This is what is done by the parents who can best afford it, that is to say, by the wealthy, whose sons are the earliest to go to school and the latest to leave.'

With this cf. Aristophanes, *Clouds*, 961 ff., where the old system is eulogized as the nurse of the men of Marathon; and Lucian, *Anacharsis sive de Gymnasiis*, 20 ff.

It should be noted that in Athens, as in Greece generally, the priest as priest had nothing to do with education, and that there was no direct religious teaching. What religious training there was came through learning hymns to the gods, through the ritual of worship at home and in the temples, and through the public festivals. In Athenian education it was the poet, not the priest, that exercised a paramount influence. This enables us to understand Plato's attack upon poets and dramatists for the pernicious effect of their works on young and growing minds (*Republic*, 377–397).

In Athens, as in Sparta, education was not for all; but, since Athenian citizenship had come to be on another and a wider basis than Spartan, a larger proportion of the male inhabitants were educated.

(2) *Mothers, nurses, pædagogi.*—It was the father, and not the tribal elders, that in Athens decided whether or not the child should be reared. Till the age of seven, children were cared for by mothers and nurses, who imparted the rudiments of learning in the form of lullabies and nursery rhymes, myths about the gods, and tales of heroes, beast fables, as well as stories of ghosts and goblins—*μορμώ*, *ἔμπουσα*, *ἐφιάλτης*, *λάμια* (Xenoph. *Hellen.* iv. 4. 17; Lucian, *Philops.* 31. 2; Theocr. xv. 40; Strabo, i. 19). Theorists like Plato (*Rep.* 377 A) had much to say about the ethical danger lurking in the myths and stories. To interest the child at this stage as well as later, there were the usual toys, amusements, and games—rattles,[1] dolls, dolls' houses, boats, tops, hoops, swings, hobby-horses, balls, leap-frog, ducks and drakes, blindman's buff (*μυΐνδα*, *χαλκῆ μυῖα*), beetle-flying (*μηλολόνθη*), balancing on an inflated wineskin well greased (*ἀσκωλιασμός*), knucklebones, hide-and-seek (Pollux, ix. 99 ff.). About the age of seven, the boy had assigned to him an elderly slave as his moral supervisor—*παιδαγωγός*. It was the attendant's duty to accompany the boy to school, to the gymnasium, or elsewhere; to look after his manners; and to beat him if necessary. At times, the slaves selected were those who from age or physical disablement were unfit for other tasks; or they were boorish and spoke with a bad accent. Such disqualifications made them incompetent to manage the older lads. The supervision lasted till the boys reached the age of sixteen or even eighteen (Plato, *Lysis*, 208 C, *Laws*, 808 C; Plutarch, *de Educ. Puer.* vii.).

(3) *Schools, schoolmasters, State supervision.*—The rise of schools followed the employment of writing for literary purposes. We hear of school buildings in the beginning of the 5th cent. (Herod. vi. 27; Plutarch, *Themis.* x.); and they existed a hundred years earlier, if we may trust the statements of Æschines (*c. Timarch.* 9 ff.) and Diodorus (xii. 12). In Athens, schools were private ventures and varied in kind, being sometimes very inferior (Demosth. *de Coron.* 257 ff. = 312 ff.). Teaching might be conducted in the open air—in some convenient nook of street or temple. Even the best schoolrooms were not grand structures or elaborately furnished. The head master sat in a high-backed chair, the other masters and the boys on stools and benches. The walls were hung with

[1] The renowned Archytas invented a rattle, *πλαταγή* (Aristotle, *Pol.* v. [viii.] 6 *ad init.*).

writing-tablets, rulers, cases for manuscripts, and lyres (see, for example, the vase-paintings). The room might at times be adorned with statues of gods, muses, and heroes, and with pictures illustrating scenes from Homer. The *Tabula Iliaca*, now in the Capitoline Museum at Rome, is regarded as part of a series of these illustrations. The school day began soon after sunrise,—not such a variable hour in Athens as in our northern latitudes,—and, with a break at midday, continued till just before sunset. How the day was portioned out among the various subjects is unknown. Nor can the number of holidays be precisely stated. Schools would not open on public festivals and other general holidays. We find fugitive records of prizes given after public competition, chiefly for athletics, but also for music and letters.

The teacher of letters (γραμματιστής) was not highly honoured, and consequently the best type of man was not always obtainable. 'He is dead, or he is teaching letters,' was a byword of any one who had unaccountably vanished. The presence in schools of pet leopards and dogs belonging to pupils (see vase-paintings) indicates laxity of discipline or general contempt for teachers. Lucian (*Necyom.* xvii.), speaking of what poverty drives kings and satraps to, classes elementary teaching (τὰ πρῶτα διδάσκοντας γράμματα) along with the hawking of smoked fish.

According to Plato (*Crito*, 50 D), parents were ordered by law to educate their sons in music and gymnastics; but the method of enforcing this is not on record. The Areopagus would exercise a general oversight—a function which the officials called σωφρονισταί seem to have performed in later times. Custom, however, if not law, made a certain tincture of literary education general in Athens. How much that was would vary with the standing and the desire of the parent. Though the Spartan severity of flogging did not exist in Athens, punishment was common and severe in all departments of education. In the home, too, the rod was not spared. The general opinion agreed with Menander's saying, 'A man unwhipped is a man untrained' (Xenoph. *Anab.* ii. 6. 12; Herondas, *Mimes*, iii.).

(4) *Early education: letters.*—For many generations the complete Athenian course consisted of letters, music, and gymnastics. At different periods and according to the boy's social position, these branches occupied a varying number of years of his life. Whether the three began simultaneously or not, we cannot tell. In later times, for those who were able and willing, a more or less definite curriculum of higher education [1] filled the years immediately preceding manhood at eighteen.

The Athenian boy learned, first of all, to read intelligently—a considerable mental discipline, since in Greek writing the words were continuous as well as without punctuation. Next, he was taught to read with proper articulation and accent, and to bring out the melody and rhythm of the sentence. He also learned to write. The scarcity of books in early times necessitated much oral work. It was not till the age of Pericles (469–429) that books became common. Slave labour made them tolerably cheap, and they speedily came into school use. In spite of Plato's outcry (*Protag.* 329 A, *Phædrus*, 275 ff.) against the written word as lifeless compared with the spoken word, books played an important part in later Greek education. A good memory, then, was very important, particularly in the earlier period; and a great amount of poetry was learned by heart. Besides strengthening the memory, this roused the imagination, cultivated literary taste, stored the mind with moral maxims and homely wisdom, and stirred the boy to emulate the brave deeds of heroes. In poetry, Homer stood supreme, reverenced as the educator of Greece, the matchless guide in all affairs of life (Xenoph. *Sympos.* iii. 5, iv. 6; Plato, *Rep.* 606 E). Other poets were Hesiod, Theognis, Phocylides, Solon, Mimnermus, and Tyrtæus. Æsop's prose fables were also popular.

At first arithmetic was not taught as a mental discipline, but was learned as of practical utility. The Greek symbols for counting were clumsy to manipulate, and calculation was performed on the fingers, or with pebbles, or by means of the *abacus*. Later, when the educational value of mathematics was better appreciated, geometry as well as arithmetic was taught. Drawing did not become a school subject till the 4th century. Aristotle approved of it, because it trained the eye to appreciate beauty and enabled one to judge the money value of statuary, and thus escape cheating (Aristotle, *Pol.* v. [viii.] 3; Plato, *Laws*, 818).

(5) *Music.*—Originally μουσική had a wide meaning, and was often used to include literature (Plato, *Rep.* 376 E) as well as music, the narrower sense to which the word came later to be restricted. In Greek schools, music was both vocal and instrumental. Though the music-master was called κιθαριστής, it was not on the κιθάρα—a professional instrument—but on the λύρα that boys learned to play. After the Persian War the αὐλός, or pipe, was in vogue, but later it fell into disfavour. It distorted the player's face (Plutarch, *Alcibiad.* ii.); he could not sing while playing; and its music was held to be exciting. The last reason is the strongest, and harmonizes with the Greek conception that music should be studied, not merely as an accomplishment to occupy leisure moments or entertain a social circle, but mainly as the chief developer of character. For music did more than stir the feelings, it created ethical qualities. The different modes of music produced each a particular type of character. The Dorian, for example, was manly, strong, and dignified; the Lydian, soft and effeminate; the Phrygian, passionate and exciting. The Greeks, however, did not love instrumental music by itself. Sounds without words never appealed to them as the highest art. The boys diligently learned by heart the verses of the lyric poets for the purpose of singing. They were carefully instructed in rhythm and metre, and in enunciation. It is this belief in the ethical importance of music that explains Plato's and Aristotle's demand for the State to regulate music in the schools, since only thus would proper rhythm and harmony be produced in the soul (Aristotle, *Pol.* v. [viii.] 3 and 5–7; Plato, *Rep.* 398–401, *Laws*, 654, 812; Polybius, iv. 20. 4).

(6) *Gymnastics.*—The Greeks attached particular importance to physical education. It began at an early age: exactly when, we do not know. From about the age of fifteen on to eighteen, a very large amount of time was devoted to gymnastic exercises; and all through life a citizen was expected to keep himself in training. It was his duty to be fit for war (Xenoph. *Memor.* iii. 12; Plato, *Phædrus*, 239 C); and it was an object of ambition, especially for the leisured, to possess a fine physical frame. Perfect bodily condition, also, was necessary for good health, and as a basis for a sound and vigorous mind (Lucian, *Anacharsis*, 15).

While using the term γυμναστική, we must distinguish the παλαίστρα from the γυμνάσιον. The former means, regularly, a private school for train-

[1] To distinguish the higher subjects from the others, the terms 'secondary' and 'primary' have sometimes been employed. We should, however, remember that, if used, the terms cannot bear their present-day precision of meaning.

ing boys; the latter was a public resort for practice by the *ephebi* and older men, as well as a training-place for competitors in the games and for professionals. In later days we find the words used indifferently: γυμνάσιον being also applied to the boys' training-school, and παλαίστρα to part of the γυμνάσιον. The latter name indicates that those exercising were γυμνοί, naked or lightly clad. The palæstra, in charge of a παιδοτρίβης, was an enclosure with a floor of sand, open to the sky—to inure the boys to the sun—and, if possible, near a running stream. A plunge in the stream or a cold bath concluded the exercises, after the sweat and dust had been scraped off by the στλεγγίς—especially needful for wrestlers, whose bodies were always oiled.

We do not know the exercises for different ages, but they would be graduated from easy to difficult. Wherever possible, the movements were performed to the sound of music. Among the earliest exercises were ball-playing, swimming, and deportment. Boys, for example, were carefully trained to sit properly and to walk gracefully (Pollux, ix. 103 ff.; Lucian, *Lexiph.* 5). The course included also χειρονομία, or rhythmic movement of the arms, leap-frog, rope-climbing, running, jumping, throwing the discus and the javelin, wrestling and boxing (Athenæus, 629 B; vase-paintings). To the Greeks, dancing meant the measured motion of the whole body, often mimetic of some action or scene. In Athens, dancing fell into disfavour in the education of boys, except for those who took part in the chorus at some public festival (Xenoph. *Sympos.* ii. 15 ff.).

The last years of the boy's training were very hard in regard to diet as well as exercises. And it became clear to the wisest thinkers that this severe physical strain militated against intellectual work. The idolizing, also, of the athlete led to professionalism. Pure athleticism, instead of creating brave and strong warriors, merely brutalized; and the result was a body useless to the State, because disproportionately developed (Aristotle, *Pol.* v. [viii.] 4; Eurip. fr. *Autolycus*; Xenophanes, *Elegies*, ii.).

While the Athenians sought to foster the exercises that would develop pluck and intelligence, we miss among them what is considered an invaluable part of our school games—the forming of clubs, the members of which discipline themselves in self-government.

(7) *Higher education: the Sophists.*—In early days, as we have seen, instruction in γράμματα and μουσική generally ceased when the boy was about the age of fourteen. The sons of the wealthy might then do as they pleased; others must think of fitting themselves to earn a living. We should remember, however, that Athenians of all ages and ranks, though not at school, were always under the intellectual and æsthetic influences of their common life—influences emanating from rhapsodists and orators, from statues and architecture, from dramas and festivals. But about 450 B.C. the feeling arose that ability to read and write, to sing and play the lyre, to recite poetry, was not a complete education. The demand for a wider and more advanced course called forth a supply of instructors in all kinds of subjects—mathematics (comprising the science of number, geometry, astronomy, theory of music); rhetoric, political and forensic; the art of disputation; literary criticism; grammar; etymology; correct diction; discrimination of synonyms; geography; natural history; rhythm and metre; dialectic; ethics. For a century the lecturers on these subjects—collectively designated the Sophists—dominated the general or liberal education of Greece. Some of the best known Sophists were Protagoras, Prodicus, Gorgias, Polus, Thrasymachus, Evenus, Hippias, and Isocrates. The hearers who flocked to them were of all ages, and many of the lectures must have been beyond the comprehension of younger minds. But much was suitable for boys, and came to be part of the ordinary school curriculum. The Sophists sometimes claimed not only to supply knowledge, but also to prepare a man for civic life, besides imparting accomplishments and general culture (Plato, *Rep.* 518 C, 600 C; *Protag.* 314, 318, 349; *Apol.* 20 B). Plato and Aristotle vigorously assailed the Sophists on the score of superficiality and for believing education to be identical with the absorbing of intellectual results. But what the Sophists taught—especially grammar, style, interpretation of poetry, and oratory—had positive merits.[1] Their method, however, was often marred by their preference of style to matter and of dazzling effect to accurate statement or reasoning (Plato, *Protagoras, Gorgias, Sophist*; Aristotle, *Soph. Elench.* i., xi., xxxiv.; Aristoph. *Clouds*; cf. H. Jackson, art. 'Sophists,' in *EBr*[11]).

In the 4th cent. the philosophers ousted the Sophists from their domination over the higher learning. Plato lectured in the Academy at Athens, where he was succeeded first by Speusippus and then by Xenocrates. In the Lyceum, Aristotle was head of a seminary of universal knowledge.

The deep interest in education at that period, as well as the searchings of heart amid the conflicting subjects and methods, may be gathered from the theories of education then set forth—Plato's in the *Republic* and the *Laws*; Xenophon's in the *Cyropædia*; Aristotle's in the *Politics* and the *Nicom. Ethics.* Though it belongs to much later times (*c.* A.D. 100), we may here mention Plutarch's sketch, *de Educatione Puerorum.*

(8) *The ephebi.*—On reaching the age of eighteen, the Athenian boy, though he did not yet receive full rights of citizenship, was no longer a minor. The State took complete charge of his training for two years. He had first to pass the scrutiny (δοκιμασία) of his township (δῆμος), to see if he was of flawless descent and of mature age (Aristotle, *Athen. Constit.* xlii.). If he passed, he was registered in the roll (ληξιαρχικὸν γραμματεῖον), and was now ἔφηβος.

Though this custom must be ancient, its origin is buried in obscurity. The word ἔφηβος does not seem to occur in literature before Xenophon (*c.* 370 B.C.); and the earliest of the inscriptions—the chief sources of information about the *ephebi*—belongs to 334–3 (*CIA* IV. ii. 574 D).

In the temple of Aglaurus the youth swore never to disgrace his arms or desert a comrade; to fight for home and temple; to leave his country better than he found it; to obey the magistrates and the laws; to oppose any violation of the constitution; and to honour the national temples and religion (Pollux, viii. 105 f.; Plutarch, *Alcibiad.* xv.; Demosth. *Fal. Leg.* 346 = 303). The *ephebi* of each tribe were under a superintendent (σωφρονιστής), who looked after their discipline and morality. Over all the *ephebi* was the κοσμητής, or president. The σωφρονισταί were paid by the State, which also provided money for the maintenance of the youths in training. As uniform, these wore a cloak, or χλαμύς, and a broad-brimmed hat, or πέτασος (Pollux, x. 163 f.). They were sent to do garrison duty at Munychia and Piræus. They had now much harder gymnastic exercises, and began regular military training under military officers. Their heavy duties, however, were lightened by the festivals and games, in which they took a prominent part, and by visits to the theatre, where special seats were allotted to them. At the end of the first year of training, the *ephebi* displayed their proficiency at the Great Dionysia, when each was presented

[1] Notably the work of Isocrates (see Jebb, *Attic Orators*, ii. 36 ff.).

with a shield and a spear. Any one whose father had died on the field of battle received a complete suit of armour. They now acted as patrols (περίπολοι), patrolling the frontiers (Xenoph. *de Vect.* iv. 52), and occupying the guard-houses (περιπόλια). The *ephebi* of each tribe were in succession stationed at the various points, and thus became familiar with the different localities. At the end of the two years, they were available for military duty at home and abroad.

Toward the close of the 4th cent. this service seems to have become voluntary, and, as a consequence, restricted to the wealthy. The number of *ephebi* decreased. Foreigners were admitted, and there was no age-limit. As time went on, intellectual studies were added,—literature, rhetoric, philosophy,—which by and by displaced the military training. We find a staff of professors, numerous students and students' clubs, a library—in fact, what has been termed the University of Athens, drawing its members from all quarters of the civilized world (see W. W. Capes, *University Life in Ancient Athens*, 1877).

(9) *Girls.*—Unlike the Spartans, the Athenians permitted no kind of public education for girls. This was in keeping with the seclusion, almost Oriental in character, in which Athenian women of the upper classes were kept—a seclusion more or less common throughout Greece except among the Dorians. A girl-wife, fifteen years of age, is described by Xenophon (*Oeconom.* vii. 5) as having been very carefully brought up to see and to hear as little as possible, and to ask as few questions as possible. In Athens, then, what girls learned they learned at home. Though some could read and write, very few received any intellectual training. They were taught to sing, to play the lyre, and to dance; bands of girls danced at the festivals. But it was chiefly in household duties that the Athenian girl was drilled. She must be able to spin and weave, to knit and sew, to cook, to superintend the female slaves, to nurse the sick, and generally to manage the household (Xenoph. *op. cit.* vii. 6 ff.). Wise mothers were also examples to their daughters in purity of life and propriety of behaviour. Neither in private nor in public had Athenian women the status or the influence of their Spartan sisters. Plato's proposal (*Rep.* 451 ff.), that women should be educated along with men, was extremely audacious. No less audacious was his admission of women to his lectures in the Academy (Diog. Laert. iii. 31). What provision was made in later centuries for female education, we cannot tell. An inscription from Teos, of late but uncertain date, records the selection of three masters to teach girls as well as boys. That the higher learning was unusual for Greek girls *c.* A.D. 100 may be inferred from Plutarch's emphatic recommendation (*Conjug. Præcept.* xlviii.) that they should study geometry and philosophy, to preserve their minds from frivolity and superstition.

(10) *Athens and Sparta.*—Contrasted with Sparta and its narrow but definite aim of creating a nation of sturdy warriors, Athens, while ever keeping in view the needs of the State and rounding off the boy's education with a military training, sought to develop the whole man. The Spartans learned reading and writing because of their practical utility; the Athenians held that to hunt everywhere after the useful is, as Aristotle remarks (*Pol.* v. [viii.] 3 *ad fin.*), by no means befitting the high-souled and the free. In Sparta nothing was relied on but continual espionage: Spartan boys, writes Xenophon (*Resp. Lacd.* ii. 11), could never evade a ruler's eye. The Athenians allowed the utmost liberty, and trusted to the restraining influence of their common civic life (Pericles' speech [Thucyd. ii. 37 ff.]).

W. MURISON.

EDUCATION (Hindu).—**1. Hindu education associated with religion.**—From the earliest period of their history the Hindus have been accustomed to associate education, like all the other departments of their social life, with religion. As we shall see (§ 6), the youth of the 'twice-born' classes were prepared for admission into the Hindu ranks by a solemn rite of initiation, which was immediately followed by a course of instruction in the sacred literature, dogmas, and ritual of the national religion; and they were thus trained to share with their brethren the privileges and obligations of the caste to which they belonged. This practice, sanctified by that devotion to usage and custom which is one of the predominating influences that guide the course of the Hindu's life, has persisted down to the present day; and, though the people have now readily accepted the system of national education which the British Government, pledged to an attitude of neutrality towards the multitudinous beliefs and usages of the native population, has organized, the duty of the parent to carry out the religious rites of education and moral training remains unaffected. The difficulty of reconciling the wide-spread desire of the people for the religious and moral training of the child with the danger of State interference with the divergent religious beliefs of its subjects, is one which the Government of India shares with those of many other peoples in the West.

2. Education during the Vedic and Brāhmaṇa periods.—The Vedic literature, composed or compiled by various poets, naturally involved a course of training in the due recitation of the hymns; and, as these formulæ came to be adopted in religious and magical rites, where every word was momentous, each gesture and movement of the reciter fraught with mystery, the need of training to fit the priest or medicine-man for the due performance of his office became increasingly apparent. We thus find in the Veda records of the meetings of priests to discuss religious topics, and of the issue of diplomas to students qualifying them for admission to the sacrificial rites, while those who failed to attain the necessary standard of knowledge were degraded to the rank of ploughmen (*Rigv.* x. 71, vii. 103. 5; M. M. Kunte, *Vicissitudes of Aryan Civilization*, 1880, p. 129 f.). This form of instruction, as the contents of the Veda underwent the criticism of interpreters, developed into the establishment of various schools of commentators (A. Weber, *Hist. of Ind. Lit.*, 1882, p. 88; H. T. Colebrooke, *Essays on the Rel. and Philos. of the Hindus*, 1858, p. 189; *Vishṇu Purāṇa*, cap. iii. iv., tr. H. H. Wilson, 1840, p. 272 ff.). This tendency increased, with the advancing development of ritual in the Brāhmaṇa period, when the education of the Brāhman student (*brahmachārī*) became fully organized.

'Instruction is no longer merely concerned with domestic traditions. The student travels to a distance, and attaches himself to now one, now another teacher of renown; and the itinerant habits thus produced must have contributed not a little to imbue the Brāhmans with the feeling that they formed a class by themselves, in the midst of the small tribes of people into which Aryan India was at the time divided. This apprenticeship, which was at the time a noviciate in morals, was a very protracted one, for "science," they used to say, "is infinite"'

(A. Barth, *Religions of India*, 1882, p. 45; for the *Wanderjahre* of Brāhman students, see C. H. Tawney, *Kathā-sarit-sāgara*, 1880, i. 196, quoting G. Bühler, Introd. to the *Vikrimānkadevacharita*). Among these schools, those at Taxila or Takshaśila, the modern Shāhdherī, Kurukshetra in the E. Panjāb, and the famous schools of logic in the East were the most important (V. A. Smith, *Early Hist. of India*², 1908, p. 57, n. 1; J. W. M'Crindle, *Anc. India as described in Classical Lit.*, 1901, p. 33, n. 4; T. W. Rhys Davids, *Buddhist India*, 1903, pp. 8, 203; R. W. Frazer, *Lit. Hist. of India*, 1898, pp. 4, 67).

3. Education in Buddhist times.—When Buddhism became fully organized in N. India, the establishment of the monastic communities gave a powerful influence to education. One of the most important of these seats of learning was the monastery (*saṅghārāma*) at Nālanda, near Rājagriha, the modern Rājgir in the Patna District, the headquarters of Indian Buddhism, founded by Aśoka (V. A. Smith, *Asoka*, ed. 1909, p. 110; *IGI* xxi. [1908] 72), the system of training at which is described by the Chinese pilgrim, Hiuen Tsiang (S. Beal, *Buddhist Records of the Western World*, 1884, ii. 170 ff.). Cf. the account of the monastery at Benares (*ib.* ii. 45 f.). Hindu and Buddhist learning attracted the attention of Megasthenes during his mission (302 B.C.) to the court of Chandragupta (Strabo, xv. 58–60, in J. W. M'Crindle, *Anc. India as described by Megasthenes and Arrian*, 1877, p. 97 ff.).

This system of Buddhist education survives to the present day in the monasteries of Ceylon, Tibet, and other parts of Eastern Asia. See, further, art. EDUCATION (Buddhist).

4. Hindu monastic education. — The modern Hindu monasteries (*maṭh*), such as those of the Jains and the ascetic orders like the Yogis, Sannyāsīs, or Udāsīs, are so carefully guarded from intrusion by European observers that little is known of the monastic organization or of the system under which the novices are trained. For a general sketch, see H. H. Wilson, *Essays and Lectures on the Religions of the Hindus*, 1861, i. 48 ff.; *BG* xv. pt. i. 147 ff. The training, such as it is, is supervised by the prior (*mahant*). High priests, called Tambirans, of monasteries (*mattam*) in the Tamil country lecture to students (*Comm. Rep. Educ. Madras*, 1884, p. 67).

5. Education under neo-Brāhmanism. — When Brāhmanism revived in a new and more vigorous form after the decay of Buddhism, the education of the youth was regulated by the code of social legislation which has come down to us in the *Institutes of Manu* and the other law literature, the former being originally a local code which assumed its present shape not later than A.D. 200, and is now generally accepted as the rule of religious and social life among all the higher classes of Hindus (A. Macdonell, *Skr. Lit.*, 1900, p. 428). The restoration of Brāhmanism to popular favour, and the associated revival of Sanskrit learning during the Gupta period, first became noticeable in the 2nd cent. A.D., were fostered by the Western satraps in the 3rd, and made successful by the Gupta emperors in the 4th cent. (V. A. Smith, *Early Hist. of India*², 287).

'The systematic cultivation of the sacred sciences of the Brāhmans began and for a long time had its centre in the ancient Sūtrakaraṇas, the schools which first collected the fragmentary doctrines, scattered in the older Vedic works, and arranged them for the convenience of oral instruction in Sūtras or strings of aphorisms. To the subjects which these schools chiefly cultivated belongs, besides the ritual, grammar, phonetics, and the other so-called Aṅgas of the Veda, the sacred law also. The latter includes not only the precepts for the moral duties of all Āryas, but also the special rules regarding the conduct of kings and the administration of justice' (G. Bühler, 'The Laws of Manu,' *SBE* xxv., Introd. xviii.; cf. the same author's Introd. 'Sacred Books of the Āryas,' *SBE* ii. and xiv.).

6. Education according to the Laws of Manu. —It must be remembered that this legislation applies only to the Aryan or 'twice-born' man, the Sūdra being forbidden to fulfil the sacred law, except certain portions of it (x. 126, 127); to hear, learn, recite, or teach the Veda (iii. 156, iv. 99, x. 127); to receive spiritual advice from a Brāhman; but in times of distress a student may learn the Veda from one who is not a Brāhman.

The student who devotes himself to sacred learning should first undergo initiation (*upanāyana*), *i.e.* investiture with the sacred thread (*yajñopavita*), in the fifth year after conception (ii. 87); he should wear the skin of a black antelope, spotted deer, or he-goat as an upper garment, while his under dress should be of hemp, flax, or wool (ii. 41); he should procure his food by begging under strict regulations, and eat it with special precautions (ii. 49 ff.); after the rite of initiation, the teacher (*āchārya*, *guru*, his assistant being called *upādhyāya*) should instruct his pupil in the rules of personal purification, conduct, fire-worship, and twilight devotions; but, before the student begins the study of the Veda, he must sip water in accordance with the sacred law, join his hands (*brahmāñjali*), clasp the feet of his teacher, and touch his right and left foot with his hands (ii. 71 f.); he must begin and end the lesson when ordered to do so, and he must at the beginning and end recite the mystic syllable *Oṁ*, because, unless this precedes and follows, his learning will slip or fade away (ii. 73 f.). The rules of behaviour of the pupil towards his teacher are carefully prescribed. He must, during the period of instruction, *i.e.* until he is allowed to return home (*samāvartana*) after completing his course of instruction, do what is beneficial to his teacher; never offend him; fetch water, firewood, flowers, cowdung, earth, and the sacred *kuśa*-grass for his use; controlling his body, speech, organs, and mind, he must stand before him with joined hands; he must eat less than usual in his presence, wear less fine garments and ornaments, rise earlier, and go to bed later; he must not converse with his teacher while reclining, sitting, eating, or with averted face; he must observe strict rules of meeting and addressing him (ii. 108, 144, 182, 192 ff.); whenever persons justly censure or falsely defame his teacher, he must cover his ears, or leave the place, and he who defames a teacher shall be amerced in a heavy fine (ii. 200 f., viii. 275). He is subject to various tabus, all things savouring of a luxurious life being specially prohibited (ii. 175 ff.). 'A Brāhmaṇa who serves his teacher till the dissolution of his body, reaches forthwith the eternal mansion of Brahman' (ii. 244). During the course of instruction he must study the whole Veda with the Rahasyas, or secret explanations of the Veda, that is to say, the Upaniṣads, and perform at the same time various prescribed austerities and vows (ii. 165). He must give no fee to his teacher while under instruction, but provide a suitable reward for the venerable man when his course is complete (ii. 245). The vow of studying the Veda under a teacher must be kept for thirty-six years, or for a half or a quarter of that period, or until the student is proficient (iii. 1). Elsewhere it is ordained that the pupil shall live with his teacher for the fourth part of his life, and the second quarter at home as a married householder (iv. 1). Casting off a teacher is one of the most deadly sins (xi. 60); and the penalties for violation of the bed of the teacher by his pupil are of the most stringent kind (ix. 235, 237, xi. 49, 55, 104 f.). Such an offender is liable to numerous transmigrations into grasses, trees, creepers, or noxious animals; but a form of penance secures purification (xii. 58, xi. 252). Brāhman students on the completion of their course are to be honoured, for money given to Brāhmaṇas is 'an imperishable treasure for kings' (vii. 82). The king shall protect the property of a pupil while he is under instruction; the pupil is incapable of being a witness in a court of justice, and he is relieved from the payment of ferry tolls (viii. 27, 65, 407). Education was thus regarded as the first of the four stages (*āśrama*) into which the life of the Hindu was divided (M. Monier-Williams, *Brahmanism and Hinduism*⁴, 1891, p. 362 f.). An interesting survival of this rule is found in the custom at a modern Hindu marriage, when the bridegroom makes a formal attempt to start for Benares to undergo a period of study (*kāśiyātra*), from which he is with difficulty dissuaded by his relations. (See a more detailed analysis of these regulations in *Calcutta Review*, iii. [1845] 216 ff.)

7. Hindu education in later times.—(*a*) *Under Muhammadan rule.*—The effect of the Muhammadan conquest was disastrous to the Brāhman caste; the springs of princely liberality were dried up, many of the sacred texts were destroyed, and the great periodical festivals were in a great measure discontinued (A. Barth, 89 ff.). Their sacred places, temples, monasteries, and colleges were in many places destroyed. As an example, when Bakhtiyār Khiljī captured Bihār about A.D. 1297,

'most of the inhabitants of the place were Brāhmans with shaven heads. They were put to death. Large numbers of books were found there, and, when the Muhammadans saw them, they called for some persons to explain their contents, but all the men had been killed. It was discovered that the whole fort and city was a place of study' (Sir H. M. Elliot, *Hist. of India*, 1867–77, ii. 306).

The enlightened emperor Akbar, however, was a patron of learning, and directed that translations of several of the sacred books of the Hindus should be prepared (G. B. Malleson, *Akbar*, 1890, p. 166 f.;

H. Blochmann, *Āīn-i-Akbarī*, 1873, i. Introd. vii. f., 103 ff.).

(*b*) *Under British rule.*—When the British, by virtue of a grant from the emperor Shāh 'Ālam, in A.D. 1765, obtained the civil authority (*dīvānī*) of Bengal, Bihār, and Orissa, they found classical education in a depressed condition, the result of the long period of anarchy which prevailed during the decay of the Mughal Empire. A number of scattered institutions (*ṭol*) were devoted to Sanskrit instruction according to the ancient system. Colleges of this type still survive in the Ṭols of Nadiyā or Nabadwīp, which are finishing-schools for Brāhman students of logic, as Rārhī or Bardwān is for grammar, and Krishṇagaṛh for law, receiving many students of middle age who come from places as far distant as Assam (*Calcutta Review*, vi. [1846] 421 ff.; Report of Prof. E. B. Cowell, Calcutta, 1867; *IGI* xviii. [1908] 281). The Governor-General, Lord Minto, in his Minute of 6th March 1811, proposed that Sanskrit Colleges should be opened at Nadiyā and Tirhūt, a project to which sanction was refused (*Calc. Rev.* iii. [1845] 257). An instructive account of the state of classical learning in W. Bengal, which proved that the instruction was feeble and unscientific, will be found in the survey of that portion of the province carried out by F. Buchanan Hamilton between A.D. 1807 and 1814 (M. Martin, *Eastern India*, 1838, i. 134 f., 485 ff.; ii. 101 ff., 428 ff., 705 ff.; iii. 128 ff.). The controversy between classical and Western education was finally closed by the celebrated Minute by Macaulay in 1835, in which he wrote:

'The question before us is simply whether, when it is in our power to teach this language, we shall teach languages in which, by universal confession, there are no books on any subject which deserve to be compared to our own; whether, when we can teach European science, we shall teach systems which, by universal confession, wherever they differ from those of Europe, differ for the worse; and whether, when we can patronize sound philosophy and true history, we shall countenance, at the public expense, medical doctrines which would disgrace an English farrier, astronomy which would move laughter in girls at an English boarding-school, history abounding in kings thirty feet high and reigns thirty thousand years long, and geography made of seas of treacle and seas of butter.'

During the last century these Vedic schools have steadily lost ground.

For instance, in Bombay 'the main object of the Veda schools of the Hindus is to teach young Brāhmans to recite *mantras* [mystical verses, spells] and portions of the Vedas, and thus to fit them in after-life to assist at the various rites and ceremonies of the Hindu household. The instruction given in these schools is limited to the correct recitation of the Sanskrit text. The pupil reads each passage aloud to the *guru* [teacher], who carefully corrects his mistakes, and when the youth has accurately apprehended the words, he commits them to memory. No detailed explanation is given of the subject-matter; and much of what is learnt is not understood by the pupil. . . . The Vedic schools, which were almost purely religious institutions, have lost ground from causes which are only remotely due to the operations of the Educational Department. An increasing carelessness in the performance of the complex rites and ceremonies of the Hindu religion is generally admitted on all sides; and by Hindus themselves it is believed to point to a time not very remote, when the services of a priest, well acquainted with the sacred mysteries, will no longer be in any great demand. Already the employments to which pupils in these schools used to aspire are much fewer and less lucrative than they once were' (*Rep. Educ. Comm.* 59; *ib.* Bombay Appendix, i. 1884, 71, 75; *ib.* Panjāb, 85). The course at Sanskrit schools in Benares at the present day consists of grammar, philosophy, and logic (*nyāya*), the Vedānta, law, rhetoric, literature, the beliefs of the Mīmāṃsā, Sāṅkhya, and Yoga philosophies, medicine, astronomy, and astrology (*ib.* North-West Provinces, 86; cf. *ib.* Bombay, i. 72).

The study of Sanskrit received an impetus in Bengal by the recognition by the State during the Permanent Settlement of 1793 of rent-free grants made by the older Government for their support (*ib.* Bengal, 3). With a view to improving the indigenous system of classical education, various institutions were founded by the British Government.

The Benares College was founded by Jonathan Duncan in 1791, and under the direction of a succession of scholars, such as J. Muir, J. R. Ballantyne, and G. Thibaut, has secured a large measure of success in the study of Sanskrit according to Western methods (*ib.* North-West Provinces, i. ff.). The same may be said of the Poona, now the Deccan, College, founded in 1821 (*ib.* Bombay, i. 5, ii. 22), and of similar institutions in other parts of the country. But, on the whole, the study of Sanskrit, though in some provinces, Bengal for instance, it has been to a certain extent stimulated by the establishment of examinations in the indigenous schools and by the conferment of titles of honour upon the most proficient pupils, remains in an unsatisfactory condition. The five Universities—those of Calcutta, Madras, and Bombay founded in 1857, that of the Panjāb in 1882, of Allahabad in 1887—provide courses for the classical languages, and encourage the study of them by scientific methods. But the attractions of Western learning surpass those of the classical type. At the more important centres of Hindu religious life, Benares, Mathura, Nāsik, Madura, learned Brāhmans still pursue the study of the Veda on Oriental lines. But the average town or village Brāhman Paṇḍit knows little more Sanskrit than a few verses, which without understanding them he recites at the domestic ceremonies of his clients. The use of English is at once more fashionable and lucrative, and the ambitious student devotes himself to it in preference to Sanskrit.

'With the Hindus the decline of their higher institutions is due in a great measure to the natural quickness and practical instincts of the Brāhmans, who have realized the altered circumstances which surround them, and have voluntarily abandoned a classical education for one more suited to produce conditions of success' (*Rep. Educ. Comm.* 60).

It is, of course, possible that the growth of a spirit of nationality among the Hindus may tend to arrest the decay of the classical teaching. Already increased attention is being given to the study of the Vedānta, and some enthusiastic believers in it have endeavoured to popularize it in Europe and America as a substitute for the out-worn faiths of the Western world. A few younger scholars are investigating with enthusiasm the history, antiquities, and ancient languages of the country. Projects have recently been announced for the establishment of a Hindu University in connexion with, and in extension of, the Hindu College at Benares, of which the leading spirit is Mrs. A. Besant. The Association known as the Bharata Dharma Mahāmaṇḍala proposes to found a University on more strictly orthodox lines, with Colleges and schools at Benares, Nadiyā, Mathura, Poona, and Conjeevaram, in which no fixed text-books are to be used, all courses of study are to be optional, and diplomas will be granted by boards of local Paṇdits. The ultimate result of these projects must for the present remain uncertain (*The Pioneer Mail*, 25th Aug. 1911).

8. **Indigenous primary education.**—When the British occupied the country, primary education was represented by the schools known in N. India as *pāṭhśālā* (from Skr. *paṭh*, 'instruction,' *śālā*, 'hall'), in the Panjāb as *śāl* or *śālā*, in Southern India as *pial*, the last term being taken from the raised platform used for sitting in front of a house on which the school is held; the word is ultimately derived from Port. *poyo*, *poyal*, 'a seat *or* bench' (Yule-Burnell, *Hobson-Jobson*, 1903, p. 703).

In Bombay 'the ordinary daily routine of a Hindu indigenous school is nearly the same in all parts of the Presidency. Each morning at about 6 o'clock the Pantoji, who is in some cases a Brāhman and the priest of many of the families whose children attend the school, goes round the village and collects his pupils This process usually occupies some time. At one house the pupil has to be persuaded to come to school; at another, the parents have some special instructions to give the master regarding the refractoriness of their son; at a third, he is asked to administer chastisement on the spot. As soon as he has collected a sufficient number of the pupils, he takes them to the school. For the first half-hour a Bhupāli or invocation to the Sun, Saraswati, Gaṇpati, or some other deity, is chanted by the whole school. After this the boys who can write trace the letters of their *kittas* with a dry pen, the object of this exercise being to give free play to the fingers and wrist, and to accustom them to the sweep of the letters. When the tracing lesson is over, the boys begin to write copies; and the youngest children, who have been hitherto merely looking on, are taken in hand either by the master's son or by one of the elder pupils. The master himself generally confines his attention to one or two of the oldest pupils, and to those whose instruction he has stipulated to finish within a given time. All the pupils are seated in one small room or verandah, and the confusion of sounds which arises from three or four sets of boys reading and shouting out their tables all at the same moment, almost baffles description. One of the Educational Inspectors writes: "Each pupil recites

at the top of his voice, and the encouragement to noise is found in the fact that the parents often compute the energy of the master from the volume of sound proceeding from the school. This is no exaggeration. I have myself heard villagers complain that our Government schools lack the swing and energy of the indigenous schools." The school breaks up about 9 or 10 o'clock, and re-assembles at 2 in the afternoon. The concluding lesson is given at 4 P.M. For this the boys are ranged in two rows facing each other, while two of the older pupils are stationed at one end between the two rows, and dictate the multiplication tables, step by step, for the rest of the boys to shout after them in chorus. When this is over, the school is dismissed, and the master personally conducts the younger children to their homes. The school nominally meets every day of the week, Sundays included. But the frequent holidays on account of the Hindu feasts and fasts, and the closure of the school twice a month on Amāvāsyā or new-moon day and Paurnimā or full-moon day fairly take the place of the weekly and other holidays in English schools. In harvest-time, also, many of the rural indigenous schools are entirely closed. It is still the practice in some indigenous schools, though the custom is rapidly dying out, for the pupils on the eve of Amāvāsyā and Paurnimā to perform the ceremony of Pāṭīpūjā or slate-worship. A quarter of an anna [one farthing], a betel-nut, half a seer [the regulation *sīr*=2·057 lbs. avoirdupois] of grain, a little saffron and turmeric, and a few flowers are laid upon the slate of each pupil as offerings to Saraswatī, the goddess of learning. Before these each boy reverently bows down, and then places the slate for a few minutes on his head. The master afterwards appropriates the offerings. Crowded, noisy, and ill-regulated as the school-room is, the majority of these schools fairly accomplish their main object, which is to teach reading, writing, and the native multiplication tables. Our return shows that nearly one-third of the pupils are able to read and write, and that about one-sixth know their tables. These statistics, however, are not based on any actual examination of the pupils, but on the opinions of the Pantojīs themselves. It appears to be generally agreed that the punishments inflicted upon the pupils of indigenous schools are less barbarous and severe than they were twenty years ago. There is still, however, room for improvement in this respect' (*Rep. Educ. Comm.*, Bombay, i. 73 f.). For similar accounts of the methods of instruction, see *ib.* North-West Provinces, 278; *Calc. Rev.* xiv. (1850) 193. An early account of a Pial school in S. India will be found in the Travels of P. della Valle in 1623 (ed. Hakluyt Society, 1892, ii. 227 f.); for modern accounts, E. C. Glover, *IA* ii. (1873) 52; *Rep. Educ. Comm.*, Madras, 68; S. Mateer, *The Land of Charity*, 1871, p. 154.

9. Origin and development of indigenous primary education.—The question of the origin of this indigenous system of education has been much debated. Though, as we have seen (§ 6), the Sūdras were excluded from the education provided for the 'twice-born' classes, it is possible that some kind of elementary education was organized by the village communities; and some authorities, arguing from the character of the instruction provided and the methods by which the teacher is appointed, controlled, and remunerated, accept this view, which, however, is disputed by Mr. J. C. Nesfield as regards the United Provinces (*Rep. Educ. Comm.*, Bengal, 363; *ib.* Panjāb, 497; *ib.* North-West Provinces, 85 f., 256). In Bengal the origin of the village school is connected with the worship of the village tutelary idol, in charge of a Brāhman, who added to his priestly duties that of education. The early history of the schools in Bengal is fully detailed in the report by W. Adam (1838; summarized in *Calc. Rev.* ii. [1844] 301 ff.). In this province the policy has been to win the confidence of the indigenous schools, to aim at amalgamating them into the State system, and cautiously and gradually to introduce necessary improvements (*Rep. Educ. Comm.* 103 f.). In the United Provinces and other parts of N. India they have been generally replaced by the circle (*halqabandī*) school, which provides for the wants of a group of villages (*ib.* 106).

10. Problems of Indian education.—The question of the extension of Western knowledge among the Hindu population is beyond the scope of this article. It is exhaustively discussed in the *Report of the Education Commission*. It may be well to indicate some of the more pressing problems of education in India which still in a great measure await solution.

(*a*) *General illiteracy.*—The most pressing difficulty is that, in spite of the efforts made to promote education during the last century, there is still a large amount of illiteracy among the Hindus. Of the total population only 53 persons per 1000 are literate in the limited sense in which this term was used at the Census of 1901; in the case of Hindus the average is 50 per 1000 (94 males, 5 females) (*CI*, 1901, pp. 158, 177). The causes which have contributed to this failure are exhaustively discussed by Sir H. Risley and Sir W. Hunter (*ib.* 162 ff.; *Rep. Educ. Comm.* 112 ff.). This specially applies to female education (*CI* 163 f.; *Rep. Educ. Comm.* 521 ff.). In 1911 a bill was introduced in the Legislative Council of India by Mr. Gokale for the gradual introduction of free and compulsory education. This proposal was sympathetically received by the Secretary of State (*The Times*, 25th July 1911); but the state of the finances and the economic situation, which renders the employment of child labour necessary among the agricultural and pastoral tribes, prevent it from becoming, for the present at least, a practicable policy.

(*b*) *Jealousy between Hindus and Muhammadans.*—The progress of education is at present much hampered by the jealousy between Hindus and Muhammadans, as shown by the controversy whether Urdū, a language which largely combines Perso-Arabic words with those derived from Sanskrit, is to be adopted in N. India as the medium of instruction in place of Hindī or other languages of Sanskrit origin (*Rep. Educ. Comm.* 69; *ib.* Bengal, 47 f., 276 f., 398 ff.; *ib.* Panjāb, 549).

(*c*) *Special education of chiefs and nobles.*—The special education of native chiefs and nobles is an ancient problem, Manu (vii. 43) directing that the king should learn the threefold sacred science from those versed in the three Vedas—the primeval science of government, dialectics, and the knowledge of the Supreme Soul—while from the people he should acquire the theory of the various trades and professions. Teaching such as this was imparted by the sage Droṇa to the Pāṇḍava princes in the epic of the Mahābhārata. Under the British Government, Chiefs' Colleges, of which the most important are those at Ajmer, Rājkot, and Lahore, have been established, 'where some of the features of the English public school system have been reproduced, with the object of fitting young chiefs and nobles, physically, morally, and intellectually, for the responsibilities that lie before them' (*IGI* iv. [1907] 435; *Rep. Educ. Comm.* 480 ff.).

(*d*) *Education of forest tribes and menial classes of Hindus.*—The education of the non-Aryan forest tribes and the depressed classes of the Hindu population presents special difficulties. The migratory, semi-savage habits of the former render the establishment of special schools difficult; but some progress has been made in this direction (*Rep. Educ. Comm.* 507 ff.; *ib.* Central Provinces, 3, 191 f.; *ib.* Bengal, 53 ff.). In the case of the depressed classes and menial castes special arrangements are needed, on account of the refusal of the higher classes to associate with them in a common school (*Rep. Educ. Comm.* 513 ff.). For instance, only a few years ago the Chānda school was closed because nearly all the masters resigned on account of the admission of a few Dheṛ boys (*ib.* Central Provinces, 2).

(*e*) *Missionary and secular education.*—Since the time of the Portuguese government, and more especially during the British occupation, the various missionary bodies have taken an active and honourable share in the work of education. Mr. W. Carey at Serampore, Dr. Duff at Calcutta, and Dr. Wilson at Bombay are among the many names of those who were conspicuously engaged in translating the Scriptures and other valuable literature into the Indian dialects, and in the general control of schools and colleges (*IGI* iv. [1907] 409 f.). The older missionaries were strongly opposed to the

native systems of education (Abbé J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*[3], 1906, p. 376 ff.; W. Ward, *A View of the History, Literature, and Religion of the Hindoos*[2], i. [1818] 583 ff.). The attitude of the modern missionary is more tolerant, because he finds that a knowledge of native modes of thought is essential to the success of his work. The question of the withdrawal of the State from the control of the higher education was raised before the Commission presided over by Sir W. Hunter; and a tendency was shown by the orthodox Hindu party to advocate the dissociation of the State from the higher missionary schools, on the ground that the support of them by Government was inconsistent with the policy of neutrality which is the basis of the Indian educational system (*Rep. Educ. Comm.*, Madras, Summary of Evidence, 176). The missionary view is defined in a series of memorials addressed to the Commission (*ib.* 303 ff.). The Commission observed (*ib.* 454):

'Missionary institutions may serve the great purpose of showing what private effort can accomplish, and thus of inducing other agencies to come forward. They should be allowed to follow their own independent course under the general supervision of the State; and so long as there are room and need for every variety of agency in the field of education, they should receive all the encouragement and aid that private effort can legitimately claim. But it must not be forgotten that the private effort which it is mainly intended to evoke is that of the people themselves. Natives of India must constitute the most important of all agencies if educational means are ever to be co-extensive with educational wants.'

LITERATURE.—The history of Hindu education still remains to be written. The leading authorities have been fully quoted in the course of this article. For the present aspects of the subject much material will be found in the *Report of the Education Commission*, with Sir W. Hunter as president, which was issued at Calcutta in 1883, with appendixes dealing with provincial details published in the following year. Each of the Provincial Governments issues an annual Educational Report, and these are periodically reviewed by the Government of India. The Reports of the Census of 1901 give full statistical details of the progress of literacy. The *Calcutta Review* (1844 ff.) contains numerous important articles on the subject, those in the earlier volumes generally reflecting the views of the Serampore missionaries. The official view of the subject is given in the article on 'Education,' *IGI* iv. (1907) 407 ff., with a bibliography.

W. CROOKE.

EDUCATION (Jewish).—1. In OT and Apocrypha. —(1) The child is a conspicuous figure in the Old Testament. No systematic provision for his education and general training is mentioned; but the importance of his personality, and the need of safeguarding his higher welfare and, with it, that of the community, by wisely planned discipline, is fully recognized. Of secular teaching there is scarcely a trace; all the ordinances relating to education deal with it in its larger aspects as a preparation for the moral and religious life, as a means of developing character. Similarly, while both teacher and scholar are mentioned in connexion with the musical training of the Levites (see 1 Ch 25[8]), the professional teacher, as an instructor of the young generally, has no place in the Hebrew Scriptures, unless we are to see a reference to him in such passages as Ps 119[99] and Pr 5[13]: the teacher is the father. In the exceptional case of a child being dedicated from birth to the Divine service, he was made over, at an early age, to the care of the chief priest, and lived with him in or close by the sanctuary (1 S 3[1ff.]). Princes of the royal house likewise had their guardians, who possibly were their tutors (2 K 10[1ff.]). There is allusion, moreover, to 'schools of the prophets,' in which youths were trained for the prophetical office, probably by religious teaching and by instruction in music (1 S 10[5]). The moral and religious training of his children became one of the most weighty of the father's obligations; and, though no system is prescribed for the discharge of this duty, thoroughness in its performance is attained by the injunction to make religious teaching an integral constituent of the daily life. The father is exhorted to teach the Divine commands 'diligently' to his children, and to speak of them 'at all times'—when he sits in his house, when he walks by the way, when he lies down, and when he rises up (Dt 6[7] 11[19]). Great events, moreover, in the national life and their anniversaries are to be used as opportunities for impressing the great verities of religion upon the child's mind (4[9]). The Passover is indicated as such an opportunity (Ex 13[8ff.], Dt 6[20ff.]). But the entire history of Israel seems to have been utilized as a basis for religious teaching. The father would recount the 'wondrous works' of God, that 'the generations to come might know them, even the children which should be born, who should arise and tell them to their children, that they might set their hope in God and keep His commandments' (Ps 78[4ff.], cf. Dt 32[7]). Josephus especially instances this study of history as an element in the education of the child in his time (*c. Apion.* ii. 25). If, as H. Gunkel holds (see the Introd. to his Com. on *Gen.*[2], 1902), the stories in Genesis are saga which were originally told to delight and move the primitive Hebrews, we must imagine the wondering children as among the listeners, sharing the pride of race and the consciousness of the Divine providence aroused by the recitals.

On the other hand, the maxims of the Wisdom Literature are examples of more formal teaching, not a few of which are addressed directly to the young. Wisdom is declared to be 'the principal thing'; 'therefore,' exhorts the Sage, 'get wisdom' (Pr 4[7]). And for him wisdom is moral science, the knowledge of right methods of living. But in his view, too, the moral life is stable only when it is rooted in religion: 'the beginning of wisdom is the fear of the Lord' (Pr 9[10], cf. Job 28[28], Sir 19[20]). It is this higher wisdom which is commended to the young, for their own sake and for the sake of their parents. Wisdom is life (Pr 9[11]), and its possessors win it to their own profit (v.[12]), and to the joy of their parents (10[1]). And parents include the mother. 'My son,' says a Sage, 'hear the instruction of thy father, and forsake not the doctrine of thy mother' (Pr 1[8] 6[20]); and the last chapter of Proverbs contains a string of moral precepts of King Lemuel 'which his mother taught him.' The parental doctrine, moreover, must have the child's true well-being for its aim; it must not be subordinated to other considerations, even to the child's immediate comfort. If necessary, discipline must be severe. Even corporal punishment is legitimate; to eschew it is cruelty. 'He that spareth his rod hateth his son' (13[24]). The Biblical maxims on this matter reflect the tone and temper of contemporary thought. None the less, the superiority of moral suasion as a disciplinary influence was fully recognized (see 17[10]).

(2) The educational ideas of the Bible receive some development in the Apocrypha. Wisdom is again lauded as the *summum bonum*, though with greater exuberance of phrase; but it connotes intellectual, as well as ethical, excellence. 'The fruits of wisdom's labour are virtues, for she teacheth soberness and understanding, righteousness and courage'; but 'she understandeth' also 'subtilties of speeches and interpretations of dark sayings; she foreseeth signs and wonders, and the issues of seasons and times' (Wis 8[7ff.]). Astronomy, meteorology, natural history, botany, and medicine are all parts of wisdom (7[17ff.]). Education, then, must have included those branches of learning in the early post-Biblical period, among the Greek Jews at any rate. Again, since Ben Sira has some maxims about behaviour at 'a concert of music' (Sir 32[4]), it is probable that music during that period was a subject of study among

the well-to-do classes. It was certainly taught systematically to the choristers of the Temple, and a certain Chenaniah is named as one of their instructors (1 Ch 15[22]).

2. In the Talmud.—Education looms large in the Talmudic literature. The solemnity and sanctity of training children for the duties of life receive the amplest recognition. The Rabbinic ideas on the subject echo the Biblical teachings. The formation of character is still the supreme aim of training; the fear of God, or, as it is usually expressed, 'the study of the Torah,' directed towards the fashioning of the good life, is still the foundation of wisdom. The child's nature is receptive, like wax in the hands of the teacher; he may make of it what he will. The child, when learning, 'writes, as it were, on clean paper.' Hence the responsibility of the teacher's office and the necessity for beginning instruction early, when receptivity is at its best. Indeed, a passage in the Talmud (*Niddah*, 30*b*) would seem to imply that the Rabbis were not unfamiliar with the conception of education as a process of drawing out the child's latent capacities, rather than the mechanical implanting of knowledge *ab extra*. Before a child is born, they say, he is taught the whole body of religious lore; but at the moment of birth an angel touches his lips, and he forgets everything. The child should begin to learn as soon as he is capable of being taught. 'Our principal care of all,' Josephus remarks, 'is to educate our children well' (*c. Apion.* I. 12), and he adds that 'the teaching is to begin in infancy' (*Ant.* IV. viii. 12). Philo, too, boasts that Jewish children are taught religion in 'their very swaddling clothes' (*ad Gaium*, 16, cf. 31). The child's incipient powers of speech were consecrated by his being taught to utter simple verses from Scripture. Two such verses are mentioned in the Talmud: 'Hear, O Israel, the Lord is one' (Dt 6[4]), and 'Moses commanded us a law, an inheritance for the congregation of Jacob' (33[4]). The age prescribed for beginning systematic instruction is the fifth or sixth year; at ten the Mishna was studied, at fifteen the Gemara (Talmud) (see *Aboth*, v. 24; *Kethuboth*, 50*a*).

The value attached to education by the Talmudic Rabbis is exemplified by many utterances. 'The world is upheld by the breath of the children in the school-house'; their instruction must not be interrupted even for the re-building of the Temple (*Shab.* 119*b*). The monition, 'Touch not mine anointed ones' (1 Ch 16[22]), is allegorically interpreted as signifying the school-children; the exhortation, 'Do my prophets no harm' (*ib.*), as an allusion to the teachers. 'Dearer to Me,' God is pictured as saying, 'is the breath of the school-children than the savour of sacrifices' (*Ḳoh. Rab.*). 'So long as there are children in the schools Israel's enemies cannot prevail against them' (*Ber. Rab.* 65). Of a great Rabbi it is told that he would never break his fast until he had taken his child to school in the morning (*Ḳid.* 30*a*). The teacher's office is regarded with the utmost veneration. Rabbi Judah, 'the Prince,' when on a pastoral visit, asks for the watchmen of the city; they bring him the beadles and the town-guard. He rebukes them; 'Not these,' he says, 'but the school-teachers are the city's watchmen' (*Jer. Ḥag.* i. 7). Teachers must be married, males, and of unblemished character. They must not hesitate in speech, and must be painstaking. One teacher is named who would go over the lesson hundreds of times until the pupil had mastered it (*Erubin*, 54*b*). A teacher who knows a little thoroughly is to be preferred to one who knows much superficially (*Bab. bath.* 21*a*). The teacher is warned against favouritism, especially against making a distinction in favour of the children of rich parents, and also against bad temper (*Taanith*, 24*a*). 'An irritable man cannot teach' (*Aboth*, ii. 5). The teacher, moreover, is to beware of compromising his dignity before his pupils; he should not jest, nor should he eat or drink in their presence (*Yorē Deah*, cxlv. 11).

Systematic provision for the education of the young seems to have existed in Palestine at the beginning of the Christian era. Simeon ben Sheṭaḥ, the president of the Sanhedrin, is said to have decreed that children should be taught at school instead of being instructed at home by their parents as hitherto. The inadequacy of the father's instruction, and regard for the educational needs of orphans, necessitated the ordinance. A century or two later this school system had extended from Jerusalem to all parts of the country. The credit for the extension is given to one Joshua ben Gamla, a high priest (*Bab. bath.* 21*a*). The Greek terms σχολή and παιδαγωγός often meet us in the Rabbinic literature. Whether the school in the Talmudic age was anything more than a religious school is very doubtful. The 'three R's' and, it would seem, foreign languages, geography, history, mathematics, astronomy, and gymnastics were also learnt by children; but all, or most of them, at home. Among foreign languages the Talmud (*Meg.* 18*a*) gives the preference to Greek; it is 'the beauty of Japhet' (the Aryan races—a reference to Gn 9[27]), 'the language of song.' The parent was further enjoined to teach his boys swimming and also a cleanly trade (*Ḳid.* 9*b*, 29*a*). 'He who does not teach his son a trade virtually teaches him to steal' (*ib.*). In the schools, however, the Bible and its Rabbinical interpretations were the chief, if not the exclusive, subjects of instruction. Mention is made of tablets on which the letters of the alphabet were written for beginners. These tablets were of two sizes, corresponding to the modern slate and blackboard. The elder children learnt from scrolls. Home tasks appear to have been set (*Ḳid.* 30*a*). The school was held either in the synagogue itself or in some adjoining building. It was kept open all day and long after nightfall; even on the Sabbath it was closed for only a small part of the day. The scholars were taught in unsystematic relays—an unpractical arrangement which necessarily led to confusion and to needless labour on the part of the teacher. A Rabbi of the 4th cent. directed attention to the evil, and the hours of instruction were limited to five daily, and were fixed for the early morning and the evening (*Erubin*, 54*b*). An average class consisted of twenty-five children; if the number reached forty, an assistant teacher was appointed. The pupils sat on benches arranged in a semicircle, so that each child might see and hear the teacher. The teacher was sometimes the reader (*ḥazzan*) of the synagogue, sometimes a Rabbi, who might be very eminent indeed. Discipline was to be maintained, but punishments should be mild. For physical chastisement a light strap only was to be used. Persistent insubordination was not to be visited with expulsion; the offender was rather to be subjected to the salutary influence of his more tractable school-fellows. Lenity was preferred to rough measures. 'Repulse the child with the left hand; draw him to thee with the right' (*Ṣoṭah*, 47*a*). The stimulus of rewards was also recognized. One Rabbi is said to have distributed sweetmeats as an incentive to the smaller children. In the earlier Talmudic period teachers received no fixed payment for their work; its performance was regarded as a pious duty. By the 2nd or 3rd cent. payment was made for instruction in reading, but it was still deemed improper to accept a salary for religious instruction. Later on this self-denying rule had to be relaxed. The teacher, when un-

paid, was exempt from public service and from taxation. Systematic provision for higher religious study also existed in the Talmudic period, notably in Babylonia. The academies of Sura and Pumbeditha were famous.

3. In the post-Talmudic period Jewish educational ideals and methods varied with the fortunes of the Jews themselves. Tolerant treatment and a civilized environment yielded fruit after their kind in Jewish culture, of which a liberal education was the necessary condition. In North Africa and in Spain, under Muslim rule, the Jews evinced a marked enthusiasm for secular learning, without, however, losing their traditional love for Hebraic and religious studies. It was otherwise in Christian countries. In France, which, so far as the Jews are concerned, included England during the centuries immediately previous to the expulsion under Edward I., and in Germany, Jewish education was, generally speaking, at a low ebb. The Jews, proscribed or ostracized by their neighbours, were thrown back upon themselves, and forced to seek their intellectual sustenance exclusively in their religious literature. Nor would the example of the general population, even if they had been accessible to its influence, have enlarged their educational outlook. When even elementary learning was confined to the clergy of the Church, it is not surprising that, with some rare exceptions, the Jews of Northern Europe should have shown no ardour for profane knowledge. On the other hand, their zeal for the one possible study was intensified; the stream was all the deeper because it was shut up in a narrow channel. Nor was this limitation of intellectual ideals unmixed loss. Immersion in the study of the Talmud, with its keen dialectic, sharpened the Jewish mind and fitted it to take full advantage of social and intellectual enfranchisement when its hour struck. Every congregation had its communal school supported by the contributions of the members. Instruction was also given by private teachers either in their own homes or at the houses of the pupils.

The act of bringing the child to school for the first time was elevated into a solemn rite. It took place when the child was five or six years old, and preferably on Pentecost, the Feast commemorative of the giving of the Law at Sinai, the prototype of the child's induction into the knowledge of the Torah. Attired in holy vestments, he was brought into the synagogue, where the Decalogue was recited as the lesson for the day. Thence he was taken to the teacher, who thereupon began to teach him the Hebrew alphabet from a tablet smeared with honey which the child ate as he pronounced the letters, so that the sacred lore might be sweet in his mouth. The solemnity of the ceremony foreshadowed the character of the entire course of instruction, which was made a very momentous business, rarely interrupted by holidays or games. 'For there was no greater disgrace than that of being called an '*am ha-areṣ* (an ignoramus)'! Having mastered the Hebrew alphabet, the child was taught to spell and to read. Thus three months passed, at the end of which he was taught passages from the Bible and the Prayer Book, which took up a second three months. The first Scripture lessons were supplied by the three introductory chapters of Leviticus, which treat of the sacrifices, whose purity matched that of the child. But a merely superficial familiarity with the sacred text did not suffice; for six months the pupil was exercised in the translation both of the Pentateuch and of the Prayer Book into the vernacular. A knowledge of writing the vernacular would also seem to have been imparted, but this was probably acquired privately. It was called the 'Christian script.' Hebrew grammar was usually neglected. The pupil, when reciting his lesson, swayed his body to and fro as old-fashioned Jews still do at prayer, and used a peculiar sing-song or cantillation. At the end of the first year he was taken from the Pentateuch to the Prophets and the Hagiographa, in the fourth year to the Mishna, and thence to the Talmud. Lessons began at an early hour of the day —in the winter while it was still dark—and continued till the time of morning prayer, when the children would either go to the synagogue or attend service in the teacher's house. After breakfast at home they returned to school, and lessons went on again until eleven o'clock. Then came the midday meal, and at noon the instruction was resumed once more, to last, with a short interval in the afternoon, till the time of evening prayer, which closed the school day. At the age of sixteen, if the pupil decided to make religious study his vocation, his *Wanderjahre* began, during which he visited various towns in turn, in order to sit at the feet of famous teachers. This extended course of study was not undertaken only by those who intended to become Rabbis; love for the Torah would fire many a youth who could hope to gain nothing from his study save the knowledge itself. Even the Rabbis would scorn all pecuniary remuneration for the exercise of their office, deeming it shameful to use the Torah, in Talmudic phrase, 'as a spade to dig withal.' They relied for a meagre livelihood upon some secular occupation, often the humble calling of the artisan.

Güdemann (*op. cit. infra*, vol. i. p. 92 ff.) reproduces from an Oxford MS an interesting scheme, dating from the 13th cent., for founding a systematic course of Jewish instruction in the north of France. The scheme contemplates the establishment of an upper and a lower school, suggested respectively, perhaps, by the cathedral seminaries and the parochial schools which existed in France at that period. The document mentions an order of students which it styles the 'separatists' or the 'dedicated,' because they have made religious study the chief or sole occupation of their lives. For these the upper or 'greater' school is to be instituted. 'That,' echoing the Talmud, the scheme premises, 'is the true learning for which a man slays himself'; so the student must give himself wholly to study, taking up his abode in the seminary so as not to lose time in coming and going, and remaining there seven years. It is the duty of every Jew, the document continues, to dedicate one of his sons to this holy vocation, just as he would set apart a portion of his property to the service of Heaven. The lower school was intended for day-scholars. The institution is to be supported by the community, each member of which is to subscribe twelve deniers half-yearly. These contributions are to be supplemented by the fees of the pupils. The staff is to consist of a rector and tutors, of whom the former is to lecture to the students, and the latter to 'coach' them. Each tutor is to be limited to ten pupils, in contradistinction to the twenty-five prescribed by the Talmud, 'which was intended only for Palestine, where the climate favours mental development, and for times when Jews were free'; for, the author of the scheme adds pathetically, 'the free are strong and clear of brain, and absorb knowledge more readily than do the downtrodden, whose higher energies are sapped by service of cruel masters.' The pupils are to be taught from a book, not *viva voce*, and they are to be encouraged to hear each other's lessons every evening as a means of sharpening their intelligence. Systematic repetition is recommended. In winter only a fourth of the night is to be devoted to the instruction, for lights are dear. The student, however, is at liberty, when he so desires, to spend the entire night in private study. Only promising pupils are to be retained in the school. If a boy proves to be dull, the rector should send for the father and discreetly say: 'God aid thy son to do good deeds; for study he has no aptitude.' The teachers are not to follow any other occupation; they are to live in the upper school all the week, returning home for the Sabbath only. They must have a special suit of clothes for school hours, so that they may teach in unsoiled garments, as befits the sanctity of their task.

As in the Talmud, so in the mediæval literature generally, much stress is laid upon moral and religious training as the final aim of education. The 'Book of the Pious' (*Sepher Ḥasidim* [13th cent.]) is full of maxims illustrative of this fact.

'Children copy their parents; if the latter are dishonest, they will be dishonest too, and all study of the Torah is useless. . . . It is not good to give children much money. . . . A wealthy father, whose children do not heed his moral and religious precepts, should see that they work for a living;

perhaps they will be brought back thereby to the right path. . . . Even if a child can only read, he should be made to understand what he reads. When he reads the Bible, the teacher should strive to arouse his piety. He should tell him that it is God who gives him food; later on, he should be told of everlasting rewards and punishments. . . . In choosing an occupation for his son, the father should have regard to the boy's character. If he is disposed to take the study of religion seriously, let him be dedicated to it; but if he would study from sordid motives, let him rather be taught some secular occupation.' Then some rules about education generally meet us: 'A teacher must not encourage a sneak, or gossip either in school or in the street. He must not say, "As I have to teach all day, I will rise early and study for myself"; for he may be drowsy whilst teaching and so neglect his duty. What one teacher forbids another should not allow. The child should be taught the subjects for which he has most aptitude; if he makes good progress in Bible, do not force him to the Talmud. If a child stammers, he should be told to bring his questions to the teacher after the other pupils have gone away, or to bring them in writing, so that he may not be mocked at by his school-fellows.'

Maxims of similar import are to be found in all the mediæval moralists, and they are given a prominent place in the 'ethical wills' which pious Jews were accustomed to leave—not seldom it was all they had to leave—for the edification of their children. Most teachers, moved doubtless by the doctrine of Proverbs and the Talmud, put in a plea for corporal punishment; but they are careful to add that it must be used with discrimination. On the other hand, a famous Rabbi of comparatively modern times (Elijah Wilna [18th cent.]) left word in his ethical will that those of his children who were addicted to scandal-mongering or untruthfulness should be unsparingly chastised. Another ethical will, to which we may here refer, though its origin was Spain, is that of Judah ibn Tibbon (12th cent.).

Judah reminds his son that he travelled to the 'ends of the earth' to find teachers for him in science and other profane studies. He exhorts him to read every Sabbath the weekly lesson from the Pentateuch in Arabic in order to perfect himself in that language. He is to take great care of his books, so that they may not be lost or damaged. 'Make thy books,' he says, 'thy companions, and thy library thy garden. Pluck the fruit that grows therein; gather the roses, the spices, and the myrrh. If thy soul be satiate and weary, roam from one bed to another, and desire will renew itself.'

Knowledge, however understood, was a precious thing for every Jew. A father would deny himself the common necessaries of life in order to secure for his son a good education. This self-denying zeal still characterizes the Jewish poor to-day.

On the other hand, the standard of education for *girls* was decidedly lower than it was in the case of boys. In this respect the mediæval Jews fell below the level of their Christian neighbours. The Talmud (*Ṣôṭah*, 21*b*) deprecates the study of the Torah by women, and the mediæval Rabbis fully shared this attitude. It was the custom to marry girls at a very early age, and there was, therefore, little time, as well as small inclination, to give them more than a mere smattering of religious knowledge. Attention was concentrated upon their domestic training and upon instructing them in those precepts of the ritual law which would especially concern them as wives and mothers. The average Jewish girl in the Middle Ages knew little or nothing of Hebrew; and, even if she was able to read the Prayer Book, she did not understand it. Thus we find Jewish women generally, in common with illiterate males, recommended by the authorities to pray in the vernacular. Later on (about the 15th cent.) the vernacular took the form of a jargon, in which devotional and religious books were written for their especial benefit. While intellectually Jewish women suffered from these narrow educational ideals, their *morale* remained unharmed. Female excellence was maintained at a high level. The Jewish woman vied with her husband in an admiration for a religious culture which she was not permitted to share; her greatest pride was to have sons learned in the Torah. She was, above everything, modest and chaste, and she could immolate herself as a martyr when the need arose. Occasionally, too, she could break her traditional bonds, and give herself to study. Jewish history tells of learned women, later Huldahs, to whose knowledge and opinions distinguished Rabbis did not disdain on occasion to appeal, and even of women who taught boys and preached in the synagogues. In the ethical wills already mentioned the testators' daughters receive the same attention as their sons in the matter of moral training.

Among the Jews in Muhammadan Spain, education, as has already been said, received a wider interpretation than it enjoyed among their brethren of Northern Europe. Joseph ibn Aknin of Barcelona (12th cent.) recommends the following subjects of instruction to be studied in the order named: reading, writing, Torah, Mishna, Hebrew grammar, poetry, Talmud, religious philosophy, logic, mathematics, astronomy, music, mechanics, medicine, and metaphysics. Jewish literature of the Spanish period witnesses to the liberal culture of its authors, and therefore to a high educational standard. Whether Rabbi or man of business, the Spanish Jew was often a poet or a philosopher, sometimes a physician also. In Italian Jewry, which was largely influenced by Spanish ideas and practice, a strong desire for secular learning manifested itself. It was discernible before the Renaissance, and when, in the 16th cent., intellectual darkness had descended upon the Jews of Germany and Russia, a sketch of a curriculum was framed by David Provenzale in Mantua which, besides the usual Hebrew and theological subjects, includes Latin and Italian philosophy, medicine and mathematics.

As time went on, the general standard of education among the Jews in Northern Europe deteriorated rather than improved. By the 15th cent. it reached its lowest point. Young children were handed over more frequently than before to the private teacher, who was often only a little less ignorant than his pupils, and who taught his class, without method or discipline, in an overcrowded and stuffy room (*ḥeder*)—an arrangement which still obtains in Russia, and is favoured by the Jewish immigrant from that country into England. A boy remained in the *ḥeder* until he reached the age of thirteen, the age of religious responsibility (*bar-mitzvah*), the advent of which was marked by his publicly reading a passage from the Pentateuch in the synagogue, and by his delivery of an address upon some Talmudic subject to an assembly of his friends at home. With the age of Moses Mendelssohn (18th cent.), however, a new intellectual era dawned for the Jews of Germany and of Europe generally. Mendelssohn's great aim and work was the rescue of the Jewish mind from mediævalism, and among the first fruits of his influence was the foundation in 1778 of the Jewish Free School in Berlin, where the instruction embraced Hebrew, German, French, and the usual commercial subjects. About the same time a movement aiming at the improvement of Jewish education, favoured by the tolerant policy of the Emperor Joseph II., was initiated in Austria. The efforts of the reformers in all countries had a twofold direction; secular teaching was to go hand in hand with Jewish instruction, but the scope of the latter itself was also to be enlarged. The tuition, more or less mechanical, in Bible and Talmud, to which it had hitherto, as a rule, been restricted, was to be supplemented by systematic instruction in Jewish history and theology. Text-books on these subjects, previously almost unknown, now appeared in rapid succession. Greater regard was likewise paid to grammar in the teaching of Hebrew. Technical schools, moreover, began to

spring up. Since that time Jewish educational ideas have gradually widened in all countries where civilization co-exists with religious liberty. In Russia and Roumania and Turkey, those ideas, except where they are leavened by salutary influences from without—by those, for example, of the Anglo-Jewish Association in England and the Alliance Israélite in France—are still antiquated; but elsewhere there is nothing to differentiate Jewish educational aims and methods from those of other religious bodies. Even Palestine, hitherto the home of reactionary tendencies, gives evidence of an educational awakening. Enlightened conceptions of teaching and a liberal curriculum are becoming the order of the day; secondary schools are springing up, and, in Jerusalem, there are to be found an arts and crafts school and a normal school for teachers. In Europe the latest tendency is to entrust the secular teaching of Jewish children to the State or to the municipality, and to restrict voluntary education to instruction in Hebrew and religion and cognate subjects. The Jews, taxed as citizens for the maintenance of general elementary and secondary teaching, deem themselves discharged from the duty of making special provision for the secular instruction of the children of their poor. They are concentrating their efforts in an increased degree upon the provision of religious training. This tendency is especially marked in England, where the first Jewish school was founded in London about the middle of the 17th cent., though nearly a hundred years had to elapse before any attempt was made to add some rudimentary secular teaching to the ordinary elements of Jewish instruction. At the present time there are eight Jewish denominational schools, including the great 'Free School' in Bell Lane, Spitalfields, with its 3000 scholars, in the metropolis. State-aided, they provide secular as well as religious instruction; but, while they are supported with hardly relaxed generosity by the Jewish community, no disposition is manifested to increase their number. The religious education of the many thousands of Jewish children who now attend the public elementary schools is undertaken by the Synagogue, with its religious classes connected with the various places of worship, and, in London, in addition, by the Jewish Religious Education Board, which maintains an organized system of religious teaching at certain County Council schools, mainly in the East End, where Jewish children form the great majority of the scholars.

MORRIS JOSEPH.

EDUCATION (Muslim).—**1. Education in the early history of Islām.**—The value set upon education in Islām is indicated by certain *hadīth* sayings which, though they may have no claim to rank as authentic, yet undoubtedly reflect the educational ideals of Islām in its early days, and may be taken as representing the prevailing views of the first generations. Thus it is handed down as a saying of the Prophet himself, that 'A father can confer upon his child no more valuable gift than a good education'; and, again, 'It is better that a man should secure an education for his child than that he bestow a *ṣā'* in charity.'[1] The boon thus commended extends also to slaves. It is regarded as a work of specially meritorious

[1] Tirmidhi, *Ṣaḥīḥ*, Cairo, A.H. 1292, i. 354.

character 'to educate a slave-girl well, then set her free, and give her to a husband.'[1]

It may be safely said that Islām raised the Arabs to a higher level of civilization, and at the same time introduced amongst them the elements of education, in which they had hitherto been rather deficient.[2] That Muhammad himself—partly, it may be, on utilitarian grounds—attached considerable importance to the acquisition of the most indispensable elements of knowledge, may be inferred from the conditions on which he released prisoners of war after his victory at Badr. He employed several Quraish captives to teach the boys of Medīna to write, and this service counted as their ransom. Twelve boys were assigned to each of the Meccan prisoners who were capable of giving the required instruction, and, as soon as the pupils had attained the stipulated degree of progress, their teachers were set at liberty.[3] The Quraish, as a people largely engaged in commerce, had naturally more occasion to practise writing than the date-planters and husbandmen of Medīna,[4] and it was, therefore, easier to find penmen among them than in Yathrib—a consideration which may perhaps also dispose us to accept the view held by certain Muslim theologians,[5] though condemned as heresy by the orthodox school, viz. that Muhammad was not the 'illiterate' that Muslim orthodoxy, with its mistaken interpretation of the epithet *ummī*, tries to make out.[6] Mention is even made of a list of contemporary Meccan women who were familiar with the art of writing; but this group did not include the youthful 'Ā'isha, who, though she had the advantage over her companions in being able to read, yet had never learned writing.[7] We may, therefore, infer that among the men of Mecca the ability to write was nothing out of the common.[8] Mu'āwiya distinguished himself as the Prophet's secretary. Penmanship was not quite so common among the Arabs of Medīna. To the Khazrajite Ubaiy b. Ka'b, who made a name for himself by recording the revelations of the Prophet, is ascribed the exceptional distinction of having been skilled in penmanship before the rise of Muhammad.[9] In Medīna, those who, in addition to certain other accomplishments, possessed also the art of writing—acquired perhaps from the Jews resident there[10]—were deemed worthy of the title of *kāmil* ('perfect').[11]

It would also appear that, once the young Muslim community had been constituted, a primitive system of education, embracing at least the bare elements of knowledge, was set on foot. In no long time we begin to meet with references to the *kuttāb* ('elementary school'). We would cer-

[1] Bukhārī, *Kitāb al-'atq*, no. 16; Jāḥiẓ, *Kitāb al-ḥayawān*, Cairo, A.H. 1323, i. 28, mentions a slave-girl who was conversant with Euclid.

Leyden, 1879 ff.), i. 1207, where the reference is not to Arabs in general, but to natives of Medīna. For the full connotation of *kāmil*, see Ibn Sa'd, v. 309, line 7 ff.

tainly not lay much stress upon the mention of a 'companion' called Mirdās,[1] and surnamed *al-mu'allim* ('the teacher'),[2] as there is but little evidence to show that such a person ever existed.[3] Even in the early period, however, we find better attested notices of the *kuttābs* and the *mu'allims* who taught in them. Umm Salīm, mother of Anas b. Mālik, the Prophet's attendant (or, according to other accounts, Umm Salama, one of the Prophet's wives), asks a *mu'allim kuttāb* to send her some schoolboys—preferably of the slave class—to assist her in wool-carding.[4] 'Amr b. Maimūn al-'Audi († *c.* A.H. 74–77 = A.D. 693–6) gives the text of an apotropæic formula which the 'companion' Sa'd b. abī Waqqāṣ taught his children, 'as the teacher instructs his scholars in writing.'[5] Another reference tells how Abū Huraira, Ibn 'Omar, and Abū Usaid (who fought at Badr) on one occasion passed by a *kuttāb*, and attracted the attention of the boys.[6] There is also evidence to show that the *lauḥ* (tablet for practice in reading and writing) was in use at a very early period; the female 'companion' Umm al-Dardā writes on such a tablet some wise sentences as reading lessons for a boy ('Abd Rabbihi b. Sulaimān b. 'Omar).[7]

Elementary education seems to have been thoroughly established in Islām by the early Umayyad period.[8] It is true that we cannot decide whether sound evidence on this point can be drawn from an anecdote telling how the facetious grammarian Sa'd b. Shaddād jocularly sold the pupils of his elementary school as slaves to 'Ubaidallāh b. Ziyād, governor of 'Irāq.[9] We are on surer ground when we read that the poet Kumait and the formidable vicegerent and commander Ḥajjāj b. Jūsuf were schoolmasters—the last-named, of course, in the years before his remarkable political career. Just before the time of Ḥajjāj, again, Jubair b. Ḥayya taught in a school at Ṭā'if, and likewise rose afterwards—in 'Irāq—to high rank, being promoted by Ziyād from the position of a clerk to that of administrator of Iṣfahān.[10] Ḍaḥḥāq b. Muzāḥim († A.H. 105 = A.D. 723) kept a *kuttāb* in Kūfa, making no charge for instruction.[11] In the 2nd cent. A.H.—the date cannot be fixed more precisely—we even hear of a Bedawi of the tribe of Riyāḥ who settled as a *mu'allim* in Baṣra, and conducted a school for payment (*bil-ujra*).[12] There is, of course, nothing surprising in the fact that in the lands conquered by Islām, such as 'Irāq, a Muslim system of education should take root and develop in the centres of an older civilization; but the foregoing references to schools in Arabia proper are more pertinent to the subject in hand.

Even in the early Umayyad period the education of the young princes at court had reached a high standard of excellence, but it is not necessary here to describe it in detail. A spirited account of it, dealing with all its phases, and furnished with copious references to sources, has been given by H. Lammens, and we need only call the reader's attention to his work.[1] The *mu'addib* ('instructor') was a standing figure at the Umayyad court, and was admirably supported in his work by the fathers of the princes.

'Omar II. took his children severely to task when they violated the rules of grammar.[2] He had, in his own youth, a most lugubrious *mu'addib*, and the ascetic character of the future khalif might perhaps have been anticipated from the fact that this tutor is described as a person negligent of externals; he wore a coat that reached to his heels, and his moustache hung down over his lips[3]—a trait at variance with Arabic ideas of elegance, which, in accordance with a primitive *sunna*, enjoined the trimming of the moustache (*qaṣṣ al-shārib*).[4]

The development of scientific knowledge under the Abbāsids in the 2nd cent. A.H. naturally carried with it a corresponding advance in preparatory education. There is also evidence of the fact that the younger generation were encouraged, by the prospect of public recognition, to give themselves heart and soul to the task of acquiring the elements of learning. It is recorded that in the early years of this period deserving pupils of the elementary schools in Baghdad were rewarded by being carried through the streets on camels and having almonds thrown to them. It was on an occasion of this kind that the poet 'Akawwak lost his sight, his eyes having been seriously injured by the almonds meant for the clever scholars. In this period, moreover, we find mention of institutions for higher education (*majālis al-adab*).[5] About the same time the Fāṭimid administration, now established in Egypt, took steps towards founding academies (*dār al-ḥikma* or *al-'ilm*) in Cairo, where the theological tenets of the Shī'ite school, as also—in eclectic fashion—the rich stores of learning inherited from the Greeks and the Persians, were studied. When the Fāṭimid dynasty was overthrown, the Ayyūbids superseded their academies by high schools conducted on Sunnite principles, and the wide spaces of the mosques were utilized for teaching purposes. This use of the mosque as a *madrasa* had a notable influence upon the architecture of the mosque itself.[6] The sultanates under the sway of the Abbāsids continued to vie with one another in the promotion of higher education—largely confined, it is true, to theology and its subsidiary sciences[7]—as also in the erection of suitable *madrasas*,[8] which find mention from the 4th cent. onwards. An epoch-making advance in the development of the higher school was made by the enlightened Seljūḳ vizier Niẓām al-mulk (middle of 5th cent. A.H. = 11th cent. A.D.), whose institutions—the *Niẓāmiyya*-academies—in various parts of the empire were devoted chiefly to the higher theological studies.[9] In the same period, however, we note a growing tendency to free the studies of the *madrasas* from their theological onesidedness. Separate institu-
tions were founded, and became famous, for ... erses
study of the exact sciences. The observ...303, iii.

hospitals now being instituted—served as they were by the most renowned physicians of the day—attracted students of medical science, as is shown by numerous references in Ibn abī Uṣaibi'a's *Biographies of the Physicians*. In the present article, however, we propose to confine our discussion largely to elementary education.

2. The subjects of primary education; forbidden books.—In a series of sayings showing no trace of theological influence, advice is given regarding the subjects which should have a place in the education of children. Khalīf 'Omar I., for instance, is said to have counselled parents in these words: 'Teach your children to swim and to throw darts; charge them that they must be able to mount a horse securely, and make them recite appropriate verses.'[1] 'Omar was himself a renowned horseman, and is said, in picturesque phrase, to have sat in the saddle 'as if he had been created on the horse's back.'[2] Amongst these attainments the art of swimming was specially prized. Khalīf 'Abdalmalik gave his sons' tutor the following injunction: 'Teach them to swim, and accustom them to sleep little.'[3] Ḥajjāj (who, according to another report, laid most emphasis upon the religious training of his children, and therefore refused to engage a Christian teacher)[4] gave a similar charge to the preceptor whom he had selected for his sons: 'Instruct them in swimming before you teach them writing, for they can at any time easily find one who will write for them, but not one who will swim for them.' Jāḥiẓ, to whom we owe this item of information about Ḥajjāj, supplies further details indicative of the importance attached to the art of swimming in the educational practice of the higher ranks. A saying of Ibn al-Tau'am commends writing, arithmetic, and swimming as the accomplishments which, above all others, a prudent father should seek to procure for his children. As between writing and arithmetic, the latter should have precedence, since it is not only of more value in business, but is actually more easily learned, while its eventual advantages are also greater.[5] The traditional view, with a slight variation, finds expression in a modern Arabic proverb current in 'Irāq: 'Learn to write, to make the calamus, and to swim in the river.'[6]

It would, of course, be absurd to suppose that the educational maxims which assign so prominent a place to swimming had their origin in Arabia, as that country could provide but few opportunities for practising the art.[7] The present writer is of opinion that—as is suggested by the grouping together of riding, dart-throwing, and swimming—such educational ideals were largely influenced by foreign, and especially Persian and Greek, views; and, indeed, the pedagogic maxims in question are but the echoes of such views.[8] In especial, the importance ascribed to swimming is doubtless to be traced to Greek ideas: to be able 'neither to swim nor to read' (μήτε νεῖν μήτε γράμματα [Plato, *Leg.* iii. 689 D]) was a Greek equivalent for the absolute lack of culture. It was likewise under the same influence that swimming found a place in the educational maxims of the Talmud.[9]

The subjects recommended in the sayings just quoted form no part of the distinctively Muslim theory of education, which was governed by principles of an entirely different character. The general course of training for young males is set forth in the *ḥadith* as follows:

'On the seventh day after the child's birth, the *'aqīqa* ("hair-cutting," together with the sacrifice of an animal) is performed, and he receives his name and is made secure against all harm; when he is six years old, his education begins; at the age of nine, he is given a separate sleeping-place; at thirteen years of age, he receives corporal punishment when he omits his prayers; at sixteen, his father gives him in marriage, then grasps him by the hand and says: "My son, I have trained you and had you taught, and I have given you in marriage: now I beseech God for help against your temptations in this world, and against your being punished in the Last Judgment."'[1]

As regards the elementary curriculum in particular, the relevant sources furnish us with the following details. When the child begins to speak, he should be taught to repeat the Muslim article of belief, *Lā ilāha ill' Allāh*; he must then learn the words of Qur'ān, xxiii. 117*b*: 'Exalted is Allah, the king in truth; there is no god but Him, the Lord of the stately throne of Heaven'; then the 'throne-verse' (*āyat al-kursī*, ii. 256), and the last two verses of sūra lix. (*sūrat al-ḥashr*): 'He is Allah; there is no deity but Him, the Holy King,' etc. Those who teach their children so will not be brought to judgment by God.[2] At the age of seven, when the child becomes responsible for the *ṣalāt*, he is to be sent to school, and the teacher must begin to instruct him systematically in the Qur'ān itself. Children should not be sent to school before the age of seven, as is the practice of some parents, who wish merely to spare themselves the trouble of looking after their offspring.[3] The teaching of the Qur'ān should be combined with instruction in the more important religious precepts and usages: the proper response to the *ādhān*, the different kinds of washings, the prayers in the mosque to which children should be taken whenever possible; they must without fail be familiarized with the practice of joint-prayer (*ṣalāt al-jamā'a*), even in the school, where one of the older boys acts for the time as leader in prayer (*imām*). Instruction in reading and writing, of course, must also be proceeded with. The children practised writing on tablets (*lauḥ*, pl. *alwāḥ*); the words employed were usually taken from passages in the Qur'ān.

Ibn Jubair († A.H. 614 = A.D. 1217), in his sketch of the state of education in Damascus, says that in the elementary schools of that city—where writing (*taktīb*) and recitation (*talqīn*) of the Qur'ān were taught by different masters—the passages for exercise in reading and writing were taken, not from the Qur'ān, but from poetical texts of secular character, as the act of wiping inspired words from the tablets seemed to cast dishonour upon the sacred book.[4] The cleansing (*maḥw*) of the tablets marked the close of the first period of morning school: the allotted hour for this was eight o'clock a.m., and the teacher must then grant a short pause (*tasrīḥ*, 'leave').[5] For the act of wiping the *alwāḥ*, when they contained verses of the Qur'ān, various precautions are recommended by the more strait-laced theologians. It must be performed in a clean and well-guarded place, not open to be trodden upon, so that the water used in wiping out the sacred words shall not subsequently suffer any desecration. The best way to dispose of the water is to pour it into a river or a pit, or to collect it in a vessel for those who wish to use it medicinally,[6] as it is believed to possess magical virtues. A pious resident of Cairo, Muhammad Tāj al-dīn († A.H. 707 = A.D. 1307), who founded a school in the Qarāfa, inserted in the deed of foundation a clause to the effect that the water used in that institution for cleansing the *alwāḥ* was to be poured upon his grave.[7] Even the pieces of rag with which the tablets were wiped must be wrung out with the greatest care, lest the water that dripped from them should be profaned.[8]

Concurrently with exercises in reading and writing from the Qur'ān, the pupils were taught the rudiments of arithmetic. To these were added

also legends of the prophets (*aḥādīth al-anbiyā*) and anecdotes from the lives of godly men (*ḥikāyāt al-ṣaliḥīn*).[1] In early times the parts of the *ḥadīth* most in favour for educational purposes were the legends about the *Dajjāl* (Antichrist),[2] by which are probably meant the traditions regarding the Mahdī period and the Last Things. Finally, the children had to learn selections from the poets; and with these the elementary curriculum seems to have reached its term. In an ordinance regarding the education of the young, 'Omar I. enjoined that popular proverbs (*al-amthāl al-sā'ira*) and beautiful poems should form subjects of instruction.[3] As regards the kind of poetry to be selected for children, the writers who discuss the course of elementary education are all most emphatic in demanding that moral pieces alone should be allowed, and that verse of an erotic character should be strictly excluded. It is interesting to read what the philosophers—to leave the theologians out of account—have to say on this subject.

Ibn Sīnā (Avicenna) recommends the following course of instruction: 'When the boy's limbs have become firm and he has attained to some readiness of speech, when he is able to assimilate the coherent materials of language and his ear has become perceptive, he should begin to receive instruction in the Qur'ān, the letters of the alphabet should be drawn for him to copy, and he should be taught the precepts of religion. As regards poetry, it is desirable that the boy should acquire the *rajaz* poems to begin with, and only afterwards the *qaṣīdas*, for the recitation of the *rajaz* is easier and its retention in the memory more certain, as its verses are shorter and its metre simpler. The teaching of poetry should commence with pieces which find themes in the advantage of good morals, the praise of science, the reproof of ignorance, and the rebuke of stupidity, and which enforce the honouring of one's parents, the practice of good deeds, and other noble qualities.[4]

Ibn Miskawaih reproaches parents for teaching their children to recite licentious poetry, to repeat the lies found in such poems, and to take pleasure in what they tell of vicious things and the pursuit of lewdness, as, *e.g.*, the poems of Imru-ul-Qais, al-Nābigha, and others like them; 'one so taught will go to live with princes, who summon him to their presence in order that he may recite such poems, and even compose in a similar strain.'[5] And in the directions drawn up for the *muḥtasib* ('chief of police'), as recorded by Ibn Bassām (13th cent. A.D.), that official is charged to see that schoolboys do not learn the poems of Ibn Ḥajjāj or the *Dīwān* of Ṣarī' al-dilā, while boys who read such poems by stealth must be deterred by corporal punishment.[6]

The strictness with which the young were guarded from the influence of erotic poetry will not surprise us when we remember the attitude of the Sunnite theologians towards narrative literature of a secular stamp. In the extant *fatwā* of a fanatically orthodox theologian of the 11th cent. A.D., people are warned against the possession not only of metaphysico-theological and philosophical works, but also of poetic and entertaining writings, and especially of certain frivolous books of the day. Contracts relating to such literary products are null and void. Writings of this character should rather be destroyed by fire and water.[7] Muhammad al-'Abdarī goes so far as to maintain that a paper merchant should not sell his wares to one who, to the best of his belief, will use the paper for reproducing the stories of 'Antar or Sīdī Baṭṭāl, and similar tales, as the diffusion of such writings falls under the category of *makrūhāt* ('reprehensible things').[8]

There were, however, other grounds upon which certain kinds of poetry were withheld from the young. Thus 'Abdallāh b. Ja'far b. Abī Ṭālib forbade his children's tutor to read with them the *qaṣīdas* of 'Urwa b. al-Ward, as they might thereby be incited to leave their native soil and seek their fortunes elsewhere.[1] There is also a *ḥadīth* saying which assigns the 'books of the Christians' likewise to the class of writings that must not be taught to the young.[2]

3. **Status of the elementary teacher.**—The importance attached to the work of the elementary teacher—the person from whom the young received their earliest knowledge of Allāh—is by no means reflected in his social status. The prevailing attitude of Muslim society towards the teacher of children (usually called *fiqī*; in the Maghrib also *dārrār*, 'little child,' from *dhurriyya*, pl. *dharārī*) is represented in Arabic literature as one of extreme disrespect. His position is on a level with that of weavers, blood-letters, and other despised trades.[3] Teachers were universally spoken of as a stupid and brainless class. 'Seek no advice from teachers, shepherds, or those who sit much among women'[4]—an adage which, as applied to teachers and weavers, and with the addition of the explanatory clause, 'for God has deprived them of reason and withheld His blessing from their trade,' is quoted as a saying of the Prophet.[5] The phrase *'aḥmaq min mu'allim kuttāb* ('stupider than a schoolmaster')—with variations in the wording—has passed into a proverb.[6]

There is also a group of anecdotes, forming a perman[illegible] ment in the Adab literature, which turn on the same poin[illegible] teacher as dunce.[7] 'How should we look for sagacity in [illegible] who is beside his wife in the evening, and in the early mornin[illegible] goes back to the society of little children?'[8] This contemptuous attitude found expression in the epigram:

Kafā-l-mar'a naqṣan an juqāla bi'annahu
Mu'allimu ṣibyān^in wa'in kāna fāḍilā,[9]

i.e. 'It is a sufficient indication of a man's inferiority—be he never so eminent—to say that he is a teacher of children.' The teacher's occupation, in fact, works almost like a specific for generating stupidity. Ibn al-Jauzī († A.H. 597=A.D. 1200), who wrote two books, treating respectively of 'the shrewd' and 'the stupid,' sets forth in the second of these the relative stupidity of various classes of people according to the following table:—'The rationality of women [who are universally regarded as *nāqiṣāt al-'aql wal-dīn*,[10] i.e. 'deficient in rationality and religion'] equals that of seventy weavers; that of a weaver equals that of seventy schoolmasters.'[11] When 'Abdallāh b. al-Muqaffa' was asked to give a weekly lesson to the son of Ismā'īl b. 'Alī, a dignitary of State, he refused the engagement, with the remark, 'Do you really wish me to have a place on the register (*dīwān*) of numskulls?'[12] It is not surprising, therefore, that the satirical poems directed against Ḥajjāj b. Jūsuf take full advantage of the fact that he, as well as his brother, was once a schoolmaster at Ṭā'if, and remind him of the time when he was still 'a humble slave, who early and late kept company with the village boys';[13] a person whose loaves were always of different shapes—'one without any visible rounding, another round as the full moon'—because he received them as payment from the parents of the children whom he primed with the *sūrat al-kauthar*.[14]

This literary mockery of the elementary teacher, however, was not so damaging as the scorn which found its way into the *ḥadīth* in the form of sayings ascribed to the Prophet; for here the criticism was no longer confined to humorous sallies against the

[1] *Aghānī*, ii. 191, 9. The reference is probably to such verses as are found in the *Dīwān*, ed. Nöldeke, Göttingen, 1863, iii. verse 5 ff., v. 1 ff., vi. 7 ff., xxxii. 4.

[14] Jurjānī, *al-Muntakhab min kināyāt al-udabā*, Cairo, 1908, p. 118.

intellectual poverty of teachers, but fastened with special keenness on their moral shortcomings.

'The teachers of our children are the vilest among you; the most deficient in pity for the orphan, the most churlish towards the poor.' 'What thinkest thou of teachers?' asked Abū Huraira of the Prophet, whose answer was: 'Their *dirham* is forbidden property, their livelihood is unjust gain, their speech hypocrisy.'[1]

The odium thus expressed made itself felt also in the treatment meted out to teachers. Yaḥyā b. Aktham († A.H. 243 = A.D. 857), judge under Khalīf Ma'mūn, even refused to accept teachers as satisfactory witnesses in a court of law.[2] This disqualification has been explained on the ground that the profession taught the Qur'ān for hire. But the teacher could, of course, make the retort that the judge himself takes a reward for dispensing Divine justice.[3] The hapless pedagogue gave further offence by drawing attention to the better treatment accorded to his calling among other peoples. Such comparisons evoked severe strictures from the religious standpoint, and were actually declared by the Meccan theologian, Ibn Ḥajar al-Haitamī († A.H. 973 = A.D. 1565)—on the authority of earlier writers—to be one ... of the recognized criteria of unbelief:[4]

'When a teacher ... thereof ... of children says, "The Jews are a great deal ... we Muslims, for they fulfil the obligations due to the ... of their children,"—any one who so speaks is to be ... as a *kāfir*.'[5]

... possible, of course, that this depreciation of ... indispensable profession of teacher may be due ... to the haughtiness inherent in the Arabic ... ce.[6] In passing judgment upon it, however, we must not forget that analogous features appear in the educational annals of Greece and Rome.[7] Moreover, it may be said in favour of Muslim society as a whole that this far from creditable attitude towards the elementary teacher was by no means universal. We know of Muhammadans of unbiased mind who made a stand against the hackneyed judgments of the populace, and attained to a more appreciative estimate of an undeservedly maligned vocation. As the representative of this point of view, we may single out Jāḥiẓ († A.H. 255 = A.D. 869), who in this, as in other matters, criticized the prejudices of the masses in an independent spirit.

Jāḥiẓ maintains that the traditional estimate of the schoolmaster held good only of those in the lowest ranks of the profession—the ignorant *fellāḥ* teachers; and he points to the men of high intellectual distinction who had taught in schools, and had in some cases exercised great influence as the instructors of princes.[8] He also cites an imposing list of illustrious scholars, poets, and theologians (Kisā'ī, Quṭruh, Kumait, etc.) who had adorned the profession, and he sets beside them a number of contemporary teachers. 'Here in Baṣra we have never had men of greater learning in various branches of science, or of more lucidity in the expression of thought, than the two teachers, Abu-l-Wazir and Abu-l-'Adnān.' Hence it was sheer folly and crying injustice to reproach the profession as a whole with stupidity.[9]

In order to gain the prestige of authority for this more favourable view of the teacher's calling, attempts were made to trace it likewise to utterances of the Prophet himself. Al-Qurṭubī († A.H. 671 = A.D. 1272), the great commentator on the Qur'ān, gives his imprimatur to one such deliverance, viz.

'The best of men, and the best of all who walk the earth, are the teachers. When religion falls into decay, it is the teachers who restore it. Give unto them, therefore, their just recompense; yet use them not as hirelings, lest you wound their spirit. For, as often as the teacher bids the boy say, "In the name of Allāh, the merciful, the compassionate," and the boy repeats the words after him, God writes for the teacher, and for the boy and his parents, a record which shall surely save them from the Fire.'[1]

It is true that the scholar who thus lent his sanction to a *ḥadīth*[2] usually branded as apocryphal was an Andalusian. In Andalusian Islām, no doubt, a higher value was placed upon the function of the teacher than was the case in the East—a result due in great measure to the flourishing system of elementary education that had grown up in the Western khalifate.[3] Here, therefore, the alleged utterances of the Prophet in honour of teachers would tend to be more favourably received. The same thing holds good of Islām in Sicily.

Speaking of Palermo, the Arab traveller Ibn Ḥauqal († A.H. 367 = A.D. 977) puts on record that he found over three hundred elementary schools in that city, and that the inhabitants regarded their teachers 'as their most excellent and distinguished citizens,' speaking of them as 'the people of Allāh, their witnesses [before God], and their trusty friends.' It is true that Ibn Ḥauqal, in explanation of the scornful attitude towards the intellectual capacities of teachers prevalent elsewhere, adds that 'they choose this profession in order to evade enrolment in the army.'[4]

4. Payment of teachers.—As has been indicated in the foregoing, the gravamen of the strictures urged against the teaching profession from the religious side was the fact that teachers asked and took payment for giving instruction in the Qur'ān. The moral propriety of taking wages for religious teaching was a question frequently debated among Muslim jurists. It is to be presumed that in Islām, as in other religions,[5] the devout were in favour of gratuitous religious instruction. In spreading the knowledge of Divine things the teacher should have no other design (*niyya*) than that of doing a work well-pleasing to God, and thereby attaining nearness to Him. No financial consideration should attach to such 'near-bringing works' (*qurāb*), any more than—on similar grounds—to the *ādhān*,[6] the *ṣalāt*, the diffusion of the *ḥadīth*, etc. All such acts must be done only *iḥtisāban* ('for God's sake'), not *iktisāban* ('for gain'). In support of this view, and in evidence of its being the only legitimate one, there were numerous traditions to hand;[7] nor were typical examples lacking to commend its acceptance.

One such example was found in 'Abd al-Raḥmān al-Sullamī, a man of devout spirit, who had actually heard *ḥadīths* from the lips of 'Othmān and 'Alī, and who, at the time of his death (during the khalifate of 'Abdalmalik), was *imām* of a mosque in

1 In Zurqānī, on *Muwaṭṭa*, Cairo, A.H. 1279–80, iii. 7.
2 *Thamarāt al-aurāq*, *loc. cit.*

4 *Al-I'lām bi-qawāṭi' al-islām* (ed. in margin of this writer's *Zawājir*, Cairo, A.H. 1312, ii. 74).
5 As illustrating the reverse side of the matter, we may quote what Wilhelm Burchard, a native of Saxony, who was held captive by the Turks in the 17th cent., says with regard to the position of teachers in Turkey: 'Man hält die Schulmeister in Türckey sehr wehrt und thun kein Überlast, lassen auch nicht geschehen, dass ihnen ein eintzig Leid wiederfahre, worinnen sie uns Teutschen hefftig beschämen, als da viele gar Fuezschemel aus ihren Schuldinern machen und alles Hertzeleid den armen Leuten zufügen' (W. B., *Eines in die 19 Jahr von Türcken gefangen gewesenen Sachsen auffs neu eröffnete Türckey*, Magdeburg, 1688, [2]1691, cap. ix.).
6 Cf. Goldziher, *Muh. Studien*, i. 110.
7 Ussing, *Darstellung d. Erziehungs- u. Unterrichtswesens bei d. Griechen u. Römern*, Altona, 1870, p. 102.
8 The tutor sometimes took his *nisba* from a family of repute in which he had served: thus the philologist, Abū 'Amr al-Shaibānī, who taught the son of Yazīd b. Manṣūr, adopted the surname Yazīdī (Suyūṭī, *Bughjat al-wu'āt*, p. 192).
9 Jāḥiẓ, *Bayān*, i. 100 ff. = *Khams rasā'il*, Stambul, A.H. 1301, p. 187.

1 Quoted by 'Abdarī, *Madkhal*, ii. 158.
2 Ibn al-Jauzī pronounces the following verdict on this *ḥadīth*: 'It is not permissible to use this saying as an argument [in the question as to payment of teachers], for it is a concoction of Aḥmed b. 'Abdallāh al-Harawī al-Jūyībārī, who was a liar, and fabricated *ḥadīths*—a matter in which all critics of tradition agree' (MS in Leyden Univ. Library, no. 1772, fol. 132a). In Suyūṭī's work on spurious traditional sayings likewise, this and other similar utterances regarding *mu'allim* are marked with a warning rubric (*Al-La'āli al-maṣnū'a fi-l-aḥadith al-mauḍū'a*, p. 103 ff.).
3 Cf. Schack, *Poesie u. Kunst der Araber in Spanien u. Sicilien*, Berlin, 1865, i. 62; Dozy, *Gesch. d. Mauren in Spanien*, Leipzig, 1874, ii. 68.
4 *Bibl. Geogr. Arab.*, ed. de Goeje, Leyden, 1870 ff., ii. 87, top.
5 Cf. Manu, xi. 63, where the act of teaching the Veda for hire, or learning it under a paid teacher, is declared to be a sin of the second degree.
6 Goldziher, *Muh. Studien*, ii. 390.
7 These traditional testimonies were collected by the Ḥanbalite Ibn al-Jauzī (MS in Leyden Univ. Library, no. 1772, fol. 131b).

Kūfa, and in that capacity had devoted himself to teaching the Qur'ān. It is recorded that once, on coming home, he found a number of cattle which a grateful father had sent him as a honorarium for instructing his son in the sacred volume. He at once returned the gift, with the message: 'We take no payment for the Book of God.'[1] Other teachers of the Qur'ān gave similar practical expression to this point of view;[2] and, in support of the theory that religious instruction should be given *majjānan* ('gratuitously'), appeal was made also to an admonition 'from the ancient books' which, in point of fact, may be identified as a Talmudic maxim.[3]

But, while the demand for free religious teaching might be good enough as an ideal, and while some even tried to carry it into effect, it was naturally left behind in the march of practical life. It was, after all, necessary that the wretched beings who, without much moral support from their fellows, engaged in the work of teaching should at least make a bare subsistence out of it. In this, as in many other things, the religious injunction, with its ascetic ideal, could not be put in practice so ruthlessly as to maintain a universal interdict against the merest pittance of payment.[4] As a matter of fact, besides the more austere *ḥadīths*, there are others of a more humane character, and more favourable to the practice of taking wages for religious instruction; and the teacher who was not in a position to prosecute his calling for a purely spiritual reward could always derive comfort from these.[5]

Even Bukhārī himself finds a place in his *Corpus Traditionum* for a saying ascribed to Ibn 'Abbās: 'Nothing has a better right to be rewarded than [instruction in] the Book of God.' It is true that he appends to this the condition laid down by Sha'bī, viz. that the teacher may on no account negotiate for his wages, but may accept what is voluntarily given him. Bukhārī finally cites the testimony of Ḥakam b. 'Uyaina: 'I have never heard it said of any of the *fuqahā* that he disapproved of the teacher's remuneration. Even Ḥasan Baṣrī paid a teacher ten dirhams.'[6] From Mālik b. Anas comes the still more decisive statement that in the holy city of Medīna none has ever taken umbrage at the teacher's receiving a reward even in this world—and that not merely as a voluntary honorarium from the parents, but as a fixed monthly fee (*mushāhara*).[7]

Accordingly the payment of teachers became the rule actually recognized in practice by Muslim law,[8] and was vindicated, with the support of the sources quoted above, by authorities of the highest repute.[9]

The adherents of the more rigid view, in giving their consent to the practice of paying teachers—this payment, however, they preferred to call *'iwaḍ* ('recompense')—sought to solace their feelings by qualifying the teacher's right by certain *pia desideria*, which, it is true, made very little difference. They appealed to the moral sense of the teacher. He must look upon his wages, not as professional emoluments, but as a gift (*fatḥ*)[10] Divinely bestowed upon him in order that he may pursue a calling well-pleasing to God.[11] The all-important thing is the inward purpose (*niyya*); he must devote himself to the work from purely spiritual motives, and without any worldly considerations whatever. To this 'Abdarī adds the naive admonition that the teacher should make no public profession of his motives, as it is quite like 'the people

of our time' to take him at his word, and deprive him of his material recompense.[1] Further, he must not let his continuance at work depend rigidly upon his being paid regularly. Should his allowance cease in any particular case, he must attend all the more zealously to the children of parents who, owing to their poverty, have fallen behind in their payments.[2] From the children themselves he must not receive presents without the knowledge of their parents or guardians.[3] In general, he must be satisfied that the money tendered him is above suspicion as to its source, and that it has not been gained dishonestly, or by methods obnoxious to religious precept; he should, for instance, have nothing to do with the money of a tax-gatherer. With respect to this counsel—it was, of course, simply a wish—it is interesting to note the qualifying clause annexed to it, viz. that in such cases the teacher need not refuse money from the hands of the mother or grandmother of his pupil, so long as he can assure himself that the immediate source has the warrant of religious law.[4] But he must avoid all intercourse with fathers whose occupation is at variance with the strict demands of religion; and, as long as they make their living in that way, he must not greet them, or hold himself accountable to them.[5]

Stories of the exorbitant charges made by eminent teachers come down from every period, though it must be admitted that this applies only to those branches of learning which were not in the strict sense religious.

The grammarian Muhammad b. 'Alī al-Mabramān († A.H. 345 = A.D. 956), pupil of Mubarrad, had a name for excessive avarice. He would not give instruction in the *kitāb* of Sībūyah under a fee of one hundred dīnārs.[6] Muhammad Shams al-dīn al-Suyūṭī († A.H. 808 = A.D. 1405) charged a dirham for every line of the grammatical poem *Alfiyya*,[7] which comprises about a thousand lines.

5. **School administration.**—Muslim literature treats in great detail of the teacher's demeanour towards his scholars,[8] and the conditions applying to the conducting of schools. As regards the relation of teacher to pupil, the fundamental principle is the just and equal treatment of all scholars. Laith b. Mujāhid affirms that at the Day of Judgment God will subject the schoolmaster to a special interrogation as to whether he maintained strict impartiality between pupil and pupil, and that, if he is found guilty in this respect, he will be set beside the workers of iniquity.[9] A whole series of apparently trivial points relating to the child's presence in school are brought by 'Abdarī under the principle that no distinction shall be made between children of the rich and children of the poor.[10] Nor must the scholars be employed in the private service of the teacher's household, without the express sanction of their parents;[11] and from this it was argued that the teacher must not make use of orphan children for such work *under any circumstances*.[12]

It is the law in Islām that all teachers should be married;[13] a similar requirement is found in the Talmud.[14] A typical indication of the ethical standpoint of Eastern peoples is seen in the regulations designed to obviate the very suspicion of evil communications. The rule that the work of elementary teaching must be done, not at the teacher's own

residence, but in a specially appointed public place (*ḥānūt*, pl. *ḥawānīt*) within sight of the people was intended to prevent every suggestion of scandal.[1] Nor could the halls of the mosques be used for this purpose, as little children might unwittingly defile the walls and flooring of the sacred edifice. This prohibition was supported by a saying of the Prophet: 'Keep your boys and your lunatics away from your mosques'; but the precept was not strictly observed in practice. It has been a favourite custom from olden times to conjoin the elementary school and the public fountain (*sabīl*); the institution of the latter is often combined with that of a school in the upper storey (*maktab sabīl*). It is interesting to note 'Abdarī's criticism of certain practices common among teachers in his day. He holds it unworthy of the profession that a teacher, at the inauguration of his school—or afterwards, if he finds his undertaking insufficiently supported—should try to draw the attention and invite the patronage of the public by setting up placards before the school-gate. It is likewise unbecoming that a teacher, in requesting the parents to attend the school-festivals (*afrāḥ*), should in his letters of invitation (*aurāq isti'dhānāt*) flatter them with high-flown epithets and titles, or compose the invitations in verse.[2]

The pupils must also have their off-days. The school must be closed for two days of every week, viz. Thursday and Friday, and also for a period of from one to three days before and after the '*īd* festival.[3] The Thursday holiday gave occasion to the proverbial phrase, 'to be as happy as a teacher on Thursdays' (*kamā fariḥa al-mu'addib bil-khamīs*).[4] The scholars are also granted a whole or partial holiday whenever any one of them has finally mastered a section of the Qur'ān.[5] The parents of a boy who has succeeded in doing this celebrate the event by a festivity (*iṣrāfa*),[6] and bestow upon the teacher a special gift, the acceptance of which is not frowned upon even by the precisians. When a youth completes his study of the Qur'ān, the occasion is celebrated in a feast called (in Mecca) *iqlāba*, or (in the Maghrib) *takhrīja*.[7] 'Abdarī's minute account of the more extravagant—and to him obnoxious—forms sometimes assumed by these functions reveals an interesting phase of contemporary life.

The question of corporal punishment was also discussed among those with whose educational methods we are now dealing. The 'rod' is regarded as a valuable auxiliary of the teacher's art. The 'strap'—quite characteristically—becomes an object of comparison: 'In the Prophet's hand was a whip, like that used in school' (*ka-dirrat al-kuttāb*)—a simile often employed.[8] The teacher is sometimes held up to derision by being described as 'one who brandishes the whip' (*ḥāmil dirra*) and takes reward for the book of God.[9] Even the philosopher Ibn Sīnā, in his treatise on the education of children, speaks of the 'assistance of the hand' (*al-isti'āna bil-yad*) as a useful adjunct of instruction.[10] The tutors of the young sons of khalīfs did not spare the rod,[11] nor did the fathers disapprove.

Al-Mubarrad describes a scene in which the Khalīf 'Abdalmalik leads by the hand Prince Marwān, 'crying because of the whipping his teacher had given him.'[12] Abū Maryam, preceptor of the Abbāsid princes Amīn and Ma'mūn, was apparently given to a too drastic use of the ferule. On one occasion he chastised Prince Amīn so severely as to make his arm black and blue. The prince complained to his father, and showed him the maimed arm. The Khalīf invited the stern pedagogue to dinner; and when the latter, in no little apprehension, specified the offence for which the prince had been so sharply dealt with, the father reassured him with the words: 'You are at liberty even to kill him: it were better that he die than remain a fool.'[1]

A further form of punishment was 'keeping in'; but, in the one instance of this known to us, it is the father, not the teacher, who administers the correction.[2]

It was to be expected that, in order to protect the children against the undue severity of irascible masters, Muslim jurisprudence would endeavour to regulate the penalties applied, both as to their form and as to their degree. It sanctioned corporal punishment, especially for religious offences,[3] but only in the case of children over ten years of age; while, as to the amount of punishment, the extreme limit was variously laid down as between three[4] and ten 'light strokes.' Nor must the teacher resort to any instrument used by the judge in administering legal penalties (*ḥadd*). The *Madkhal* speaks severely of contemporary teachers who chastise with 'dry almond rods, bushy palm-branches, Nubian switches, and even the instrument called the *falaqa*'[5] ('stocks'), and used for the bastinado. The supervision of the teacher in this, as in other matters, was assigned to the chief of police. In the directions drawn up for this officer he is instructed to be observant of the way in which children are treated at school, and to protect them from maltreatment by hot-tempered teachers.[6]

6. Education of girls.—It must be borne in mind that the maxims relating to the training and instruction of the young apply only to boys (*ṣabī*). The education of girls did not fall under these rules except in one single particular, viz. that, as set forth in the police directions recorded by Ibn Bassām, the female teachers of girls (*mu'allimāt al-banāt*) are to be more strictly looked after in regard to the poetical pieces which they set before their pupils.[7] While it was deemed necessary to instruct girls in moral and religious things, there was no desire to lead them through the portals of intellectual development. Woman's proper sphere centres in the spindle,[8] and this requires no training in letters. Even the philosophic thinker and poet Abū-l-'Alā al-Ma'arrī († A.H. 449=A.D. 1057) endorses this maxim,[9] which became a veritable household word in the ancient Muslim world. The following utterance of the Prophet regarding females—said to rest on the authority of 'Ā'isha—is frequently quoted: 'Do not let them frequent the roofs; do not teach them the art of writing; teach them spinning and the *sūrat al-nūr*.'[10] But it were surely preposterous to regard this sūra

(xxiv.) as suitable for the training of young girls, containing as it does the revelations which refer to women of known or suspected immoral life. The most emphatic warnings of all are uttered against teaching women to write. Ibn Miskawaih († A.H. 421 = A.D. 1030), in spite of all his schooling in philosophy, finds nothing strange in this prohibition. In his *Jāwidān Khirad* he adopts a pronouncement of 'Omar I. which, in counselling the stringent control of women, lays an interdict upon their being taught to write.[1]

It is told of Luqmān the sage that, when on one occasion he passed a school, and noticed that a girl was being taught, he asked, 'For whom is this sword being polished?' implying, of course, that the girl would be her future husband's ruin.[2] It is not surprising to find this view reflected in the police instructions handed down by Ibn Bassām: 'He [the teacher] must not instruct any woman or female slave in the art of writing, for thereby would accrue to them only an increase of depravity.' It is a current saying that 'a woman who is taught to write is like a serpent which is given poison to drink.'[3]

Girls must be kept from the study of poetical literature; here there is no concession whatever, such as is made in the literary education of boys.[4]

These views, however, belong rather to the sphere of ethnology than to that of religion, and it would be absurd to regard them as expressing principles inseparable from the fundamental teachings of Islām. The history of Muslim civilization, even in periods which show no deviation from the line of strict orthodoxy, would supply many a refutation of such a theory. When we bear in mind how many women had a share in the transmission of *ḥadīth* works,[5] we see the untenability of the view that in religious circles the art of writing was withheld from women on principle. The daughter of Mālik b. Anas was able to correct the errors of those who recited and transmitted her father's *Muwaṭṭa*.[6] That the rule against teaching women to write was of universal validity is disproved by the very name of a learned lady of Damascus, viz. *Sitt al-kataba* ('mistress of the writers') *bint abi-l-Ṭarḥ*, who supplied Jūsūf b. 'Abdal-mu'mīn of Nābulūs with traditions.[7] The learned woman is found even among remote tribes in the heart of the Southern Sahara, where women are apparently not prohibited from cultivating Muslim learning.[8]

'The nomads of this region of the Sahara possess books, precisely as do the settlers; nor do they abandon them even in their wanderings; their migratory habits do not prevent their devoting themselves to intellectual activities, or allowing their children, *even girls*, to share in such studies.'[9]

Above all, however, it is the position of women in the learned life of Andalusian Islām, as portrayed by such writers as al-Marrākushī,[10] and verified by the facts of literary history, that shows to what a small extent the prohibitory maxims were applied in actual religious practice.

[9] Ismā'īl Hamet, 'La Civilisation arabe en Afrique Centrale' (*ib.* 11). The author contrasts the ignorance prevalent among women in the Northern Sahara with the culture which is widely diffused among those of the Southern tribes (*ib.* 22).
[10] *Hist. of the Almohades*[2], ed. Doxy, Leyden, 1881, p. 270.

Besides the women who attained eminence in various branches of science and literature, and especially in poetry, we find several who were active in civic service, as, *e.g.*, 'Muzna (secretary to the Emīr al-Nāṣir li-dīn-Allāh [† A.H. 358 = A.D. 969]), the learned, gifted with a beautiful handwriting.'[1] Such examples show at least that the prohibitive sayings referred to were a dead letter in practical life; and they also prove that the education of women actually attained a very high standard, and went far beyond the prescribed limit of the *sūrat al-nūr*. Hence the endeavours made within recent times in various parts of the Muslim world to raise female education to the level of Western civilization may be justified by an appeal to the past history of orthodox Islām.

7. Education in ethical and political writings.—The problem of elementary education has not been ignored in the literature of ethics and politics. The somewhat mechanical precepts of the older theological writings have been furnished with a deeper foundation in ethics and philosophy, and enriched with the ideas of a more worthy conception of life. As in ethics and philosophy generally, so also in education, we must recognize the powerful effects of that Hellenistic influence which we have already noted in some matters of detail. Reference was made above to an educational excursus which Avicenna († A.H. 428 = A.D. 1037) incorporated in his tractate on government (*risālat al-siyāsa*).[2] But Avicenna dealt with little more than the formal elements of the question, and it was really al-Ghazālī († A.H. 505 = A.D. 1111) who first brought the problem of education into organic relation with a profound ethical system. Starting from the Hellenistic idea of the infant mind as a *tabula rasa* susceptive of objective impressions,[3] he urges upon parents and teachers their solemn responsibility for the principles which they may stamp permanently upon the young soul. The child is given them as a trust, and it is their part to guard it well and faithfully. They must not only fill the young mind with knowledge, but—and Ghazālī lays special emphasis upon this—must seek to stimulate the child's moral consciousness, and train him to the proprieties of social life.[4]

It is somewhat remarkable that in the discussion of problems in the theory and practice of education the literature of Western Islām (the Maghrib) takes the lead. In the East, it is true, Ghazālī's vigorous dissertation makes up for the more abundant products of the West, and has, moreover, had a great influence upon the latter. As early as the 4th cent. A.H., however, we find a reference to a work called *Kitāb al-tafḍīla fī ta'dīb al-muta'allimīn* ('On the Education of Pupils'), by 'Alī b. Muhammad b. Khalaf al-Qābisī († A.H. 403 = A.D. 1012), of Gabes in Southern Tunis,[5] who enjoyed a high repute as one of the Mālikite traditional school.[6] The present writer has, however, sought in vain for any further mention of this presumably pedagogical work of al-Qābisī. In regard to the legal provisions bearing upon education, again, the great authority

[4] This most important treatise by Ghazālī has been translated into English and appreciatively criticized by D. B. Macdonald, 'The Moral Education of the Young among the Muslims,' in *IJE* xv. [1905] 286-304; cf. also al-Ghazālī, *Lettre sur l'éducation des enfants*, tr. by Muhammad ben Cheneb, in *Rev. africaine*, xlv. [1901] 241 f.
[5] Balawī (likewise a native of the Maghrib), *Kitāb Alif-bā* i. 76, line 6.
[6] Ibn Khallikān, ed. Wüstenfeld, Göttingen, 1835-40, no. 4 (tr. de Slane, London, 1843-71, ii. 263); Abū Bakr Ibn Kh[illegible] (*Bibl. Arab. Hisp.* ix. x.), p. 296.

is Abu-l-Walīd ibn Rushd the elder († A.H. 520 = A.D. 1126), qāḍī of Cordova, and grandfather of the famous philosopher of the same name (*i.e.* Averroës). Abū Bakr ibn al-'Arabī († A.H. 543 = A.D. 1148), qāḍī of Seville, who expounded his educational ideas in a work entitled *Marāqī al-zulfā* ('Stages of approach,' *i.e.* to God), is also frequently indebted—even in his language—to Ghazālī's treatise. The *Marāqī* is apparently lost, but numerous excerpts are quoted in a work by another Maghrib writer, the *Madkhal al-shar' al-sharīf* ('Introduction to the Sublime Law' of Muhammad ibn al-Ḥājj al-'Abdarī († A.H. 737 = A.D. 1336–7). This work, which has in view the reform of Muslim life on the basis of the ancient Sunna, devotes a number of sections to the subject of education and training, and has on this account been used as one of the sources of the present article. It is worthy of remark that in the scheme of education set forth in 'Abdarī's quotations from the *Marāqī* of Ibn al-'Arabī, the latter lays great stress upon hardening the body: the young should sleep in hard beds, and be trained in physical exercise; they should be urged to bodily activity, and inured to pain by corporal punishment. He also pleads strongly for games and hours of recreation.

> 'If a child is kept from play, and forced to work at his tasks without intermission, his spirit will be depressed; his power of thought and his freshness of mind will be destroyed; he will become sick of study, and his life will be overclouded, so that he will try all possible shifts to evade his lessons.'[1]

Ghazālī likewise had spoken emphatically on the evils of overpressure. Next in order after 'Abdarī comes another Maghrib authority, Ibn Khaldūn († A.H. 808 = A.D. 1405), renowned as a writer on the philosophy of history, who devoted great attention to educational problems, and especially to the spirit of primary education, its gradation, the methodics of teaching the Qur'ān and philological subjects, and even the question of school-books (*mutūn*);[2] a lucid account of his educational ideas will be found in D. B. Macdonald's *Aspects of Islam.*[3] A work treating of married life (*muqni' al-muḥtāj fī ādāb al-ziwāj*) by the Maghrib writer Abu-l-'Abbās b. Ardūn al-Zajlī († A.H. 992 = A.D. 1584) contains a long chapter on the education of children; this was published recently by Paul Paquignon.[4] Reference may also be made to a compendium of the maxims relating to education, the work of a Maghrib author whose name is not given; it is based largely on the treatise of 'Abdarī, and has been published in the original, together with a French translation, by the Algerian professor, Muhammad ben Cheneb.[5]

A word may be added, for fullness' sake, regarding the educational 'guide' of Burhān al-dīn al-Zarnūjī (*c.* A.H. 600 = A.D. 1203), introduced into Europe under the title of *Enchiridion Studiosi.*[6] This work, the author of which was a native of the East, deals, not with primary education, but with the study of theology, and gives pious counsels for the successful prosecution thereof. From the educational standpoint the sixth chapter is worthy of attention, as it contains suggestions regarding the first steps in study, the amounts to be mastered in the early stages, the repetition of what has been learned, etc. The author, conformably to time-honoured maxims, advises students to begin a study so far as possible on a Wednesday, as it was on that day that God created light.[7]

8. Modern movements towards reform.—So long as the social life of Islām remained impervious to Western influence, and even to-day in circles that are still unaffected by it, the instruction of the young proceeded mainly on the lines laid down in the older theological writings (see above, § 2). The best descriptions of this traditional stage are found in the works of E. Lane[1] and Snouck Hurgronje[2] (for Arabic countries), and H. Vámbéry[3] (for Turkey proper).[4] But, while this primitive and patriarchal form of instruction still holds its place—even amid the influences of foreign culture with which it will have nothing to do—there has meanwhile arisen in various Muslim countries a system of education which comes more and more into harmony with modern requirements. The new movement was initiated by the Egyptian pasha Muhammad 'Alī, the founder of modern Egypt, whose educational reforms, begun in 1811, were at first, it is true, of a somewhat circumscribed character. A further advance was made in 1824 by the erection of training schools in various departments, and the movement was partially organized and consolidated in 1836.[5] On this basis all branches of education have made rapid progress in Egypt. In Turkey, the reform of primary education was inaugurated in 1845, under Sultan 'Abdulmajid, by the institution of the so-called *Rushdiyya* schools, while in 1868 his successor, 'Abdul 'Azīz, established a lyceum in Galata-Serai.[6] But, in spite of ceaseless efforts to raise the standard and widen the scope of education throughout Turkey, the results still fall far short of a general diffusion of knowledge, and in many parts of the Ottoman Empire there has been no advance whatever upon the crude institutions of primitive times. It should be added, however, that in Turkey and elsewhere the more liberal-minded Muhammadans, in default of adequate institutions of their own, send their children of either sex to non-Muslim schools established by European and American agencies.

It will be readily understood that, in countries under European rule having a Muslim population, the various Governments have greatly promoted the cause of education by the establishment of distinctively Muslim schools, as, *e.g.*, in India,[7] and, since the English occupation, also in Egypt. In the Muslim colonies of France and Holland likewise,[8] the respective administrations have devoted great efforts to the task of bringing the native educational methods nearer to the standards of modern culture. It is a remarkable fact that the Muhammadan subjects of the Russian empire (Tatars) are spontaneously and independently making strenuous and successful efforts to develop a modern system of education,[9] and, under the leadership of enlightened co-religionists, are able, in all social and intellectual concerns, to combine an unswerving loyalty to their faith with an earnest striving after progress on modern lines. The advance thus being made in various branches of education embraces also the instruction of girls, which is coming to be recognized more and more

as a matter of vital moment for the Muhammadan world. The more important phases and incidents of the whole movement are chronicled in the *Revue du monde musulman* (Paris, since 1906), which deals with all Muslim countries, and has now completed its sixteenth volume.

Among specifically Muhammadan tendencies making for educational reform, we may mention the Bābī movement, which arose in Persia in 1844 (see art. BĀB, BĀBIS, vol. ii. p. 299 ff.), and which, as Bahā'ism, has since then been constantly extending its influence. From the outset the principles of this sect have embraced an endeavour to raise primary education to a higher level and to relieve it of its long legacy of prejudice—aims which have been most strenuously pursued by the Bahā'i. Their more exalted conception of woman and of her function in family life, and their abolition of the restraints placed upon the female sex by ancient convention, are naturally coupled with efforts to improve the education of girls.

With the progress of primary education the development of the higher grades of instruction goes hand in hand. In many parts of the Muslim world, indeed, the latter has outstripped the former. A considerable number of colleges for the study of special subjects—military, medical, legal, and technical—and designed primarily to meet economic and political requirements, have been established, and in some centres these are combined to form a kind of university (*dār al-funūn*).[1] A large institution, designed to perform the function of a university, was quite recently erected in Cairo[2] (President-Rector, Prince Aḥmed Fu'ād Pasha, great grandson of Muhammad 'Alī). In Aligarh, India, the endeavour to form the academy founded there in 1875 into a university is within sight of success—a movement which, with Agha Khān at its head, finds generous support among adherents of Islām throughout India.[3] Ṭeherān likewise has a college which does its work under the style of a *dār al-funūn*. By way of providing stepping-stones towards such higher institutions, effective progress is being made in Turkey and Egypt with the system of preparatory or *i'dādī* schools.

These institutions are all conducted according to detailed instructions of the respective Governments, and the instructions are printed and made public. Various reforms, especially in regard to the system of examination and granting diplomas, have been recently effected by the Government in the great *madrasa* of the Azhar mosque in Cairo, in which the study of the various branches of theology is pursued on traditional lines; as also in the schools associated with that *madrasa* at Ṭanṭa (the Aḥmediyya mosque), Damietta, and Alexandria.[4] The need for reform in higher theological education has asserted itself also in more sequestered localities.[5] Among other agencies aiming at the diffusion of culture among Muhammadans, mention may be made of the Khaldūniyya institution at Tunis,[6] which takes its name from the Ibn Khaldūn referred to above. All these manifold activities are but so many endeavours to arouse, strengthen, and apply in practice, among the Muhammadan peoples, the conviction that their religion does not prohibit them from rising to the demands of a progressive civilization, or pursuing the intellectual life.

EDUCATION (Persian).—The Persians, like all other Orientals, attached high value to education, so that Hōrmazd (afterwards Hormisdas IV.) could reply to his teacher, the sage Buzurjmihr, that 'wisdom is the best thing, for the sage is the greatest among the great' (*Shāh-nāmah*, tr. Mohl, Paris, 1876–78, vi. 425), and the Pahlavi *Pandnāmak-ī Vajōrg-Mitrō* (ed. and tr. Peshotan Behramji Sanjana [under the title *Ganjeshâyagân*], Bombay, 1885, p. 11) makes the same sage say: 'Education makes man noble, . . . education is a corrector of man'; while the 9th cent. *Dīnkarṭ* (ed. and tr. Sanjana, Bombay, 1874 ff., p. 585) declares that 'men ought to raise themselves to illustrious positions by worldly knowledge and by education, (which enables them) to read and write.' So vital was this matter, especially as regards religion, that even an adult was advised by Buzurjmihr (*Pandnāmak*, p. 21) to spend a third of every day and night 'in getting religious training and in asking sensible questions of pious men,' the second third being devoted to agriculture, and the remainder to eating, sleeping, and recreation. The legal code of the Avesta, in like manner, enjoins that the 'holy word' (*mąθra spenta*) be pronounced to those who come 'seeking (religious) instruction' (*xratu-činah* [*Vend.* iv. 44]), and it is especially mentioned as a desirable characteristic of children that they be 'of good understanding' (*hvīra* [*Yasna*, lxii. 5; *Yašt*, xiii. 134]).

Thus far there is the unity of all generalities; but, when we turn to the data concerning the actual training of children, much confusion confronts us. The reason doubtless is that, just as in modern times, education was not absolutely uniform; and, in addition, the passages on which we must rely are largely concerned (especially in the classical authors) with the early training of royal children; while some accounts, notably those of Xenophon's *Cyropædia*, are not free from the suspicion of exaggeration in the interests of political romance.

The *Vendīdād* states (xv. 45) that the care (*θrāθra*) of the child should last seven years. Until the age of four (Bahrām Gūr, *Shāh-nāmah*, v. 400), five (Herod. i. 136), or seven (Valer. Max. ii. 6), the infant passed his time in the women's apartments, and his first training was received from women and eunuchs (Plato, *Legg.* 695 A; cf. the pseudo-Platonic *Alcibiades Primus*, 121 D). From five until seven the child should be under its father's tuition (*Shāyast lā-Shāyast*, v. 1 [West, *SBE* v. 290]), although, as in the case of Bahrām Gūr, who was sent to Arabia in infancy (*Shāh-nāmah*, *loc. cit.*), this rule was not always observed. Real instruction began about the age of seven (Bahrām Gūr), or even as early as five (Herod. i. 136; Strabo, p. 733), and lasted until the age of twelve (Bahrām Gūr, who, however, seems to have been exceptionally brilliant), fifteen (Artaxshīr Pāpakān, the founder of the Sasanian empire [*Kārnāmak-ī Artaxshīr-ī Pāpakān*, ed. and tr. Darab Peshotan Sanjana, Bombay, 1896, p. 5]), sixteen or seventeen (Xenophon, *Cyropæd.* I. ii. 8), twenty (Herod. i. 136), or even twenty-four (Strabo, p. 733); but all essential instruction should be given by parents to their children by the age of fifteen (*Pandnāmak*, p. 25). It was a man's duty to instruct his child, for thus it might rise to some superior station in life (*Dink.* ed. Sanjana, p. 263); and he should teach not only his child, but his wife, his countrymen, and himself

(this probably refers especially, as Sanjana remarks, to religious rather than secular knowledge; see *Āndarj-ī Āṭūrpāt*, ed. and tr. Peshotan Behramji Sanjana, Bombay, 1885, p. 2); while it is enjoined upon him: 'If you have a son, send him to school from his early years, for education is the light-giving eye of man' (*ib.* p. 5). The *Pandnāmak* (p. 25) adds a further inducement for a parent to teach his child to practise virtue and to shun vice: 'Those parents that give a certain amount of education of this kind to their children obtain their recompense from whatever good deeds their children do; but those that do not give it draw upon their own heads whatever iniquities their children, devoid of the strength it affords, commit.' It is also especially recommended to marry one's daughter 'to an intelligent and learned man; for her union with such a person is like the seed sown in a fertile soil and producing grain of a superior quality (*Āndarj*, p. 7).

In its original extent the Avesta contained accounts of the subjects and methods of education, but these records have now vanished, and the sole information regarding them is contained in the *Dīnkarṭ* (VIII. xxii. 2; xxxvii. 4 [tr. West, *SBE* xxxvii. 77, 114]).

The former of these *Dīnkarṭ* passages—on the second section of the *Ganabâ-sar-nijaṭ Nask*—contained information 'about arrival at the period for the teaching of children by a guardian or father, and the mode of his teaching; . . . the sin due to not teaching a child who is to be taught, and whatever is on the same subject.' The other passage—on one of the concluding sections of the *Hūspāram Nask*—touches on matters pertaining to 'the association of priestly instructor and pupil, and their meritoriousness together; the fame of the priestly instructor for priestly instruction, and that of the disciple for every kind of learning derived from the priestly instructor, and every kind that the priestly instructor imparts to the pupil; and the happy effects of the priestly instructor, of every kind, in similar matters.'

According to a famous passage of Herodotus (i. 136; cf. Strabo, p. 733), Persian boys were taught 'three things only—to ride, to shoot, and to speak the truth'; and it is clear from Strabo's account that their training was physical rather than mental. The Iranian sources imply (as was doubtless the case) that intellectual instruction was carried to a far higher degree. Thus Artaxshīr Pāpakān 'became so proficient in literary knowledge, riding, and other arts, that he was renowned throughout Pārs' (*Kārnāmak*, p. 5); and for Bahrām Gūr were chosen three teachers: one for the prince's instruction in letters; the second to teach him falconry, battledore, archery, swordsmanship, vaulting, and 'to hold his head high among the brave'; and the third to acquaint him with all royal and administrative duties (*Shāh-nāmah*, v. 401 f.). Some idea of the mental attainments which the *beau ideal* of a Persian prince was supposed to possess may be gleaned from the examination of Hōrmazd, on the completion of his education, by Buzurjmihr (*ib.* vi. 425–430).

Strabo states (*loc. cit.*) that the Persian boys were trained in companies of fifty each; and Xenophon (*Cyropæd.* I. ii. 2 ff.) ascribes to the Persians an elaborate system of education, which however, is probably far from being historic.

According to him, the Persians were the only nation who taught their future citizens from the very first to abstain from evil and to do good. They had a 'free market,' from which all trading was excluded as causing a confusion inimical to good training; and of its four parts one was occupied by children, and another by youths. Both classes were divided into twelve parts, aged men directing the children, and men of mature years the youths. The children studied justice as the Greek schoolboys studied their letters, and the most of their time was passed in holding mock courts. Besides this, the children learned self-control (σωφροσύνη), and to all this training they were subject until the age of sixteen or seventeen, when they were graduated into the number of the youths, their duties now being of a more practical nature, such as mounting guard, hunting, warlike exercises, and tests of endurance, this period of their lives lasting twenty-five years. The whole account seems to be a thinly-veiled picture of what Xenophon would gladly have seen carried into actual effect in Greece.

Persian children of noble and princely families were often educated at court (Xenoph. *Anab.* I. ix. 3, *Cyropæd.* VIII. vi. 10), although it was by no means unusual for high-born children to be sent for their training to other families of rank, as was the case with Zames (Jām), the second son of Qubād (Procopius, *de Bell. Pers.* i. 23), and with Bahrām Gūr, the latter being educated in Arabia (*Shāh-nāmah*, v. 400). Tutors for the latter prince were sought from all civilized countries, including Greece, India, China, and Arabia, the choice being finally awarded to two sages from the country last-named (*ib.* p. 398 f.). Besides this, we are told by Clemens Alex. (*Pæd.* i. 7) that the Persians had 'royal pedagogues' (βασίλειοι παιδαγωγοί), who, four in number, were chosen from all the Persians by the king and placed in charge of the instruction of his children. The pseudo-Platonic *Alcibiades Primus* (*loc. cit.*) adds that these men were appointed when the princes had reached the age of fourteen, and details their duties as follows:

The first, who was 'the most wise,' taught the 'magic' (μαγεία) of Zoroaster, 'which is the service of the gods,' and royal duties; the second, who was 'the most just,' taught the child to practise truthfulness throughout life; the third, who was 'the most prudent,' taught control of all passions and contempt of bodily pleasure; and the fourth, who was 'the most manly,' taught the prince to be fearless and brave (cf. the three teachers of Bahrām Gūr, though their branches of instruction, as noted above, were quite different from those detailed in the Greek source).

Of the personal relations between teacher and pupil there is little record in the extant Iranian texts, although, from the respectful and affectionate attitude maintained towards the instructor in the *Shāh-nāmah*, it is to be inferred that the feeling between the two was one of tenderness and devotion. It has already been observed that a section of the lost Avesta *Hūspāram Nask* devoted attention to 'the association of priestly instructor and pupil, and their meritoriousness together' (*Dīnk.* VIII. xxxvii. 4); and the Avesta, as now preserved, itself has a significant indication of the closeness of this relation (*Yašt*, x. 116 f.):

'Twentyfold is Miθra [here the godling of alliance and fidelity] between two friends from the same district; thirtyfold between two from the same community; fortyfold between two from the same house; fiftyfold between two from the same room; sixtyfold between two from the same priestly gild; *seventyfold between priestly pupil and priestly teacher* (*aēθrya aēθra-paiti*); eightyfold between son-in-law and father-in-law; ninetyfold between two brothers; hundredfold between parents and child; thousandfold between two countries; ten thousandfold is Miθra to him who is of the Māzdayasnian religion.'

LOUIS H. GRAY.

EDUCATION (Roman).—The history of Roman education is that of an evolution from a simple to a complex and comparatively encyclopædic kind of instruction; from what we should call 'primary' education through a stage when 'secondary' education was gradually combined with higher learning of a 'University' stamp; from the ancient discipline of the home to an Imperial system of officials appointed under the cognizance of the Emperor; from an unpaid instruction by parent or slave to an organization where, at least in the higher grades, large salaries were paid; and from a narrowly Roman training to a cosmopolitan culture. To illustrate the development in biological terms, there was an original Roman strain, there was subsequent crossing with Greek influences, accompanied by vigorous adaptation to environment, and followed gradually by a fixing of the type, which became more and more effete. So practical a people as that of Rome was certain to have its own way of fitting each new generation for the struggle and duties of life, and the equip-

ment which was sufficient for the burgher of a city-State needed wide expansion before it could suit the citizen or civil servant of a world-Empire. The altering aims and methods of Roman education are easily discernible in a chronological survey of the subject, which may be conveniently examined in three stages:

(1) Earlier period—Republican times, to the age of the Punic Wars, *c.* 240 B.C.
(2) Middle period—*c.* 240 B.C. to the reign of Hadrian, A.D. 120.
(3) Final period—from A.D. 120 to the end of the Empire.

One may at once point out that, amidst the ferment of the fresh ideas of Hellenic culture, Roman education was most progressive in the middle period, while in the later period the rhetorical training, on the contrary, became stereotyped; that is to say, education in the end ceased to secure so well the practical aims which it previously had in view, and the acceptance of traditional culture and methods as absolute rendered the system impervious to health-giving conceptions of change and advance.

1. Earlier period—to the Punic Wars.—For the earlier centuries of the city, evidence regarding education is scanty and untrustworthy.

Not much value can be attached to statements of a later age about the school attendance of Romulus and Remus at Gabii (Plut. *Romul.* vi.), about Numa's Sabine training, or about the education, partly in Greek, given to Servius Tullius (Cic. *de Rep.* II. xxi.). The advanced culture of Etruria, we know, influenced Roman religion and customs; but the probability of its having influenced Roman education (Cic. *de Div.* I. xli. 92; Jullien, *Les Professeurs de litt.* etc., pp. 29–33), and, in fact, the state of general education in regal times, are matters beyond our ken. It is true that Mommsen considers reading and writing to have been widely spread in Rome at an early period (*Röm. Gesch.* i. 211 f. [Eng. tr., 1875, i. 224]); but even so one cannot positively assert the existence in the 5th cent. B.C. of schools at Rome regularly attended by girls of mature years, although that would be the literal inference from Livy's account of Virginia going to school among the shops of the forum (Liv. III. xliv.; Dion. Hal. *Ant. Rom.* XI. xxviii.); nor can one on similar evidence positively assert the existence of schools at Falerii and Tusculum in the times of Camillus (Liv. v. xxvii., VI. xxv.).

The character of education, however, during many generations of the older Republic can be readily grasped. The clearest conception of it is to be obtained from what Plutarch tells us (*Cat. Maj.* xx.) of the way in which Cato brought up his son. Although this applies to the period of the Punic Wars, yet Cato's rigid attachment to traditional usage impels one to take it as representative of the education after the ancestral fashion which preceded the Punic Wars. Cato kept a slave to teach the elements to the young people in his establishment; but he disliked the notion of having his own son scolded or reprimanded by an inferior; so he himself undertook the training of his boy in literature, law, and gymnastics (αὐτὸς μὲν ἦν γραμματιστής, αὐτὸς δὲ νομοδιδάκτης, αὐτὸς δὲ γυμναστής). The physical education was in riding and the use of weapons, boxing, and exercises likely to test endurance. With his own hand and in large letters he wrote out historical narratives for the boy's use, and showed such scrupulous regard for decency of behaviour and language in the interests of the youth's moral welfare that Plutarch expressly alludes to the noble work of moulding a young life to virtue.

This practical, physical, and moral training was long in vogue. The younger Pliny regretfully recalls those happy ages when instruction was more a matter of the eye than of the ear, and his concise formula expresses a central feature of the primitive training—'suus cuique parens pro magistro' (*Ep.* VIII. xiv. 6), as does Seneca's allusion to the 'domestic magistrates' (*de Ben.* iii. 11) as agents of education. Close companionship of parent and son characterized the manners of times which encouraged youths to listen to a father's discussion of legal questions raised by his *clientes* in the *atrium*, to take part in his religious observances as *camilli*, to attend him to the senate (as was the usage at one period), to hear momentous speeches delivered, and even to accompany seniors to dinner-parties, where they might sometimes chant the praises of bygone heroes (Cic. *Brut.* xix. 75, *Tusc. Disp.* IV. ii. 3; Val. Max. II. i. 10; Varro *ap.* Non. 77, *s.v.* 'Assa voce'), and where their very presence might prove a salutary check upon licence (Plut. *Q. Rom.* xxxiii.), on the principle worthily formulated by Juvenal—'maxima debetur puero reverentia' (xiv. 47).

In the Latin sense *educatio* was applied to the process of training a child how to live—how to confront the problems of material existence (Varr. *ap.* Non. 447, 33, *s.v.* 'Educere': 'educit obstetrix, educat nutrix, instituit paedagogus, docet magister'). In this sense, education began with the father's recognition of the newly-born infant's right to live, which was conceded if he formally raised it in his arms; and most of this early care for the young fell to the mother or to near kinswomen, or, in an increasing degree as society developed, to nurses. In the time of the Empire, Tacitus could still use the phrase 'in sinu matris educari'; and it should be remembered that a Roman matron was well equipped to impart sound physical, moral, and often intellectual training to sons and daughters. Her position was one of greater dignity than that of the Athenian wife, and some have ventured to think that 'the whole social fabric was moulded by the forceful character of house-mothers in the serene atmosphere of the home' (C. W. L. Launspach, *State and Family in Early Rome*, 1908, p. 199). This is but a modern version of that 'regiment of women' (γυναικοκρατία) which so alarmed Cato (Plut. *Cat. Maj.* viii.).

Although primitive usage preferred that mothers should suckle their own babes, there is good evidence for the early employment of both foster-mothers and dry nurses. At a later period the number of nurses employed can be gauged from the records of inscriptions (see 'Monumenta columbariorum,' in *CIL* vi. 4352, 4457, 6323, 6324, 8941–43; cf. occurrences of *nutrix* and similar words in indexes of the *CIL* ix. and x., under 'Parentelae et necessitudines'). Their importance was not restricted to questions of the proper feeding of infants, although this was not overlooked by the Romans (Varro, *Cato* [for older readings *Catus* or *Capys*], *aut de liberis educandis*, cited Aul. Gell. IV. xix.; Nonius, 201, *s.v.* 'Cepe'). It was recognized that they had much power in shaping the character for better or worse, and in securing the avoidance of many bad habits, foolish beliefs, and objectionable pronunciations. This is the reason for the stress laid upon the choice of a nurse in Quintilian and in the *de Educatione Puerorum* ascribed to Plutarch.

About the age of seven a Roman boy in the earlier period came more definitely under his father's tuition, to be taught on the lines which we have seen were followed by the elder Cato—namely, the elements of reading, writing, and reckoning, and such bodily exercises as would best fit him for military service. Boys belonging to the simpler and more agricultural times of Rome also took part in farm-work and in the rural religious ceremonials; while girls learned, under their mother, spinning and other domestic accomplishments, except the menial tasks of corn-grinding and cookery. The two main careers were war and politics; and the object was to train a man of action, with no claims to rival the intellectual and æsthetic accomplishments of an Athenian, but well-developed in body, reverential towards the gods, mindful of ancestral custom (*mos maiorum*), regardful of the laws which he learned as a boy by rote from the Twelve Tables (Cic. *de Leg.* II. xxiii. 59), inclined, therefore, by the force of precept and example to follow virtues like obedience, temperance, bravery, and industry, which may always be inculcated independently of an organized system of education, if parents can be relied upon to perform their duty. There was nothing more

distinctive of the native Roman education than its training of character, and the store set by morality—*e.g.* modesty (*τὰ δ' αἰσχρὰ τῶν ῥημάτων οὐχ ἧττον εὐλαβεῖσθαι τοῦ παιδὸς παρόντος ἢ τῶν ἱερῶν παρθένων ἃς Ἑστιάδας καλοῦσι* [Plut. *Cat. Maj.* xx.]; cf. Cicero's terms of praise 'adulescenti pudentissimo et in primis honesto' [*pro Cluent.* lx. 165]); or obedience (Dion. Hal. *Ant. Rom.* ii. 26). In fact, the outstanding qualities in a model young Roman may be taken, as summarized in Cicero's words, as 'self-control combined with dutiful affection to parents and kindliness towards kindred' ('modestia cum pietate in parentes, in suos beneuolentia' [*de Off.* II. xiii. 46]). Such were the moral results attained by an education entrusted without reserve to the *familia*, in consonance with a characteristically Roman regard for the *patria potestas*. By the time that a youth reached the age of 20, a training deemed adequate for all likely calls upon him had been given through the home, through exercise, through the companionship and experience of seniors, and through observation of the ways of men in the forum. The formal training of the mind, at first often undertaken by a father himself, tended, as claims on time became more insistent, to be delegated to a cultured slave, acting under the parental supervision.

While robust frames, disciplined minds, stolid gravity, and unyielding courage bore testimony to the strength of the ancient upbringing, it had its defects. It provided little to induce refinement, artistic tastes, or kindlier emotions. It produced a Cato, ready to recommend the prompt sale of a slave worn out by faithful service, or a Mummius, who sacked Corinth without compunction, and saw nothing extraordinary in laying down a stringent condition that his contractors for transporting unrivalled masterpieces of Greek art to Rome should replace any lost or damaged *en route*! Yet, despite limitations, it was an admirable method of training patriotic warriors; and it yielded the constancy and energy requisite for the victors in the Punic Wars. Leaving such liberty to the family, and eschewing State infringement upon private instruction, the older Rome succeeded in drawing the bonds of citizenship closer than Greece had done through theories of systematized education.

2. Middle period—240 B.C.–A.D. 120.—The most momentous alien factor in the development of Roman education was the influence of Greece. The whole action of Hellenic culture upon Rome was of high significance; but its details cannot be considered here (see 'The Invasion of Hellenism,' in J. W. Duff's *Lit. Hist. of Rome*[2], pp. 92–117). Some salient facts, however, must be given. Relations between Rome and Magna Graecia led to contact with Greek civilization at an early but not exactly determinable date. The borrowing of the alphabet is a well-known instance; and commerce and diplomacy obviously ensured acquaintance with Greek, at any rate in its spoken form. Thus Postumius in 282 B.C., as Roman envoy at Tarentum, could make a speech in the language, even if it was a ludicrously bad one; and Cineas, the representative of Pyrrhus, seems to have addressed the Roman Senate in Greek without an interpreter. But this does not necessarily imply acquaintance with Greek literature, or presuppose a highly developed literary education; and it is fully a century later when we find the father of the Gracchi (consul in 177 and 163 B.C.) addressing the Rhodians in good Greek. Certainly, the literary education had long been in operation before the days of Licinius Crassus, who, as proconsul of Asia in 131, proved his command of no fewer than five Greek dialects. A date of lasting import for education, as it was for literature, was the year 240 B.C., when Livius Andronicus realized and supplied the need of a literary text for Roman schools by translating the *Odyssey* into Latin saturnians. It remained in use till the days of Horace. The period of Livius was evidently one of educational activity; for he and Ennius, Suetonius says, were poets and 'half-Greeks,' but at the same time teachers who gave instruction in both languages (*de Gram.* i.). Another sign of the times was the opening, about 231 B.C., by Sp. Carvilius, of the first school where regular fees were charged. Apparently as early as 173 B.C. the teaching of Epicurean philosophy had excited so much attention that the Government, alarmed at its seductive plausibility, banished two of its professors. Soon after, Aemilius Paulus brought the royal library from Macedon to Rome (Plut. *Aem. Paul.* xxviii.; Isid. *Orig.* VI. v. 1), and the access of the 'Scipionic Circle' to its volumes must have influenced education, as it did literature. The residence of the thousand Achæan hostages in Italy for sixteen years after 167 B.C. is memorable, not only for the intellectual stimulus so given, but also for the recorded advice tendered by the most famous of the hostages, Polybius, to the younger Scipio—that he should take advantage of the educational facilities obtainable owing to the number of Greek teachers in Rome (Polyb. XXXII. x.). Nearly at the same date Crates, the renowned librarian of Pergamum, came on an errand of state from King Attalus, and, being detained in Rome owing to a broken leg, spent some time in lecturing. A man of broad scholarship, he so improved the method of teaching by his lectures on Greek literature that Suetonius declares him to have been the introducer of 'grammar' (*de Gram.* ii.). Meanwhile Greek philosophy and rhetoric were making great headway—too much headway in the eyes of many patriotic Romans; for in 161 the *philosophi* and *rhetores* were banished, probably for reasons similar to those which in 92 B.C. prompted the censors Ahenobarbus and Crassus to interdict the *rhetores Latini*, namely that, in handling rhetoric, they did not lecture in Greek and according to genuine Greek methods, but transferred their attention to Latin, and reared students in a cheap 'school of impudence.' A similar distrust animated Cato's hostility to letting the dangerously brilliant philosopher Carneades prolong his diplomatic visit and continue his discourses in 155 B.C. In fine, what we discover before the middle of the 2nd cent. B.C. at Rome is an acquaintance with the principles of Greek rhetoric on the part of the upper classes, and the emergence of three grades of education—in the hands of the *litterator*, the *grammaticus*, and the *rhetor* respectively. Roughly, they correspond to our elementary, secondary, and University standards (Apul. *Flor.* xx. 'prima craterra litteratoris ruditatem eximit, secunda grammatici doctrina instruit, tertia rhetoris eloquentia armat'). The consideration of these must now occupy us.

(1) *Elementary education.*—The *litterator* was in charge of the education in reading, writing, and ciphering. He was the teacher of the rudiments (*γραμματιστής*), and must not be confused with the more advanced *grammaticus*, who was sometimes, in virtue of his fuller learning, called *litteratus* (Orbilius, quoted by Suet. *de Gram.* iv.). St. Augustine draws a clear distinction between these elementary 'letters' and the *belles lettres* which once attracted him so powerfully—'adamaueram latinas (litteras), non quas primi magistri, sed quas docent qui grammatici uocantur' (*Conf.* I. xiii. 1). In private houses, failing the parent, a trained slave, or in some cases the child's own attendant (*paedagogus*), taught the rudiments; but elementary schools kept by a *ludi magister* (who was usually

a freedman) were, despite the unconcern of the Government, on the increase. The percentage of illiteracy was less than might be supposed; for primary education must have been pretty widely diffused, to admit of the circulation of military orders in writing by the time of Polybius. The scribblings on the walls of Pompeii, too, argue a wide-spread faculty of reading and writing in the 1st cent. A.D. The methods of elementary teaching are discussed in Quintilian's work, the fullest educational treatise which has come down from antiquity. The lack of literary texts had vanished long before his day, and he counsels early lessons on good authors (he prefers Greek [I. i. 12]), even before pupils can grasp the entire meaning. Simple fables and extracts from authors made convenient reading-books. The initial recognition of the shapes of letters can be, he points out, aided by ivory models given to children to play with (I. i. 26; for instruction in reading, see Grasberger, *Erziehung*, etc., ii. 256–300). Writing was started by guiding the pupil's hand, as he followed with the *stilus* characters traced on wax-covered tablets, or by a sort of stencil process in which the letters were cut on wood (Quint. I. i. 27; Vopisc. *Tac.* vi.). Later came the copying of specimen letters, and more advanced pupils would use a *calamus* with *atramentum* to write upon vellum from Pergamum, or *charta* manufactured from the papyrus plant of the Nile (for instruction in writing, see Grasberger, *op. cit.* ii. 300 ff.). The *dictata magistri*, selections for dictation, gave practice in writing, and could be used afterwards to train the memory. In arithmetic many references show that the fingers were freely used for calculations. As at all times, tables had to be got up by rote, and St. Augustine recalls with an evident shudder of dislike the refrain of 'one and one make two,' etc. (*Conf.* I. xiii. 'unum et unum duo, duo et duo quatuor, odiosa cantio mihi erat'). Harder sums were done with the help of the *abacus* and its *calculi*, the board being marked out into columns for units, fives, tens, fifties, hundreds, etc. The difficulties due to the awkwardness of the Roman figures were considerable (Marquardt, *Das Privatleben der Römer*², 97–104, or Fr. tr. *La Vie privée des Romains*, 1892, i. 115–123); but this fact did not prevent the attainment of high arithmetical skill by the capitalists, tax-farmers, money-lenders, and traders of a shrewd, hardheaded, and frequently covetous race, which had largely diverted its attention from farming to money-getting.

(2) '*Grammar School' education.*—Training under the *grammaticus* succeeded to elementary instruction commonly when the pupil was 12 or 13; and lasted until he passed at about 16 into the hands of the *rhetor*. It should be noted that age-limits for the different grades of study cannot be regarded as constant; for undoubtedly there was overlapping between the grades; then, as now, pupils of the same age exhibited marked disparity in mental capacity; and the abandonment of the *bulla* of boyhood and the assumption of the *toga uirilis* varied, with individuals and at different times, from 14 to 17, when military service usually began. At the 'Grammar School' the aim was to teach intelligent and effective reading of standard authors in both Latin and Greek. Of the series of *grammatici* mentioned by Suetonius, most were of Hellenic origin, and many were freedmen (*de Gram.* xv., xvi., xix., xx.); but there were Romans who applied the methods of Crates' lectures on Greek literature to their own poets, so that Naevius, Ennius, and Lucilius soon became school authors (*op. cit.* ii.). On the whole, the profession received scant honour and scant pay. The magistrates' officer (as in the case of Horace's master Orbilius), the pantomime actor, and the boxer might all turn teacher (Suet. *op. cit.* ix., xviii., xxii.); and yet there were instances of Roman knights taking up the work; and the educational demands must have been considerable when the city had over twenty flourishing Grammar Schools (*op. cit.* iii.). Under the Empire, good schools had a *grammaticus Latinus* and a *grammaticus Graecus*—a special teacher for each language, one lecturing in *toga*, the other in *pallium*. Though their subject-matter was different, the method was the same for both (Quint. I. iv. 1).

This specialization and style of description are abundantly clear from inscriptions found in Italy and the provinces (*e.g.* the *Graecus* in *CIL* ii. 2236 [Corduba], vi. 9453, 9454, x. 3961 [Capua]; the *Latinus*, ii. 2892 [Tricio in Spain], iii. 406 [Thyatira in Asia Minor, ΡΩΜΑΙΚΩ], 3433 [Verona], 5278 [Como], vi. 9455 [Rome], ix. 5545).

Greek *grammatici*, who taught in Rome towards the end of the Republic, understood and wrote Latin also. The freedman Ateius Philologus, a native of Athens, was described by Asinius Pollio as 'nobilis grammaticus Latinus' (Suet. *de Gram.* x.), and Gnipho, Cicero's teacher, was 'non minus Graece quam Latine doctus' (*op. cit.* vii.). Professors who took the simple title of *grammatici* were usually *grammatici Latini* (*e.g.* *CIL* ii. 5079 [cf. 3872, 'magistro artis grammaticae'], vi. 9444–9452, ix. 1654).

'Grammar' (*grammatica*) covered a wider field than in our acceptation. Its two functions were 'recti loquendi scientia' and 'poetarum enarratio,' in other words, the knowledge of the correct employment of language and the appreciation of literature (Quint. I. iv.–ix.). The first division involved study of the parts of speech, accidence, metric, and discussed faults in use of words, in idiom, pronunciation, spelling. The second division, which aimed at elucidation of the poets, involved far more than literary study. Besides the geographical, historical, or mythological implications of the matter, subsidiary subjects, like music, geometry with astronomy, and philosophy, were necessary for successful teaching or study (Quint. I. iv. 4, I. x.). Prose was much less lectured upon than verse; so that Cicero with reason complains of the comparative neglect of history (*de Leg.* I. ii.). For linguistic study, pupils used the Latin grammar of Remmius Palaemon, or the Greek handbook by Dionysius of Thrace, a work which held its ground at Constantinople till the 13th cent. A.D. Inquiry into the phenomena of language appealed to generations of eminent Romans, to *savants* like Varro, to statesmen like Cæsar, and to some of the Emperors; while the *Corpus* of the grammarians (ed. Keil), taken along with such representative commentators upon Virgil as Macrobius and Servius, will suffice to indicate the range and methods of Roman grammar.

The tasks set included the re-telling of Æsop's fables as an oral and a written exercise, paraphrasing, training in *sententiae* (moral maxims), *chriae* (anecdotes with moral bearing), *ethologiae* (personal character-descriptions), *narratiunculae* (short stories on poetic themes, to teach matter rather than style [Quint. I. ix. 6]). The study of literature—the coping-stone of ancient grammar—involved *lectio* (expressive reading without sing-song or provincial accent [Quint. I. viii. 2, VIII. i. 3, XI. iii. 30]); *enarratio* (erudite explanation of the subject-matter); *emendatio* (textual criticism); *iudicium* (literary criticism).

The authors prescribed by the *grammaticus* were largely identical with those prescribed by the *rhetor* at a later stage, as handled by Quintilian in his tenth book; only, the standpoint of study ultimately altered to oratorical effectiveness. In Greek the rule was to begin with Homer, as in Latin with Virgil. Homer was approved as an indispensable text for the study of language, history,

myth, religion, manners, geography; and wide knowledge—with sometimes the most meticulous recollection of details—was demanded from a lecturer. Other Greek authors popular in schools were Hesiod, for his practical maxims; the lyric poets in selections, excluding or minimizing the erotic; the great tragedians; and the comic poets, especially Menander. Among Latin texts which had a prolonged vogue were Andronicus' verse translation of the *Odyssey*, the older epic poets Naevius and Ennius, and the dramatists Plautus, Caecilius, Terence, Pacuvius, Accius, Afranius. Virgil was introduced into the school course by Caecilius Epirota, a freedman of Atticus, not long after the poet's death, and took among Roman authors a place parallel with Homer's among the Greeks. Horace, too, was soon found in the schools; and a desire to escape from archaic models accounts for the lectures which were given on the poems of Lucan, Statius, and Nero himself, during the lifetime of the authors. The literary reaction of the 2nd cent. A.D. led to a revival of interest in ante-Augustan poets. This predominance of poetic study, which is so marked a feature of the course in grammar, had great effects upon Latin style. But prose authors received more attention from the *rhetor*. Cicero became a model in his own day, and Quintilian holds him up as 'iucundus incipientibus quoque et apertus.' Among historians he recommends Livy in preference to Sallust, who, he maintains, needs a more advanced intelligence; but here Quintilian is thinking more especially of the training for declamation.

(3) *The highest education.*—In the final stage of formal education, namely, under the *rhetor*, the training was designed to fit directly for the duties of public life—for deliberative and forensic oratory; and, its faults notwithstanding, rhetoric turned out, in the time of the Empire, men of affairs, magistrates, civil servants, and advocates, equipped with an admirable power of effective speech. The Roman turn for oratory ensured an early and favourable attention to the practice and theory of Greek rhetoric, which inherited old traditions from Sicily, Athens, and Asia Minor. The Greek rhetor was, therefore, heard gladly, and his lessons were acceptable to an extent not always conceded to *rhetores Latini*, who had been viewed with suspicion by the authorities in 92 B.C., and who did not in Quintilian's time do their work so well as their Greek colleagues (I. ix. 6). Referring to the relation between grammar and rhetoric, Quintilian touches on the constantly recurrent phenomenon of overlapping in education (II. i.). In this case it was nothing new, for Suetonius tells us that in ancient times the same teacher often taught both departments (*de Gram.* iv. 'ueteres grammatici et rhetoricam docebant'); and Quintilian says that boys were often kept too long by the grammarian before being sent on to the rhetorician. With his usual good sense he recognizes that the time for passing into the rhetor's hands should depend on capacity rather than on years (II. i. 7). The secondary teachers, however, were tempted to trench on the superior province, and to give boys practice in what were really rhetorical exercises, so that pupils might go on to the professor of rhetoric creditably equipped (Suet. *de Gram.* iv. 'ne scilicet sicci omnino atque aridi pueri rhetoribus traderentur').

By the middle of the 2nd cent. B.C., as has been seen, the principles of Greek rhetoric were familiar to the upper classes at Rome; but a new departure was the introduction of 'declamations' on imaginary themes—perhaps by Molon of Rhodes about 84 B.C., as Bornecque thinks (*Les Déclamations et les déclamateurs*, p. 42). This hypothesis is not at variance with the probable date of the earliest systematic treatise in Latin upon rhetoric, *ad Herennium* (86 to 82 B.C.), or with the fact that it touched on declamation, and furnished subjects for debate of the *suasoria* type. It was only, however, towards the end of Cicero's life that *declamatio* came to be transferred from its old sense of vehement delivery of a speech to the sense of an oratorical exercise upon an invented subject. Declamation subsequently became the crowning exercise in rhetoric, and spread from Rome through Italy to the schools of Gaul and Spain.

To lead up to declamation the rhetorician prescribed a definite series of preliminary exercises, and for effective educational results Quintilian insists that the professor must be of excellent character, as well as of the highest possible intellectual ability, and tact in dealing with a class (II. ii.–iii.). The preliminary exercises (II. iv.) include composing narratives of a less poetic stamp than in the 'Grammar School,' discussion of matters of historic doubt, panegyric and invective, comparison of characters, *communes loci* (traits of character useful for attacking vices), *theses* (questions of a general type for deliberation, *e.g.* 'Is town or country life preferable?' 'Is the glory of law or of warfare the greater?'), *coniecturales causae*, which Quintilian remembered as a pleasant exercise of his own student days (*e.g.* 'Why is Cupid winged and armed with arrows and torch?'), and criticism of laws. Prose models in oratory and history are to be lectured on, and here Cicero and Livy can be used with most profit. For repetition, select passages from great authors should be got up by heart, rather than the student's own show-pieces, which the proud parent, to the detriment of true oratory, was only too anxious to have declaimed over and over again (Quint. II. vii. 1).

The two culminating exercises were the *suasoria* and the still more difficult *controuersia*, the former deliberative, the latter forensic in its bearing.

Their character is best illustrated by the seven *suasoriae* and five complete books of *controuersiae* which survive from the collection of Seneca the elder; there exist also excerpts from these five and from the five lost books, along with the declamations of the pseudo-Quintilian and excerpts from Calpurnius Flaccus. The *suasoria* was a fictitious soliloquy by some historic personage at a crisis in his life—'Alexander debates whether he should cross the Ocean,' 'The three hundred at Thermopylæ consider whether they should retreat,' 'Cicero deliberates whether he should beg his life from Antony.' The most familiar instance of all is Juvenal's recollection of the cane in the rhetorical academy where he declaimed his exercise purporting to advise the dictator Sulla to abdicate (*Sat.* i. 16–17).

For complete success such exercises demanded historical knowledge of circumstances and character, with considerable gifts of imagination and style. An interesting fact is recorded about Ovid, that as a student he enjoyed the *suasoria* but disliked the *controuersia*. The latter was an exercise in arguing for or against—sometimes, to attain versatility, for and then against—the claims put forward in an invented case. The cases, the laws, and the types of person introduced came very often from a sphere of imagination which certainly provoked ingenuity in treatment, but called forth the strictures of Quintilian for their remoteness from practical life.

Suetonius (*de Rhet.* i.) quotes two examples of the less extravagant *controuersiae*—the one concerning the disputed ownership of gold found in a fishing-net after the particular cast which certain youths have purchased from the fishermen in advance; the other concerning the disputed freedom of a valuable slave who had been disguised and declared as a free man by his importers to cheat the Customs officers at Brindisi (similar to cccxl. in the Quintilianean *Declamationes*, ed. Ritter, 1884). But many were much more unreal, and involved incredible situations in which a great part was played by tyrants, pirates, unnatural fathers, and so on. Take a case—'A kidnapped youth writes asking his father to ransom him; when the father declines, the daughter of the pirate-chief offers to free the prisoner, if he will swear to marry her. He consents, is set free, goes back to his father, and marries the girl. The father afterwards sees an heiress who would make a desirable

match for his son, and orders him to divorce the pirate-chief's daughter. The son refuses, and is disinherited' (Sen. *Contr.* I. vi.).

This kind of exercise sharpened the wits by a sort of mental gymnastic; it produced marvellous subtlety of argument, and great readiness and finish of speech. But it had serious drawbacks. Its range was narrow and artificial; its subjects were hackneyed—so that the dreary round of declamation on the same subject by youth after youth rising in turn from the bench was, as Juvenal remarks, enough to kill teachers with boredom ('Occidit miseros crambe repetita magistros' [vii. 154]). Old material had to be dressed in apparently fresh form; and this caused an excessive concentration upon style and expression, to the inevitable detriment of subject-matter and sound sense. The system was calculated to produce an indifference to truth, to the rights or wrongs of a case, and so was morally deleterious; it fostered, too, that glibness of speech which seemed so detestable to the sensible author of the *de Educatione Puerorum*; and—most notorious and most wide-reaching of all in effect—it accounted for a large amount of the tinsel, staginess, and artificiality of the Roman literature of the Silver Age.

It was a complaint with good judges, like Quintilian and Tacitus, that the licence and ignorance of declaimers had corrupted true eloquence. Like Cicero before him, Quintilian contemplated an ideal oratory on a basis morally and intellectually sound (Quint. XII. i. 1), and he cites Cicero's requirement of wide knowledge as an indispensable equipment ('omnium rerum magnarum atque artium scientiam' [II. xxi. 14]). Quintilian's requirements are stated more modestly when he says that the orator must at least study the subject on which he is to speak—'sed mihi satis est eius esse oratorem rei de qua dicet non inscium.' But he does desiderate acquaintance with many subjects outside the professional training—*e.g.* ethics, physics, and dialectic (I. *prooem.* 16; XII. ii. 10), law (XII. iii.), and history (XII. iv.). It was, indeed, largely in philosophy that Roman students of ability followed their 'post-graduate' course, either in the capital itself, where Epicurean, Academic, and Stoic thought had long been represented, or in Athens as the traditional headquarters of the schools. The education of great authors must not be taken as absolutely typical; yet it proves the educational facilities available for leisured people of some means. Thus Virgil added to literature the study of philosophy, rhetoric, medicine, mathematics, and law. Cicero had able Epicurean and Academic teaching in Rome; but at the age of 27, partly for health, partly for culture, he went abroad and studied under eminent Greeks in Athens, Asia Minor, and Rhodes. Cæsar was 25 when he visited Rhodes, mainly for advanced rhetoric. The age for study at a foreign 'University,' however, was usually earlier. The younger Cicero and Ovid were 20 when they went to Athens; Horace was studying philosophy there at 18.

Encyclopædic learning became obviously less attainable as knowledge advanced, and distinct progress in education between the 2nd cent. B.C. and the close of the Republic is evident on a comparison of Cato's list of subjects of general culture and Varro's list in his *Disciplinarum libri ix.* In the Roman gentleman's education, Cato included oratory, agriculture, law, war, and medicine; while Varro's nine were grammar, dialectic, rhetoric, geometry, arithmetic, astronomy, music, medicine, and architecture. The significant point is that war, law, and agriculture had become professional studies. It will be observed that the first three in Varro's list correspond with the *trivium*, or elementary course of the Middle Ages, and the four succeeding subjects with the *quadrivium*, or advanced course pursued from the time of Martianus Capella.

The practical outlook of the Roman developed an education different in conception from that harmonious training of the faculties of mind and body contemplated by the Greek μουσική and γυμναστική. Literature came slowly to the Roman, and, even when it had entered the schools, it was subservient to rhetoric, which, in turn, was taught at first as an instrument of success in life. Cicero makes a suggestive remark, in noting certain contrasts between Greek and Roman education, when he adds that the Greeks held geometry in the highest honour, while his own countrymen studied it only as far as it was useful (*Tusc. Disp.* I. ii. 4). The gymnastics, music, and dancing of the Greeks became known to Rome only in their decadence, and so missed their chance of full influence. Physical exercise the Romans preferred to limit by practical aims; to them the idleness of the *palaestra* was a thing suspect, and nudity immodest. As for music and dancing, they remained, to the mass of the Romans, accomplishments which clever performers might be paid to learn, but which formed no essential part of a free man's education. A count against a Catilinarian lady-conspirator was that she danced too well for a woman of good reputation (Sall. *Cat.* xxv.); and the associations of the term *saltator* are plain in the light of Cicero's declaration: 'nemo fere saltat sobrius nisi forte insanit' (*pro Mur.* vi. 13; cf. Hor. *Od.* III. vi. 21).

(4) *Education of women.*—Women of good family were often highly educated. The mother of the Gracchi was well able to superintend her boys' education (Cic. *Brut.* lviii. 211); and Pompey's wife was expert in literature, geometry, philosophy, and lyre-playing (Plut. *Pomp.* lv.). There were ladies in the time of Lucretius, as in the time of Juvenal, who liked interlarding their Latin with Greek expressions (Lucr. iv. 1160–1170; Juv. vi. 195). Ovid's gay set contained women with pretensions, if not claims, to literary tastes (*de Arte Am.* ii. 282). Seneca considered feminine capacity for mental training equal to masculine (*ad Helv.* xvii., *ad Marc.* xvi.); and Quintilian favours the intellectual development of women for the sake of their children (I. i. 6; for ancient frescoes from Herculaneum and elsewhere illustrating girls at study, see references in art. 'Educatio,' in Daremberg-Saglio). The mark made by women in authorship testifies to emancipation from, or expansion of, the ancient ideal of the Roman matron who was *lanifica* and *domiseda*. Agrippina's memoirs, Sulpicia's poems, and the literary tastes of Pliny's wife are among the proofs and fruits of this higher education among women. But it is disputed whether girls and boys were educated in mixed classes in ancient Rome.

According to some authorities, both sexes got the same training from the grammarian, and studied their Homer and Ennius together (Friedländer, *Darstellungen*, I. v. 'Die Frauen,' p. 246; Boissier, *Rel. rom.* ii. 215). Marquardt cites several passages in support of this view (*Das Privatleben*[2], i. 110, n. 8; Hor. *Sat.* I. x. 91; Mart. VIII. iii. 15–16, IX. lxviii. 2). But it is combated by Jullien (*op. cit.* pp. 147–150; cf. Hulsebos, *De educ. et instit.* p. 98), who holds that the passages relied upon do not refer to training under the *grammaticus*. It is, however, significant that Livy sees nothing uncommon in representing Virginia, a girl of mature years, as attending school. Many girls were, of course, taught at home, like the daughter of Atticus (Suet. *de Gram.* xvi.; Cic. *ad Att.* XII. xxxiii. 2), by a private tutor, or in some cases by a governess (*CIL* v. 3897, vi. 6331; cf. Ovid, *Tr.* ii. 369–370; Juv. vi. 185 ff.).

(5) *Schools and equipment.*—The more concrete side of education, such as schools, equipment, pay of teachers, can receive only brief treatment here. A school (*ludus*) was often simply in a room on the ground-floor of a building, separated from the

street by a curtain, or in a room above, open on one side like a veranda or Italian loggia (*pergula*). Thus, if there was no inspection, there was publicity; and the noise of school lessons, which began at an early hour, was a subject of complaint in Rome (Ovid, *Amores*, I. xiii. 13–14; Mart. IX. lxviii. 1–4). There is evidence for the educational use of models, maps, and busts. The *tabula Iliaca*, now in the Capitoline Museum at Rome, was a sort of concrete aid to study for a class working upon Homer; it may have been used by Augustus when a boy. We hear surprisingly little of the buildings used in higher work: halls, porticoes, theatres, baths, and wrestling-schools could be used for largely attended declamations. We read, too, of 'roomy *exedrae* furnished with seats, whereon philosophers, rhetoricians, and the rest of the study-loving world may sit and debate' (Vitruv. V. xi. 'exedrae spatiosae in quibus philosophi rhetoresque reliquique qui studiis delectantur sedentes disputare possint'). Hadrian's Athenæum was a noble edifice, in the amphitheatres of which Greek and Latin rhetors could lecture to crowded audiences (Aurel. Victor, *de Caesaribus*, xiv.; Lamprid. *Alex. Sev.* xxxv.; Capitol. *Pert.* xi., *Gord. Tres*, iii.). As to fees, the eight asses per month of the country school mentioned by Horace (*Sat.* I. vi. 75) show that elementary education was not handsomely paid. Masters seem in early days to have depended chiefly on freewill offerings from pupils or their parents at times of festivals like the Quinquatrus in March (when the *Minerval* was presented to the teacher), or the Saturnalia in December. Carvilius, towards the end of the 3rd cent. B.C., seems to have introduced the innovation of regularly charging school fees; but probably many adhered to the old custom of trusting to the gratitude and generosity of patrons. Thus Gnipho, Cicero's master, never stipulated for a fee (Suet. *de Gram.* vii.). Suetonius records the extreme poverty of some famous grammarians; *e.g.* Orbilius, Valerius Cato, and Hyginus the freedman of Augustus and librarian of the Palatine (Suet. *de Gram.* ix., xi., xx.). On the other hand, some were fortunate enough to secure favour in high places; thus, Verrius Flaccus was nominated by Augustus preceptor to his grandsons, had his school housed in the Palatium under the condition that he would accept no new pupils, and received a salary of 100,000 sesterces a year (*op. cit.* xvii.). Remmius Palaemon made 400,000 sesterces annually from his school (*op. cit.* xxiii.). In Imperial times, especially in the later period still to be considered, with the emergence of municipal schools there appears the feature of local endowment of education; and, where the municipality did not act, it was possible for a few private individuals to guarantee the salary of a master, as the younger Pliny suggested when he found that boys had to be sent from Como to Milan for their education. The first Emperor to appoint State-paid professors of rhetoric was Vespasian (Suet. *Vesp.* xviii.); and thenceforward, in the higher teaching of rhetoric or philosophy, especially if directly encouraged by Imperial favour, men like Quintilian could count on making a good income.

(6) *Punishments and holidays.*—The Roman schoolmaster was a severe disciplinarian, and unsatisfactory pupils were punished with the rod (*ferula* [Juv. i. 15]) or with the severer *scutica*. A famous fresco from Herculaneum represents a pupil 'horsed' by another, while a third holds his feet and the master flogs him. Quintilian expresses his objection to corporal punishment (I. iii. 14). As to holidays, climatic conditions must have necessitated a considerable break in the hottest time of the year; and during harvest and vintage there can have been little or no attendance at country schools.

The old notion of a four months' summer holiday, based on a false reading in Horace (*Sat.* I. vi. 75), is an error, but one which apparently dies hard (*e.g.* A. Meissner, *Altröm. Kulturleben*, Leipzig, 1908, in section on education, p. 77 ff.: 'Das Schulgeld wurde, da während der Monate Juli bis Oktober Ferien gegeben wurden, nur für acht Monate berechnet').

The *nundinae* and the greater public festivals brought a cessation of school-work. Apart from minor feasts and extraordinary occasions for rejoicing and shows, the more important festivals alone accounted for over sixty holidays every year.

3. **From Hadrian to the end of the Roman Empire.**—The State, which had concerned itself with morality by repeatedly enacted sumptuary laws and by encouraging marriage, was much slower to take education under its direct cognizance. Yet it is the Imperial concern for education which makes the distinctive feature of this closing period; for neither in East nor in West did the substance or method of education alter much. Thus, in the Greek portions of the Roman world the 'Second Sophistic' was represented by travelling rhetoricians, who found critical audiences—indicative of a wide diffusion of the old intellectual culture (Dill, *Rom. Soc. from Nero to Marcus Aurelius*, 1905, p. 372; Mommsen, *Provinces of Rom. Emp.*, Eng. tr., 1886, i. 362–367; cf. Philostr. *Apoll. Tyan.* i. 7, *Vit. Soph.* i. 220). Again, in the West, Africa (especially at Carthage), Spain, and the Gallic seats of learning maintained the ancient training in grammar and rhetoric. Marseilles, Autun, Lyons, Bordeaux, and, later, Toulouse, Narbonne, and Trèves were representative centres. It was the continuance of an old movement. Agricola had in early life realized the benefits of a good education at Marseilles, and about A.D. 80 established schools in Britain for chieftains' sons. In the 2nd cent. Juvenal glances at the craze for culture signified by the influence of Gallic eloquence on British lawyers, and by the talk in the 'Farthest North' about appointing a professor of rhetoric (*Sat.* xv. 111–112). Marcus Aurelius went through the normal three stages with certain additions: lessons from his *litterator* were amplified by others from an actor and a tutor who was both musician and geometer; at the next stage he had one Greek and three Latin *grammatici*; at the third stage he had three Greek masters of eloquence (including Herodes Atticus), and one Latin master, Fronto. He studied under many philosophers, and worked hard at law. He also attended public declamations (Capitol. *M. Ant. Phil.* ii.–iii.). A broadly similar course, though less full, was followed early in the 3rd cent. by Alexander Severus, first in the East, and afterwards at Rome (Lamprid. *Alex. Sev.* iii.).

The persistence of the ancient pagan learning meets us in an interesting way when we note the course of training followed by Christian Fathers and well represented in the *Confessions* of St. Augustine, which, as the utterances of one who had been a student in Africa and a professor at Milan, place vividly before us at once the æsthetic attractions and the moral defects of classical literature.

The characteristics of Roman education in Gaul during the 4th and 5th cents. are best known to us through the works of Ausonius and Apollinaris Sidonius (Dill, *Rom. Soc. in last Cent. of W. Empire*[2], pp. 385–451). The rhetorical training had suffered inevitable degeneration, thanks to its extravagant display of conventional cleverness in handling unrealities; but one pleasant feature in the literary education is its tendency to form a ground of common interest between Christian and non-Christian friends. Another and a less pleasant feature, suggestive of the coming disruption of the Empire, and anticipative of the training of the Middle Ages, is the gradual decline of the study of Greek in the West. This is quite noticeable

both in Gaul and in Africa, where, in the time of Apuleius and Tertullian, educated men had known Greek as proficiently as Latin. St. Augustine, for example, had little hold upon or affection for Greek, and studied Plato chiefly in Latin translations (*Conf.* I. xiii.-xiv., VII. ix., VIII. ii.).

The attitude of the central authorities towards education, which is the salient feature of this period, had been foreshadowed from the very beginning of the Empire. Julius Cæsar granted the franchise to medical men and teachers of the liberal arts (Suet. *Div. Iul.* xlii.)—a great testimony to the dignity of learning as a passport for foreigners to Roman citizenship. A similar spirit prompted Augustus' exemption of teachers from a decree banishing foreigners (Suet. *Div. Aug.* xlii.); and his establishment of Verrius Flaccus in the Palatium has been mentioned. Tiberius and Claudius were interested in schools and in grammatical learning; but the next practical step in the direction of Imperial patronage was Vespasian's fixing of an annual stipend of 100,000 sesterces for Greek and Latin rhetors (Suet. *Vesp.* xviii.). This stipend of about £800 a year probably would not hold good outside the capital itself, and it may not have been till the reign of Domitian that Vespasian's arrangements came into actual force; for one of Jerome's entries under Domitian's reign (*Euseb. Chron.* ad ann. 2104) is: 'Quintilianus Calagurritanus ex Hispania primus Romae publicam scholam et salarium e fisco accepit et claruit.' Trajan's decision to confer education upon 5000 poor boys was a recognition of the gain to the community from having its future citizens trained (Plin. *Paneg.* xxvi.-xxviii.). Then, under Hadrian, came that expansion of educational policy from Rome to the Empire at large which marks his reign as the opening of a new era. Himself a widely read student, accomplished in painting and music, with a taste for declaiming, and fond of having learned men in his *entourage*, he showed liberality to all professors, and he superannuated teachers who were beyond their work (Spart. *Hadr.* xvi.). Besides giving rhetoric a home at his Athenæum in the capital, he established schools in the provinces, granted them subventions, and appointed teachers.

Hadrian's policy was continued and extended by Antoninus Pius (Capitol. *Ant. Pius*, xi.: 'rhetoribus et philosophis per omnes prouincias et honores et salaria detulit'), who also exempted rhetors, philosophers, grammarians, and doctors from certain State imposts, laying down the number of professors to be thus favoured in each town—*e.g.* in the smallest within the scope of the decree, 5 doctors, 3 sophists, 3 grammarians (*Digest.* xxvii. 1, 6). This measure proves the relationship of municipal and central authorities with the *personnel* of the teaching body. In reality, the expense of such schools fell on the municipalities, and the Emperors by special benefits simply encouraged and supported the towns in their educational policy. As Pottier remarks: 'C'est vraiment une organisation municipale de l'enseignement' (art. 'Educatio,' in Daremberg-Saglio; cf. Boissier, 'L'Instruction publique,' *loc. cit. infra*, pp. 331-335).

In A.D. 176, Marcus Aurelius made payments to establish professorships at Athens (Dio Cass. lxxi. 31. 3, ed. Bekker; Lucian, *Eun.* iii.). In the 3rd cent. with Alexander Severus appeared a bursary system; for, while increasing the schools and fixing salaries for rhetors, grammarians, and others, he arranged that their lectures should be attended by poor students aided by exhibitions (Lamprid. *Alex. Sev.* xliv.: 'discipulos cum annonis, pauperum filios, modo ingenuos, dari iussit'). The recurrence of enactments in the 4th cent. proves the tendency of municipalities to be mean or dilatory in paying salaries to teachers, education always appearing to offer a tempting field for economy. In 301, monthly payments were fixed by edict of Diocletian; *e.g.* 50 denarii per pupil for a *magister institutor*, 75 for a *calculator*, 200 for a *grammaticus Graecus siue Latinus* and for a *geometres*. Constantine ordained the regular payment of salaries, and by edicts of A.D. 321, 326, and 333 he granted indulgences to teachers 'quo facilius liberalibus studiis multos instituant.' When Constantius Chlorus appointed Eumenius to be principal of the resuscitated school at Autun about A.D. 297, the town had accepted the Emperor's right to choose as quite natural; and in 362, Julian claimed the nomination of professors throughout the Empire as a prerogative of the Emperor, but delegated the sifting of candidates to the local bodies (*Cod. Theod.* xiii. 3. 5). His forbidding of Christians to teach in schools was the first definite restriction imposed by the Emperor upon the freedom of local choice. Different rescripts of Gratian and of Theodosius regulated the stipends and the number of chairs (*Cod.* xiii. 3. 11, xiv. 9. 3). Gratian's policy possesses a special interest, because it was probably guided by his adviser and former tutor, Ausonius; his edict left the appointments of teachers to the municipalities, but fixed the emoluments; *e.g.* a rhetor was to have twice the amount due to a grammarian. Now, this was equivalent to ear-marking money in the municipal budgets for professorial salaries.

The last notable advance in the Imperial organization of public instruction is the foundation by Theodosius II. at Constantinople in 425 (little over a century before its dissolution by Justinian) of a University staffed by 31 professors, viz. 3 Latin rhetors, 10 Latin grammarians, 5 Greek rhetors, 10 Greek grammarians, 1 philosopher, 2 jurisconsults. The professors were treated as State-functionaries, and a monopoly in public teaching was secured to the University. The staffing is significant for its omissions. Neither science nor medicine figures in the list, and philosophy is poorly represented; yet Constantinople had a wider curriculum than most other institutions, which in the main concentrated their work, as Bordeaux did, upon grammar and rhetoric. Thus philosophy, never truly a passion with the Romans, and certainly losing ground in the Gallic schools of the 4th cent., came to be fully represented only at Athens, which in this respect outshone Massilia, Naples, Alexandria, Antioch, Seleucia, Smyrna, Ephesus, Rhodes, Tarsus, and Rome itself; while law, though not forgotten in centres like Cæsarea, Antioch, Alexandria, Carthage, Arles, and Narbonne, was most effectively taught at Berytus, outside the two capitals of the Empire; and medicine—a separate branch of study which had only by degrees risen out of the hands of slaves and freedmen, and could be best learned by assisting a practising doctor of repute—was specially professed in the schools of Rome, Alexandria, and Athens.

A law of Valentinian I. (A.D. 370) illustrates the concern of the Government for another aspect of education. It lays down rules for the supervision of students at Rome. On arrival, they were required to deliver to the *magister census* a passport from the governor of their own province, stating their antecedents; they must declare their intended course of study; misconduct might render them liable to public chastisement and expulsion; and permission to reside in Rome up to the age of 20 was made conditional on good behaviour and diligent study. Such regulations were necessary; for idlers and rowdies, like the *euersores* of St. Augustine's *Confessions*, could and did make themselves terrors to professors and to fellow-pupils in the

schools of Europe, Africa, and Asia Minor. The amenities and the troubles of student life in the 4th cent., both in West and in East, are brought home to us in the pages of Ausonius, Augustine, Eunapius, and Libanius. We read of a cultured society looking back with pleasure and gratitude to 'college' lectures and companionships; students flocking to the lectures of a famous professor, especially, as Eunapius shows, if he came from their own part of the world; professorial schemes to attract students, or timidity in rebuking them, or jealousy over a rival's reputation; corporations of students formed, as Libanius discovered, to further the interests of a favourite professor, to waylay new-comers, and by rough ordeals initiate them into membership, under oath that they would take no lessons except from sophists recognized by their worshipful association (see A. Müller, *loc. cit. infra*).

If we take Gaul as typical of the survival of the old Roman education, we find in the 5th cent. that studies have ceased to make any advance, and that the classical tradition is on the eve of disappearance before irruptions of barbarism and the distrustful attitude of the Christian monastic schools.

J. WIGHT DUFF.

EDUCATION, MORAL.—I. Definition and scope.—The concept 'moral education' requires to be clearly defined; otherwise much confusion is bound to arise in discussion. We shall consider first what the definition should exclude, then what it should include.

(*a*) *Religious and denominational duties.*—The differences between the members of the human race are altogether insignificant compared with the differences between a man and his Deity. We may, therefore, profitably distinguish, at least for practical purposes, between moral and religious duties; and, since a man's duties to his Church are corollaries to his duties to his Deity, it would be well also to include denominational under the head of religious duties. Moreover, neither a man's relation to his Deity nor that to his fellows is a purely ethical one; therefore, just as we do not look upon every human question as an ethical one, so we must bear in mind that every religious problem is not necessarily a moral one. We are thus justified in distinguishing between theological and moral duties, and in confining, for all intents and purposes, theological duties to the religious lesson, and moral duties to the moral lesson.[1] Both religious and moral education would be gainers by such a separation, since the duties towards our fellows and those towards the Deity, which differ in several respects, could be more exhaustively and more fruitfully treated. This would be all the more important because opinions on theology vary so widely in the 20th century.

The objection that morality is connected with, and dependent on, theology is beside the point, for a similar connexion exists between theology and most other subjects in the curriculum—history, science, and literature, for instance. Accordingly there is no compelling reason why morality, any more than history or science, should form part of the religious lesson. To the particular extent that the objection is justifiable, it may be met by occasional references in the religious lesson to ethics, history, and science, as the case may be, and, in denominational schools, by occasional references to theology when treating of the same subjects. For example, one chapter in the official Portuguese Moral Instruction Manual for Primary Schools is devoted to theological duties, including duties to the Church, while, conversely, the Portuguese Catechism treats to some extent of moral duties. Each, morality and theology, comes in this way to its own. For the common school, however, it would be sufficient for the teacher to make it plain that the religious lesson will deal with religious and denominational duties. If it is argued that the principal motives to right conduct are theological, the reply must be that the trend of modern times is to appeal to human motives in conduct, and that an ethics which is primarily other-worldly is on that account out of place in education. Our literature, our press, our social and political life, and the whole spiritual structure of our schools imply the sufficiency of human motives for right action. The argument is further weakened by the fact that non-theological moral lessons of one kind or another are becoming frequent all over the world.

Finally, it is held by some that the Bible alone (or the Catechism) is the proper text-book of moral instruction, and that true morality is one with Bible morality. The remarks in the last paragraph partly dispose of this objection. In addition, it may be stated that the books comprising the Bible reflect a certain civilization which is widely removed from ours: *e.g.* our political and social life vastly differs from that of Judæa, and men live now—not as in that period of history—on an international plane. Our scheme of virtues and our moral teaching must, therefore, be based on the conditions of modern existence. Let any one compare, for this purpose, the Portuguese Catechism with the Portuguese Ethical Manual, or the syllabuses of the English Moral Instruction League with an ordinary religious instruction syllabus, or the Ten Commandments, as they stand in the Bible, with the explanations of them given in most Protestant and Roman Catholic catechisms, and the difference between Bible morality and modern morality will be obvious. This is not a question as to whether the Bible is abstractly correct in its morals (though even this is disputed by recognized theologians).[2] Different civilizations

1 'Religion itself I take to mean a body of truths or beliefs respecting God and our relation to Him; and flowing from these a collection of duties which have God as their primary object. These are, in the main, functions of the will in the form of exercises of internal and external worship. Out of these beliefs and volitions there emerge feelings and emotions which we call religious sentiments. They include love, gratitude, sorrow, fear, joy, hope, awe, veneration, and allied forms of consciousness' (Father Michael Maher, S.J., in *Papers on Moral Education communicated to the First International Moral Education Congress*, 1908, p. 178).

2 'If the Jehovah who instructed Jacob to cheat Laban, bade Joshua to massacre the women and children of Canaan, sent bears to kill the children who mocked Elisha, or accepted such

must be interpreted in different moral terms, and a person brought up strictly on Bible morality would be fitted only for Bible times and not at all adapted for our age. The Bible, therefore, may be used by the teacher of morals as one only out of many sources of moral insight and inspiration.

We conclude, therefore, that for all practical purposes moral must be separated from religious education.

(*b*) *Intellectual, physical, æsthetic, and professional education.*—The closer study of educational problems demonstrates more and more that the concept 'education' has various aspects which can be separated with comparative ease. Moral education has consequently come to be regarded as a distinct branch of education. To this the objection is still sometimes offered, that since, as is alleged, intellectual education tends to make children truth-loving and true, or physical education makes them courageous and upright, therefore separate moral education is superfluous. A careful examination, for which we have no space here, would show that there is little truth in these contentions, and that, on the whole, each branch of education has to look to perfecting itself, if it is to achieve solid results, although it may justly rely on some support being given to it by each of the other branches.

It might further be argued that ethics should not be treated as a special subject, but should permeate the whole of education. To this the reply is that these two means are non-exclusive. Just as the teacher in every class promotes the physical education of the children by insisting on proper postures and movements, and by touching on aspects in his subject connected with physical culture, even though there be a separate gymnastic class, so discipline and indirect moral instruction do not exclude systematic moral teaching. They are complementary and interdependent. As to the fact that the formation of character is generally judged to be the chief aim in education, this can make no difference to the need of separate teaching for the purpose of conveying clear and connected impressions on the way of life.

We have seen that moral education is to be distinguished from religious, intellectual, physical, æsthetic, and professional education. We must inquire now what this form of education aims to compass.

(*c*) *Support of the present regime.*—If moral education demanded obedience solely, its purport would be readily divined, for children would simply be taught to do what they are commanded by parents, teachers, masters, and magistrates, and to be satisfied with the economic and social position in which they may happen to find themselves. This code of morals is not by any means a rarity to-day, and its inculcation, in part at least, is favoured in many quarters. For instance, the large majority of French text-books on moral instruction were, until recently, emphatic on the point that the Great Revolution had achieved everything of moment for the good of France, and that dissatisfaction with present conditions argued, therefore, an unethical state of mind. There is no future in the schools for such a non-progressive morality.

(*d*) *Abstract moral conceptions.*—It is also easy to define moral education in abstract moral terms. Obedience to the commands of duty, hearkening to the voice of conscience, belief that our will is free, the heinousness of sin, the hauntings of remorse, and the necessity for repentance are such abstract moral conceptions. Even general references to truthfulness, kindness, or courage do not alter materially the effect of the teaching, for in all these cases the moral lessons do not tell the young what to do and what to leave undone. The bigot, the oppressor, the pleasure-hunter, the idler, and the ignorant are in no way morally enlightened by the recollection of such teachings, but rather tend to be confirmed in their respective courses of conduct by an accommodating conscience. The moral education of the present has no sympathy with such an abstract theory.

homage as is offered in the 69th Psalm, were to be regarded not as a conception relative to a barbarous age, but as an authoritative picture of the one true God, then it would inevitably follow that the ruler of the world was not, in the modern sense, a moral being' (Canon Glazebrook, in *Papers on Moral Education communicated to the First International Moral Education Congress*, p. 155 f.).

(*e*) *The aim of moral education.*—Moral education, as conceived to-day, aims in the main at communicating a deep sense of personal, social, civic, and international responsibility. The duties implied in this responsibility may be comprehended in twelve categories of social relationship: (1) home and family (including relatives, guests, near neighbours, household helps, and domestic animals); (2) companionship (including sociability, acquaintances, friends, and courtship); (3) the school (including love of knowledge and science); (4) social life; (5) animal life; (6) self-respect (including regard for moral, intellectual, and physical health); (7) the ethics of work; (8) leisure and pleasure; (9) love of nature; (10) love of art; (11) citizenship and internationalism; (12) respect for the past, the present, and the future. Courage, prudence, temperance, and justice would be regarded as the general virtues which guide and inspire personal and social endeavour, and the teacher would sum up, with the Stoics, all the duties and virtues in the one duty and virtue of manliness, that is, of being a man or woman guided by careful reflexion and wide sympathies. The features peculiar to such instruction are: it should be positive rather than negative in its injunctions, and draw its material from reality rather than from fiction; it should concern itself with motives as well as with acts; it should keep in view both the desirability and the danger of cultivating habits of thought and action; it should not restrict itself to inculcating duties suitable to the child stage; it should not consist of mere analysis or strict logical treatment; it should cultivate the active side, and enforce the importance of example; it should lay stress on complete faithfulness to the ideal, and the rejection of even the faintest compromise with sin; and its prime test should be its effect on the character and the conduct of the taught.

2. The place of moral education.—It is almost universally agreed that the supreme object of education is the formation of character, and this agreement is due to the common conviction that morality is the unifying bond of society, without which social harmony and happiness are impossible. Moral education is, consequently, held to be of supreme importance.

3. Departments of moral education.—Moral education may be divided into home education, school education, and self-education.

(*a*) *Moral education in the home.*—The problem of moral education in the home is more complicated than that of moral education in the school. In the home there are, besides assistant teachers, two teachers—the parents (who often do not agree in their views on education); there are usually several children of different ages; the children have no set tasks to perform as at school; the home schooling extends practically over the twenty-four hours at first; the parents have not usually been prepared for their duties, and they have other than educational duties to fulfil; and there are no authoritative manuals to inform them how to educate their children morally. Under these circumstances it is only the general pressure and influence of the environment which guide and correct the education given.

One striking exception alone exists up to the present—that referring to the education of infants. Here a multitude of definite rules are followed which simplify the problem and almost solve it. Perfect cleanliness, proper food, plenty of fresh air, prescribed regularity and proportion in everything, and never-failing gentleness remove nearly all educational

obstacles, to the great relief and benefit of both parents and infant. Accordingly it is wisely suggested that every young woman (and perhaps every young man) should visit for a few weeks a crèche (or other scientifically conducted nursery) for the purpose of learning the 'trade' of parent. A second significant step is being already taken. Young women, trained in kindergartens, learn how to amuse and employ young children, and how to depend completely, in the exercise of their profession, on intelligent anticipation, cheerfulness, serenity, loving care, courtesy, and respect for the child's love of liberty. No corporal punishment, no pushing or pulling, no scolding, shouting, or argumentation, no harshness, teasing, or bribing, no alternation between forbidding and granting everything, no appeals to low motives, no false promises or excuses are resorted to, and yet the educational results are far more satisfactory than they used to be. The evident conclusion is that prospective parents should train themselves or be trained as are kindergarten nurses and teachers; and, considering the simplicity of the training and the thoroughly unwise education which is only too common, opinion should not be divided on the matter. The only drawback—which is, however, a serious one—is that this education, as now given, does not prepare for any high calling. A positive scheme of ethics, such as we have sketched, must supplement the mere training in cheerfulness and correct behaviour; for the building up of a strong character bent on playing a worthy part in life must be the objective.

The above method of dealing with infants and young children indicates the general lines of a sound system of moral education. The children, at all stages of development, must have something to do both in the way of amusement and employment, and the parents must know how to treat them. The children should be trained in self-help, in helping in the home, and in helpfulness generally. Devotion to the right, love of justice and tolerance, courage, perseverance, courtesy, modesty, exactitude in observation and in giving accounts or making statements, independent thought, carefulness in generalizing, love of truth and of learning, of nature and of art, strenuousness and love of work, temperance in the classic sense, and simplicity of living should be, among other virtues, inculcated in the home according to the stage of development of the young. Children should learn, too, to do what is right and reasonable unhesitatingly, intelligently, perseveringly, cheerily, and rapidly. In the adolescent period the parent should be the trusted friend of the youth or maiden; and purity, sobriety, industry, desirable companions, love of nature, art, and learning, and devotion to good causes should be particularly encouraged.

We may divide moral education into four periods: (i.) from birth to the age of two-and-a-half; (ii.) from two-and-a-half to seven; (iii.) from seven to about twenty-one; and (iv.) from twenty-one onwards. In the first period, when the child cannot as yet be easily reasoned with, we consider more especially the formation of good *habits*; in the second, when the child possesses just about sufficient understanding to comprehend commands, his character is to be moulded chiefly by *obedience*; in the third, when the mental powers and self-possession are more developed, *commendation* should be the principal means of moral training; and, naturally, *self-direction* is the main motive fitting the last period. Yet the formation of good habits must be continued throughout the second, third, and fourth stages; the appeal to obedience throughout the third and fourth stages; the method of commendation throughout the fourth stage; and, indeed, the four methods are applicable, in varying degrees, to all the four stages.

The following aspects are discernible in a well-considered system of moral education:—

(1) The nature of the morality taught and the principal methods employed have to be fixed, as we have done above.

(2) Since the child has two teachers in his parents, and since harmony and efficiency in the teachers are essential, two conditions at least require to be satisfied. In thinking of marriage, the suitability of the contemplated partner should be weighed from this point of view. Secondly, husband and wife must seek to eliminate any points of differences in educational conceptions which may exist between them. The parents must also do their utmost to prepare themselves for the task of educating their offspring. Perhaps in time a voluntary and afterwards a compulsory service for about a year or more, probably divided into separate periods, will take the place of the present military service, and prepare men and women for the duties of adult life.

(3) The general organization of the home requires attention. The treatment of the children will be consistent, and show neither rigidity nor weakness. The children should be supplied with everything necessary for their moral, intellectual, and physical welfare. They will have convenient rooms and places to be in and to play in. Things will be so arranged in the home that the children are not tempted into mischief. The songs, the toys, the games, the picture-books, the stories told, the readings, the amusements, the employments, and the domestic animals should, as is becoming increasingly the case, largely promote the moral aim of home education. In short, an ethical spirit should determine the whole organization.

(4) Example is of far-reaching importance with the young. Dependent on their environment, they adopt the ideas of those surrounding them; they imitate their actions, their bodily attitudes, their tone of voice, and, what is sometimes not recognized, their feelings. Overflowing with energy and living in the present, the young child possesses, it is true, little self-control; but intelligent anticipation and organization, and unvarying serenity, consistency, and cheerfulness on the parents' part prevent passionateness and vacillation from becoming permanent in the child, and thus pave the way for the acquisition of whatever virtues his guardians possess.

(5) Incidental moral teaching was almost continuous under the old conditions. The child is eager to act, and also soon gets tired of any particular course of action; therefore, when his amusements are not scientifically regulated, he appears to be thinking of nothing but mischief, and remonstrances become incessant. Still, even under the most favourable conditions, many an occasion presents itself for pointing a moral. We can thus, by noting the moral successes and failures in conduct, impress the need for doing what is right and reasonable unhesitatingly, intelligently, and so forth.

(6) Indirect moral teaching should not be left entirely to chance. Various personal and social problems should be discussed (with due regard to the age of the child) from an ethical point of view, and provision should be made in order that such opportunities should not be lacking. Occurrences in the home, public events, the reading of a story, and the learning of a lesson may all be made occasions for indirect moral teaching.

(7) Direct moral teaching should also be given. The young are interested in issues concerned with conduct, and, if we approach them intelligently and sympathetically—sentimentality and sermonizing being excluded—we can talk over with them their own conduct, the conduct of others, and moral ideas and ideals generally. In this way, a lively sense of their duties and of their strong points and failings may be generated in them, and their character to a large extent determined. This would make superfluous many rebukes, and prevent the child from forgetting what he is to do and what he is to leave undone. How to do better than well rather than how not to do ill should be the burden of incidental, indirect, and direct moral teaching.

(8) Systematic moral teaching would be implied in the above so far as special instruction in morals is concerned, but systematic teaching proper involves teaching where the various ideas are, so far as possible, co-ordinated and comprehended in a system. Systematic teaching in the home, taking for granted rising stages of development, would mean that one important problem after another would be approached, and its bearing on present

and future life and conduct investigated. The aim of such set talks is the attaining of clear and comprehensive moral ideas, and the communication of a general enthusiasm for the right. Given a reasonable family life and a simple ideal, this should not prove unattainable. Systematic teaching being the rule in every subject, there can be no objection to systematic moral teaching.

(9) Environmental factors have important bearings. In (1) and (8) we have tacitly assumed a certain economic affluence in the family, and a certain social environment favourable to right conduct. These assumptions fall wide of the mark if the average family is considered, where the income is generally so meagre that scarcely anything beyond the barest necessities can be procured, while bad economic conditions and low moral standards lead to much misery and unrighteous dealings. Owing to these and other causes—not least the absence of efficient moral education—impurity, intemperance, idleness, ignorance, lack of sympathy and economic exploitation are widespread. Consequently, the average family is almost bound to fail to a considerable extent in the task of moral education, whilst the unpropitious social conditions create further obstacles. The moral educator is thus commonly also a social reformer.

(*b*) *Moral education in schools.*—The problems of school and home are largely the same, and we have, therefore, implicitly dealt to some extent with the school in speaking of the home and of moral education in general. Let us summarize the points. (1) There must be a system of morals which the teacher can utilize; (2) the teacher must be efficiently trained; (3) he should have a strong personality; (4) the school should be effectively organized for ethical purposes; there should be (5) incidental, (6) indirect, (7) direct, and (8) systematic ethical teaching; (9) the environment must not be decidedly unfavourable to right conduct; and (10) school and home must be properly correlated. We shall deal with these points separately.

(1) The nature of the ethics to be taught at school will naturally be the same as that inculcated in the home, only that the school life lends itself better to the practice of the social virtues. The principles governing the discipline will also be precisely the same, except that greater care will be requisite to do justice to the sensibilities and individuality of children who come from various homes, and that special care is necessary since the children are usually massed together for nearly an hour at a time. To ensure adequate attention to the pupils' needs, the teachers should preferably be class-teachers, and should remain some three years with the same set of children.

(2) The moral training of the young must be undertaken by efficient teachers. Moral education demands, therefore, that the teaching profession should be sufficiently respected and remunerated to attract men and women of character and ability, and that prospective teachers should be thoroughly prepared in training colleges and otherwise. This preparation should include special training and teaching in morals, in order that teachers should be familiar with the meaning and the task of moral education.

(3) The personality of the teacher, and particularly that of the headmaster, is of importance, especially where the school, as used to be the case, makes no organized provision for moral training. In the latter case almost everything depends on the influence of the headmaster, and to this is due the altogether exaggerated estimate of the teacher's personality which still largely survives. The personality of the teaching staff, however, has no small significance even to-day, considering that the teachers are to the child the living embodiment of the purpose for which the school exists.

(4) We need not enumerate here the various factors which go to the making of a well-organized school. These are well known. We lay stress on only a few points, assuming that the moral training of the pupils is the school's chief aim. The average number of children in a class should not exceed twenty-five; no more in the way of teaching results is to be expected than is consistent with thoroughness in training and teaching; the teacher should have sufficient leisure to continue his education; the teaching staff should be actively interested in the welfare of the pupils, and should also organize games and amusements; self-reliance and co-operation among the pupils should be encouraged; and a decided ethical tone should be traceable in the school decorations. Following the practice of the American School Republics, many tasks should devolve upon the pupils, and a strong and healthy corporate spirit should be cultivated among them. The school should be in close touch with the home, and it should introduce the pupils to the larger world by visits and excursions of various kinds. The ethical atmosphere of the class-room needs, however, special mention. Just as every teacher is at all times expected to watch over the pronunciation of his pupils, and to make sure that they express themselves clearly, intelligently, fluently, and concisely, so the ethical purpose of the school demands that at least the following moral qualities be kept constantly and consciously in view by the teacher: courtesy, love of truth, broad-mindedness, strenuousness, courage, orderliness, kindliness, uprightness, and simplicity of living.

(5) Incidents are uncommon to-day in a good school, and consequently little room is found for incidental moral teaching. Even where an 'incident' occurs, the good teacher usually finds it far more effective to confer privately with the culprit than to play to the gallery. It is inconceivable that in a well-conducted school the moral teaching should be confined to incidental moral instruction, though it can be easily understood why in former days, when the teaching methods were ill-devised and the disciplinary measures harsh, incidental moral teaching had a large scope.

(6) Indirect moral instruction is moral instruction arising out of the treatment of one subject or another of the curriculum. The history and the literature lessons are peculiarly suited to this. In addition, the physiology lessons are sometimes made the channel for inculcating general rules of health, the natural history lessons for kindness to animals, and the domestic science lessons for the household virtues.

Until recently such indirect moral instruction was rare, and there were many warnings uttered against it: *e.g.* educationists urged that one must not introduce an irrelevant subject; that it is not practical to attempt to kill two birds with one stone; that one must beware of falsifying facts to suit ethical ends; and that the class is not the place for moralizing and sermonizing. There used to be legitimate grounds for this objection, the chief one being that the school was at that time intellectualistic and opportunistic in aim, and that the recognized way of treating a subject and the matter itself almost precluded indirect ethical teaching. This is rapidly changing. The Belgian history-syllabuses, the attitude towards history of the English and Scottish Boards of Education, and that of many historians and educationists imply that history must be conceived as a record of the growth of civilization, and not merely as an account of military exploits. Illustrative of this fundamental change is also the fact that the New York City Education Authority conceives of geographical teaching as tending primarily to show the solidarity of the human race and its interdependence. Similarly, German and French School Readers now supply plentiful material of an ethical character, while frequently one of the main tests of a piece of literature to-day is whether or not an ethical spirit pervades it. Even arithmetic will soon be looked upon as a training in exact and cautious thinking rather than as a meaningless juggling with figures; and in high educational quarters the permeation of æsthetic culture—music, singing, drawing, painting, modelling—with an

ethical spirit is coming to be taken for granted. In a word, the whole curriculum is about to be ethicized, and in a generation or two we may expect every subject to be primarily ethical in character, with signal advantage to the particular subject (since ethics is life, and life is interesting) and to the race (since conduct, as Matthew Arnold said, covers three-fourths of life). It was because the school was narrowly patriotic, because it was too much concerned about turning out factory heads and hands, because its text-books were often written by near-sighted specialists who did not perceive the social meaning and bearing of the several school subjects, and because there was no strenuous attempt to make it serve its chief aim—character-building—that indirect moral instruction was rare, and frequently out of place. With educational advance, genuine opportunities for indirect moral instruction are multiplying; and such indirect instruction will appear more and more important, until every subject will ultimately prepare the pupil for promoting the cause of progress and well-being—individual, social, and racial. Ethics will be taught as the leading fact in history and life, and largely take the place of the facts favoured by militarism, commercialism, specialism, and intellectualism. The recent Education Codes of most countries illustrate this trend.

(7) Direct moral instruction in special subjects is now not infrequently given. Hygiene, with special reference to the drink question and to non-smoking, is a popular subject; temperance is a separate subject widely favoured; patriotism, citizenship, purity, good manners, and kindness to animals are also subjects to be met with in curricula. Such courses are of recent origin, and are rapidly multiplying in the school systems of the civilized world. It is, however, already felt that these separate courses require co-ordination and correlation, and that individually they do not supply the requisite ethical momentum to make the lessons effective for character-forming.

(8) Systematic moral instruction means direct or separate teaching, where the whole subject is treated in a comprehensive manner. This, however, does not exclude systematic treatment of selected subjects; it rather presupposes it, just as it assumes indirect moral instruction and the proper organization of the school for ethical ends. Such systematic instruction—common to all school subjects from the beginning of school life—alone provides clear and comprehensive ethical ideas, and covers the whole field of right doing. The other kinds of instruction — incidental, indirect, and direct—favour particular virtues instead of virtue, and cannot do justice to many aspects of conduct which may require detailed treatment. The ethics of home, of work, of the proper use of leisure, of friendship, and of much else could only in this systematic way be adequately and usefully dealt with. Sole reliance on the other methods—which is never the case with any other school subject—argues an unpedagogical procedure because the children do not correlate what they hear on the various occasions, and consequently soon forget it. Accordingly, systematic moral teaching, for the whole of the school period and in agreement with the ordinary pedagogic principles, is bound to come.

Already France, Italy, Portugal, and Japan possess such teaching; the English Board of Education strongly recommends it in its Code; many British colonies and over fifty English Local Education Authorities provide it; and individual schools and systems of schools in the United States and elsewhere also supply such teaching. The Ethical Societies have done much to popularize the idea of courses in general morals for the young, and the English Moral Instruction League is almost wholly responsible for the rapid advance made in this direction in England.[1] See MORAL EDUCATION LEAGUE.

The content of this instruction we have already outlined in speaking of the aim of education and of home education. Its tendency, as indicated in those passages, will be to produce men and women whose wills are good, strong, firm, and enlightened, men and women inspired by the widest sympathies.

[1] For full details regarding Moral Instruction (theological and non-theological) in eighteen countries, with complete syllabuses in use and an exhaustive bibliography, see Gustav Spiller, *Report on Moral Instruction and on Moral Training*, 1909. See also *Moral Instruction in Elementary Schools in England and Wales, A Return compiled from Official Documents* by H. Johnson, Secretary of the Moral Instruction League, 1908.

(9) The school must prepare for social life; but what is to be done if the social life of the present in many ways discourages right conduct? The answer that every man must rise above circumstance has led to much preaching and little doing, and is, therefore, to be ruled out of court. On the contrary, we are bound to recognize that for one person whom nothing daunts, nineteen are, for good or evil, sensibly affected by their environment. Accordingly, we must admit that home and school to-day are not all-powerful, and cannot send out into the world ideal men and women, or ensure that their charges will not morally suffer when plunged into the whirling stream of social life. There is need, therefore, for the social reformer, and the school must create him. Much, indeed, in the school itself depends on the spirit which pervades society: *e.g.* scholars are herded together—50, 60, or 70 in a class—and leave school several years before they should, and teachers are poorly trained and ill paid. Probably, until the national expenditure on education is at least doubled, the school will not be able to grapple effectively with the problems it has to face, nor until then will it yield a 'high rate of interest.'

(10) *School and home.*—A child well brought up at home is, as educationists testify,[1] an excellent scholar, for such a child eagerly and easily learns. If the home does its duty, the task of the teacher is, therefore, incalculably simplified. In fact, if home education approached perfection, school education would either be superfluous or follow lines different from the present ones. Well-bred children would possess the intellectual virtues (so far as the stage of development they had reached permitted) which the school is now inculcating with infinite pains and with relatively small success: *e.g.* careful observing, judging, and generalizing, a good memory, and vigorous independent thinking; and conciseness, readiness, polish, and clearness in speech and writing. They would also possess in a high degree the school virtues of punctuality, regularity, orderliness, neatness, attentiveness, industry, and courtesy; and, accordingly, the educational methods might demand much more of the child—working without supervision, co-operating with other children—making the influence of the school co-terminous with waking existence. Under these circumstances the school would not feel obliged to cram the children with 'necessary' knowledge; it would chiefly teach them how to learn, and the school's work it would mostly leave to the consultation of dictionaries, encyclopædias, maps, and books of statistics at home and at school; to observation, experiments, private reflexion, art galleries, museums, travel; and, not least, to the reading and the study of the great literary, scientific, and philosophical classics. This being the relation between school and home, it is essential that the two should come into close contact, and even be co-ordinated.

At present, in spite of various efforts, the school has succeeded only to an insignificant degree in keeping in touch with the home. Parents may call on the teacher; they are occasionally invited to attend lessons, examinations, and festive functions; they receive periodical accounts of the children's progress and conduct; they are asked to assist the children with their 'home' work, and to interest themselves in the children's school life; occasional parents' evenings are organized; in a few instances teachers visit the parents and the children, and also organize the children's amusements outside school; and in rare cases the parents of the scholars are asked to be represented on the school's committee of management. The subject of the relation between school and home is of sufficient importance to warrant a special investigation being undertaken with a view to making far-reaching proposals, since scarcely anything could be of such advantage to the school as that the pupils should have

[1] 'Little difficulty is felt in securing good work from boys who have had the invaluable advantage of a good home training' (Collar and Crook, *School Management and Methods of Instruction*, 1900, p. 53).

a first-rate home education. Among the objects more particularly to be realized is the professional encouragement of home education by the preparation of manuals, by the holding of classes and courses of lectures, and by full readiness to give counsel and assistance to parents. Ultimately the Education Authorities will concern themselves probably with home as well as with school education.

(c) *Moral education of adults.*—Adult life offers a number of special moral problems—the question of gaining a livelihood, the relation of superior to subordinate, of partner in marriage, and of parent, of civic responsibility, of influencing others by our ideas and activities, and so forth. The home and the school may develop a good character in those they have charge of, but this character is likely to deteriorate markedly when, adult life being reached, there is no inclination to continue the education received. The test of the moral man as well as of the business man is success in his particular sphere, and therefore the good man must ask himself: 'Does every one who knows me, near and far, think that I am all that I should be? Is my influence on all those I come in contact with, near and far, a beneficial one? Do I succeed as partner in marriage, as parent, as employer or employed, in friendship, in social intercourse, and in civic life? And to what extent do I succeed?' Experience proves that these searching questions are more easily put than satisfactorily answered.

Certain reasons for this relative non-success in life are not difficult to discover. We do not fully understand and appreciate others; passing impressions and feelings dominate us instead of the broadest considerations; we are unaware of the priceless value of simple living and cheerfulness, of uprightness and devotion to the common good; and we make innumerable distinctions between men, when one undeviating rule—to assist all according to their need—should be followed. Yet the mere being conscious and convinced of these reasons will avail little. They must be expanded in a series of works which show the way to act in the various relationships of life. We shall not, for instance, understand others by earnestly wishing to understand them, or live the simple life without knowing in what it consists. Unfortunately, writers on ethics have not generally appreciated the moral difficulties which are due to painful ignorance of details. No man will think of telling a man, 'Be forthwith a musician or poet'; but the writings of ethical thinkers only too often imply the command, 'Be forthwith a good man.' The truth is that the good life is a fine art which requires unceasing study and practice. The Church, Ethical Societies, and similar organizations have sought, with comparatively little success, to act as ethical schools for adults, and the reading of the great moralists, essayists, and devotional writers (of whom we cite some below) has been recommended for the same reason, and wisely; but what would render the most signal service would be scientific manuals on right conduct, dealing fully with the various relationships of life, especially if these manuals were used in connexion with classes, where views could be exchanged and definite advice might be received. The 20th century needs Doctors of Morals as well as Doctors of Medicine. Cf. ETHICAL DISCIPLINE.

GUSTAV SPILLER.

EDWARDS AND THE NEW ENGLAND THEOLOGY.—Jonathan Edwards, saint and metaphysician, revivalist and theologian, stands out as the one figure of real greatness in the intellectual life of colonial America. Born, bred, passing his whole life on the verge of civilization, he has made his voice heard wherever men have busied themselves with those two greatest topics which can engage human thought—God and the soul. A French philosopher of scant sympathy with Edwards' chief concernment writes:[1]

'There are few names of the eighteenth century which have obtained such celebrity as that of Jonathan Edwards. Critics and historians down to our own day have praised in dithyrambic terms the logical vigour and the constructive powers of a writer whom they hold (as is done by Mackintosh, Dugald Stewart, Robert Hall, even Fichte) to be the greatest metaphysician America has yet produced. Who knows, they have asked themselves, to what heights this original genius might have risen, if, instead of being born in a half-savage country, far from the traditions of philosophy and science, he had appeared rather in our old world, and there received the direct impulse of the modern mind. Perhaps he would have taken a place between Leibniz and Kant among the founders of immortal systems, instead of the work he has left reducing itself to a sublime and barbarous theology, which astonishes our reason and outrages our heart, the object of at once our horror and admiration.'

Edwards' greatness is not, however, thus merely conjectural. He was no 'mute, inglorious Milton,' but the most articulate of men. Nor is it as a metaphysician that he makes his largest claim upon our admiration, subtle metaphysician as he showed himself to be. His ontological speculations, on which his title to recognition as a metaphysician mainly rests, belong to his extreme youth, and had been definitely put behind him at an age when most men first begin to probe such problems. It was, as Lyon indeed suggests, to theology that he gave his mature years and his most prolonged and searching thought, especially to the problems of sin and salvation. And these problems were approached by him not as purely theoretical, but as intensely practical ones. Therefore he was a man of action as truly as a man of thought, and powerfully wrought on his age, setting at work energies which have not yet spent their force. He is much more accurately characterized, therefore, by a philosopher of our own, who is as little in sympathy, however, with his main interests as Lyon himself. F. J. E. Woodbridge says:[2]

'He was distinctly a great man. He did not merely express the thought of his time or meet it simply in the spirit of his tradition. He stemmed it and moulded it. New England thought was already making towards that colorless theology which marked it later. That he checked. It was decidedly Arminian. He made it Calvinistic. . . . His time does not explain him.'

Edwards had a remarkable philosophical bent; but he had an even more remarkable sense and taste for Divine things; and, therefore (so Woodbridge concludes, with at least relative justice), 'we remember him not as the greatest of American philosophers, but as the greatest of American Calvinists.'

1. The period of Edwards' preparation.—It was a very decadent New England into which Edwards was born, on 5th Oct. 1703. The religious fervour which the Puritan immigrants had brought with them into the New World had not been able to

[1] Georges Lyon, *L'Idéalisme en Angleterre au xviii[e] siècle*, Paris, 1888, p. 406 f.

[2] *The Philosophical Review*, xiii. [1904] 405.

propagate itself unimpaired to the third and fourth generation. Already in 1678, Increase Mather had bewailed that 'the body of the rising generation is a poor, perishing, unconverted, and (except the Lord pour down His Spirit) an undone generation.'[1] There were general influences operative throughout Christendom at this epoch, depressing to the life of the spirit, which were not unfelt in New England; and these were reinforced there by the hardness of the conditions of existence in a raw land. Everywhere thinking and living alike were moving on a lowered plane; not merely spirituality but plain morality was suffering some eclipse. The churches felt compelled to recede from the high ideals which had been their heritage, and were introducing into their membership and admitting to their mysteries men who, though decent in life, made no profession of a change of heart. If only they had been themselves baptized, they were encouraged to offer their children for baptism (under the so-called 'Half-Way Covenant'), and to come themselves to the Table of the Lord (conceived as a 'converting ordinance'). The household into which Edwards was born, however, not only protected him from much of the evil which was pervading the community, but powerfully stimulated his spiritual and intellectual life. He began the study of Latin at the age of six, and by thirteen had acquired a respectable knowledge of 'the three learned languages' which at the time formed part of the curricula of the colleges—Latin, Greek, and Hebrew. Before he had completed his thirteenth year [Sept. 1716), he entered the 'Collegiate School of Connecticut' (afterwards Yale College). During his second year at college he fell in with Locke's *Essay concerning Human Understanding*, and 'had more satisfaction and pleasure in studying it,' he tells us himself,[2] 'than the most greedy miser in gathering up handfuls of silver and gold from some new-discovered treasure.' He graduated at the head of his class in 1720, when he was just short of seventeen years of age, but remained at college (as the custom of the time was) two years longer (to the summer of 1722) for the study of Divinity. In the summer of 1722 he was 'approbated' to preach, and from Aug. 1722 until April 1723 he supplied the pulpit of a little knot of Presbyterians in New York City.[3] Returning home, he was appointed tutor at Yale in June 1724, and filled this post with distinguished ability, during a most trying period in the life of the college, for the next two years (until Sept. 1726). His resignation of his tutorship was occasioned by an invitation to become the colleague and successor of his grandfather, Solomon Stoddard, in the pastorate of the church at Northampton, Mass., where, accordingly, he was ordained and installed on 15th Feb. 1727.

By his installation at Northampton, Edwards' period of preparation was brought to a close. His preparation had been remarkable, both intensively and extensively. Born with a drop of ink in his veins, Edwards had almost from infancy held a pen in his hand. From his earliest youth he had been accustomed to trace out on paper to its last consequence every fertile thought which came to him. A number of the early products of his observation and reflexion have been preserved, revealing a precocity which is almost beyond belief.

On this ground, indeed, Lyon, for example, refuses to believe in their genuineness. It is futile to adduce the parallel of a Pascal, he declares; such a comparison is much too modest; the young Edwards united in himself many Pascals, and, by a double miracle, combined with them gifts by virtue of which he far surpassed a Galileo and a Newton; what we are asked to believe is not merely that as a boy in his teens he worked out independently a system of metaphysics closely similar to that of Berkeley, but that he anticipated most of the scientific discoveries which constitute the glory of the succeeding century.

It is well to recognize that Lyon has permitted himself some slight exaggeration in stating his case, for the renewed examination of the MSS which he, and, following him, A. V. G. Allen asked for, has fully vindicated the youthful origin of these discussions.[1] There is, for instance, a bantering letter on the immateriality of the soul, full of marks of immaturity, no doubt, but equally full of the signs of promise, which was written in 1714–1715, when Edwards was ten years old. There are some very acute observations on the behaviour of spiders in spinning their webs which anticipate the results of modern investigation,[2] and which cannot have been written later than his thirteenth year. There are, above all, metaphysical discussions of 'Being,' 'Atoms,' and 'Prejudices of Imagination,' written at least as early as his junior year at college, that is to say, his sixteenth year, in which the fundamental principles of his Idealistic philosophy are fully set out. And, besides numerous other discussions following out these views, there is a long series of notes on natural science, filled with acute suggestions, which must belong to his Yale period. It is all, no doubt, very remarkable. But this only shows that Edwards was a very remarkable youth.

It is in these youthful writings that Edwards propounds his spiritualistic metaphysics, and it is chiefly on the strength of them that he holds a place in our histories of philosophy. His whole system is already present in substance in the essay 'Of Being,' which was written before he was sixteen years of age. And, though there is no reason to believe that he ever renounced the opinions set forth in these youthful discussions—there are, on the contrary, occasional suggestions, even in his latest writings, that they still lurked at the back of his brain—he never formally reverts to them subsequently to his Yale period (up to 1727).[3] His engagement with such topics belongs, therefore, distinctively to his formative period, before he became engrossed with the duties of the active ministry and the lines of thought more immediately called into exercise by them. In these early years, certainly independently of Berkeley,[4] and apparently with no suggestion from outside beyond what might be derived from Newton's explanations of light and colour, and Locke's treatment of sensation as the source of ideas, he worked out for himself a complete system of Idealism, which trembled indeed on the brink of mere phenomenalism, and might have betrayed him into Pantheism save for the intensity of his perception of the living God. 'Speaking most strictly,' he declares, 'there is no proper substance but God Himself.' The universe exists 'nowhere but in the Divine mind.' Whether this is true 'with respect to bodies only,' or of finite spirits as well, he seems at first to have wavered; ultimately he came to the more inclusive opinion.

He could write of the rise of a new thought: 'If we mean that there is some substance besides that thought, that brings that thought forth; if it be God, I acknowledge it, but if there be meant some thing else that has no properties, it seems to me absurd.'[5] Of 'all dependent existence whatever' he comes at last to affirm that it is 'in a constant flux,' 'renewed every moment, as the colours of bodies are every moment by the light that shines upon them; and all is constantly proceeding from God, as light from the sun.'[6] He did not mean by this, however, to sublimate the universe into 'shadows.' He was only attempting to declare that it has no other substrate but God: that its reality and persistence are grounded, not in

some mysterious created 'substance' underlying the properties, but in the 'infinitely exact and precise Divine idea, together with an answerable, perfectly exact, precise, and stable will, with respect to corresponding communications to created minds and effects on their minds.'[1] He is engaged, in other words, in a purely ontological investigation, and his contention is merely that God is the *continuum* of all finite existence. He is as far as possible from denying the reality or persistence of these finite existences; they are to him real 'creations,' because they represent a fixed purpose and an established constitution of God.[2]

Edwards was not so absorbed in such speculations as to neglect the needs of his spirit. Throughout all these formative years he remained first of all a man of religion. He had been the subject of deep religious impressions from his earliest boyhood, and he gave himself, during this period of preparation, to the most assiduous and intense cultivation of his religious nature. 'I made seeking my salvation,' he himself tells us, 'the main business of my life.'[3] But about the time of his graduation (1720) a change came over him, which relieved the strain of his inward distress. From his childhood, his mind had revolted against the sovereignty of God: 'it used to appear like a horrible doctrine to me.' Now all this passed unobservedly away; and gradually, by a process he could not trace, this very doctrine came to be not merely a matter of course to him but a matter of rejoicing: 'The doctrine has often appeared exceedingly pleasant, bright, and sweet; absolute sovereignty is what I love to ascribe to God.' One day he was reading 1 Ti 1[17] 'Now unto the King, eternal, immortal, invisible, the only wise God, be honour and glory, for ever and ever, Amen,' and, as he read, 'a sense of the glory of the Divine Being' took possession of him, 'a new sense, quite different from anything he ever experienced before.' He longed to be 'rapt up to Him in heaven, and be, as it were, swallowed up in Him for ever.'[4] From that moment his understanding of Divine things increased, and his enjoyment of God grew. There were, no doubt, intervals of depression. But, on the whole, his progress was steadily upwards and his consecration more and more complete. It was this devout young man, with the joy of the Lord in his heart, who turned his back in the early months of 1727 on his brilliant academic life and laid aside for ever his philosophical speculations, to take up the work of a pastor at Northampton.

2. Edwards the pastor.—Edwards was ordained co-pastor with his grandfather on 15th Feb. 1727, and on the latter's death, two years later, succeeded to the sole charge of the parish. Northampton was relatively a very important place. It was the county town, and nearly half of the area of the province lay within the county. It was, therefore, a sort of little local capital, and its people prided themselves on their culture, energy, and independence of mind. There was but the one church in the town, and it was probably the largest and most influential in the province, outside of Boston. It was not united in sentiment, being often torn with factional disputes. But, under the strong preaching of Solomon Stoddard, it had been repeatedly visited with revivals. These periods of awakening continued at intervals during Edwards' pastorate; the church became famous for them, and its membership was filled up by them. At one time the membership numbered 620, and included nearly the entire adult population of the town. Stoddard had been the protagonist for the laxer views of admission to Church-ordinances, and early in the century had introduced into the Northampton church the practice of opening the Lord's Supper to those who made no profession of conversion. In this practice Edwards at first acquiesced; but, becoming convinced that it was wrong, sought after a while to correct it, with disastrous consequences to himself. Meanwhile it had given to the membership of the church something of the character of a mixed multitude, which the circumstance that large numbers of them had been introduced in the religious excitement of revivals had tended to increase.

To the pastoral care of this important congregation, Edwards gave himself with single-hearted devotion. Assiduous house-to-house visitation did not, it is true, form part of his plan of work; but this did not argue carelessness or neglect; it was in accordance with his deliberate judgment of his special gifts and fitnesses. And, if he did not go to his people in their homes, save at the call of illness or special need, he encouraged them to come freely to him, and grudged neither time nor labour in meeting their individual requirements. He remained, of course, also a student, spending ordinarily from thirteen to fourteen hours daily in his study. This work did not separate itself from, but was kept strictly subsidiary to, his pastoral service. Not only had he turned his back definitely on the purely academic speculations which had engaged him so deeply at Yale, but he produced no purely theological works during the whole of his twenty-three years' pastorate at Northampton. His publications during this period, besides sermons, consisted only of treatises in practical Divinity. They deal principally with problems raised by the great religious awakenings in which his preaching was fruitful.

Such, for instance, are the *Narrative of Surprising Conversions*, published in 1736, the *Thoughts on the Revival of Religion in New England in 1740*, published in 1742, and that very searching study of the movements of the human soul under the excitement of religious motives called *A Treatise concerning Religious Affections*, published in 1746. Then there is the *Humble Attempt to Promote Explicit Agreement and Visible Union of God's People in Extraordinary Prayer for the Revival of Religion*, etc., published in 1749, which belongs to the same class, and the brief *Account of the Life of the Rev. David Brainerd*, published in the same year. There remains only the *Humble Inquiry into the Rules of the Word of God, concerning the Qualifications requisite to a Complete Standing in Full Communion in the Visible Church of God*, published in 1749, along with which should be mentioned the defence of its positions against Solomon Williams, entitled *Misrepresentations Corrected and Truth Vindicated*, although this was not published until somewhat later (1752). No doubt there was much more than this written during these score or more of years, for Edwards was continually adding to the mass of his manuscript treasures; and some of these voluminous 'observations' have since been put into print, although the greater part of them remain yet in the note-books where he wrote them.

It was in his sermons that Edwards' studies bore their richest fruit. He did not spare himself in his public instruction. He not only faithfully filled the regular appointments of the church, but freely undertook special discourses and lectures, and during times of 'attention to religion' went frequently to the aid of the neighbouring churches. From the first he was recognized as a remarkable preacher, as arresting and awakening as he was instructive. Filled himself with the profoundest sense of the heinousness of sin, as an offence against the majesty of God and an outrage of His love, he set himself to arouse his hearers to some realization of the horror of their condition as objects of the Divine displeasure, and of the incredible goodness of God in intervening for their salvation. Side by side with the most moving portrayal of God's love in Christ, and of the blessedness of communion with Him, he therefore set, with the most startling effect, equally vivid

pictures of the dangers of unforgiven sin and the terrors of the lost estate. The effect of such preaching, delivered with the force of the sincerest conviction, was overwhelming. A great awakening began in the church at the end of 1735, in which more than 300 converts were gathered in,[1] and which extended throughout the churches of the Connecticut valley. In connexion with a visit from Whitefield in 1740 another wave of religious fervour was started, which did not spend its force until it covered the whole land. No one could recognize more fully than Edwards the evil that mixes with the good in such seasons of religious excitement. He diligently sought to curb excesses, and earnestly endeavoured to separate the chaff from the wheat. But no one could protest more strongly against casting out the wheat with the chaff. He subjected all the phenomena of the revivals in which he participated to the most searching analytical study; and, while sadly acknowledging that much self-deception was possible, and that the rein could only too readily be given to false 'enthusiasm,' he earnestly contended that a genuine work of grace might find expression in mental and even physical excitement. It was one of the incidental fruits of these revivals that, as we have seen, he gave to the world in a series of studies perhaps the most thorough examination of the phenomena of religious excitement it has yet received, and certainly, in his great treatise on the *Religious Affections*, one of the most complete systems of what has been strikingly called 'spiritual diagnostics' it possesses.

For twenty-three years Edwards pursued his fruitful ministry at Northampton; under his guidance the church became a city set on a hill to which all eyes were turned. But in the reaction from the revival of 1740–1742 conditions arose which caused him great searchings of heart, and led ultimately to his separation from his congregation. In this revival, practically the whole adult population of the town was brought into the church; they were admitted under the excitement of the time and under a ruling introduced as long before as 1704 by Stoddard, which looked upon all the ordinances of the church, including the Lord's Supper, as 'converting ordinances,' not presupposing, but adapted to bring about, a change of heart. As time passed, it became evident enough that a considerable body of the existing membership of the church had not experienced that change of heart by which alone they could be constituted Christians, and indeed they made no claim to have done so. On giving serious study to the question for himself, Edwards became convinced that participation in the Lord's Supper could properly be allowed only to those professing real 'conversion.' It was his duty as pastor and guide of his people to guard the Lord's Table from profanation, and he was not a man to leave unperformed a duty clearly perceived. Two obvious measures presented themselves to him—unworthy members of the church must be exscinded by discipline, and greater care must be exercised in receiving new applicants for membership. No doubt discipline was among the functions which the Church claimed to exercise; but the practice of it had fallen much into decay as a sequence to the lowered conception which had come to be entertained of the requirements for church membership. The door of admission to the Lord's Supper, on the other hand, had been formally set wide open; and this loose policy had been persisted in for half a century, and had become traditional. What Edwards felt himself compelled to undertake, it will be seen, was a return in theory and practice to the original platform of the Congregational churches, which conceived the Church to be, in the strictest sense of the words, 'a company of saints by calling,' among whom there should be permitted to enter nothing that was not clean.[1] This, which should have been his strength, and which ultimately gave the victory to the movement which he inaugurated throughout the churches of New England,[2] was in his own personal case his weakness. It gave a radical appearance to the reforms which he advocated, which he himself was far from giving to them. It is not necessary to go into the details of the controversy regarding a case of discipline, which emerged in 1744, or the subsequent difficulties (1748–9) regarding the conditions of admission to the Lord's Supper. The result was that, after a sharp contest running through two years, Edwards was dismissed from his pastorate on 22nd June 1750.

3. Edwards the theologian.—By his dismissal from his church at Northampton, in his forty-seventh year, the second period of Edwards' life—the period of strenuous pastoral labour—was brought to an abrupt close. After a few months he removed to the little frontier hamlet (there were only twelve white families resident there) of Stockbridge, as missionary of the 'Society in London for Propagating the Gospel in New England and the Parts Adjacent' to the Housatonic Indians gathered there, and as pastor of the little church of white settlers. In this exile he hoped to find leisure to write, in defence of the Calvinistic system against the rampant 'Arminianism' of the day, the works which he had long had in contemplation, and for which he had made large preparation. Peace and quiet he did not find; he was embroiled from the first in a trying struggle against the greed and corruption of the administrators of the funds designed for the benefit of the Indians. But he made, if he could not find, the requisite leisure. It was at Stockbridge that he wrote the treatises on which his fame as a theologian chiefly rests: the great works on the Will (written in 1753, published in 1754), and Original Sin (in the press when he died, 1758), the striking essays on *The End for which God created the World*, and the *Nature of True Virtue* (published 1768, after his death), and the unfinished *History of Redemption* (publ. 1772). No doubt he utilized for these works material previously collected. He lived practically with his pen in his hand, and accumulated an immense amount of written matter—his 'best thoughts,' as it has been felicitously called. The work on the Will, indeed, had itself been long on the stocks. We find him making diligent studies for it already at the opening of 1747;[3] and, though his work on it was repeatedly interrupted for long intervals,[4] he tells us that before he left Northampton he 'had made considerable preparation and was deeply engaged in the prosecution of this design.'[5] The rapid completion of the book in the course of a few months in 1753 was not, therefore, so wonderful a feat as it might otherwise appear. Nevertheless, it is the seven years at Stockbridge which deserve to be called the fruitful years of Edwards' theological

[1] More than 550 members were added to the church at Northampton during Edwards' pastorate (see Solomon Clark, *Histor. Catalogue of Northampton First Church*, 1891, pp. 40–47).

[1] According to the organic law of the Congregational churches (the Cambridge Platform), 'saints by calling' are 'such as have not only attained the knowledge of the principles of religion, and are free from gross and open scandals, but also do, together with the profession of their faith and repentance, walk in blameless obedience to the word.'

work. They were interrupted in the autumn of 1757 by an invitation to him to become the President of the College of New Jersey, at Princeton, in succession to his son-in-law, Aaron Burr. It was with great reluctance that he accepted this call; it seemed to him to threaten the prevention of what he had thought to make his life-work—the preparation, to wit, of a series of volumes on all the several parts of the Arminian controversy.[1] But the college at Princeton, which had been founded and thus far carried on by men whose sympathies were with the warm-hearted, revivalistic piety to which his own life had been dedicated, had claims upon him which he could not disown. On the advice of a council of his friends,[2] therefore, he accepted the call and removed to Princeton to take up his new duties, in January 1758. There he was inoculated for smallpox on 13th Feb., and died of this disease on 27th March in the fifty-fifth year of his age.

The peculiarity of Edwards' theological work is due to the union in it of the richest religious sentiment with the highest intellectual powers. He was first of all a man of faith, and it is this that gives its character to his whole life and all its products; but his strong religious feeling had at its disposal a mental force and logical acuteness of the first order; he was at once deeply emotional, and, as Ezra Stiles called him, a 'strong reasoner.' His analytical subtlety has probably never been surpassed; but with it was combined a broad grasp of religious truth which enabled him to see it as a whole, and to deal with its several parts without exaggeration and with a sense of their relations in the system. The system to which he gave his sincere adhesion, and to the defence of which, against the tendencies which were in his day threatening to undermine it, he consecrated all his powers, was simply Calvinism. From this system as it had been expounded by its chief representatives he did not consciously depart in any of its constitutive elements. The breadth and particularity of his acquaintance with it in its classical expounders, and the completeness of his adoption of it in his own thought, are frequently underestimated. There is a true sense in which he was a man of thought rather than of learning. There were no great libraries accessible in Western Massachusetts in the middle of the 18th century. His native disposition to reason out for himself the subjects which were presented to his thought was reinforced by his habits of study; it was his custom to develop on paper, to its furthest logical consequences, every topic of importance to which his attention was directed. He lived in the 'age of reason,' and was in this respect a true child of his time.[3] In the task which he undertook, furthermore, an appeal to authority would have been useless; it was uniquely to the court of reason that he could hale the adversaries of the Calvinistic system. Accordingly it is only in his more didactic—as distinguished from controversial—treatise on *Religious Affections*, that Edwards cites with any frequency earlier writers in support of his positions. The reader must guard himself, however, from the illusion that Edwards was not himself conscious of the support of earlier writers beneath him.[4] His acquaintance with the masters of the system of thought he was defending, for example, was wide and minute. Amesius and Wollebius had been his text-books at college. The well-selected library at Yale, we may be sure, had been thoroughly explored by him; at the close of his divinity studies, he speaks of the reading of 'doctrinal books or books of controversy' as if it were part of his daily business.[1] As would have been expected, he fed himself on the great Puritan divines, and formed not merely his thought but his life upon them. We find him in his youth, for instance, diligently using Manton's *Sermons on the 119th Psalm* as a spiritual guide; and in his rare allusions to authorities in his works, he betrays familiarity with such writers as William Perkins, John Preston, Thomas Blake, Anthony Burgess, Stephen Charnock, John Flavel, Theophilus Gale, Thomas Goodwin, John Owen, Samuel Rutherford, Thomas Shephard, Richard Sibbes, John Smith the Platonist, and Samuel Clark the Arian. Even his contemporaries he knew and estimated at their true values: Isaac Watts and Philip Doddridge as a matter of course; and also Thomas Boston, the scheme of thought of whose *View of the Covenant of Grace* he confessed he did not understand, but whose *Fourfold State of Man* he 'liked exceedingly well.'[2] His Calvin he certainly knew thoroughly, though he would not swear in his words;[3] and also his Turretin, whom he speaks of as 'the great Turretine';[4] while van Mastricht he declares 'much better' than even Turretin, 'or,' he adds with some fervour, 'than any other book in the world excepting the Bible, in my opinion.'[5] The close agreement of his teaching with that of the best esteemed Calvinistic divines is, therefore, both conscious and deliberate; his omission to appeal to them does not argue either ignorance or contempt; it is incident to his habitual manner and to the special task he was prosecuting. In point of fact, what he teaches is just the 'standard' Calvinism in its completeness.

As an independent thinker, he is, of course, not without his individualisms, and that in conception no less than in expression. His explanation of the identity of the human race with its Head, founded as it is on a doctrine of personal identity which reduces it to an 'arbitrary constitution' of God, binding its successive moments together, is peculiar to himself.[6] In answering objections to the doctrine of Original Sin, he appeals at one point to Stapfer, and speaks, after him, in the language of that form of doctrine known as 'mediate imputation.'[7] But this is only in order to illustrate his own view that all mankind are one as truly as and by the same kind of Divine constitution that an individual life is one in its consecutive moments. Even in this immediate context he does not teach the doctrine of 'mediate imputation,' insisting rather that, Adam and his posterity being in the strictest sense one, in them no less than in him 'the guilt arising from the first existing of a depraved disposition' cannot at all be distinguished from 'the guilt of Adam's first sin'; and elsewhere throughout the treatise he speaks in the terms of the common Calvinistic doctrine. His most marked individualism, however, lay in the region of philosophy rather than of theology. In an essay on *The Nature of True Virtue*, he develops, in opposition to the view that all virtue may be reduced ultimately to self-love, an eccentric theory of virtue

[1] Dwight, i. 251.

[2] Dwight (i. 576) was not able to ascertain all the facts concerning this council; Ezra Stiles, *Diary*, New York, 1901, iii. 4, supplies interesting details.

[3] Cf. the discussion of Edwards' 'rationalism,' by Jan Ridderbos, *De Theologie van Jonathan Edwards*, 310–313.

[4] Hopkins tells us that 'he had an enormous thirst for knowledge, in the pursuit of which he spared no cost or pains. He read all the books, especially books treating of theology, that he could procure, from which he could hope to derive any assistance in the discovery of truth.' From his youth up, however, he disliked a display of learning. In his earliest maxims, by the side of 'Let much modesty be seen in the style,' he sets this other: 'Let it not look as if I was much read, or was conversant with books, or with the learned world' (Dwight, i. 41 f.).

as consisting in love to being in general. But of this again we hear nothing elsewhere in his works, though it became germinal for the New England theology of the next age. Such individualisms in any case are in no way characteristic of his teaching. He strove after no show of originality. An independent thinker he certainly claimed to be, and 'utterly disclaimed a dependence,' say, 'on Calvin,' in the sense of 'believing the doctrines he held because Calvin believed and taught them.'[1] This very disclaimer is, however, a proclamation of agreement with Calvin, though not as if he 'believed everything just as Calvin taught'; he is only solicitous that he should be understood to be not a blind follower of Calvin, but a convinced defender of Calvinism. His one concern was, accordingly, not to improve on the Calvinism of the great expounders of the system, but to place the main elements of the Calvinistic system, as commonly understood, beyond cavil. His marvellous invention was employed, therefore, only in the discovery and development of the fullest and most convincing possible array of arguments in their favour. This is true even of his great treatise on the Will. This is, in the common judgment, the greatest of all his treatises, and the common judgment here is right.[2] But the doctrine of this treatise is precisely the doctrine of the Calvinistic schoolmen. 'The novelty of the treatise,' we have been well told long ago,[3] 'lies not in the position it takes and defends, but in the multitude of proofs, the fecundity and urgency of the arguments by which he maintains it.' Edwards' originality thus consists less in the content of his thought than in his manner of thinking. He enters into the great tradition which had come down to him, and 'infuses it with his personality and makes it live,' and the vitality of his thought gives to its product the value of a unique creation.[4] The effect of Edwards' labours was quite in the line of his purpose, and not disproportionate to his greatness. The movement against Calvinism which was overspreading the land was in a great measure checked, and the elimination of Calvinism as a determining factor in the thought of New England, which seemed to be imminent as he wrote, was postponed for more than a hundred years.[5]

4. **The New England theology.**—It was Edwards' misfortune that he gave his name to a party; and to a party which, never in perfect agreement with him in its doctrinal ideas, finished by becoming the earnest advocate of (as it has been sharply expressed[6]) 'a set of opinions which he gained his chief celebrity by demolishing.' The affiliation of this party with Edwards was very direct. 'Bellamy and Hopkins,' says G. P. Fisher,[7] tracing the descent, 'were pupils of Edwards; from Hopkins West derived his theology; Smalley studied with Bellamy, and Emmons with Smalley.' But the inheritance of the party from Edwards showed itself much more strongly on the practical than on the doctrinal side. Its members were the heirs of his revivalist zeal and of his awakening preaching; they also imitated his attempt to purify the Church by discipline and strict guarding of the Lord's Table—in a word, to restore the Church to its Puritan ideal of a congregation of saints.[8]

[8] On the 'rigidity' of the New Divinity men in 'Church administration' and 'discipline,' see the interesting details in Ezra Stiles' *Diary*, iii. 273 f., 343 f., 358 f.

Pressing to extremes in both matters, as followers will, the 'Edwardeans' or 'New Divinity' men became a ferment in the churches of New England, and, creating discussion and disturbances everywhere, gradually won their way to dominance. Meanwhile their doctrinal teaching was continually suffering change. As Fisher (p. 7) puts it, 'in the process of defending the established faith, they were led to re-cast it in new forms and to change its aspect.' Only, it was not merely the form and aspect of their inherited faith, but its substance, that they were steadily transforming. Accordingly, Fisher proceeds to explain that what on this side constituted their common character was not so much a common doctrine as a common method: 'the fact that their views were the result of independent reflection and were maintained on philosophical grounds.' Here, too, they were followers of Edwards; but in their exaggeration of his rational method, without his solid grounding in the history of thought, they lost continuity with the past and became the creators of a 'New England theology' which it is only right frankly to describe as provincial.[1]

The men who worked out this theological transmutation were men of high character, great intellectual gifts, immense energy of thought, and what may almost be called fatal logical facility. Any people might be proud to have produced in the course of a century such a series of 'strong reasoners' on religious themes as Joseph Bellamy (1719–1790), Samuel Hopkins (1720–1803), Stephen West (1759–1818), John Smalley (1739–1820), Jonathan Edwards, Jr. (1745–1801), Nathaniel Emmons (1745–1840), Timothy Dwight (1752–1817), Eleazar T. Fitch (1791–1871), and Nathaniel W. Taylor (1786–1858)—all, with the single exception of the younger Edwards, graduates of Yale College; not to speak of yet others of equal powers, lying more off the line of direct development, like Leonard Woods (1774–1854), Bennet Tyler (1783–1858), Edward D. Griffin (1770–1837), Moses Stuart (1780–1852), Lyman Beecher (1775–1863), Charles G. Finney (1792–1875), Leonard Bacon (1802–1881), Horace Bushnell (1802–1876), and Edwards A. Park (1808–1900).

It is a far cry from Jonathan Edwards the Calvinist, defending with all the force of his unsurpassed reasoning powers the doctrine of a determined will, and commending a theory of virtue which identified it with general benevolence, to Nathaniel W. Taylor the Pelagianizer, building his system upon the doctrine of the power to the contrary as its foundation stone, and reducing all virtue ultimately to self-love. Taylor's teaching, in point of fact, was in many respects the exact antipodes of Edwards', and very fairly reproduced the congeries of tendencies which the latter considered it his life-work to withstand. Yet Taylor looked upon himself as an 'Edwardean,' though in him the outcome of the long development received its first appropriate designation—the 'New Haven Divinity.' Its several successive phases were bound together by the no doubt external circumstance that they were taught in general by men who had received their training at New Haven.

The growth of the New Divinity to that dominance in the theological thought of New England from which it derives its claim to be called 'the New England Theology' was gradual, though somewhat rapid. Samuel Hopkins tells us that at the beginning—in 1756—there were not more than four or five 'who espoused the sentiments which since have been called "Edwardean" and "New Divinity"; and since, after some improvement was made upon them, "Hopkintonian" or "Hopkinsian" sentiments.'[2] The younger Edwards still spoke of them in 1777 as a small party.[3] In 1787, Ezra Stiles, chafing under their growing influence and marking the increasing divergence of views among themselves, fancied he saw their end approaching.

[3] Ezra Stiles, ii. 227; Fisher, *loc. cit.*

'It has been the Ton,' he writes,[1] 'to direct Students of divinity these thirty years past or a generation to read the Bible, President Edwards', Dr. Bellamy's, and Mr. Hopkins' writings—and that was a good sufficiency of reading.' But now, 'the New Divinity gentlemen are getting into confusion and running into different statements.' 'The younger Class, but yet in full vigor, suppose they see further than those Oracles, and are disposed to become Oracles themselves, and wish to write Theology and have their own books come into vogue.' He thought these 'confusions' the beginning of the end.

In this he was mistaken: the New Divinity, in the person of Timothy Dwight, succeeded him as President of Yale College, and through a long series of years was infused into generation after generation of students.[2] The 'confusions' Stiles observed were, however, real; or, rather, the progressive giving way of the so-called Edwardeans to those tendencies of thought to which they were originally set in opposition.

We note Hopkins already conscious of divergence from Edwards' teaching—a divergence which he calls an 'improvement.' Ezra Stiles tells us that in 1787 the New Divinity men were beginning to 'deny a real vicarious Suffering in Christ's Atonement,' and were 'generally giving up the Doctrine of *Imputation* both in *Original Sin* and in *Justification*'; and some of them, 'receding from disinterested Benevolence, are giving in to the Idea that all holy Motive operates as terminating in personal happiness,'[3]—a very fair statement of the actual drift.

The younger Edwards drew up a careful account of what he deemed the (ten) 'Improvements in Theology made by President Edwards and those who have followed his course of thought.'[4] Three of the most cardinal of these he does not pretend were introduced by Edwards, attributing them simply to those whom he calls Edwards' 'followers.' These are the substitution of the Governmental (Grotian) for the Satisfaction doctrine of the Atonement, in the accomplishment of which he himself, with partial forerunners in Bellamy and West, was the chief agent; the discarding of the doctrine of the imputation of sin in favour of the view that men are condemned for their own personal sin only—a contention which was made in an extreme form by Nathaniel Emmons, who confined all moral quality to acts of volition, and afterwards became a leading element in Nathaniel W. Taylor's system; and the perversion of Edwards' distinction between 'natural' and 'moral' inability so as to ground on the 'natural' ability of the unregenerate, after the fashion introduced by Samuel Hopkins[5]—a theory of the capacities and duties of men without the Spirit, which afterwards, in the hands of Nathaniel W. Taylor, became the core of a new Pelagianizing system.

The external victory of the New Divinity in New England was marked doubtless by the election of Timothy Dwight to the Presidency of Yale College (1797); and certainly it could have found no one better fitted to commend it to moderate men; probably no written system of theology has ever enjoyed wider acceptance than Dwight's *Sermons*.[6] But after Dwight came Taylor, and in the teaching of the latter the downward movement of the New Divinity ran out into a system which turned, as on its hinge, upon the Pelagianizing doctrines of the native sinlessness of the race, the plenary ability of the sinner to renovate his own soul, and self-love or the desire for happiness as the spring of all voluntary action. From this extreme some reaction was inevitable, and the history of the so-called 'New England Theology' closes with the moderate reaction of the teaching of Edwards A. Park. Park was of that line of theological descent which came through Hopkins, Emmons, and Woods; but he sought to incorporate into his system all that seemed to him to be the results of New England thinking for the century which preceded him, not excepting the extreme positions of Taylor himself. Reverting so far from Taylor as to return to perhaps a somewhat more deterministic doctrine of the will, he was able to rise above Taylor in his doctrines of election and regeneration, and to give to the general type of thought which he represented a lease of life for another generation. But, with the death of Park in 1900, the history of 'New England Theology' seems to come to an end.[1]

[1] Ezra Stiles, iii. 273–5.

[2] Young Theodore D. Woolsey in 1822 can speak of 'Hopkinsianism' as 'a sort of net which catches all but the Presbyterian eels, who slip through.' It had become, he says, 'a general term which comprehends all who are not Arminians and disagree with Turretin on the Atonement' (*Yale Review*, Jan. 1912 [i. 2], p. 246).

[5] Cf. G. N. Boardman, *Hist. of New England Theology*, 50.

[6] Cf. G. P. Fisher, *A Sermon*, etc., 57: 'No work in systematic divinity has had such currency and authority in Great Britain, at least outside the Established Church of England, as the Sermons of Dr. Dwight. In that country they have passed through not less than forty editions.'

LITERATURE.—(*A*) A list of Edwards' works is given by Dwight, i. 765 ff.; S. Miller, 254 ff., and Ridderbos, 327 ff. (*opp. citt. infra*). A brief bibliography will be found in Allen, *op. cit. infra*, 391 ff. The first edition of Edwards' Works was in 8 vols., ed. S. Austin, Worcester, Mass. 1808–1809. This edition has been frequently reproduced in 4 vols.: New York, 1844, 1852, 1856, 1863, 1881. A new and enlarged edition in 10 vols., ed. S. E. Dwight, vol. i. being a Memoir, appeared at New York, 1829. An edition was published at London in 8 vols., 1837, to which 2 supplementary vols. were added, Edinburgh, 1847. Later British editions are: London, 1840, with Dwight's Memoir and an Essay by H. Rogers; London, 1865 (Bohn), in 2 vols. Additional writings of Edwards have been published: *Charity and Its Fruits*, ed. Tryon Edwards, London, 1852 (subsequently re-issued under the title *Christian Love in the Heart and Life*[6], Philadelphia, 1875); *Selections from the Unpublished Writings of Jonathan Edwards*, edited with an introduction by A. B. Grosart, Edinburgh, 1865; *Observations concerning the Scripture Economy of the Trinity*, edited with an introduction by Egbert C. Smyth, New York, 1880; *An Unpublished Essay of Edwards on the Trinity*, edited with an introduction by George P. Fisher, New York, 1904; *Selected Sermons of Jonathan Edwards*, edited with an introduction and notes by H. N. Gardiner, New York and London, 1904 (contains one new sermon).

(*B*) For life, etc., see S. Hopkins, *Life and Character of the late Rev. Mr. Jonathan Edwards*, Boston, 1765, Northampton, 1804; S. E. Dwight, *Memoir*, being vol. i. of his edition of the Works (see above), New York, 1829; S. Miller, *Life of Jonathan Edwards*, Boston, 1837 and 1848 (vol. viii. of first series of Jared Sparks' *The Library of American Biography*); A. V. G. Allen, *Jonathan Edwards*, Boston, 1889; Williston Walker, *Ten New England Leaders*, Boston and New York, 1901, pp. 215–263, also *Hist. of the Congregational Churches in the U.S.*, New York, 1894, chs. vii. viii. ix.; [Joseph Tracey] *The Great Awakening*, etc., Boston, 1842.

(*C*) The most comprehensive survey of Edwards' theological teaching is given by Jan Ridderbos, *De Theologie van Jonathan Edwards*, The Hague, 1907; see also G. P. Fisher, *Discussions in History and Theology*, New York, 1880, pp. 227–252; Noah Porter, 'Edwards' Peculiarity as a Theologian,' in *The New Englander*, xviii. 737 f.; H. N. BENJAMIN B. WARFIELD.

EGO (a term [Lat. 1st personal pronoun='I'] for 'self,' used in various languages).—The conception of the Ego is very perplexing. It is difficult to describe its content, and to discover a fundamental principle which will serve to distinguish it satisfactorily from the non-Ego. If, starting from its etymology, we say an Ego is a self-conscious being, one who knows himself and is able to say 'I,' and proceed to ask what the Ego so defined is, we get different answers. Descartes called it a

[1] Cf. F. H. Foster, *Genetic History*, etc., Chicago, 1907, 'Conclusion,' pp. 543–553, where the fact is fully recognized, though the reasons assigned for it are questionable.

'thinking thing,' including, under the term 'thinking,' understanding, affirming, denying, willing, refusing, imagining, perceiving (*Meditation II.*). Thinking is a quality; qualities inhere in substances; for it cannot be that a quality is a quality of nothing. By substance is meant a 'thing existing in such a way as to stand in need of nothing else in order to its existence' (*Principles*, § 51). There is only one absolutely independent being, namely, God. A finite mind, however, is dependent on nothing but the 'concurrence of God.' It is not dependent on body; for, Descartes contends, it can be thought to exist when the existence of body is doubted; and it does not need a place in order that it may exist. Its existence is involved in thinking—'as long as I think, I am' (*Med. II.*). Yet Descartes has to recognize that bodily and mental substances are so intimately related in man that some of the experiences of the Ego—pain, hunger, thirst, etc., which he calls confused modes of thinking—arise from this union. He tends to deny mind to animals.

An examination of the content of self-consciousness, however, shows that the line drawn between the self and the not-self is not always drawn by Egos themselves in the way Descartes draws it. At times some of our inner states are excluded from our conception of ourselves. We identify ourselves, *e.g.*, with what we want to be, with the ideals we have taken as our own. When we forget these and act on other motives, we say that we have forgotten *ourselves*. At other times the body and even objects outside the body are included in the conception of self.

'Between what a man calls *me* and what he simply calls mine the line is difficult to draw. We feel and act about certain things that are ours very much as we feel and act about ourselves. Our fame, our children, the work of our hands, may be as dear to us as our bodies are, and arouse the same feelings and the same acts of reprisal if attacked. And our bodies themselves, are they simply ours, or are they *us*? Certainly men have been known to disown their very bodies, and to regard them as mere vestures, or even as prisons of clay from which they should some day be glad to escape.

We see, then, that we are dealing with a fluctuating material, the same object being sometimes treated as a part of me, at other times as simply mine, and then again as if I had nothing to do with it at all. *In its widest possible sense, however, a man's* ME *is the sum-total of all that he* CAN *call his*, not only his body and his psychic powers, but his clothes, and his house, his wife and children, his ancestors and friends, his reputation and works, his lands and horses, and yacht and bank account. All these things give him the same emotions. If they wax and prosper, he feels triumphant; if they dwindle and die away, he feels cast down—not necessarily in the same degree for each thing, but in much the same way for all' (W. James, *Text-book of Psychology*, 1892, ch. xii. p. 176 f.).

Philosophical reflexion seems to confirm the conclusion drawn from a psychological analysis of the content of self-consciousness. The self cannot be separated from what it knows, feels, and reacts upon, without being destroyed. If it knew nothing of the world, it would apparently be empty of content. It lives and grows by the dual process of appropriating all things related to it, and at once distinguishing itself from them. Its nature, as MacTaggart observes, is very paradoxical.

'What does it include?' he asks. 'Everything of which it is conscious. What does it exclude? Equally—everything of which it is conscious. What can it say is not inside it? Nothing. What can it say is not outside it? A single abstraction. And any attempt to remove the paradox destroys the self. For the two sides are inevitably connected. If we try to make it a distinct individual by separating it from all other things, it loses all content of which it can be conscious, and so loses the very individuality which we started by trying to preserve. If, on the other hand, we try to save its content by emphasising the inclusion at the expense of the exclusion, then the consciousness vanishes, and, since the self has no contents but the objects of which it is conscious, the contents vanish also' (*Studies in Hegelian Cosmology*, 1901, § 27).

Descartes' assertion that the Ego, as we know it now, is a thinking substance independent of its own and other bodies cannot therefore be justified by an appeal to immediate consciousness, psychological analysis, or philosophical reflexion. That after death other objects take the place of bodies may, of course, be quite possible. But dependent relation to objects seems an inexpugnable element of our conception of it. Whether bodies have themselves substantial existence is a question which will concern us again. At present we have to consider the question whether the Ego can be intelligibly called a substance. Substance is represented by Descartes as that in which qualities inhere. It is, in Locke's words, their 'unknown support.' We do not know, Locke says, what a substance is. It cannot be perceived by the outer or inner sense. There is no idea of it in the mind, and so we can give no intelligible account of its relation to the qualities which it is supposed to support. Hence, to say that qualities inhere in substances is, according to Locke, to say nothing more than that they exist together.[1] Why, then, assume the existence of substances? Berkeley, following after Locke, asked this question regarding material substance, and denied its existence. Hume asked it of mental substance, and denied the existence of the Ego.

'I have no immediate intuition [of matter],' said Berkeley; 'neither can I immediately from my sensations, ideas, notions, actions, or passions infer an unthinking, unperceiving, inactive Substance—either by probable deduction, or necessary consequence.' The physical world is nothing but a floating system of ideas (*Third Dialogue between Hylas and Philonous*).

'For my part,' said Hume, 'when I enter most intimately into what I call *myself*, I always stumble on some particular perception or other, of heat or cold, light or shade, love or hatred, pain or pleasure. I never can catch *myself* at any time without a perception, and never can observe anything but the perception.' A mind is 'nothing but a bundle or collection of different perceptions, which succeed each other with an inconceivable rapidity, and are in a perpetual flux and movement' (*Human Nature*, bk. i. pt. iv. sec. 6).

'The final result of Hume's reasoning,' says Huxley, 'comes to this: As we use the name of body for the sum of the phenomena which make up our corporeal existence, so we employ the name of soul for the sum of the phenomena which constitute our mental existence; and we have no more reason, in the latter case, than in the former, to suppose that there is anything beyond the phenomena which answers to the name. In the case of the soul, as in that of the body, the idea of substance is a mere fiction of the imagination. This conclusion is nothing but a rigorous application of Berkeley's reasoning concerning matter and mind, and it is fully adopted by Kant' (*Hume*, 1879, p. 171 f.).

The last quotation represents Huxley's own opinion also. The individual mind is held to be a series of mental phenomena parallel with the series of material phenomena which compose the corresponding individual body. The series do not interact. In place of Descartes' dualism of substances we have a dualism of material and mental phenomena. (For an adverse criticism of this theory, see J. Ward, *Naturalism and Agnosticism*[3], 1903, vol. ii. pt. iii.; and McDougall, *Body and Mind*, 1911, ch. xii.)

Reflexion on Descartes' conception of substance led Spinoza also to deny the substantial existence of the Ego. His method was different from that of the English Empiricists. Emphasizing the idea that substance is conceived through itself and exists in itself, he concluded that there is only one Substance—God. Minds and bodies are but modes of its two attributes—thought and extension—respectively (*Ethics*, ii. prop. 10).

The substantial nature of the Ego has been maintained by other thinkers holding more adequate notions of substance than that held by Descartes. The universe, according to Leibniz, consists entirely of indivisible, mutually exclusive substances, or 'monads,' as he calls them. The content of these monads consists of their perception of the universe. They differ according to their point of view and the clearness of their perception. The rank of a monad in the scale of being depends on the clearness of its perception, on the degree of adequacy with which it mirrors or reflects the universe. What appears to us as inert matter is an

[1] *Essay concerning Human Understanding*, bk. ii. ch. xxiii. § 102.

aggregate of monads whose perceptions are faint and obscure. The bodies of men and animals are orderly aggregates of monads belonging to various grades of being, dominated by one monad—the self or soul. Extended bodies have no existence as such. Their extension is but an appearance to conscious beings. These do not, therefore, interact with matter; neither do they interact with one another. They develop from within. The order of the world is due to the pre-established harmony in which they were created by the supreme monad, God (Leibniz, *Monadology*). In G. H. Howison (cf. his *Limits of Evolution*, N.Y., 1905) we have a modern disciple of Leibniz. For Lotze also the universe consists of Egos. They are not mutually exclusive, as with Leibniz. They are related to one another through inclusion in the one absolute Person, God. God is the only absolute Substance, but finite Egos have relative independence. They are not mere modes of the being of another, or of others, as material things are. The latter do not exist in themselves, because they do not exist *for* themselves. Only beings that exist *for* themselves have self-existence. What is essential for self-existence is feeling. Thought is not essential, although it is necessary in order to develop the full meaning of selfhood, to enable an Ego to know itself and to say 'I.' But whatever has a feeling of self, the worm, *e.g.*, writhing in pain, has the fundamental characteristic on which substantial or self existence depends. For it 'undoubtedly distinguishes its own suffering from the rest of the world, though it can understand neither its own Ego nor the nature of the external world' (*Microcosmus*, Eng. tr., 1885, vol. i. bk. ii. ch. v. § 3). J. Ward develops a theory along lines suggested by Leibniz and Lotze (cf. his *Realm of Ends*, Cambridge, 1911, *passim*).

We have so far discussed the term 'Ego' as applied to the complete conscious individual, or to what psychologists call the 'total self.' But it has another application which is important. Since Kant wrote, many have recognized within the Ego so conceived a duality, variously described as a duality of subject and object, of subject-consciousness and object-consciousness, of the 'I' and the 'Me,' of the pure Ego and the empirical Ego—not a dualism of essentially different substances, be it understood, but a duality of such a nature as to form together one individual conscious being.

Hume's 'bundle of perceptions,' Huxley's 'sum of phenomena,' are capable of being analyzed, described, and related to one another. They are constituents of the Ego as object-consciousness, the Me, the empirical Ego; not, however, the only constituents of the object Ego. As already noted, a line cannot be drawn between what is included in the Ego and what is not. The body is often included by a man in his consciousness of himself, and even objects outside the body. A mystic may feel at one with the universe, or consciously identify himself with God.[1]

But distinct from the self as known and possessed is the self or subject which knows and possesses it. Knowing implies two terms in relation. An idea or perception which is perceived by no one is a contradiction. The centrality and organization of experience is unintelligible apart from the synthetic act of an interested subject (Ward).[2] Simple ideas are not combined into complex ideas by mere association; a combining is necessary (James).[1] A 'bundle of perceptions' or a 'sum of phenomena' cannot know itself as a bundle or sum respectively. How is that which is, *ex hypothesi*, a series to know itself as a series? (J. S. Mill).[2] Experience is not a mere series of perceptions. It is a unity. 'That the different kinds of empirical consciousness must be connected in one self-consciousness is the very first and synthetical foundation of all our thinking,' whether of ourselves as individuals or of the world as systematically connected according to law.[3] And the unity of self-consciousness depends on the synthetic activity of the Ego, the 'I think' which accompanies each of its synthetic acts.[4]

In Kant's philosophy three Egos may be distinguished—the pure Ego (the subject of knowledge), the empirical Ego (the succession of our conscious states, Hume's flux of perception), and the noumenal Ego (the subject of moral action). The first is needed to account for the objective unity and necessity of knowledge; the second is a verifiable fact; the third is postulated to make morality possible. The pure Ego is a logical principle, and the source of all theoretical principles; the empirical Ego is a part of the order of Nature, and all its states are determined according to the scientific law of causation which, with other theoretical principles, has its source in the pure Ego. The noumenal Ego does not belong to the world of sense, and is not subject to the order of Nature; it is free, and must be so if morality is to be possible. For morality implies the categorical imperative 'Thou oughtest,' and 'ought' implies 'can.' The categorical imperative is a command of the Practical Reason, or of reason in its practical application. Hence the freedom of the Ego is a postulate of the Practical Reason. And, since freedom is impossible in a world determined throughout according to the law of causation, as the world of sense-experience is thought by Kant to be, the ethical Ego belongs to the noumenal or intelligible world—a world which transcends the phenomenal.[5] The ethical Ego is the same as the logical Ego, but its transcendent existence can be asserted only by the Practical Reason. For the theoretical reason the Ego is an utterly empty idea. Nothing more can be said about it than that it is self-consciousness in general, the bare form of consciousness—the 'I think' which accompanies all knowledge of objects, and is the possibility of the knowledge of objects, but which has itself no content to distinguish it, and is not separable from the consciousness of objects.[6]

One obvious objection to Kant's conception of the Ego in its logical and ethical form is that it is too abstract to account for the concrete unity and organization of experience. Sentiency is excluded from it. Perceptions and sense-impulses must be assumed as somehow given. Kant made this assumption at first. He saw later that synthesis was implied in simple apprehension. But the conception of the Ego was not modified by him. He did much to overcome the opposition between sensibility and reason which had been developed by previous thinkers. One of his main purposes was to show that both were necessary for knowledge. But the dualism persists in his philosophy as two elements of opposite nature that had to be brought together. Later thinkers have carried out more thoroughly what Kant attempted. J. Ward maintains that the subject of sense-ex-

[1] Cf. Deussen, *The Philosophy of the Upanishads*, Eng. tr., Edin. 1906, p. 39: Brahman, the 'eternal infinite divine power is identical with the *âtman*, with that which, after stripping off everything external, we discover in ourselves as our real most essential being, our individual self, the soul. This identity of the Brahman and the *âtman* . . . is the fundamental thought of the entire doctrine of the Upanishads. It is briefly expressed by the "great saying": "thou art thou" and "I am Brahman."' To know self as Brahman is to achieve salvation.

[6] *Critique of Pure Reason*, 278 ff.

perience is one and continuous with the subject of knowledge. So also the subject of simple impulsive actions is one and continuous with that of purposive actions.

Because experience at all levels depends on active as well as on passive factors, and because the conception of an object without a subject is a contradiction, Ward believes that the duality of subject and object in unity is a fundamental and underivative characteristic of experience, present alike in cognition, conation, and feeling. It is true even of the experience of God—the Supreme Person.[1] Other thinkers who recognize that experience shows this duality deny its fundamental character. Bradley, *e.g.*, says that the distinction is derivative. There is no ground for asserting that it is true of experience at all levels—the highest and the lowest. The consciousness of activity is not primary. 'The perception of activity comes from the expansion of the self against the not-self.' There is no consciousness of activity as distinguished from mere change apart from the idea of change. Moreover, subject and object have contents and are actual psychical groups. The contents of subject and object are interchangeable. Ideally, every conation and the most inner feelings may be made objects; we can, *e.g.*, think of changing them (*Appearance and Reality*[2], 1897, chs. ix. and x.; cf. also A. E. Taylor, *Elements of Metaphysics*, 1903, bk. iv. ch. iii.).

Ward replies that Bradley confounds reality with the perception of it, experience with a reflective knowledge of it. The relation subject-object must exist before it can be perceived. To show how the idea of activity arose is not to show that the consciousness of activity itself is derivative. The so-called 'expansion of the self' is the activity of the subject, and is presupposed in the perception of it. The relation subject-object cannot be reduced to relation between presentations.

The strongest objection to Ward's theory is that based on the ability of the mind to reflect on its own conations and feelings, thus apparently transferring them to the object Ego. But a subject, it may be urged, is implied even in reflexion. True. Is it, however, the same object? May there not be several Egos? W. James maintains that this is the case.

'Consciousness,' he says, 'may be represented as a stream; things which are known together are known in single pulses of that stream. The pulse of the present moment is the real subject. It is not an enduring being; each subject lasts but for a moment; its place is immediately taken by another which exercises its function, that is, to act as the medium of unity. The subject for the time being knows and adopts its predecessor, and by so doing appropriates what its predecessor adopted.' 'It is this trick which the nascent thought has of immediately taking up the expiring thought and adopting it which leads to the appropriation of most of the remoter constituents of the self. Who owns the last self owns the self before the last, for what possesses the possessor possesses the possessed' (*Text-book of Psychology*, 205). 'If there were no passing states of consciousness, then indeed we might suppose an abiding principle absolutely one with itself to be the ceaseless thinker in each one of us. But, if states of consciousness be accorded as realities, no such "substantial" identity of the thinker need be supposed. Yesterday's and to-day's states of consciousness have no substantial identity. For when one is here the other is irrevocably dead and gone. But they have a functional identity, for both know the same objects, and so far as the by-gone me is one of those objects they react upon it in an identical way, greeting it and calling it *mine*, and opposing it to all the other things they know. This functional identity seems really the only sort of identity in the thinker which the facts require us to suppose. Successive thinkers numerically distinct, but all aware of the same past in the same way, form an adequate vehicle for all the experience of personal unity and sameness which we actually have. And just such a stream of successive thinkers is the stream of mental states . . .' (*ib.* 202 f.).

This theory is not open to the objection made to that of Ward. But another difficulty presents itself when we consider the relation between the Egos. Assuming that the present pulse of the stream is able to exercise all the functions attributed to the Ego at any moment, the question arises, How are we to account for its special characteristics, and for the selection made out of the total complex presented at any moment, and thus account for the concrete unity or unities then manifested? The present Ego, according to the account given, is not derived from its predecessors; it does not 'inherit' the past, but possesses it by an act of appropriation. An Ego is not continued in its successor, for it has no substantial identity with it. Each Ego is described as an isolated individual, which appears for a moment as a medium of unity, and then vanishes, leaving its complex object and conative and reactive accompaniments—why have these not vanished?—to be appropriated by another, and this in turn gives place to still another which appropriates it.

Does this theory enable us to understand the relative permanence and unity of experience? Perhaps we should not take James's words too literally when he says that there is no substantial identity between yesterday's and to-day's states of consciousness. The words 'substantial' and 'identical' are ambiguous. James is here refuting the theory that the Ego is a substance which exists independently of what it knows, and remains one and the same over against the flux of experience. But his statements do not simply deny such a subject. They affirm also that the successive subjects are different beings, and that there is no continuity of existence between them; when one is here the other is irrevocably dead and gone. That the past conditions the present he would not deny. Yet how can this be if there is no identity between past and present states? And how can a past state which is irrevocably dead and gone be known and welcomed by the subject as its own?

James seems to make too much of his metaphor. A stream is not adequate to represent conscious life. It emphasizes its continuity, and over-emphasizes its transitoriness. Our experience contains relatively permanent elements. The past endures in the present. A state of consciousness is not a momentary existence merely. As a passing phase, of course, it endures only for a moment. But its whole being is not summed up in the term 'passing phase.' Experience is process; so is all else. 'All things flow.' No state of the existence of a tree or stone ever, as such, recurs. But the stone or the tree does not cease to exist, and every mode it has assumed shows itself in a more or less permanent modification of being. A subject which knows a tree as an enduring thing must itself be a relatively permanent being.

But we are not obliged to attribute absolute unchanging permanence to the subject, and define it as a simple indivisible principle or entity. It must have at least as much concreteness and variety of character and as much complexity of structure, so to speak, as its objects. Moreover, the character of the Ego is a changing one. The fabric or material of experience is undergoing frequent transformation, and we cannot but suppose that the Ego is similarly transformed. Indeed, it is obvious that our capacity for knowing, feeling, and doing is being continually modified. What appeals to us and compels attention, what we choose and reject, our conception of the world and our estimate of the things in it, change from day to day. The unity and identity of the subject cannot, therefore, exclude change. Why should a simple and indivisible element be asserted to exist in us? One motive is the desire to give to the Ego characteristics quite opposite to those

[1] *Naturalism and Agnosticism*, Lect. xv., *The Realm of Ends*, 191 ff.

possessed by body. MacTaggart argues, on metaphysical grounds, that such an element gives to finite experience its peculiar centrality or unity of centre.[1] But, if this simple element exists, it cannot be the subject which knows, feels, and does.

Once we recognize that the subject is not simple and indivisible and that it can change, it is no insuperable objection to Ward's theory to say that the subject may reflect on its activities and may desire to change them, thus transferring them for the time to the object consciousness. For subject and object are not two substances—entities different in kind. They enter into the unity of one experience and are inseparable.

'What a subject without objects, or what objects without a subject, would be, is indeed, as we are often told, unknowable; for in truth the knowledge of either apart is a contradiction' (Ward, *Naturalism and Agnosticism*, ii. 112). 'Let what may be outside experience, if there can be anything, and the supposition is not nonsense, at least there cannot be bare subjects lying in wait for objects, nor objects that by definition never are positively objects' (*ib.* 128 f.).

LITERATURE.—In addition to the works already cited, reference may be made to monographs and commentaries on the works of the authors mentioned, and also to the Histories of Philosophy under their names. For a psychological account of the processes by which the consciousness of self originates and develops, see W. K. Clifford, *Seeing and Thinking*[2], London, 1880; J. Royce, *Studies of Good and Evil*, New York, 1898; G. F. Stout, *Manual of Psychology*, London, 1898–99; J. M. Baldwin, *Social and Ethical Interpretation*[4], New York, 1907; W. McDougall, *An Introduction to the Study of Social Psychology*, London, 1909.

DAVID PHILLIPS.

[1] *Studies in Hegelian Cosmology*, § 85 ff.

EGOISM.—A distinction may be drawn between theoretical and practical egoism. (*a*) Theoretical egoism, usually called Subjective Idealism or Solipsism (*q.v.*), is the theory which maintains that his own individual Ego is the only being that a man can logically assert to exist. For he can know only what is in his own mind; and, since his knowledge does not extend beyond the states of his own being, he has no valid ground for asserting the existence of other beings. Of course, it is absurd for any one to think that he is the only being in existence; and, in order to escape the absurdity and to make it intelligible how we know beings other than ourselves, we must assume, it is maintained, that our experience is not of our own states merely.

'The escape is simple once we recognize that experience from the outset involves both subject and object, both self and other; and that the differentiation of both factors proceeds *pari passu*' (J. Ward, *The Realm of Ends*, 1911, p. 129; cf. also F. H. Bradley, *Appearance and Reality*[2], 1897, ch. xxi.).

(*b*) Practical Egoism, according to Kant (*Anthropologie*, § 2), has three forms—logical, æsthetic, and moral respectively. The *logical* egoist considers it unnecessary to bring his own judgment to the test of another's understanding. Protagoras, for example, is said to have taught that 'man is the measure of all things, of the existence of things that are, and of the non-existence of things that are not'; that 'things are to you such as they appear to you, and are to me such as they appear to me, for you and I are men' (Plato, *Theætetus*, 152 A, Jowett's tr.). The *æsthetic* egoist is fully satisfied with his own taste (cf. the saying, 'De gustibus non est disputandum'). The *moral* egoist makes himself the end of all his activities. Nothing is valuable unless it benefits him. Its moral application is what we have usually in mind when we speak of egoism. In ethical works it is contrasted with altruism (*q.v.*), concern for the good of others.

Egoism, as an ethical theory, maintains that the standard of conduct for the individual is his own good on the whole. It should be distinguished from the directly egoistic or egotistic attitude of mind to life = mere selfishness. A man is usually called egoistic or egotistic in so far as his inclinations and purposes are immediately and exclusively directed towards himself (cf. Meredith's *Egoist*). Such egoism may be independent of any theory as to what is right or reasonable. It may be exemplified by a child or by a thoughtless man; and may take the form of choosing what is most agreeable or least painful at the time of action, without any thought of life as a whole. On the other hand, it may be the result of cool deliberation and concentrated purpose. Thoroughgoing egoism of this kind is seldom or never met with. 'Selfishness' is not, indeed, a logical consequence of ethical egoism. It is not inconsistent with the latter to cultivate a 'disinterested' regard for others and for their welfare. For too great and direct regard for self-interest may lead to a narrowing of the scope of life which is incompatible with the greatest individual well-being. The hedonistic egoist who seeks his own happiness too keenly is in danger of defeating his own end.[1] A man concerned to save his soul may attain his end most effectively by trying to save others, and by forgetting that he has a soul to save: losing interest in himself, he finds himself. By dying he lives. Hence Ethical Egoism, or Egoism as a theory of the good or of what is right and reasonable, does not necessarily imply 'selfishness.'

Ethical egoists are generally dogmatic; *i.e.* they do not seek to justify the individual's right to make his own good the standard of life, or, in other words, to show that such a view is a reasonable one for him to take. Such justification is not, perhaps, thought to be necessary. The reasonableness of seeking our own good is taken for granted. A reason is supposed to be needed for considering the good of others when inclination does not induce, or necessity compel, a man to do so. Even Butler says

'that our ideas of happiness and misery are of all our ideas the nearest and most important to us . . . that, though virtue or moral rectitude does indeed consist in affection to and pursuit of what is right and good, as such; yet, when we sit down in a cool hour, we can neither justify to ourselves this or any other pursuit, till we are convinced that it will be for our happiness, or at least not contrary to it' (Sermon xi.).

That the egoist should seek his own good as one of his ends requires no justification. Every justification is secondary and derivative; whereas the appeal for his own good is to each one immediate, and it is intuitively evident that he should seek it. The appeal of the good of others is not so direct; nor is it so immediately evident that one should promote it except when others are bound to him by such intimate ties as make their welfare interesting to him in the same way as his own is. Consequently, when, from any cause, natural and social claims are weak or repudiated, egoistic theories of life tend to win recognition. The Cynics, *e.g.*, lived during the decline of the Greek city-State, and Hobbes (1588–1679) during the social disorganization attending the Revolution in England. Spinoza was ostracized for his theological views; Schopenhauer and Nietzsche were constitutionally Ishmaelites.

Egoism is based, explicitly or implicitly, on an 'atomistic' conception of society; every social whole is composed of individuals, the nature of each one of whom is to preserve his own life, to seek his own good, to satisfy his own desires; and good and evil are relative to the individual. There is nothing good or evil absolutely. Both presuppositions are explicit in Hobbes:

'The object of the voluntary acts of every man is "some good to himself"' (*Leviathan*, ch. xiv.). 'Whatsoever is the object of any man's appetite or desire, that is it which he for his part calleth "good"; and the object of his hate and aversion "evil"; and of his contempt "vile" and "inconsiderable." For these

[1] Cf. Sidgwick, *Methods of Ethics*, 1893, p. 49.

words of good, evil, and contemptible are ever used with relation to the person that useth them; there being nothing simply and absolutely so; nor any common rule of good and evil, to be taken from the nature of the objects themselves; but from the person of the man . . .' (*ib.* ch. vi.). 'The "right of nature," which writers commonly call *jus naturale*, is the liberty each man hath, to use his own power, as he will himself, for the preservation of his own nature; that is to say, of his own life; and consequently, of doing anything which in his own judgment and reason he shall conceive to be the aptest means thereunto.' 'Whensoever a man transferreth his right, or renounceth it, it is either in consideration of some right reciprocally transferred to himself or for some other good he hopeth for thereby' (*ib.* ch. xiv.).

Social life was impossible while men exercised this liberty. Consequently they divested themselves of the right of doing what they liked in consideration of the fact that others did the same. This 'social contract' is the basis of community life. Through it men passed from the natural state, in which every man was at war with every other man, to a state of peace. The obligation to obey laws rests on this contract and on the authority and power which the Government possesses in virtue of it to enforce them. Obedience to Divine ordinances (whether learned from Nature or Revelation) likewise depends on a recognition of the Divine authority and power to enforce them by pains and penalties.

The relativity of good and evil to desire and aversion respectively is taught by Bentham and his followers. They maintain, moreover, that each one desires pleasure only and freedom from pain.[1] Thus J. S. Mill writes:

'I believe that these sources of evidence [practised self-consciousness and self-observation, assisted by observation of others], impartially consulted, will declare that desiring a thing and finding it pleasant, aversion to it and thinking of it as painful, are phenomena entirely inseparable, or rather two parts of the same phenomenon; in strictness of language, two different modes of naming the same psychological fact: that to think of an object as desirable (unless for the sake of its consequences), and to think of it as pleasant, are one and the same thing; and that to desire anything, except in proportion as the idea of it is pleasant, is a physical and metaphysical impossibility' (*Utilitarianism*, ed. 1901, ch. iv. p. 58).

Nietzsche's account of the good aimed at by the individual differs from the accounts both of Hobbes and of the Hedonists:

'Psychologists should bethink themselves before putting down the instinct of self-preservation as the cardinal instinct of an organic being. A living thing seeks above all to *discharge* its strength—life itself is the *Will to Power*; self-preservation is only one of the indirect and most frequent *results* thereof' (*Beyond Good and Evil*, Eng. tr., Edinburgh, 1907, § 13).

On comparing the representative opinions given above, it becomes evident that Egoism is not necessarily associated with any particular theory of the nature of the good; and that, moreover, in any of its forms it cannot be established by a psychological analysis of the nature of desire, or by an examination of the ends that men actually seek. Modern psychological investigations have, indeed, made it increasingly evident that the human consciousness is not under the control of any one principle except at a highly reflective stage of intellectual life. Men have various impulses directed to different objects, and they are not reduced to the unity of a system, or subordinated as means to one end. And, even when such unity exists, the governing principle is regulative only in a general way. It does not enter as a constituent element into all purposive actions and directly subordinate them as means to itself. Unity of aim is an ideal rather than an actual principle—a fact to which the conception 'ought' bears witness. It would be a more correct account of what actually happens to say that psychological egoism, whenever it exists, is a consequence of a more or less conscious ethical egoism, than to say that ethical egoism is based on psychological egoism. For men aim consistently at their own good, to the extent that they have definite conceptions of themselves and of the nature of the good which will satisfy them. Ethics is the systematic study of this good; and its teaching will acquire scientific exactness only when the nature of the individual man in relation to his fellows and the rest of the universe is clearly understood.

If the egoist's attitude is dogmatic, his ethics is fundamentally merely a statement of his own convictions, and he cannot be reasoned with. But, when he tries to justify his conviction, he may be reasoned with, and, possibly, convinced of error. The egoist is trying to give a reasonable basis to his theory when he rests it on a psychological analysis of the nature of desire. His attempt is, as we have seen, not successful. He might yet maintain that he has an immediate and ultimate intuition that he should seek his own good whether he actually does so or not. It may be safely said, in reply to this, that other men would not recognize the validity of the egoist's intuition, especially if his good is to be obtained at their expense. Further, he ought consistently to admit that every other individual's good is an ultimate end for himself, and that it should be recognized as such by all. And, if this be admitted, does it not follow that the good of all should be respected by each, and that, therefore, a limit is set to individual self-seeking? The egoist's contention would then be qualified into the statement that he should seek his own good, but in such a way as not to interfere with similar self-seeking on the part of others.

Further, it may be urged that the atomistic conception of human life is false. Human societies are not mere aggregates. A man is not self-contained; no sharp line of division can be drawn between his life and interests and those of others (cf. art. EGO). He is a member of an organic whole. The complete good is the good of the whole of which he is a member. The full realization of his interests is at the same time the full realization of the interests of others. Hence his good is no purely private and personal matter. It is true that sometimes there is an appearance of conflict. Whether the conflict is necessary is a large question which cannot be discussed here. In an ideal state, as H. Spencer (*Data of Ethics*[2], 1879, ch. xi.) points out, there would be no conflict. And even now men exist who seem to find that they more nearly realize their true good by denying what appear to be their private interests and acting for the sake of others. They so identify themselves with their State or Church that they are content to die in order that the institution may live and flourish. The surrender of life is not felt to be self-sacrifice but self-realization, and it is often made with no thought of recompense in a future life.

LITERATURE.—Most modern writers on Ethics discuss Egoism. In addition to the works already cited the reader may consult: F. H. Bradley, *Ethical Studies*, London, 1876; Felix le Dantec, *L'Egoïsme base de toute société*, Paris, 1912; G. E. Moore, *Principia Ethica*, Cambridge, 1903; F. Paulsen, *A System of Ethics*, London, 1899; H. Rashdall, *The Theory of Good and Evil*, Oxford, 1907; Max Stirner, *Der Einzige und sein Eigenthum*, Leipzig, 1892; A. E. Taylor, *The Problem of Conduct*, London, 1901; artt. CYNICS, NIETZSCHE, SCHOPENHAUER.

DAVID PHILLIPS.

EGOISM (Buddhist).—The inquiry whether the motives, sources, or springs of action are or are not exclusively egoistic, or self-interested, whether or not 'altruism' may rank as a twin in such springs, or whether there are yet other sources, is so characteristic of modern ethics that it is not strange if no corresponding discussion be found in early Buddhism, any more than in other early philosophical and religious traditions. Such discussions are the corollaries of a synthesis which belongs

[1] Hobbes also says that desire is always accompanied by some pleasure more or less; pleasure is the 'appearance or sense of good,' and 'displeasure' the 'appearance or sense of evil' (*Leviathan*, ch. vi.). Spinoza's view is similar. But both writers lay stress on self-preservation as the fundamental impulse.

more essentially to the past two centuries than to any others we can name—that of individuals and of peoples as *solidaires* one of another. They have sprung from a time, when, in George Eliot's words, 'ideas were making fresh armies of themselves, and the universal kinship was declaring itself fiercely; . . . when the soul of man was waking to pulses which had for centuries been beating in him unheard, until their full sun made a new life of terror or of joy' (*Daniel Deronda*).

Herein may possibly lie a sounder basis of historical division in ethical theory than, with Martineau, to find in a psychological basis the true dichotomizing principle of the ethical systems of pre-Christian and post-Christian thought. His generalization is sound only as long as we turn our back on not only one part of pre-Christian ethical thought, but on by far the most considerable part. In his strange statement, 'It is curious that psychological ethics are *altogether peculiar to Christendom*' (italics his), the whole world of Oriental thought is ignored.[1] To take India only: in Vedāntist ethics, the ethical ideal, growing up with the evolution of thought, is emphatically subjective. The creative and presiding power of the universe became identified with the psychical principle in man; salvation lay in the personal recognition of this identity—'the finding self to be Ātman' (Deussen); and the ethical value of actions was reckoned less according to an objective scale of utility than according to a subjective calculus of their significance, in cost and result, to the doer.[2]

Buddhist ethic is no less strongly and consciously psychological (see DESIRE [Buddhist]). Its views on the self were different from those of Vedāntism. It denied any immanence, in the wholly and constantly changing living organism, physical and mental, of an eternal, unchanging, impassive (*i.e.* super-passive) principle. The 'I' (*ego, aham*) of agency was a convenient abstraction of thought, a convention of popular speech, as when we say '*it* rains.' As a metaphysical, rather than an ethical, subject, but one of cardinal importance in Buddhist doctrine, the Ego is dealt with under SELF, SOUL. Under the present title we are concerned with the attitude of its ethical doctrine towards that which, in theory or practice, is called 'egoism.' All the materials, in fact, for our modern ethical *discussion* of egoism and altruism are present in Buddhism; and, since the sources of those materials are still so imperfectly accessible, and so inadequately exploited, it is by no means impossible that we may yet discover, or come upon, such discussion. We may nevertheless affirm this much: that it forms no such predominant feature as is the case in modern ethical works. It is as if the pulses of that full social consciousness to which we have referred above were beating latent and unheard. The struggle of early culture was for the individual to 'find himself,' even as it is to-day. The intervening struggle has been to find one's brother. In a brief provisional inquiry like the present, the best course suggesting itself is to indicate: (1) the presence in Buddhist scriptures of the materials aforesaid, or, let us say, of channels in ethical thought on the lines of the modern cleavage; (2) any modification in that thought due to the a-psychic or anti-animistic standpoint; (3) any evolution in Buddhism with respect to egoistic and altruistic theory.

1. We find in the Pāli Piṭakas a definite theory with respect to the 'springs of action.' These are termed *hetu* ('condition,' 'cause'), or *mūla* ('root'), or *nidāna* ('source'). They are six in number, three being 'roots' of good, three of bad action.[3]

[1] Martineau, *Types of Ethical Theory*, Oxford, 1885, i. 14.
[2] P. Deussen, *Allgem. Gesch. d. Philosophie*, i.[2] (Leipzig, 1907), p. 327 ff.
[3] *Aṅguttara Nikāya*, i. 134 f.; C. A. F. Rhys Davids, *Buddhist Psychological Ethics*, London, 1900, p. 274 ff.; S. Z. Aung, *Compend. of Philosophy*, London, 1910, p. 279 ff.

And, though bad and good actions are so termed in virtue of the painful or pleasurable results they entail respectively on the agent, yet they are shown actually to consist in immoral and moral actions respectively—that is to say, in actions considered as affecting others.

The three bad 'roots' are greed, hate, and want of intelligence; the other three are their opposites —detachment, love, and intelligence. In Pāli they read *lobha, dosa, moha*; *alobha, adosa, amoha*. A frequent synonym for the first is *rāga* ('lust,' 'passion,' understood very generally); for the third, *avijjā* ('ignorance'); for the fifth, *mettā* ('love,' 'charity,' 'amity'); for the sixth, *paññā* ('insight,' 'wisdom'). So radical and inclusive, as sources of all human faults and follies and consequent suffering, are the first three held to be, that the extinction of them, that is to say, letting action proceed solely from their three opposites, is one of the few positive definitions given of *nibbāna* (*nirvāṇa* [*q.v.*]).

No reduction is attempted of either triplet to any more ultimate ground of action. But the first-named of the six approximates closely to that manifestation of organic life, so significant in Buddhist ethics, called *taṇhā*, unregenerate desire, want, appetite, craving (see DESIRE [Buddhist]). *Taṇhā* is—by the great scholastic, Buddhaghoṣa (*q.v.*)—termed *mūla* also, but it is of the whole round of re-birth that it is called the root (*vaṭṭa-mūlabhūtā taṇhā*). It is itself rooted in, or the effect of, sensuous contact—'because of contact, sensation, because of sensation, craving.' The result of craving is grasping (*upādāna*)—a term which, in its double sense of the *act* just named, and the *fact* of requisite stuff or fuel, becomes a mental hieroglyphic or word-picture, to indicate how the *taṇhā*-prompted will and action serve to re-kindle once more, in a new 'becoming' or coming-to-be (*bhava*), the fires of life. This *taṇhā* is fairly approximate to egoism, considered as the instinct and impulse of self-preservation. But in that one form of it as *vibhavataṇhā*, described by the commentators as the lust of self-annihilation, its connotation is wider than that of the lust of life, and it is perhaps better to consider its meaning as wanting, lusting, or craving in general; the lust of life and the pleasures of life, earthly or celestial, being its predominant manifestation.

Now, if the hundred equivalent terms and metaphors describing *lobha* in the *Dhamma-saṅgaṇi*[1] be consulted, it will be seen that *lobha* and *taṇhā* are practically coincident in meaning. Still, the latter term is not used in describing the three roots or conditions of bad *kamma* or action, as is *lobha* or *rāga*. In parables drawn from plant-life, *taṇhā* functions not as root, but as the moisture which is, together with suitable soil, an essential *condition* of growth.[2] As related to the other two roots, *lobha* or *taṇhā* is itself a root or condition of inimical actions.

'Thus it is, Ānanda,' the Buddha is described as saying, 'that craving comes into being because of sensation, pursuit because of craving, gain because of pursuit, decision because of gain, desire and passion (*chhandarāga*) because of decision, tenacity because of desire and passion, possession because of tenacity, avarice because of possession, watch and ward because of avarice, and many a bad and wicked state of things arising from keeping watch and ward over possessions—blows and wounds, strife, contradiction and retort, quarrelling, slander and lies' (Rhys Davids, *Dialogues*, Oxford, 1899, ii. 55)—a passage that was a few centuries later paralleled by St. James's account of the relation between *taṇhā* and strife (Ja 4[1f.]).

But the root-principle of *dosa*, here shown as co-operating with that of *lobha*, is deeper seated than such hostile acts, and is the temperamental state or disposition of natural aversion, misanthropy, anti-social feeling, expressed in Buddhist psychology by *paṭigha*, resistance, opposition, aversion.[3]

[1] Tr. in C. A. F. Rhys Davids, *Bud. Psychol. Ethics*.
[2] *Saṃyutta Nikāya*, iii. 54; *Aṅg. Nik.* i. 223.
[3] S. Z. Aung, *op. cit.* 83.

As related to *moha*, *lobha*, or lusting after false goods and ends, is aided by the errant groping and dim vision, denoted by the former term. Thus the verses ascribed to Mahāpajāpatī (aunt and foster-mother of the Buddha) run:

'Oh! but 'tis long I've wandered down all time,
Not knowing how and what things really were,
And never finding what I needed sore.
But now mine eyes have seen th' Exalted One,
Now have I understood how ill doth come.
Craving, the cause, in me is dried up. . . .'
(*Therīgāthā*, 157 f.)[1]

2. Taking next the three causes of good or moral action, it is not possible to reduce them to simpler terms. They are at least as ultimate as conation, feeling, and cognition. *Alobha*, or detachment, is not so negative as it sounds. Essentially a state of mind and heart which does not grasp at, or cling to, it is the condition of all generous and disinterested action.[2] Such a state is likened to the free mobility of a dewdrop on the glaucous surface of a lotus-leaf. *Adosa* is sympathy, altruistic tenderness, care, and forbearance, the ἀγάπη of St. Paul. *Amoha* is the clarity of mind affirmed in the foregoing verses. Any one of these three, according to the *Paṭṭhāna*, may condition, involve, and lead to the other two—'Because of *alobha*, [arises] *adosa*, *amoha*,' etc. (*Duka-paṭṭhāna*, 1); but this is all.

We may trace self-interested and other-interested motives in acts conditioned by one or more of these six, but the six are not reducible to the one principle or the other. The good of self and that of others, as the end and result of action, are frequently met with in the Pitakas, but not as basic principles. For instance, the two form part of a fourfold cleavage in classifying human beings:

'There are four classes of persons in the world: those, namely, who live neither for their own good, nor for that of others; those who live for the good of others, not for their own good; those who live for their own good only; those who live for the good both of themselves and of others.'

Of these four, the first are compared to a charred and rotten log, good for nothing. Of the rest, the scale of value is noteworthy. The second, or altruist, is better than the first; the third, or egoist, is better than the altruist. The fourth, whom H. Sidgwick would have called a universalistic hedonist, is the best of all. When, however, we read further, the explanation of living for, or being concerned with, one's own and others' good shows that we are not dealing with egoists as we should understand them. The class who study their own good only are those persons who, while seeking to extirpate *rāga*, *dosa*, *moha* in themselves, do not habitually exhort others to do the same. Those who study others' good only are such as exhort others to extirpate the conditions of bad acts, while not themselves trying to do so. A similar distinction is drawn with respect to other moods of ethical endeavour, showing that the Dhamma contained no encouragement for unenlightened, worldly, or sensual self-interest.[3]

Another classification in self- and other-regard, occurring several times, is that of persons who inflict pain or hardship on self and their fellow-men. The same fourfold division is followed, but only the doubly negative class is commended. To these belong the self-conquerors, the saints, those who have won *nibbāna*.[4] Especially is the dual regard for self and others put forward as conduct conditioned by the sixth 'root,' *amoha* (or *paññā*). One who is mastered by greed, etc., devises what is injurious to himself, to others, to both. One who has not cleared away the 'five hindrances'—sensual desire, ill will, ignorance, etc.—has too weak insight to know his own good, others' good, or both; he who has cleared them away 'knows what is the good of both even as it really is.'[1] Generally speaking, the balance of ends is stated in such words as the verse, 'He seeketh both his own and others' good';[2] and in the Buddha's words: 'Contemplating either one's own good, or that of others, or both, is sufficient motive for setting about it strenuously.'[3] But, while the early Buddhist held that morality was the basis of all spiritual growth, and that benevolence was essential to the increase of one's own happiness, he did not, as Sidgwick says of Comte, 'seriously trouble himself to argue with egoism, or to weigh carefully the amount of happiness that might be generally attained by the satisfaction of egoistic propensities duly regulated' (*History of Ethics*, London, 1887, p. 257). Thus the Buddha is represented as giving ethical advice to questioners perplexed by rival doctrines, as follows:

'Let your verdict not be guided by tradition, precedent, custom, or dialectic. Test the doctrines, each for himself, whether they will conduce to happiness or the reverse. For you know well that the conduct conducive to happiness is the conduct that is conditioned by detachment, by love, by intelligence; and that the conduct conducive to sorrow is conditioned by greed, hate, and illusion. These impel men to take life, steal, live unchastely, tell lies, and stir others up to do the like. Those impel men to avoid doing these things.'[4]

In more detailed expositions of ethical disposition and conduct, the term nearest to our 'selfishness' is perhaps *macchariya*. The derivation is from a stem signifying madness or infatuation, but the dominant feature in the disposition so called seems to be meanness, the opposite of magnanimity, a grudging spirit. The content of the term is, however, expounded in part by other terms indicative of a selfish nature, of one that, spreading itself over all its own gettings, says 'Mine be it, not another's,' and of one that would hinder generosity in others. Another such ancillary term signifies a styptic or contracted state with regard to others' needs.[5]

Other aspects of egoism—self-interest, self-conceit, self-seeking, self-reference—are all represented in Buddhist doctrine. The term *sadattha*, one's own good, advantage, or interest, is used invariably, we believe, in the approved sense of 'enlightened' self-interest, including 'personal' salvation. Thus, in one of the usual descriptions of the elect or perfected, it is said:

'They who are arahants, who have destroyed the intoxicants (*āsavas*), who have lived the life, have done that which was to be done, have laid aside the burden, have won their own salvation (*anuppatta-sadattha*),' etc.[6]

Self-conceit, or *māna*, is thus described:

'Conceit at the thought "I am the better man,"—"I am as good [as they],"—"I am lowly"—all such fancies, overweening vanity, arrogance, pride, flag-flaunting, assumption, desire of the heart for self-advertisement:—this is called *māna*.'[7]

Now, *māna* was quite incompatible with *sadattha*. Self-conceit did not arise in the bosom of him who had won his highest gain. As with some phases of evangelical Christianity, so with Buddhism, it was customary for one attaining to the consciousness of salvation to testify to the same. Two disciples thus attaining are related to have waited on the Buddha, and repeated the formula quoted above:

'Lord, he who is arahant, who has . . . won salvation, who has utterly destroyed the fetters of becoming (re-birth), who is by perfect knowledge emancipated, to him it does not occur—"There is that is better than I, equal to me, inferior to me." And, they saluting and passing out of the congregation, the Buddha speaks: "Even so do men of true breed declare *aññā* (gnosis): they tell of their salvation (*attha*), but they do not bring in the ego (*attā*)."'[8]

Two other disciples, more notable than these,

testify in their talk to this contrast between saintship and self-reference. Ānanda comments on Sāriputta's beautiful expression and demeanour, and asks:

'What have you been occupied with to-day?' 'I have been dwelling apart, practising *jhāna*, brother, and there arose in me never the thought, "It is *I* who attain or *I* who emerge."' 'That is because all egoistic tendencies in the venerable Sāriputta have long been rooted out,' responds Ānanda.[1]

Not only do we find this unobtrusion of the ego commended, but we also read of the Buddha, when the self had been obtruded, diverting the point of the episode to altruistic regard. The story is told in the *Udāna*, a little manual of short episodes framing a metrical *logion*, how the king of Kosala and his wife discuss the possibly current Vedāntist text, that the self, the immanent deity, is dearer than all else.[2] It is possible that the metaphysic implied is more in line with that of the Christian text, 'What shall a man give in exchange for his soul?' (Mt 16[26]). Anyhow, the king mentions the conversation to the Buddha, who thereupon replies:

'The whole wide world we traverse with our thought,
Nor come on aught more dear to each than Self.
Since aye so dear the Self to other men,
Let the Self-lover harm no other man.'[3]

Etymologically speaking, ego-ism is more than paralleled in Indian linguistic. The oblique cases of the personal pronoun yield derivatives as well as the nominative. Thus we have *ahaṁ-kāra*, 'I-maker,' and also *mamaṅkāra*, 'mine-maker,' *mamattam*, 'mine-ness,' *a-mama*, 'having nought of "mine",' *i.e.* calling nothing, or wishing nothing to be, mine, etc. It is in connexion with these last terms that we find egoism as self-seeking dealt with, that is to say, with that larger self which has annexed and identified with itself the things a man possesses (W. James, *Princ. Psychology*[2], London, 1905, i. 292 ff.).

'Unlike, these two, and far apart they dwell:
The goodman keeping wife, and he who naught
Doth call his own (*amamo*), the saint. Unchecked
The layman hurteth other lives, the sage
In self-restraint protecteth all that lives.

He who doth never think "'Tis mine!";
Nor "Others have gotten something!"; thinketh thus:
There's naught for me! no "mineness" (*mamattam*) being found
In him, he hath no cause to suffer grief.'[4]

3. The first-named term of these derivatives, *ahaṁ-kāra*, undergoes an interesting evolution in Indian thought, but the ethical part it plays is slight. In the (older) Chhāndogya Upaniṣad, it is equivalent to the *Ātman*, or soul conceived as the immanent Divinity. Put into our metaphysical idiom, the one passage referring to it runs thus: 'Under the aspect of a *plenum*, the sum total of our perceptions is Self, is I-making.'[5] In several later Upaniṣads the term recurs, but in the psychological sense attached to it in the Sāṅkhyā philosophy. That is to say, it is a mental organ, or function, evolved from matter, and mediating between the material and the spiritual, or presenting external experience as so many 'intelligibles' to the soul or self.[6] Its occurrence in the Buddhist scriptures is confined practically to one phrase repeated in a few *suttas* of two Nikāyas. The meaning of the phrase is invariably that of the older Upaniṣad. It has two slightly varying forms: 'mind involved in I-making-mine-making conceit (*māna*),' and 'the bias of I-making-mine-making conceit.' The context is concerned with the problem of practical philosophy and religion: how, given the recipient organism and the world of external impressions, to attain spiritual freedom, and not to suffer the conceit of self-reference to arise. All assumption of a self, soul, or ego (*attā*, *aham*), as any part of the organism or its impressions, is to be extruded.[1]

It is possible that the function assigned to *ahaṁ-kāra* in animistic psychology was contemporary with the foregoing. But there is no allusion to it, as a psychological fallacy or otherwise, in Buddhist psychology.

But anti-egoistical teaching nowhere resolves itself into a positive doctrine of altruism. The solvents applied, in Buddhism, to the animistic creed of immortal, unchanging Divine soul within one body after another have been described as the destruction of individuality. The object, however, was not expressly the breaking down of spiritual barriers between one individuality and those of its fellow-men. We may, again, apply to the Buddha Sidgwick's description of Comte's views (*op. cit.* p. 257):

'A supreme unquestioning self-devotion, in which all personal calculations are suppressed, is an essential feature of his moral ideal.'

The self-devotion, however, is not altruistic, but to the highest good, for self and others, as he conceived it: the good that lay in the perfecting and the perfection (and thereby the completion) of life. And this was ultimately a task to be carried out by each man for himself.

'I only may achieve the task; herein
None other may accomplish aught for me.'[2]

On the other hand, the accomplishing lay essentially in a life based on other-regarding virtues, and, in all cases where temperament or infirmities did not forbid, in ministering to the spiritual and temporal needs of others. Combined, moreover, with moral conduct and service was the altruistic side of the contemplative disciplines, on which considerable emphasis is laid. This consisted in a systematic irradiation or mental suffusion (*pharaṇa*) of other beings, starting from one person or group and expanding the range, with *love*, then *pity* (or sympathy with sorrow and pain), then *sympathy* with the happy, finally *equanimity*, each emotion to be realized as practically elastic to an infinite degree. Lastly, the rejection by the Buddha of all validity in rank, caste, or birth, as standards of personal value, was conducive to fraternity in general. A discourse on the altruistic duties of the layman has this peroration:

'Liberality, courtesy, benevolence, unselfishness, under all circumstances and towards all—these qualities are to the world what the linchpin is to the rolling chariot.'[3]

And the fraternal affection among members of the Order is frequently mentioned.

'Behold the company who learn of him—
In happy concord of fraternity . . .
The noblest homage this to Buddhas paid.'[4]

One of the most elevated and best known of Pitakan expressions of universal benevolence is that inculcating mother-love to all beings—perhaps the finest outburst of altruism in all ancient literature:

'E'en as a mother watcheth o'er her child,
Her only child, as long as life doth last,
So let us, for all creatures, great or small,
Develop such a boundless heart and mind.
Ay, let us practise love for all the world,
Upward, and downward, yonder, hence,
Uncramped, free from ill will and enmity.'[5]

Those among modern Buddhists who call themselves Mahāyānists claim that, in developing and progressing beyond original Buddhism, the sentiment of altruism as opposed to egoism takes a more prominent position in their teaching, notably in what is termed the Bodhisattva (*q.v.*) theory. In this the goal of *nirvāna* becomes one not of personal salvation but of transferred

merit, saintly aspiration being for the salvation of all beings. Negatively, writes Daisetz Suzuki, *nirvāna* 'is the annihilation of [the belief in] the notion of ego-substance, and of all the desires that arise from this erroneous conception. . . . Its positive side consists in universal love or sympathy for all beings.'[1]

EGOTISM.—See VANITY.

EGYPTIAN RELIGION.—I. *CONDITIONS.*—

1. Length of time.—The very long history of Egypt is traceable through more than 7000 years in writing, and it has a pre-history of which details can be recovered from 1000 or 2000 years before writing; hence the changes of religious thought can be followed over a wider range than in classical lands. In place of a very full account, covering a few centuries, as in Greece and Italy, we have a scattered and fragmentary account of as many thousand years. The scope and the treatment, therefore, must be very different from that applied to other religions.

2. Character of the land.—The peculiar nature of the country reacted on the religion, as upon all other interests of man. The continuous contrast of desert and of cultivation impressed the whole Egyptian character. It produced those contrasts which seem so contradictory—a people who had the reputation of gloomy stubbornness, and who yet covered their tombs with scenes of banquets, dancing, and gaiety: a people to whom the grandeur of the tomb was one of the great objects during life. The constant presence of the dead in the cliffs and desert overlooking the scenes of their lives, or, in later times, more familiarly kept surrounding the family life in the atrium of the house, preserved a sense of the continuity with the Other-world which made a far more contrasted life than we see elsewhere. As opposed to the luxuriance and fatness of the rich plain, there was always visible on either hand the desert, little known, dreaded, the region of malevolent gods, of strange monsters, of blinding, suffocating storms, of parching thirst and heat.

3. Form of the land.—The form of the country also acted on the religion by favouring isolated communities, which preserved distinct beliefs. Not only was the long, narrow valley readily cut up into distinct principalities, which warred on one another and promoted separate forms of worship, but there was also a strong antipathy between the two sections of the population, east and west of the river. To this day a man of one side will dislike those just opposite to him more than those ten times as far away on his own side. The Nile valley not only holds a streak of population a hundred times as long as it is wide, but even two incompatible streaks side by side all the length of it. Thus there was every facility for the isolation of local worships. Before a strong continuous monarchy existed, or whenever it was eclipsed, there appeared a long row of antagonistic tribes and cults, each of which defended its local worship as the bond of its union. To kill and eat their neighbour's sacred animal was the regular assertion of independence and vigour. Whatever antagonisms we now see remaining beneath the unification of Islām are mere shadows of the intense antipathies between the partisans of rival cults in ancient times.

4. Political rivalry and fusion.—Religion was thus essentially a part of politics. Fanatical fervour is the product of the political necessity of union. Small bodies, which are liable to be broken up, need a test of true membership, and a moral consciousness that they are in the right and their enemies are in the wrong, foul, miserable, and despicable. All this is given by a religious antipathy. The god is the rallying cry; the triumph of his followers is his triumph. Hence the mythic victories of the gods, one over another, are the records of the victories of their worshippers; and even the marriages of the gods are in many cases the expression of the marriages of the tribes who upheld them.

Besides the violent conquest of one god or tribe over another, there was the peaceful fusion of tribes, who became blended both in blood and in religion. This led to the fusion of gods who were alike, and who henceforward bore compound names, as Ptah-Sokar-Osiris, or Osiris-Khentamenti. This fusion also led to the acceptance of several gods and the uniting of them in groups, triads, or enneads. Thus Horus was originally an independent god, known later as the 'elder Horus' or 'greater Horus,' son of Hathor and not of Isis (Lanzone, *Diz. di mitol.* 603); from whom Hat-hor, 'the dwelling of Horus,' took her name. Isis 'was an independent deity . . . she had neither husband nor lover' (Maspero, *Dawn*, 131). Thus the best known triad of Egypt was compounded of the gods of three independent tribes, Osiris, Isis, and Horus, who were linked as a family when the tribes became fused together.

5. Resulting mixture.—Not only was the theology thus compounded by multiple names for a god, and forming groups of connected gods, but the fusion also led to the acceptance of incompatible beliefs, particularly about the future life. The interaction and combination of these formed a chaotic mass of contradictions, which were continually in flux, and accepted differently by each age, each district, and even each person. There is no such thing as 'the Egyptian Religion'; during thousands of years there were ever-varying mixtures of theologies and eschatologies in the land.

Such may exist even under the far more exclusive dominance of Christianity. The old Pictish *Bucca Gwidden*, or 'bright spirit,' is still named among us as 'Puck,' while the *Bucca Dhu*, or 'dark spirit,' has become the familiar 'Bogey Bo.' If we even retain these in London at present, much more were they realities in the West country during past centuries. They are as totally incompatible with Christianity as one theology in Egypt was irreconcilable with another; yet here they have co-existed for eighteen centuries.

II. *SOURCES.*—6. Classifications and publications.—The sources of our knowlege of the religion are but fragmentary; the ten books on worship, and ten on the laws and the gods, have disappeared since the days of Clement. Taken in the order of age, the materials may be classed, with the chief modern publications, thus:

1. *FIGURES OF SACRED ANIMALS OF PRE-HISTORIC AGE*: J. Capart, *Primitive Art in Egypt*, Eng. tr., London, 1905, figs. 125–139; W. M. F. Petrie, *Naqada*, do. 1896, *Diospolis Parva*, do. 1901.

2. *AMULETS, ANIMATE AND INANIMATE*: Petrie, *Deshasheh*, London, 1897, *Dendereh*, do. 1900, xxvi., *Abydos I.*, 1902, xxxviii.; G. A. Reisner, *Cairo Catalogue*, xxxv. [1907] 'Amulets.'

3. *TITLES OF PRIESTLY OFFICES*: M. A. Murray, *Names and Titles of Old Kingdom*, London, 1908; H. Brugsch, *Dict. géogr.*, Leipzig, 1877–80; G. Legrain, *Répertoire*, Cairo, 1908; J. D. C. Lieblein, *Dict. de noms*, Leipzig, 1871, i.–iv.; Petrie, *Royal Tombs*, London, 1900, i. and ii.

4. *NAMES OF PERSONS, SHOWING THE USUAL GODS AND IDEAS*: same sources as for 'Titles.'

5. *DEATH-SPELLS TO ENSURE SAFETY FOR THE BODY AND SOUL*: P. le Page Renouf, *Book of the Dead*, London, 1907; G. Maspero, *Inscr. des pyr. de Saqqarah*, Paris, 1894; E. A. W. Budge, 'Book of Gates,' and 'Book of Am-Duat' (Under World), in *The Egyp. Heaven and Hell*, London, 1906; G. Jéquier, *Livre de ce qu'il y a dans l'Hadès*, Paris, 1894; H. Schack-Schackenburg, *Das Buch von den zwei Wegen*, Leipzig, 1903; R. V. Lanzone, *Le Domicile des esprits*, Paris, 1879; Brugsch, 'Sai an Sinsin' (*RP* iv. [1905] 121); Ed. Naville, *Tomb of Sety I.*, Paris, 1886; F. Guilmant, *Le Tombeau de Ramsès IX.*, Paris, 1908; E. Lefébure, *Hypogées royaux*, Paris, 1886–9.

6. *TEMPLE SCENES OF RELIGIOUS SERVICE, AND TEMPLE*

[1] *Outlines of Mahāyāna Buddhism*, London, 1907, p. 51.

WRITINGS: A. Moret, *Du Caractère religieux de la royauté pharaonique*, Paris, 1903; C. R. Lepsius, *Denkmäler*, Berlin, 1897 ff.; A. Mariette, *Abydos*, Paris, 1869–80, *Dendérah*, do. 1880; A. Gayet, *Le Temple de Louxor* (*Mém. Mission Archéol. au Caire*, xv.).

7. *HYMNS*: Petrie, *History*, i. (1894) 182, ii. (1896) 215–8; *RP* ii. [1903] 129, iv. [1905] 99, 107, vi. [1907] 97, viii. [1909] 129; Naville, 'Litany of Ra' (*RP* viii. 105).

8. *POPULAR FIGURES OF GODS, MAINLY OF ROMAN AGE*: A. Erman, *Egyp. Religion*, Eng. tr., London, 1907, pp. 218–227; Petrie, *Roman Ehnasya*, London, 1904; V. Schmidt, *De graesk-aegyptiske Terrakotter i ny Carlsberg glyptothek*, 1911.

9. *GENERAL WORKS*: Lanzone, *Diz. di mitol. egiz.*, Turin, 1881–6; A. Wiedemann, *Rel. of the Anc. Egyptians*, London, 1897; Maspero, *Dawn of Civilization*², London, 1896, *Études de mythol.*, Paris, 1893 ff.; Budge, *Gods of the Egyptians*, London, 1904; Erman, *op. cit.*
